A November day, somewhat bleak, though not freezing, the Ramapo Hills—dwindlings of the Blue Ridge—blue and purple under the declining sun, twenty miles away; a few obstinate leaves, still clinging to the cherry tree in my yard, rustling and fluttering; and the robins, a troop of them, making the air lively with their darting flights southward, the cedar twigs bending as they alight and call to their comrades; preparing for winter, as I am preparing for it with my beech sticks. But here is the difference, in power and ease of locomotion between them and me. They fly from the cold and I stay and fight it, using nature—her trees—to fight herself with, I the canny man, the intelligent animal, who employs nature against herself.

The robins get the best of it though. Few of us can afford to go to the Carolinas or Florida for our winter. Few of us can support two country seats, one at the north, among the Canada woods, for summer and one in the pines and along the sands of the south for the winter. Yet I make and spend enough in a year to keep five thousand robins that time. But I am not more handsomely clothed, not near so handsomely; though the clothing of the robin costs him nothing. Nay, our female human being, though she may flaunt herself never so gaily in her silks, cannot show so soft or beautiful a plumage as yon robin.

We pride ourselves a good deal in these days on our quick and cheap means of transportation by railroad. But how many of us use it? How many of us see the country as our robin does? Who finds out its expanse as he, traversing it from one end to the other? Who gets his birdseye view of it all, as he goes, as if he were always on a hilltop catching the view? Or who finds out the dells, enters into the smallnesses of nature's treasure-places as he does? finds the prettiest trees and creeps into them, watches with near eye the moss, studies at short focus the shapely leaf (what a connoisseur of leaves he must be!), inhales the first escaping fragrant breath of the trunk? Fly away, robin, on your pleasure journey of use; leave me here to saw through my stout stick of wood that makes the small of my back ache. Your way of escaping the cold is not half so toilsome, not one-hundredth part so tame as mine, the superior human being. I believe you get more out of life than I do. Who feasts on fresher fruits or more choice or on a greater variety of them than you? Free, spirited, well-fed, handsomely coated, you go, nearer your Maker, I do believe, than I am.

Yet I do crawl nearer by this very stick of beech that I was just sawing. It is a ponderous fellow, that has made me sweat to get through. I see the end of one of the lengths pointing up to me as I saw. The section is as fresh as a baby's skin, almost as smooth; as for color, no baby has ever beaten it. Here toward the heart it is of a darker tinge, yet not really dark, no darker than the shadow that may rest under the baby shoulder, and beside it there is the genuine flesh color, an animated flesh color, not milky, but of the delicatest mottling of hues of pink; that transparent skin it is like where you see the presence of underlying blood vessels, not distinct in their shape, but casting up a mellowed, graded indication of their presence; the skin that shows of life beneath and coursing blood, the gentlest whisper possible of deep life. So much for the color.

Charmed by the aspect, I left my saw and buried my nose, as far as a nose can be buried in a piece of wood, on the end of the stick of beech, and sniffed this pink section. A perfume! how subtle, exquisite, unapproachable. It shoots me into the woods, a suggestion of all woody perfumes. I am no longer in my back yard; a forest is around me. So faint! my nose could not have caught it three inches away; yet here it is wholly distinct, full of character; yet how could you express its difference from the fragrance of any kindred stick of the forest? Nature does not parade all her scents. I have to go close to her, almost to burrow into this chunk of beech with my nose to catch the modest, retiring sweetness. Ah, my friend robin, I wonder if you get these scents in your close communion with the trees? Few of us men do.

Yet that stick was my victim—killed, felled, and quartered by other hands than mine; but slow to rot after death; sweet even yet and yielding fragrance to me. I have sawn it into bits, but still I can not take away its fragrance until I have burned it; and even in the burning it will yield incense; but when it is in ashes then I shall be complete conqueror.

One of them is roasting now on the fire below me. I turn the victim when he does not burn well. Ah! a savage victor, I! I am Moloch! I, man! to whom many such sacrifices have burned. I warm my hands over my murder of the forest. These brothers and sisters, mute, muter than the animals—yet they struggled animatedly to the sun, acted a wish—dumb life, I, your brother; I, into whom life was breathed as it was into you; of no higher lineage than you; of no fairer form, nor firmer texture; nor half so sweet as you!—I have usurped power over you; and exercise it. We were created even, now I am lord.

There was a time when man was not so; when he picked up only the dead and dry twigs on the ground or wrenched off the withered, half-broken boughs. He had no steel axes then. But that was a type of man we despise, a man who could not master the woods: without the desire to; content to live in them; live and let live; not as enemies.

But we are numerous. This land was inhabited once, for hundreds of years, before we white men came, and yet the woods were not cut down. How did they live? They did not multiply so fast as we, though six or seven hundred thousand extra, 1860–1865, was not a bad contribution to death. But they killed each other more regularly, perhaps. Well, they subsisted on the animal life which the woods and streams contained and on their own little cornfields; and the woods stood, and helped feed them. We white men crowd in and kill all that the woods contain; and fish many streams dry of fish. We took away the feeding-ground from the wild life that ran in the woods. What care we for the forest? We want to get rich. We change everything. Behold, now, a continent half denuded, with plains of grain, and a rushing, trading population. Compare it with the continent of two hundred years ago. Come, brother Molochs, warm your hands by the flames of this maid of beech, and let us consider whether the continent is better.

JOHN ELLIOTT CURRAN.

IN THE LAND OF THE MICMACS.—II.

(Continued from page 249).

TO our delight the red men's appetite took a more civilized turn next morning, and James observing this, remarked in his peculiar cool way that they must have been lying in wait a long time for the chance of last night.

"Air ye goin' t' sind the boat down this morn, Misther Miller, fur more grub?" after setting down the coffee and stepping back with his hands on his hips.

"What do you think about it?" queried Walter; "how are they feeding now, Davey?"

"Faith, sur," replied Cookey, with head cocked on side and eyes upon our canoemen, "they don't hould out wurth a cint, an' that's a fack, but"— and here he paused as if afraid or ashamed to speak his mind. After a moment's hesitation, however, he added, "There's no dipindince to be put in the brutes, they're born desavers."

"Perhaps, Davey, they would rather go up to North Branch short of provisions, so that they could use their tomahawk on you when hard up," interposed James in a good-humored manner, which Cookey at once detected.

"I dunno know 'bout that, faith," retorted Davey, "but an Injun, they say, has a swate mouth for fat mate, an' ef that's the truth, the tommyhawk 'll find a softer pate and fatter jintes than Davey's," and tipping Phil a cunning wink, he made his way to the fire. James coughed. The reference was to his plump, portly figure.

In an hour we were stemming again the strong current of this rough, boisterous stream. We had outflanked civilization yesterday. No houses, no cultivated fields, no sign of human life save our own met our gaze that morning. The forest reached down to the river on both sides, and huge maples, poplars and balm of Gileads fringed the shores and cast their morning shadows across the noisy, turbulent waters. The hills became mountains, and the latter crowded more closely upon the little river, squeezing it narrower and narrower; the stream, as if resenting such treatment, became more angry and tore downward through great granite boulders, sputtering, leaping, rushing, roaring.

In some places the river is thickly strewn with these huge stones, of all sizes and shapes, most of the larger ones rising from two to six feet above the surface of the water, and so blocking the stream as to cause a very strong current wherever an opening occurs. In such places our speed was a snail's pace, and even that full of excitement and danger. Much judgment and experience are necessary to choose the safest and most practicable routes through these rocky mazes, and more coolness, dexterity and strength to safely pass them. The Indian seems well adapted for such work. Theirs is the keen vision of the hunter, whose trained eye takes in everything at a glance. They know the limit of their bodily powers, they know also what a frail thing a bark canoe is among wild waters, rushing and twisting between rocks. They can, therefore, be trusted. So don't grow impatient when your guides pause below some noisy rapids, and, steadying the canoe with their poles, speak to one another in their own beautiful language, whose sounds seem born of the sweet murmuring of forest and water. Observe, too, those black piercing eyes are away up among the swells and foam where danger lurks. They are measuring their strength with that of the current at every pass, until a choice is made; then a mutter from one, an *ää* from the other, and up go the poles as if moved by some perfect machine, the rapid is boldly collared, and soon you are shot over the lip into the smoother water beyond.

With the first afternoon's experience, I thought a rapid could have no danger for me; but I must confess to nervousness when in the midst of the first boulder rapid of the second day. It was so different. The mad rocks seemed tearing up the incline like huge monsters in some African river, dashing the spray and foam into the canoe itself; the noise was so loud! the danger so near! I often felt like grasping a boulder at my side and clinging to it with all my strength. The first thought is "we'll be safe there anyhow," but a moment's reflection shows you how foolhardy such a timid freak would be. When my excitement was at its height, I happened to glance at the face of the sternman. The cool calm, undisturbed expression of that countenance I shall never forget, for it told me in mute but strong words, "You can be a coward sometimes." I realized it in a moment, and as a stream of black saliva shot from the wide opening in that face, I thought of Black Jack, and then of my pipe. Wishing to appear calm, I remarked, "Mebbe me takum smoke, Louis?" "Much better likum smoke bove rocks," returned the Indian, without even looking at me, but that reply proved that my nervousness had been observed. Ever after I wore my most stolid look in the middle of a rapid.

About 11 o'clock we reached Blue Stone Pool, an excellent salmon hole, which takes its source from a great rocky spur, bluish in color, projecting into the river from the north side, forming a heavy rapid in front and a fine pool below. The water was slightly discolored—the result of a rain some days before—and as salmon take the fly in such much better than in clear water we expected great sport. There was nothing but bustle and confusion for a quarter of an hour. Rods were brought out, reels fished from grip-sacks, fly-books opened and laid on the yellow gravel shore, busy fingers were twisting the waxends about the joints, others putting landing nets together, etc. And now the trio are ready and step into the water to wade a short distance toward the pool before casting. The six dusky canoemen line the shore, some holding landing nets ready, others adjusting their tumakums, but keeping a sharp lookout upon the anglers. Davey has put a few yards between himself and the red men, and, seated on a rock, watches for the opening of the play. He has never seen a salmon taken with the fly, is quite sure that slender "gad" will never "hould 'im," and so regards the whole thing as ridiculous.

Walter casts his Durham-ranger with much skill away out into the rapid water at the head of the pool, and as it floats away he draws it in by a succession of short smart pulls. The other two pause and keenly watch the gaudy lure. Now it begins to sweep in toward the shore a little and has just reached that spot where the experienced angler expects a rise, when there is a rush, a flash, a strike, but lo, the feeling of disappointment, as the fly sails harmlessly through the air. A murmur and excited shake of the head pass through the spectators, while Davey shrugs his shoulders and forces back a derisive smile.

"Now, Walter, my turn," said James, sweeping his long 17-footer through the air and dropping his Jock-Scott lightly in the pool. Down it went with the rapid current until about the middle of the pool, when it was drawn as before. As it curves round there is another splash and another miss. Evidently the fish are not on their take to-day or else they have not found their favorite fly. Phil follows suit with the same result. Upon consultation they decide to give the fish a rest. Old anglers invariably do this, especially upon missing a rise or two, as they think the fish, growing accustomed to the regular appearance and disappearance of the lure, will fail to respond or will even become afraid of it.

After a rest of fifteen minutes Walter's fly was sweeping around the curve at the critical point, when he got a splendid rise and hooked his fish firmly. Then the reel hummed out its thrilling music, the rod bent with a graceful curve and all eyes were scanning the surface for the first break. Presently a bright object sprang into the air near the head of the pool, and at the same moment a shout from the Indians echoed far and near as they rushed toward the point indicated. Back fell the fish as Walter reeled him in. Then he darted down the pool and again flung himself high in the air just opposite Davey, who had left his rock and was gazing into the water.

"A foine fish ye've got, Misthur Miller," shouted Cookey, rushing into the river and wading toward Walter; "gie me a grip o' the shtring, an' my word fur it, he'll ind his jig on the shore."

"No, no, my good fellow; thanks for your offer, but he'd be sure to break loose." (Walter is very polite, even in the midst of exciting scenes.)

"Break loose!" returned Davey, "faith he'll break that slinder swutch o' yers in a giffy ef— Aye, there he goes again, like a March hare wi' a pinch o' snuff in hus nose. Don't be foolish, man, gie us the shtring."

Again Walter refused the proffered help; and Davey, turning, waded without another word to the shore, seated himself on his rock, and seemed to take no further interest in the struggle, confident that it must have but one ending.

For fifteen minutes or more the fight was continued, when the fish showed signs of letting up, and soon Louis had him nicely netted. He tipped the spring balance at 16lbs. Davey admired him very much, but could see no good in "foolin'" with a fish so long.

Then it was James's turn, and he, too, on the second cast struck a fine fish, which afforded some excellent sport, and was safely landed. He weighed 14½lbs. Phil's luck proved a grilse—a young salmon about 3½lbs. in weight. These are very active, and give fine play for five or six minutes, but are soon wearied. Again Walter raised and hooked a fine one, but lost it when the Indian was about to bag it. James landed his second fish safely, which scaled 12lbs. For half an hour longer the pool was whipped, but without another rise.

Meanwhile Davey, who is an excellent cook, had dinner under way, and soon we were seated, enjoying a rare dainty dish of fried grilse. It is more delicate in flavor, sweeter and more juicy than the full-grown salmon, and the grain of the flesh is finer. We made a hearty, substantial meal, the, by no means, least enjoyable part of it being Davey's laughable references to our mode of capturing salmon.

And now let us take a look at the group on the sand a few paces away. They sit in a circle with their legs crossed beneath them. A large black tin kettle is in the center, from the top of which projects a salmon tail, while a similar one stands near filled with black tea. Bread and hardtack lie in piles on flat stones around the kettles, while tin cups and a huge bowl of molasses complete the outfit. On the knees of each rests a pressed tin plate, while the right hand holds a sheath knife, drawn from its scabbard on the belt. All eyes are upon the steaming kettle, and as the flavor of boiled salmon reaches the nose they grow more impatient to begin. Presently Sâk turns the vessel over, and a whole fish, in two pieces, slides out upon the flat stones. This is the signal of battle. Plates, knives and fingers are soon busy, and in the twinkling of an eye that whole salmon disappears from the center. Piled up on six dishes, it is fast melting away, and soon nothing, save the backbone, jaws and skull, remains. It has all been converted into red man. Davey grows uneasy; the monsters of last night are again on the trail, and early starvation and tomahawks haunt his imagination.

"It's jist es I tould ye," he observed, turning toward us with a hopeless look, "the' air at their ould thricks agin, an' divil a hap'urth o' vittels 'ull be fur the morrow night."

"Don't be alarmed, Davey, we'll feed them on salmon," said James in encouraging tones.

"Salmon!" repeated Cookey, "troth if the strame wus full the'd ate it dhry—the haythens."

It was no use attempting to reason him into seeing that one giant feed was all an Indian wanted for the whole day; he shook his head dolefully, believing them to be "born desavers."

About two o'clock in the afternoon the three canoes were again in motion. The river became rougher, the boulders larger and rapids stronger, and our men had to labor hard. Poling became more difficult. The further we ascended the rougher became the bottom, until it was nothing but large, angular or flat stones, on which the poles frequently slipped. The Indians do not use iron or steel picks on their poles here, as I've seen them doing on other rivers. The stones are too hard and flinty for that. Instead, however, they scorch the ends of the poles to harden the wood, and this they claim prevents much slipping.

Toward four o'clock we approached an angry long rapid, and a very noisy fellow, too, for we had heard his growling some distance below. A few rounded granite boulders stood here and there on the decline, encircled with white water, warning the voyageur of what he was to expect up there.

"What you callum rapid, Louis?" I queried of the man in the stern.

"Push an' be Damn," replied he.

"Push and be what?" I asked with a look of surprise.

"An' be damn," repeated the Indian with a broad leer, as he noticed my puzzled look.

"Who callum that, Louis?" I continued.

"White man, long 'go. Me tellum you byme bye. Too hard work talkum here.'

"Come, boys, you must rest awhile before you tackle this rough water. Push into that rock there, and Sân catch hold of that projecting corner. All right. Now, boys, sit down and take it easy for a few minutes." After the kettle containing cold tea had been passed from one to the other and the pipes lighted I turned to Louis. 'Come, now, the story about 'Push and be Damned' Rapids."

"Long 'go," began Louis, "ole white man thinkum good as Injun, sartin he canoe can polum up here. Gottum one big pappoose, white un, he all same Sâk [meaning that the boy poled from the bow, as Sâk was doing]. Canoe walkum berry slow, ole un gettum berry mad. Callum to pappoose, push, push, all time. Pappoose gettum cross all same. Well, canoe walkum up to that big rock, creepum 'long little more high. Water too big, canoe no walkum more. Ole un cross one bull moose, callum one, two, three times push, push. Pappoose jumpum out canoe, tellum ole un 'Push an' be damn.' Rollum over big water two three times like dog half drown. Pappoose gettum shore byme bye. Ole un sittum down canoe, and canoe swingum round, runnum fast down river. Byme bye hittum rock, makum two canoes. Ole un catchum rock an' creepum on top. Pappoose walkum all way back wigwam. Ole un fraid come off, stayum on rock one, two days. Skeeters an' bitum-no-seeums eatum all time, Byme bye white man takum ole un off an' callum big water here 'Push an' be Damn.' "

"Push and be Damn' " rapids was certainly the worst yet encountered, and the men seriously discussed whether or not it might be safer to thread the shore, pulling the canoe up, as they sometimes do, with a towline; but as the Indian is proud of his reputation for pluck and endurance, this notion was soon given up. Just here the stream is almost choked with boulders—great round granite ones, which might have been tossed from the overhanging cliffs by the giant boys of olden times. Among the red men there are traditions to this effect.

My men selected the right bank, the others the left. We were obliged to ascend a steep incline, and then pass between two rocks only 8 or 10ft. apart, where the current was very strong. Inch by inch the way was fought. And now the bow is almost touching one of the boulders. The wild waters rush past, moaning and hissing, threatening to sweep us to destruction, but we are as yet in the friendly eddy of the rock. I look at my man, but save a more rapid glance of the eyes, there was no change in the stolid face. Now begins the lateral movement. The canoe must be moved out sideways, the greatest care being taken not to allow the water to "grip" the bow, until beyond the line of the obstruction ahead, and in the course of the current.

At last the desired point is reached, when up go the two poles and as quickly descend; with teeth clenched, the men throw their whole weight upon them and the canoe seems to rise out of the water and shoot ahead. Again and again the poles rise, and the craft leaps into the torrent. Now we are between the boulders and the scene is truly grand. The wild waters dash upon the rocks, the waves roll outward and meet beneath our frail bark, forcing her up on a "horseback" of seething elements. The Indians pause. The stream is deep here and their poles are shaking violently by the current. I almost forget my determination to keep cool. I glance again at that dark visage in the stern. Surely I shall see signs of excitement, if not fear; but no, cool, self-possessed, as usual; the teeth are clenched and the eye more firmly riveted on the bow, that is all. They are feeling their way, waiting for the moment of least lateral resistance, when the final spurt will be made. At length it comes. As if moved by one spirit, the two spring to the work; a tremendous push drives the canoe half way up the lip, another and another follow quickly, until at last it is shot over the verge into the safer waters beyond. I raise a shout for Louis and Sâk, and refresh them with a "smile" of booktawichk. The other canoes were more fortunate, having found easier passes through the labyrinth of boulders on the other side.

About 3 o'clock we come to the mouth of Devil's Brook, a wild mountain torrent, which threads its noisy course down through forests of dark spruce and tumbles into the Little South West by a succession of leaps and plunges. Its waters, bounding for miles and miles through cool shades, and fed by many springy rivulets, are deliciously cool; but never did they taste better or seem more refreshing than on that afternoon. Great swarms of spotted trout, with an occasional sea trout among them, lay here and there in this icy water as it mingled with the river. The temptation was too great for Walter; so putting his ten-ounce rod together, he was soon reeling in the "speckled beauties." About twenty were taken, averaging all the way from ½lb. to 2lbs. Davey was delighted at this fresh accession to our larder. The evil day seemed further off.

After leaving Devil's Brook the river was smoother and the current weaker, so that three or four miles were made in about two hours. We passed a beautiful mountain scene during that time. The south side of the river is formed by a great semi-circular range, rising several hundred feet, its sloping sides were covered with evergreens, firs and spruce, while from the summit great pines lifted themselves into the air, standing out like giant sentinels of the valley below.

We experienced much difficulty, however, in finding a suitable place for camping, as the banks were steep and the shores rough and rocky; but when we reached Blake's Sluiceway—a narrow, deep and swift part of the river, where a lumberman of this name was drowned some years ago—we hit upon a fair site and pitched tent for the night. Our Indian friends were very quiet; even Sâk's glib tongue was silent for a long time. They were very tired. There was, however, some "tall" eating. Panful after panful of fried trout vanished in quick order, until Cookey became somewhat alarmed, fearing that two square meals were henceforth to be in order every day.

The last mouthful is no sooner down than the Indian grows uneasy, and the pipe is soon in his hand. The "poochnaughan" is opened, and a mixture of cut tobacco and red willow bark is produced. They prefer this to pure tobacco; why I did not learn. Probably the cost has something to do with it.

The tumakums were smoked in ominous silence for a long time, scarcely a word passing from one to the other, until we joined them at their fire; and even then they were not disposed to talk. Yes, they were very tired, and no wonder. Any one acquainted with the difficulties to be met in ascending this river can well understand their feelings. However, in the course of half an hour Sâk found his tongue, and even good-natured Stephe made some remarks; but after the booktawichk had been passed round there was a great change in their spirits.

Sâk, as usual, did the most of the talking. He has rather a keen sense of humor, is quick to perceive a point, and frequently turns the tables on us in a pleasant way. This was especially the case that evening in reciting a legend of the creation of man. James had inquired if Sâk thought the white men and Indians were the same at first, or whether the first were white or red men.

"O, sartin," rejoined Sâk, "all same, only white man white. Nickskam makum all Injun at first, no white man 'tall, an' settum hunt mooin (bears). Mooin seeum Injun, thinkum all same, an' fightum. One, two, some Injun brave, raisum war-whoop, an' killum mooin with tomahawks. More Injun 'fraid, turnum pale, runnum 'way, no fightum, that's white man. Nickskam seeum run turnum white, sayum no brave. White Injun 'fraid of mooin, no livum in woods. Makum wigwam in field. No go in woods only Injun long too, sames you now," and the other Indians laughed heartily at Sâk's humorous thrust at the white man.

The more we see of Sâk, the more inclined are we to believe that his imagination has much to do with the creation of the stories and traditions told about the campfire.

Presently the moon climbed high over the southern hill-wall, and shot her beams across the dark valley to the rough crags beyond, lighting up the wild mountain scenery, but leaving night still lurking in the hollows, rifts, and gulches, which appeared like ugly blotches on the fair picture. And before she rose high enough to chase the gloom from the low, narrow river valley and flood it with her silvery mantle, we all retired; we, to our tents and comfortable beds, but the red men only moved the closer to the fire, curled themselves up and were soon asleep.

CHIKTEK.

NEWCASTLE, New Brunswick.

HUNTING IN FLORIDA.—I.

THOUGH a native of Massachusetts, it was my fortune, at the age of thirteen, to enjoy squirrel, oppossum and fox hunting in interior Virginia; at nineteen, deer, coon and bear chasing in southwestern Georgia; at twenty-five, plover, duck and hawk shooting in southeastern New England; at forty, a sight of wild chamois in the high Alps, and at fifty-five, a camp life of fifty consecutive days in the miasmatic swamps and everglades around Lake Okechobee in southern Florida. The object of this narrative is to give a detailed account of this latter experience in the most forbidding of all wild regions; but to the naturalist a perfect elysium.

The mention of Florida suggests the invalid, but it should not in the case of myself or my three companions, the one an experienced collector of forty, inured to all the hardships of camp life, and recognized by naturalists as Doctor P., and the other two, youths of eighteen, inexperienced, but enthusiastic, whom we will call Erwin and Fred.

For hunting-dress outfit, I was provided with a suit of sail cloth, colored yellowish brown or butternut, to resemble dead leaves, the sack coat prepared with ten pockets, besides one, full size of the skirt, for large specimens, the pants with six pockets, two blue flannel shirts, with inside pockets for watch, money and photographs, all wrapped in oil silk bags (carefully keeping paper money from contact with the oil silk surface, by first enclosing it in an envelope), military boots and brogans, and four pair of thick woolen socks. Any sort of vest is an incumberance on hunting excursions. A huswife well provided with sewing materials, extra buttons, pieces of cloth in variety for mending garments and dressing wounds, was not omitted.

For obtaining game, and for camp constructing, I had a double-barreled breechloader; in the waist-belt on the left side, a large size revolver, and on the right side a claw-hatchet with wrist string in the handle; sundry small traps, bunches of cord, insect nets, etc. At least one breechloading rifle should be in every hunting party.

For preserving and transporting specimens, I found a tin knapsack, constructed with various apartments for alcoholic vials, lunches, medicine-box and eggs, very convenient. At least ten gallons of alcohol and twenty pounds of arsenic were provided, besides some hundreds of muslin bags of different sizes, for keeping specimens distinct when thrown into one large jar. Convenient instruments, in duplicate, for skinning birds and animals and for blowing eggs, completed the general outfit.

Two o'clock P. M., Jan. 29, 1874, found myself and party steaming out of the harbor of P., in southern New England bound direct to Savannah. A sudden fit of indigestion admonished Fred to seek cascading quarters, before we were fairly out of sight of land, whither I followed him in a short time. The Doctor and Erwin proved invulnerable, and greatly enjoyed our distress. How singular that of all the "ills that flesh is heir to," the most distressing never awakens a particle of sympathy from the unsuffering, but rather mirth and cruel hectoring. Happily for Fred and myself, we were booked for the same stateroom, to which having retreated, through the live-long night and succeeding day, we were as sympathizing as the Siamese twins. On the third day, my seasickness fled more suddenly than it came, on hearing the cry on deck, "Porpoises! porpoises! all round." Hastening up, I found we were in a school of that species of Cetacea called *Delphinus delphis* and quite unlike the common porpoise. This latter is often seen entering bays and even ascending large rivers for miles, while *Delphinus* rarely approaches soundings. Looking from the deck of the steamer, I had an excellent opportunity for observing their swift motions, and the upward and downward movement of the tail, in contrast with its horizontal movement in fishes. At regular intervals they would rise to the surface to breathe through their single spiracle on the summit of the head; but exhaling and inhaling in an incredibly brief period of time. The hot air from the lungs, surcharged with moisture, is instantly condensed to vapor, giving to the careless observer the appearance of spouting water, which none of the Cetacea ever do. Celebrated for their swiftness, they play around the vessel, changing their position from side to side, by sometimes passing under the bow and sometimes under the stern, but never disconcerted by the speed of the steamer, though plowing the waves at the rate of ten knots per hour. Both jaws are armed with numerous conical teeth, enabling them to feed upon the gregarious tribes of fishes. Robert L. Pell says: "It commits great ravages among the enormous shoals of flying fish (*Exocetus volitans*), inhabiting the temperate latitudes, and it is a very remarkable fact that he necessarily seizes it as it endeavors to escape him, behind; and were it not for provident nature, he could not swallow it on account of its wings. The moment, however, it enters his mouth, some internal management reverses the fish, and it passes down his throat head first. This cetaceous animal much resembles the porpoise, but has a longer snout and more slender body." In this quotation from the address of Mr. Pell, before the American Institute, May 17, 1858, we suspect either he or the reporter rather mixed accounts, by confounding the cetaceans *Delphinus* with the scale-fish *Coryphæne*, species of both genera being popularly called dolphins, though the former is a mammal and the latter a true fish. According to Captain Basil Hall, it is the *Coryphæne* that "commits great ravages among the flying-fish," and an old whaler by my side fully confirms his account, but as confidently denies Mr. Pell's. Can any of my readers testify to ever having seen any species of porpoise pursue and feast upon flying-fish?

Delphinus delphis is regarded as the true dolphin of the ancients, to which the Greeks paid divine honors, placing its image in their temples and impressing it on their coins, though never actually imitating nature in their representations of it, but rather idealizing it as embodying physical and moral perfections beyond those of the human race.

At noon we passed Cape Hatteras with a perfectly calm sea, very unlike some of my former passings of it in a sailing vessel in my youthful days. At 9 P. M. Sunday, we anchored in Tybee Sound, and at dawn proceeded up the Savannah River to the city. We conveyed our luggage across the city in a drenching rain, and started at 5 P. M. in the cars for a night ride of 250 miles to Jacksonville. The contrast between the station and car accommodations of southern New England and southern Georgia was painfully striking. Toward dawn our train passed over the hard-fought battle-ground of Olustee, where the Union troops were disastrously defeated in the late civil war. Anticipating our arrival at the place, I had sought information among the passengers, and fortunately found one who was in the fight on the Southern side. To my eager inquiries, he pointed out the graves of the Union soldiers who fell in the battle and in the hasty retreat of their comrades were left on the field, and I knew that there lay two of my former pupils, whose lives had been laid upon the altar of their country. Another, who commanded a company of cavalry in the fight, was taken captive on the retreat and thrown into prison, escaping only to die in a few weeks of the disease contracted during his prison life.

At 10 A. M. arrived at Jacksonville— four and one-half days from snow and ice, to orange groves laden with fruit.

Making inquiries for best route to Lake Okechobee, I found it was a "terra incognita" to even Floridians. The publisher of a recent map of the State pointed to it with the remark, "It is said to be there, but I have never met one who has seen it. Should you find it and return, having escaped its miasma and reptiles, do not fail to give me a call, and verify or correct my map for the next edition." The papers were teeming with sensational stories about the wonders of the lake; beautiful islands, on which are castle ruins, grassy plains and nondescript animals, among which latter "were spiders of 4lbs. weight!" I was also informed of a party, just a day or two in advance of me, bound for the lake by a western approach to it. This information at once decided me in favor of an approach from the east, and with only two days' delay in Jacksonville, I found myself and party on the little steamer Lollie Boy headed for Salt Lake, expecting to arrive there by 12 M. Saturday.

To quote from the "Floridian Peninsula": "Such entire ignorance of a body of water with a superficies of 1,200 square miles, in the midst of a State settled nearly half a century before any other in our Union, which had been governed for years by Spanish, by English, and by Americans, well illustrates the impassable character of those vast swamps and dense cypresses known as the everglades; an impenetrability so complete as almost to justify the assertion of the State Engineer, so late as 1855: 'These lands are now, and will continue to be, as much unknown as the interior of Africa, or the sources of the Amazon!' " The sequel to my narative will show how completely two months more sufficed, through the perseverance of two of my party, united to two others that subsequently joined them, together with my own independent efforts, to dispel the vagueness and even romance attending a knowledge of its existence.

Though the area of the State of Florida compares with that of New England in the ratio of 59 to 62, three-fourths

of its surface is much of the year under water; and this fact will largely account for the ignorance concerning its physical features. None but wild Indians, cattle-rangers and naturalists can be expected to wade through its swamps, risk its miasmata, and brave is dangerous animals. From the first two, little information can be expected, and the latter have but recently been attracted to its more inaccessible regions.

The St. John's is an anomaly among rivers. Its source or sources, like those of the Nile, are still unknown. It flows a little west of north, till near its mouth, for at least 300 miles, but with a change of level for that entire distance of not more than 6ft. Still it cannot be called a sluggish stream, which is all the more remarkable, "when it is considered that not an eminence in East Florida attains the height of 200ft.:" and where all the water comes from, to give for 150 miles from its mouth an average breadth of about two miles, in apparent contradiction of all the hydraulic laws of physical geography, is the never-ceasing wonder, as day and night one steams over its surface. Ascending, the voyager traverses lake after lake; some extensive enough to give a water horizon, and fully justifying the alleged meaning of the Indian name Il-la-ka, "a river of many lakes;" though it may here be stated that an educated Choctaw chief defined the name as meaning, "it hath its own way, is alone contrary to every other;" a signification quite as pertinent to its physical character as the former. Its unnavigable portion seems to issue from an immense prairie covered with long saw grass, a region neighbor to the everglade and culminating in it. The great rains of the summer are here collected as in a reservoir, till the low latitudinal water-shed is overflown, and the sources of the northern flowing St. John's are confounded with that of the southern flowing Kissimmee. After the annual great rain fall is over, the running away of the waters reveals the submerged dividing line, and leaves the streams distinct, with an easterly and westerly water-shed of varying longitudinal width, but never extensive even in the driest seasons. Such an anomalous condition was long suspected by those engineers who had approximated the sources of both streams, but it was left to the observations of my party, so far as I know, to confirm the view, as will appear in the sequel.

Nearing the wharf at Hibernia, a few miles above Jacksonville, I was most agreeably surprised to find my lifelong friend, the late Professor Jeffries Wynan, at whose house, in Cambridge, Mass., I had dined a few days before, and whom I supposed still in New England. Forced by chronic complaints, he was spending his twenty-third winter, if I remember rightly, in Florida, and as the event proved his last. Mitigating his tendencies to pulmonary diseases by a southern winter, and to catarrhal by a White Mountain autumn, he had for nearly a quarter of a century alternated between the two extreme latitudes, and thus prolonged a most useful life, till in the issue he left behind a reputation that established him in the line of comparative anatomy as the peer of Agassiz and Owen.

At the moment of embarking on the little steamer, two ladies came on board whose ways at once suggested the "school marm." When informed by the clerk that every stateroom was already assigned, he was taken all aback by the reply, "Oh, any of these gentlemen will sleep on the saloon floor, just for one night." On hearing this remark, my first impulse was to put myself outside of that crowd at once. But observing that none of the younger passengers responded favorably to the appeal, I volunteered the half of my room, and induced the Doctor to give up the other half. Without a single "thank you" in reply, we were speedily dispossessed, and not possessed again, each day of the voyage proving so charming to the "ladies" that they concluded to remain aboard and return to Jacksonville with the boat. Gallantry, however, had its reward, though at the expense of a hard couch for successive nights.

The steamer stopping the second day for an hour at Volusia to "wood up," an opportunity was afforded for examining the shell mound upon which the village is built. It is formed exclusively of fresh-water species, mainly Ampullarias and Paludinas with some Unios, as are all the mounds upon the river from a few miles above its mouth, and has evidently resulted from being the dwelling-place of some of the earliest inhabitants during the successive stages of its formation, and the casting away of the shells, after extracting their contents for food. Professsor Wyman, than whom no archæologist has given more attention to their investigation, speaks with great confidence of their pre-Indian origin. My brief stay resulted in unearthing a few pieces of pottery, at varying depths, and in determining the river line of the mound to be at least 100ft., with a height of 6 or 8ft., and of a uncertain extent inland, owing to the forest growth on the top of it.

The shell mounds of Florida, whether upon the coast or the banks of its rivers, and especially those abounding upon the St. John's from near its source to its mouth, must not be confounded with the sand or burial mounds no less abundant, but scattered all over the State and giving no evidence of ever having been used for dwelling places. In the fourth memoir of the Peabody Academy of Science, Vol. 1, 1875, Professor Wyman has presented in a volume of about 100 pages quarto, finely illustrated, the result of his researches and conclusions, in respect to forty-eight fresh-water shell mounds on the banks of the Upper St. John's, and to which the reader is referred for the most complete account hitherto published of these most interesting relics.

Our nights upon the St. John's were moonless, but the darkness did not prevent at least one side issue up a narrow creek for an hour to leave provision stores and whisky at the camp of a woodsman. As we threaded our way in the Cimmerian gloom with interlacing branches overhead, and sometimes sweeping the upper deck, the wildfowl were startled from their slumbers and the owls roused to a vigorous protest against the invasion of their domains. But the lynx-eyed pilot, who successfully steered his way along the tortuous channel with not even the friendly glare of a lantern at the bow was to me the greatest wonder of the excursion.

Again in the St. John's, we found ourselves at daylight nearing a bluff, where we left Professor Wyman and his annual camping companion, G. A. Peabody, Esq., of Salem, Massachusetts. To their great disgust, a squatter had taken possession of their old camping-site, and already erected a log house in the orange-laden grove. Appearing at the door with rifle in hand, he saluted the old-comers with, "How d'ye, gen'lmen, come to squat here?"

In the afternoon another side issue to the left took us into Lake Beresford to leave another squatter, who had migrated from Georgia, and at a venture was being landed in a swamp with a wife and several children between the age of two months and twelve years. As their scanty furniture was handed out and the family left on the beach in the rain, with no shelter, and miles away from any human sympathizers, three hearty cheers were given by their departing fellow-passengers for the American pluck, male and female, that ever adapts itself to physical surroundings, however forlorn the prospect.

Once more on the St. John's, we found its breadth steadily narrowing, till it was reduced to less than 200ft., an advantage to the hunters on board, of which they were not slow to avail themselves, in popping away at every alligator and large bird that appeared at short or long range. Soon, however, the banks recede again and suddenly, as the steamer enters Lake Monroe, an expanse of water covering an area of at least twenty square miles. This crossed, the bluffs on either side are well-studded at advantageous points with shell mounds till the last great lake upon the river is sailed over, and the region of water, prairie and swamp is fully reached. At high water it makes little difference, in this region, whether the steamer keeps the channel or not, her sailing course well illustrating the principle of "cutting across lots." At half stage, as we found it, the channel was sufficiently disclosed to be followed, and equally well illustrated the doubling track of a hare with the hounds close at his heels. For a bird to rise from one side with the intention of proceeding but a short distance up or down stream, and alighting on the other side, and succeed twice in succession, would establish its claim to something of intelligence considerably superior to instinct. At length, growing weary of the monotony, I proposed to the captain to set me ashore and let me have a hunt of 100yds. across the base of a peninsula, while the steamer was doubling it at fifty times that distance. "Will you risk the snakes, alligators and quicksands?" was the squelching reply.

Leaving the St. John's, a few miles of navigation through Snake River, still more tortuous in its windings, and whose abrupt turnings often required the boat hands to jump ashore and push the bow round with poles, brought us into Salt Lake, so called from the saline taste of its water, a phenomenon as yet unexplained. Our voyage was terminated on the opposite side of the lake, by grounding the boat an eighth of a mile from the shore. A scow came off for us, having on it four cords of wood for the steamer. As our captain was supplied he declined taking it, and so our luggage to the amount of as much greater weight was piled on the wood, besides fifteen or twenty passengers, and the scow pushed off. Half-way to the shore it grounded, and then the boatmen exclaimed, "Why, here is just where it grounded going out." A fair specimen of "Cracker" calculation, of which this was our first, but by no means our last lesson. With the grounding of the scow a race commenced on the part of the mule and ox teams waiting for us on shore, to see which should reach us first to secure a load of goods and passengers for Sand Point, on the Atlantic coast, six miles distant. When they reached us the cart bodies were just even with the top of the water. For my part I selected a single mule team. For the bridle, a cord passed through the mouth and over the top of the head. Another single cord to the driver on the bare back, answered for a rein. A leather band supported the thills, and a collar made of straw, with wooden hames and short chains, completed the harness. Had the traces been of rawhide the whole arrangement would have been unique as a specimen of thriftlessness. Having packed on our baggage of 800lbs., with two of us on top to balance it, we started for the shore, apparently better able to carry the little mule than it to draw us. The intervening six miles gave us our first Florida lesson in walking. Midway we passed a large sand burial mound, from the top of which Professor Wyman had exhumed a skeleton buried only a foot deep, though 6ft. below pieces of charcoal and decayed bones were discovered.

While still in the woods, our teamster commenced unloading at a hut constructed in part of logs and in part of framework covered with boards split out by hand.

"Is this Sand Point?" I inquired.

"This is Sand Point."

"But where is the ocean?"

"A mile and a 'af further on."

"Were you not to take us to the ocean, where we could find a sailboat?"

"You bargained for Sand Point, and this house is where the post office used to be. To go to the wharf will cost you a dollar more."

"Did you not know when the bargain was made that we expected you to take us to the shore?"

"A bargain's a bargain, and if you want me to take you to the shore, I will come to-morrow night or Monday morning, and do it for another dollar."

Here, then, was our first lesson in "Cracker" honesty. The captain of the boat having sent us ashore in the wilderness, fifteen minutes before dinner, when our appetites were well whetted up for a bountiful repast, and which our walk of six miles had not in the least diminished, we concluded to dismiss our honest teamster and stop over Sunday at the hut yclept in the guide book Sand Point Hotel.

The next day, inquiring for a church, was informed by mine host of a Sabbath school recently started in a schoolhouse not far distant, he had "hearn tell of," but had never seen. Treading my way along a cow path, I came upon the building, just as the school of six pupils and two teachers, one of whom was my honest teamster of the day before, was assembling. The floor was of rough boards, the apertures for light without glass, and the long benches without backs, but the Bible was in the building and the tender youth were taught its sacred truths. Outside of my own tent it was my last recognized Sabbath for seven weeks.

Seeking negotiation for a sailboat, to take us a hundred miles further south by the Indian River to Fort Capron, the first boatman presenting himself was so under the influence of liquor that he was almost incoherent, though profuse in praises of his boat and his skill in managing it. Having declined his services, we fortunately secured the best boatman and boat on the river.

Betime Monday morning, we had our luggage stowed upon the sailboat, and commenced a voyage of 100 miles further south upon the Indian River, a misnomer for an interior sea or rather lagoon, running parallel with the Atlantic Ocean and connecting with it by infrequent inlets. Its salt water abounds in innumerable varieties of fish, while the shores on either side are no less attractive to the sportsman. In some places, the banks recede from each other four or five miles, in others not more than 50yds. Oyster-bed reefs obstruct navigation for vessels larger than common sailboats, but channels might be easily dredged across them for the passage of a small steamer, and thus open this more auspicuous region of Florida to the tourist and invalid.

Anxious to reach our most southern point of destination, we restrained ourselves from capturing either fish, reptile, bird or mammal, though the temptation was constantly presented; especially when, to reef sail, we ran into the mouth of St. Sebastian River, and saw upon the beach fresh tracks of deer, wildcats, and pumas. At sundown we anchored hard by the hut of our boatman's brother-in-law, in which we found shelter and repose, though not upon beds of down, but rather of dried hides. The larder furnished venison steak and hominy for supper and breakfast, besides the inevitable pork and yam of a "cracker's" repast.

The western shore at this point presents geological features of remarkable interest. That portion ordinarily washed by the waves presents a bluff, 6 or 8ft. in height, formed apparently of fragments of shells cemented into firm rock by pressure or heat, but honey-combed with cylindrical orifices 6 to 15in. in diameter extending perpendicularly from the surface of the bluff to a line corresponding with the level of the beach at low-water mark. The appearance is as though a sudden overflow of the waves had deposited a mass of broken shells to the depth of 10ft., more or less, around the closely growing trunks of an extensive grove of palmetto trees; and then, the shelly mass having consolidated ere the trees had decayed, the moulds of the trunk remained, a geological wonder. The same foundation structure is said to extend inland beneath the soil to an unknown distance, having been tested a half mile from the shore, and only kept denuded on and near the beach by the more powerful action of occasional storms. The geologic explanation of this unique feature is a desideratum.

Between watching the "looming" of distant "points" ahead and astern, the "sailing" of pelicans and the "breaking" of huge sharks, at times almost under the bow of the boat, the hours of the second day whiled away, till at 4 P. M. we landed at Fort Capron, the projected base of our swamp operations. Stepping from the boat a Yankee explorer bound also to Lake Okechobee, grasped my hand, and in a trice told me that he had brought out a sailboat all the way from New York city, with the intention of having it carried across the country, sixty miles, by an ox-team, to Fort Bessinger, on Kissimmee River, down which he proposed to navigate till it should usher him into the lake, and, moreover, he was only waiting to make up a party of four, having already secured one. Here was a dilemma. The addition to my party would make the number six, while the utmost capacity of his boat would accommodate but four. It was, however, quickly decided that we should all go to the river together, and then mature our plans according to circumstances. To secure the services of an ox-team and a driver, the "Explorer" and Erwin volunteered a tramp of ten miles to the cabin of a "cracker," who was understood to be able to furnish the team. On their return the following day they reported themselves successful, and Saturday fixed upon as the date of our departure, the "cracker" engaging to take the boat and all luggage to the river at a point designated for forty dollars.

Meanwhile indoor accommodations were furnished us at Fort Capron by "mine host" Judge P., to whom I had a letter of introduction from a former pupil. Erwin and Fred, at the suggestion of Doctor P., commenced initiating themselves into camp life by erecting their tents in the yard. I donned my hunting suit and commenced collecting, not a little encouraged in that my first seven shots were each successful in securing the game.

As the day of our departure drew near, I was informed that we should pass through a settlement of outlaws, ten miles distant, every man of whom had left his native region for that region's good, and located himself outside of "law and gospel" just over the frontier line of civilization. The owner of our team was accounted a leader among them, and by way of cautioning me, my informant related, under the promise of secrecy, the particulars of a murder, within three weeks, by two of the gang, of an honest, industrious German, who had made for himself a home just outside of their settlement. He, being a man of education and some degree of refinement, not affiliating with them, and withal being envied the possession of a better orange plantation than they had, though wholly the result of his own industry, it was decided to get rid of him on the damning charge of being a stealer and killer of cattle. Among Floridian "crackers" this is a far more heinous crime than that of taking human life, and once fastened upon a man, if only on suspicion, immediately puts him out of the protection of such law as may exist. Finding their victim could not be driven away, their usual resort to treachery was adopted, and the deed committed to two desperate ruffians, one a young man of nineteen, whom we will call Tom, and who will figure largely in the sequel of this narrative. To him, as the story was told me, our team owner promised his daughter in marriage, if successful.

At first every effort was made to provoke a quarrel that should give some shadow of an excuse for the execution of their plot; but the imperturbably good nature of the honest German would not beguile him into a dispute. At length, under the pretense of desiring some orange-slips from his excellent grove, they called at his cabin and asked for some dinner. Both dinner and slips were cheerfully given them, and then requesting their host to set them across the deep creek about a quarter of a mile from his house, he went with them for the purpose, but did not return. Soon after leaving his wife heard four gun and three pistol shots in quick succession; but surmising they were at game waited till near dark for her husband's return and then repaired to the creek, only to be horrified with the sight of blood in the boat still securely fastened on the other side. It was subsequently proven that the assassins thought to cover up the evidence of their guilt by dragging the body a half mile below and thrusting its dismembered fragments into alligator holes. The wife, snatching up her young child, traversed the gloomy wilderness for ten miles at the dead of night to Fort Capron and reported the deed.

The following week the sheriff of the county, with a posse of ten men, started for the settlement with the intention of arresting the guilty parties. When within five miles of it he was met by a delegation informing him that his design was known, and the whole neighborhood was assembled in one cabin with plenty of arms and provisions, and ready to endure a siege, but no one could be arrested while a man or woman remained alive. Under these circumstances, and considering "discretion the better part of valor," the sheriff beat a hasty retreat. Thus the matter stood two weeks subsequent, as I was about to enter the community, my informant closing up his narration with the remark that he felt it his duty to let me know the character of those to whom I was about to trust myself and my party, but cautioned me on no account to breathe a suspicion of any one or reveal the secret to either of my companions, lest it might be suspected by the outlaws that we had some knowledge available to the government, and, on the principle that "dead men tell no tales," find our last resting place in concealed alligator holes, even if their cupidity should permit us to return from the swamp after they had fleeced us to the extent we might permit. Forewarned, forearmed, I the more persistently determined to penetrate the mystery and walk the strand of Lake Okechobee.

Saturday, punctually at 12 o'clock, our teamster appeared with two yoke of steers attached to a double set of shaky wheels. In an hour or two the boat was launched upon the axles and loaded with our provisions of coffee, hominy, hard-tack and pork; our ammunition, of powder and shot; our preserving materials, of salt, arsenic and alcohol (the latter poisoned, lest the teamsters should be tempted to try the preserving of themselves with it); our capturing apparatus, of fish-net, insect-nets, etc., (guns, pistols and hatchets are on such trips to be a constant appendage of the person); besides the camera and necessary chemicals of the Explorer for procuring pictures of the ruins said to be in the lake. When ready to start, I saw plainly the weight was too much for the wheels, and predicted a breakdown, to which, however, no other one of the party would listen.

The cabin of the teamster lay upon the direct route to the lake, ten miles distant, where we expected to make our first encampment. All went well till we entered the bordering swamp of Five Mile Creek, when, after wading deeper and deeper for half a mile, and the oxen were just ready to plunge in all over for a swim across the channel, crash went one of the wheels. There was no alternative but to wade back to dry land and camp without our tent. Fortunately, our provisions and cooking utensils were on the top of the load, and, by judicious distribution of the weight, easily borne back. From a stagnant pool near our camping place we obtained water for our coffee, after frightening away from the margin the lizards, etc., and then straining it to get rid of the smaller nuisances, both vegetable and animal. Rolled up in our blankets, we composed ourselves to sleep with clouds of mosquitoes settling down upon every exposed spot of flesh, and amid the hooting of owls and howling of wild beasts, having just before the breakdown crossed the fresh track of a puma. To repair the damage there was no alternative but for the teamster and his driver to push on with the oxen to his home and return as soon as a new set of wheels could be procured.

At noon, on Monday, he reappeared with a stouter set, for which he had meanwhile made an entirely new axle. Transferring the load, the old wheels were left in their tracks, where five weeks later they still remained. Reaching the bank of the creek, it was found that neither oxen nor wheels could touch bottom. To effect a crossing, the yoke was taken off, and swum over, and so placed on the opposite shore as to be quickly hitched on again. The driver stripped naked, as well as the Explorer and Erwin, the former to swim at the heads of the oxen at the risk of being gored in their wild plunges, the other two to swim astern and guide the boat against the current. The moment the steers got foothold on the opposite bank, they refused to move, leaving the wheels sinking in the quicksands and the boat rising from the axles. It was a critical moment, but the leaders being hitched on and a simultaneous shout raised by all, a "long pull and a strong pull altogether" landed the boat on the bank and relieved our anxiety.

Five miles further brought us to the clearing of our "teamster." Selecting a place for a camp, I went on alone to a well near the cabin, and observed two men dressing a hog hung to the limb of a tree. Coming suddenly upon them around a corner of the cabin, I noticed that the younger of the two instantly dropped his work and rushed for the cabin door, out of which he soon issued with a double-barreled gun in his hand and stood defiant. Apparently not noticing him, I passed back to my companions, wondering at his behavior. Soon our teamster took me aside and asked why I wore a pistol belt with U. S. on the buckle. I told him I had borrowed it from my cousin, who was color-bearer of his company during the late war. "Then you are not a United States Marshal?" To me the idea was so ridiculous I could not restrain my laughter, and he returned to his cabin. Subsequently I learned that the young man was "Tom," and the United States belt with its pistol on one side and clawhatchet on the other, together with the gun in my hand, had aroused his suspicion that I had come with a posse in disguise for his arrest. "The criminal doth fear each bush an officer." Spreading our tent and smoking out the mosquitoes with pine knots, Fred and myself slept soundly with the expectation of rising at daylight to renew our trip to the lake.

In the morning we were told by our teamster that the load was twice as heavy as he promised to carry and he should go no further unless it was reduced at least one-third, and he was paid sixty dollars instead of forty. Lesson second in "Cracker" honesty. Fred and myself volunteered to remain, while Doctor P. and Erwin insisted on advancing. Assuring Erwin I should see the lake before leaving Florida, if health permitted, he still chose to take his risk with the Explorer, alleging that he left New England with that sole object in view and now saw no other certainty but to go with the boat. Poor fellow, he went on, and he saw the lake and circumnavigated it, but while lying on his back most of the time for five weeks, shaking with fever and ague, hardly firing his gun during the whole trip. Of all this I was happily ignorant till I found him on my return from the swamps at Fort Capron, unable to walk across the room.

Just before they were ready to start, the teamster came to me and said he had in the woods another pair of steers that six months before had been yoked. These Tom would catch and with a light cart take the luggage of Fred and myself on the morrow, and carry us too, except in the deepest wading places. By following their wheel tracks and with a light load, we could easily overtake them. Besides, we had learned from a neighbor during the evening that Fort Bassinger was not more than ten miles from the lake; moreover, this neighbor had left a boat at the fort, in which he would take Fred and myself to the lake and back to the fort in one day, while the oxen were resting. Then we would return to his cabin together, and let the rest of the party pursue their plan of exploring the lake. For this service he must receive four dollars per day, including Tom's wages, who was at work for him. The plan seeming feasible, I concluded to adopt it, and after much persuasion obtained Tom's consent, who was not yet, as I afterwards learned, entirely free from the suspicion of my being a United States officer sent to arrest him.

After frivolous delays of several hours Tom started for the woods, and toward night drove into the inclosure a "bunch" of cattle having one of the steers wanted. In singling this one out with the lasso it leaped the fence and was quickly out of sight again. He must now go a mile and get a neighbor, who, by the way, was his reputed companion-assassin, and the twain go two miles in another direction and borrow some dogs, with which to catch the runaway steer. About ten at night they pass my tent, Tom ahead on a horse, holding one end of a rope around the horns of the steer; his companion, on foot, holding on to a rope around one hind leg of the animal, which had been caught by the nose with bloodhounds. The next morning the woods were again scoured for the other steer, which was brought in similarly about noon. An inspection of the cart decided, in the mind of Tom, that the wheels were too weak, and he must borrow a pair from a neighbor some eight miles away. This he would do next day and be ready to start Friday morning, three days behind time. Yielding at length to my remonstrances, he started soon after dinner to exchange the wheels and break in the wild steers, returning past midnight. In the morning the last caught steer was utterly exhausted, and the third day of delay must after all be spent in hunting up and breaking in another. Friday morning we started, the first essay of the wild creatures being to upset the load in their zig-zagging through "a right smart palmetery"—rough palmetto roots above ground.

NOTES OF THE FIELDS AND WOODS.

III.

IT IS interesting to think of the changes that have taken place in the plant world under the hand of man. It was not very long ago that our fields, now waving with wheat and maize, and our hillsides and valleys, covered with the soft verdure cropped by the grazing herds, were occupied solely by plants native to the soil. They grew and flowered and scattered their seeds to the wind under no husbandry save that of nature. There was no favor shown then; tender plants and strong were treated alike. There was the virgin soil for all, and there were light and heat and rain for all, but there was no breaking up of soil for the destruction of some, nor scattering and covering of seeds for the introduction of others in their places. Nevertheless there was a great, though silent, struggle for place going on. Nature is prodigal. Every plant produces seeds calculated to increase its kind a hundredfold. But where every inch of soil is taken there can be no increase of numbers. Hence the struggle; of the hundred seeds flung to the winds there was room for the development of but one; the ninety and nine were choked out in the strife for existence. The struggle was between members of the same species, but more observably between different species. The contest was fiercest here, silent but intense. The weakest species must go to the wall. It was a survival of the fittest, if fittest means hardiest and possessing greatest adaptability to surroundings. For in this warfare there was one alternative to utter destruction, and that was retreat. Many species of plants saved themselves from extermination by withdrawing from the soil first contested and adapting themselves to new conditions. Take, for example, the lichens. Now we see them growing in apparently very disadvantageous situations, on bare rocks, the trunks of trees, roofs, etc. Can it be doubted that they have taken these abodes for any other reason than that they have been crowded out of better ones? Their capability of adapting themselves to changed conditions doubtless saved them from utter extinction. They are secure in their present places, for no other plants could live under the same conditions. It is not unlikely that the dry, brittle, crumpled growth that now clings with slender hold upon the bare rock was once a green pulpy leaf, full of sap and vigor. The lichens were among the first plants to appear upon the earth. It is only a speculation, but it does not seem too great a license to imagine that at first they consisted of a green thallus (like that of the liverworts) held to the ground by thread-like roots and getting their food from air and soil. But new plants came into being and sought possession of the same soil. The newer were hardier and grew more vigorously and gradually crowded out the first possessors. But here and there was a favorable situation for the tender lichen; some spot rich enough in means of life to supply its humble wants, but not those of its rivals. Gradually it adapted itself more perfectly to its new surroundings; its manner of life became modified to fitness to its new environment. Formerly dependent upon soil and air it came at length to find sustenance in the latter element only. There it could grow and flourish upon the rocks and trunks of trees. Then must have come a new chapter in the lichen's history. For it is now known that these plants are not solely aerial in their habits, but that they live partly by parasitism upon other plants—minute single-celled algæ that live inside the lichen leaf. These little green cells scattered in the tissues of the leaf were until a few years ago supposed to be true cells of the lichen plant. They were known to be singularly like the minute algæ that live everywhere on the bark of trees, old roofs and similar situations, giving to the surfaces to which they adhere a green color. And it was observed that the green cells inside the lichen leaf multiplied in just the same way as the algæ living outside, namely, by division. Thus a few cells in the leaf would increase to very many, forming rows and layers that filled the spaces between the filaments of the lichen leaf. Finally it was observed that these filaments gave off branches which applied themselves to the green cells and absorbed nourishment from them. These observations led to the opinion that the green cells were just what they seemed to be—algæ living inside the lichen leaf, protected and kept moist by it, and in compensation giving up a part of their substance as food for the lichen plant. Thus a lichen is not a simple plant, but a community of two kinds of plants, each affording service to the other.

Now, it is not difficult to imagine how the algæ came to be tenants of the lichen plant. In the first place, the algæ live in their natural free condition in the same situations as the lichens, as on the bark of trees. It would, therefore, very easily come about that algæ cells would become lodged upon a young, growing lichen leaf. This situation being a favorable one, they would thrive there, and the lichen leaf would slowly grow around them and finally inclose them among its own cells. The algæ cells would then give of their substance to the lichen cells lying contiguous to them, and thus a parasitism be established. These suggestions seem much the more plausible from the fact that it is in just this way that we must conceive the algæ to get inside the leaf of a lichen of to-day. The must lodge upon the leaf and then be inclosed by the latter in its growth. The algæ cells doubtless sustain themselves in the same way as those living in a free condition outside, namely, by materials derived from the air and rain.

The lichens are interesting plants in other ways besides their manner of obtaining food. They are remarkable for the great age to which they live; there is good ground for believing that they endure as long as a hundred years. An authority states that some plants have been found by actual observation to endure forty-five years. Their growth is exceedingly slow, indicating that only a little nourishment serves to keep them alive. In a dry time they have power of suspending growth altogether, renewing it again at the fall of rain. In time of rain they change their color, becoming greener. Another interesting fact about lichens is that they grow only where the air is free from smoke or dust. They are never found growing in the neighborhood of towns where the atmosphere is impregnated with soot and smoke. Thus these plants afford an indication of the purity of the air.

The lichens are of no little use to man. Some of our most valuable dyes are made from them, and in the far North, as is well known, the Iceland moss (a true lichen) furnishes food to both man and his indispensable ally, the reindeer. This animal scrapes away the snow with its feet and crops the lichen from the ground, this plant constituting its sole food. As the reindeer is not only a beast of burden to the Icelander, but also furnishes him with food and clothing, it is seen that the lichens render these regions habitable. No plants grow in latitudes so far north as they.

There are quite a number of kinds of common lichens. Most of them consist of a flat, crumpled, grayish-green leaf-like growth, but some have branched stem-like parts growing out at an angle to the surface to which the plants are attached. Lichens, like the other cryptogamic plants, reproduce by means of spores. They grow in cavities, which in the most common lichens are arranged in discs easily discernible to the eye. The spores escape from the cavities and under favorable circumstances germinate into new plants. The entire productive process of the lichens is not well understood. It is probable that besides the spores other reproductive cells are produced, which are of a sexual nature and which by their union form a germ cell.

When one goes out for a stroll in the fields nothing is more common than to go further than one intended or take a different direction from that in which one set out. It has been so in the present writing. The writer had in mind to put down some notes upon the changes that the plant would have undergone under the cultivation of the soil. The imagination likes to dwell upon the time when the earth was virgin, when nature's face was yet untouched by the hand of man, our hillsides were covered with mighty forests. The great trees threw out their thousand leaves to summer's breeze or swayed their pliant arms in winter's blasts. Our plains were carpeted with endless wealth of grass and herb, waving in summer's wind and lifting up a thousand flowers to summer's sun. But the woodsman's axe came and leveled the forests, and the plough—that perfect engine of plant destruction—came, breaking through the soil, turning the roots of the plants up to the scorching sun and the tender light-loving blades down to darkness. Then upon the fresh upturned earth seeds were scattered; seeds brought from climes beyond the sea; they took root and flourished and brought forth their kind. They have never relinquished their hold upon the new soil. The native plants have never regained what for countless generations was their own without dispute. To man was given dominion over every living thing that moveth upon the earth. To him was given every herb bearing seed, which is upon the face of all the earth, and every tree in which is the fruit of a tree yielding seed; to him was it given for meat.

S.

IS THIS THE SEA-SERPENT?—The Cape Ann *Advertiser* says: The schooner M. A. Baston, of this port, Capt. Thomas Thompson, brought in a very peculiar species of fish, caught on the LaHave Bank, and which resembles the pictures and descriptions of a sea-serpent more than anything brought into Gloucester. Nothing of the kind has ever been seen by the fishermen or experts in the matter of rare fish. It answers no published description in the works devoted to the subject. It is 4ft. in length and about 5in. through, has one long dorsal fin extending the whole length of the back. The head is triangular shaped, the lower jaw extending 2in. beyond the upper jaw and terminating in a soft extremity. Both jaws are armed with very sharp teeth, resembling those of a porpoise. The upper jaw has three long prongs at the extreme tip. The rest of the upper teeth are very fine and small. It was packed in ice at the rooms of the American Fish Bureau, and forwarded to the Smithsonian Institution at Washington.

BOB WHITE'S PARADISE.

LAST week friend Daniels and I discovered a place fit to write about, and worthy to become celebrated for the particular purpose it was designed for by a beneficent and all-wise Providence. The first of these two things I am going to do in the hope that thereby the second may not be done; for I give notice that I pre-empt the subject, and that once accomplished, the place will forever remain what I have called it at the beginning of this account—Bob White's paradise—for, this not being read, others will not find him out, and we can't hit him when we do find him.

On the evening of the day before, we left a city which is sufficiently located when I remark that it is in the middle of a country that lies between the equator and the North Pole, and which country is in its entirety a paradise for all honest and jovial men and is itself a retreat for the persecuted and ill-treated of all the decent rest of the world, and rode a hundred miles south, until we penetrated for miles a dense wilderness where people do not look for quail because there are none there. And we went to sleep at an inn in a small hamlet, our dog, Dale, shortly thereafter climbing, in a devout and careful manner, into the lower part of the same bed, and going also to sleep in the comfortable belief that in unity there is warmth, which there is.

But in the morning after breakfast we trudge after the manner of the hunters, industriously into the wilderness by a road which had deteriorated commercially from the time it was made and which declined topographically from its start until we came down into a valley, the like of which is enough to make even a shotgun thrill with pleasure.

When we came down out of the hills we also came out of the wilderness. The little scrub oaks had given way before the axe of the pioneer until now all the valley is cultivated and settled. It winds in and out between the high hills on either side, its little stream showing here and there through the thickets which fringe it; some places a half mile from hills and hillside, some places a mile; every now and then its middle stream straying over to the foot of one or the other hillside to get a tributary spring, or loitering at the end of some gully to pick up its streamlet; so that after awhile it requires rubber boots and logs and things to get you over dry shod. And, sir, there are cornfields and stubblefields and meadows and thickets, now on one side of the stream, now on the other, and again on both sides, and here and there a farmhouse nestles close to the hill. And when you get down six miles to the end where the stream reaches the big spring, famous in that it is so big that it turns itself into a river from the very start and so cold that brook trout are said to live therein by the grace of the Fish Commissioners, in order that there may not be too much of a good thing, the valley stops, leaving the stream to once more cut its narrow way out of the hills.

And that is where we hunted. We only needed to traverse about a mile of it, for within its compass we found four bevies of quail, surely enough for one day. Especially so when we couldn't shoot them, and only required enough to shoot at. We had entered the second field, when a bevy that had probably just begun its breakfeast of ragweed flushed wildly ahead of the dog and settled a few yards away in a thicket. Now, the dog Dale had never been hunting or smelled a game bird before, and was therefore about to make his first essay in the business of right-minded pointers. Accordingly we all approached the thicket with those feelings of perturbation and delight which can better be imagined by young dogs and old hunters than described by either. He pointed staunchly and beautifully his first quail, and if his masters had shot as staunchly and beautifully as he pointed, he would doubtless have retrieved it. But they missed. This course of procedure was the general order of the day. At one time in the day my companion called me to him from the bushes near the stream. True, I had heard him shout, but time had taught me to attach no significence to that; and when I noticed Dale swimming out of the stream with a quail in his mouth, and which he brought carefully to my hand, I delightedly asked him (the dog) how he caught it. And then, seeing it was dead, my inquiring eyes sought those of my friend, who returned the look solemnly, and said:

"Mr. President, I have shot a quail!"

This was so unusual a circumstance that we both instinctively felt the need of a season of consultation. Accordingly we called up a scion of the hamlet, who had loitered after us with a basket all day in the hope of reward, and extracted from the basket packed by the provident goddess of our bachelor kitchen at home, a can of coffee, which we warmed over a fire of twigs. The owner of the land had so many twigs that we thought he wouldn't care. Likewise we brought forth a fried fowl, various sandwiches, pickles, cups, pie, cake, a bottle loaded with over five drams, and a package of cigars.

"I am sorry it happened," he said, "on account of the relatives of the deceased. It would not have been so bad if it had been some other birds, but we had been shooting at them a long time, and experience had given them the right to feel safe."

"True," said I, "and we know no way to reach the survivors with our regrets, which makes it the sadder for us. Now, in the course of human events, if you in the exercise of your professison inadvertently sever a patient's jugular vein, as seems to have been done here, you can attend the funeral, or send flowers to decorate his coffin, and afterward create reminiscences of the man's greatness for the benefit of his surviving heirs. But here, a quail before death remains only a quail after death. He cannot in life run a corner grocery with an eye-opener attachment in the rear and in death be a fond husband, a devoted father and a leading politician in the First Ward. And yet," I continued, seeking to assuage his grief and also to draw his attention from the yet unsecured portion of the fried fowl, "you should bear it manfully. It was an occurrence totally beyond your control. I too aim at the whole world when I shoot, so that this concrete result of an abstract dealing might have fallen to my lot if he had flown in front of my gun instead of yours."

After a period of drowsy repose, such as comes to noble minds after a light repast, we sauntered on, the dog pointing every now and then all day. Sometimes we stood by to admire him at such times until he must have grown impatient. I disdain to give the list of casualties for the day. It might attract attention to a spot which, I love to asseverate, is a paradise for quail, and an elysium of bliss for those who, like my friend and I, love nothing better than such a day as that one was. We are going there again Thanksgiving Day. Indeed, we are going to lease the shooting privilege of the entire valley in company with a few carefully selected poor shots.

Would you like to become a charter member?

G. K. A.

NATIONAL PARK NOTES.

YELLOWSTONE NATIONAL PARK, Nov. 8.—*Editor Forest and Stream*: In my last notes from the Park I mentioned the fact that William James was held at Camp Sheridan, Mammoth Hot Springs, awaiting the action of the civil authorities, and that he was charged with being one of the porters who robbed the coach July 4. Since then, I learn, he has confessed everything and has implicated Chas. Higginbottom in the robbery. Higginbottom was arrested on the 3d inst. by the sheriff of Park county and taken to Bozeman. He was at work on the Horr Bros. coal mines, only a few miles from where the crime was committed.

On the 5th inst., William James was turned over to a Deputy U. S. Marshal by Captain Harris. James was escorted to the line of the Park by a squad of soldiers, where he was delivered up to the marshal, who took him to Bozeman. There he and Higginbottom will await the action of the U. S. Grand Jury, which will sit on the 15th inst. How strong the evidence is against Higginbottom I cannot learn. It is thought revenge was the object of both men, as they were well enough posted to know that very little money is carried by tourists, and that in checks, drafts, etc. Higginbottom was a stage driver discharged by Wakefield, and James was an exile from the Park for having trapped and killed game on the reservation last winter. Stopping the coach it was supposed would check travel to the Park and injure the transportation business. James is said to be a cousin of the notorious Jesse and Frank James and has been in trouble before.

Since the cold snap in October the weather has been very enjoyable, with warm, sunny days and cold nights; very little snow, just enough to make the game feel good and keep well back in the mountains, although nearer their winter range. Elk, mountain sheep, antelope and deer can now be seen in great abundance by taking a few miles' ride from the Mammoth Hot Springs or Yancey's. Travelers from Cooke City see game on all the high mountains on either side of the road.

Hunting parties out from Gardiner and the Upper Yellowstone report but little game. It has not yet come out of the Park. Very little game has been killed so far this season in Montana in the country adjacent to the Park, and, as the new laws will protect the game much earlier this year, very little will be killed. H.

CLUBS AND PRESERVES.

Editor Forest and Stream:

How about those who are not wealthy enough to jo'n one of those powerful concerns? Thousands of your readers make plans a long way ahead, to take a trip to the woods, and they are often obliged to defer it another year. But the blessed knowledge that there is a place where they may go lawfully when the time does come, makes it easy to bear.

But how long will it be before all the vast wilderness be taken up, at the rate of a hundred and twenty square miles at a jump?

When Billy and I were young shavers we could go gunning anywhere, and often we would climb the highest hills, and look to the north, where the woods seemed to stretch without end, and where on clear days we could see some of the White Mountains; and we would plan sometime to look upon the wonderful country beyond.

Now, tresspassing signs mock us everywhere; barbed wire bristles on every fence; and we console ourselves by saying "there is no game any way" (as if we went for game alone), and we will try our level best to go down to Maine next year; only sometimes "next year" does not come along for three or four years. But when it does come, how glorious and free the life in the wilderness. And the memories of lonely camps, glorious lakes, rivers, forests and beautiful sunsets, has cheered us many a time after.

How is it? Were we next year to take a trip to a district lying within the territory of some of these clubs? would we be put back? and would it make it right for them to banish us from the mountains just because they happen to have the power to do so? Next to casting my vote there is another privilege I prize as an American citizen, and that is, when circumstances permit, to take with rifle and pack to the wilderness for a season, where I can see no use for fences and policemen.

LAWRENCE, Mass. PIPPSISSEWA.

A TRANSFORMED PUNT.—Mr. G. R. White, of Ottawa, Can., had a curious experience while shooting on his preserves on the Ottawa. He constructed a duck punt, specially designed for floating over the mud flats; the bow was pointed, the bottom curving up and the deck curving down. Some days ago he was shooting at the end of a bay, and when he could get his craft no further, left it, and returned to camp by the shore. About a week afterward he went to recover his punt, when, to his surprise, he found that it had been converted into a house by a colony of muskrats. They had covered in the cockpit and gnawed a convenient doorway through the side of the punt, rendering it utterly unseaworthy. The rats doubtless thought that they had secured commodious winter quarters.—G.

INDIAN SUMMER IN MICHIGAN.—The open season for deer began a week ago, and I have thus far heard only of one killed (on Torch River) in this county. Five or six years ago we could start one in a couple of hours almost anywhere. Looks as if the poor things needed protection, doesn't it? We are in the midst of the most delightful Indian summer weather and you just ought to be on these lakes to have the benefit of it.—KELPIE (Central LAKE, Mich., Nov. 7).

SHOOTING NOTES.

TWO belated woodcock were shot near Kingston, N. Y., on Friday last, the snow being an inch deep. I doubt very much if woodcock are so susceptible to cold as is generally imagined. I remember shooting eight birds once in Christmas week in eastern Virginia, when everything had been frozen up tight for three days. At the time there was six inches of snow on the ground. The birds were all strong flyers. Looking back upon the past fall's woodcock shooting, it certainly was remarkably good in Connecticut, northern New Jersey and in New York. I met a friend at Oneida the other day, and he told me that he and a friend killed 51 birds on Oct. 23 in that vicinity, shooting but half a day. Other sportsmen in the same section got bags of 20 to 30 birds each about the same time. Strange to say, in every case the cock were found only on the wettest ground.

Never were partridges more abundant in Delaware county, N. Y., than they have been this season. I have three friends who killed 92 in four days about two weeks ago.

The largest individual bag, however, that I have heard of has been made by Mr. Selkirk, who resides near Albany. He had up to Nov. 11 shot 531 birds. He is a genial gentleman who only takes the field for pleasure, and always keeps his friends well supplied with game from his gun.

One has only to travel on an accommodation train to this city on any line of railroad in southeastern New York to see to what extent the partridges are being snared. In the Catskill region birds are more scarce, for this cause, this autumn, than they have been known in forty years. Every little station along the Ulster and Delaware Railroad has its snaring banditti, and bunch after bunch of snared birds are handed in the baggage cars to be eventually shipped in big lots to this city.

Mr. Arthur Duane, of this city, and his friend Mr. Chas. Barnum, killed fifty-one partridges, eight woodcock and one English snipe at Lime Rock, Conn., in three days last week.

Mr. Chas E. Gove and a friend from Albany went for a couple of days' shooting in Ulster county last week. The rain and snow, however, spoiled their fun, and they had no chance to shoot but two birds.

There are more bears in the Catskill Mountains this season than have been seen in a long while. Deer and wolves disappeared from this region many years ago. The last wolf was killed by Farmer Hall, for which he received some $80 bounty. It is rather interesting to look over the old bounty records of the town of Catskill, which for over seventy years show the well sustained warfare against the animals of prey in Greene county.

I met some old shooting friends at Montreal the other day and they tell me of many caribou in the mountains to the eastward of Quebec. The Indians of that region also report several small herds of moose. The Shickshock Mountains are the range.

Two important bills will be introduced in the next session of the New Jersey Legislature. One placing the fine of $50 for trespassing on land advertised as a game preserve, and the other to abolish summer woodcock shooting. I am greatly in favor of both, and I am happy to say there are hundreds of responsible residents of that State who think with me.

The trouble continues in South Jersey between non-resident shooters, farmers and the West Jersey Game Protective Society. Things seem badly mixed and we New Yorkers are all in a fog as to the merits of the case. Many of us would be happy to hear through FOREST AND STREAM, what such thorough and accomplished sportsmen as Mr. George Emlen, Mr. Benjamin Richards and Mr. Winsor, of Philadelphia, have to say about it.

The draining of the famous Sagamon bottoms and Clear and Quiver lakes in Mason county, Illinois, which FOREST AND STREAM notices editorially in issue of Nov. 3, is being supplemented by the reclaiming of Four-mile Prairie, in Green county, Indiana. Although the latter place was but little known it was one of the best mallard marshes in the West. A wide ditch now taps the famous string of ponds where I alone for years enjoyed magnificent shooting. Being familiar with the effect of the ditching of Mason county, where I have killed canvasbacks, redheads, mallards, bluebills and "black Jacks" on several occasions, I will give those who read these notes a point well worth remembering, that in every instance during the transition of ducking grounds to farming lands, there is a stage in the game when the best English snipe shooting that man may wish for can be had. I found this the case in Mason county in 1880, having picked up the point at Havana, Ill., in 1878, when I learned for the first time the contemplated "improvement."

On the night of Nov. 8 a flock of swans were attracted by the lights of the iron furnaces in Hollidaysburg, Pa., and for a long time circled over the village in an aimless way. It is said some of the birds alighted on the housetops and on the ground. The next morning A. P. Walker captured a crippled member of the flock. It was pure white, and measured 6ft. across the wings.

William S. Foster, so well known to old-time Shinnecock Bay gunners and the efficient superintendent of the Palmer's Island Ducking Club, Currituck Sound, North Carolina, writes me from the latter place what ducks there are this season in that once famous water are being slaughtered illegally by fire-hunters and big-gun night-shooters. The law forbids shooting after sunset and before daylight, but, like the rest of our game laws, it is a dead letter. This year the sound is covered with more batteries and bush blinds than ever known before. Every duck has its price upon its head, and every native is going for that price. It is full time the members of the ducking clubs should consolidate and prosecute the law breakers.

Quail shooting on Long Island has been about as poor as usual. At East Hampton there are more shooters than birds. The best place I know is in the vicinity of Ponquogue.

Pennsylvania sportsmen have been enjoying fine wildfowl shooting on the Susquehanna River about Columbia Dam. Ducks are also reported numerous along the beautiful Juniata. Rabbits and some quail are being shot in York county. Once York Valley was a famous cover for quail, and many good shoots have I enjoyed there with "Pop" Treager of York and poor Jim Evans, the once celebrated gun maker of Philadelphia. But in taking a retrospective think, I must say I never saw finer shooting at quail in Pennsylvania than that once afforded in Gratz Valley, Dauphin county. THE WISE ACRE.

NEW YORK, Nov. 14.

CAPE COD WILDFOWL.—Monomoy Island, Cape Cod, Nov. 5.—Wildfowl are arriving now in full force. Large flocks of scoters, commonly called coots, old squaws and sheldrake are seen on the outside; but the wind has been so fresh that there has been no chance for boat shooting off the shoals where the birds tend. Out in the bay a scattering of coots, sheldrakes, old squaws, whistlers, and some large flocks of black ducks are seen. Saw two flocks of brant to-day, one of eight and one of twenty, on the flats. A few beetleheads or young black-bellied plover, winter or greater yellowlegs, with now and then a small bunch of bullpeeps or sanderlings, and dundlins or crooked bills, as they are called here, are seen on the flats. One more cold northwester and they will have departed for warmer region, leaving behind the Bonapartes, herring and great black-backed gulls to swarm to the bleak sandbars and flats seeking some palatable morsel left to them by the receding tide.—CHESTER.

ON A HARVEST HOME TICKET.—Highland Park, Ill., Nov. 8.—I've had my usual Dakota hunt and my usual good time, although I went a little earlier than usual and so missed the geese. All the roads out of Chicago issued "harvest excursion" tickets this year for one fare for the round trip, good for thirty days to return, but the start had to be made Oct. 11. We left Chicago with a large train, and before we were through Minnesota had twenty cars. Quite a respectable proportion of the passengers were hunters, and we dropped some off at nearly every station after we reached Dakota. There are many reasons why I wish I had a complete file of the FOREST AND STREAM, but when I find how much the paper is appreciated by a couple of boys in Dakota to whom my copies are mailed after I have read them I don't regret having given them away. Every Christian sportsman should rejoice that so good and clean a paper as the FOREST AND STREAM is published.—HARRY HUNTER.

TEXAS GAME GROUNDS.—Fort Worth, Texas.—I am often surprised that nothing is to be found in FOREST AND STREAM portraying the merits of Texas as a hunting ground. We have game of all kinds and the mild winters are more inviting than the Arctic winters of the Northwest. In the Panhandle antelope range the plains in great number, and along the streams bear are often found. Turkeys and prairie chickens are not much thought of. In eastern Texas deer abound, and along the Louisiana line the dense brakes harbor a great many bears. Ducks and geese winter there in myriads, and the lakes and marshes are covered with them throughout the winter. About half of the counties in Texas are exempt from the operation of the game law, and the hunter is welcomed wherever he goes. This information will be, I believe, valuable to some of your readers who do not know Texas. —C. E. L.

CHILLICOTHE, O., Nov. 11.—The quail season opened in this State yesterday. Rain having fallen the night before and the weather remaining moist and cloudy, it was a fine day for the field. Many of the sportsmen of the city were out and made very good bags. Birds are well grown and fat. The writer and a companion bagged twenty-seven quail and eleven hares. Birds were lying very close and were hard to find after scattering. The dogs were rank and gunners out of practice. Indications are that quail are abundant.—J. B. McL.

THE BEAR RIVER COUNTRY.—Delphos, Kan., Oct. 31.—Just in from my annual trip to the mountains. Had fine success. Secured deer and elk; and killed a large grizzly bear at short range (30ft.), besides much smaller game. Was in the Bear River country of Colorado; and settlers there say that the Utes were the worst game butchers in the State, killing during the summer for hides and in spring killing the female elk to feast on the unborn calf. —G. N. B.

LLOYDS NECK, Long Island.—The Lloyds Neck Game Protection Association, having as its object the strict enforcement of the game laws in that section of Suffolk county, has been organized. The officers elected for the year are: President and Treasurer, O. E. Schmidt; Secretary, Dr. R. H. Derby.

CONNECTICUT GAME EXPORTATION.

Editor Forest and Stream:

In your issue of to-day "Elk" says relating to the shipping of game out of the State, "Towns on the Connecticut River still ship via the Connecticut River Steamboat Company through the connivance of the baggage masters." In the first place, there is no "Connecticut River Steamboat Company," but the Hartford and New York Transportation Company run a line of steamers between Hartford and New York. I think that as "Elk" is greatly mistaken about the "Connecticut River Steamboat Company," he is equally so in regard to birds being shipped to New York from this section by any line of steamers. Now, "Elk," come out and produce your proof. You have made a statement. Will you prove it? I am well acquainted with that keen sportsman, Mr. C. C. Goodrich, general agent for the H. & N. Y. Transportation Co. He has issued very strict orders to his employees, and should any one get caught, G. B. would surely stare him in face for receiving any game for shipment to points outside the State.

I inclose a letter just received from C. C. Goodrich, Secretary and General Agent of the Company:

HARTFORD AND NEW YORK TRANSPORTATION CO.—Hartford, Conn., Nov. 11, 1887. A. C. Collins, Warden, Dear Sir: In answer to your clipping from FOREST AND STREAM, my baggage masters and freight clerks most positively deny any complicity in the shipment of partridge, quail or woodcock. They think that your correspondent "Elk" must be misinformed. If he is positive and can give proof that our employes are defying law and deceiving us we will immediately displace the guilty party according to notice issued previous to Oct. 1. Yours very truly, C. C. GOODRICH.

Mr. Goodrich has promised me his support, and his word is his bond. Another statement of "Elk": "Now the market hunter shoots nothing but woodcock and grouse, for quail and rabbits do not pay enough to bother about." I will admit that this may apply to rabbits, but on quail I cannot concur. Quail are scarce and command a better price than woodcock. I quote the market price (prices that are paid the market hunter): Ruffed grouse, 40 cents each; quail, 30 cents each; woodcock, 20 cents each. Can "Elk" name a market hunter that will not bother with quail? for I have a friend who would go miles to secure a negative of him, for he must be a *rara avis*. If "Elk" is for the protection of game and can furnish any evidence that will convict, let him write me, giving his name. A. C. COLLINS, Game Warden.

HARTFORD, Conn, Nov. 10.

Camp-Fire Flickerings.

"That reminds me."

225.

THE following was related to me a few days ago as a fact:

A few years ago a party who were hunting deer in the great swamp in Proton township, Grey county, Ontario, were joined, after they had been out a few days, by two tenderfeet. These were advised to follow carefully the first fresh deer tracks that they found; and to their great joy they discovered, before they had gone half a mile from camp, the footprints, freshly made, of what they were certain was a small deer. They followed rapidly the trail, which indicated that the object of their pursuit had been in a most uncertain frame of mind, as it zigzagged about in the most bewildering manner, and finally led them to a clearing, in which stood a farmhouse and outbuildings. A familiar grunt which emanated from a well-known domesticated animal that stood a few yards away on the trail they had been following enlightened the hunters to the fact that the imaginary deer of which they had been in pursuit had resolved itself into a hog that, having gone in pursuit of beech nuts, had led them to its owner's barnyard. The game was not molested, but the air became blue. R. S. B.

A HUGE WHITEFISH.

Editor Forest and Stream:

The catch of whitefish at the fisheries on the west shore of Lake Erie, in the vicinity of Monroe, Mich., has this season been very large, greatly in excess of any previous season for a dozen years. There has also been a very perceptible improvement in the size and quality of the fish taken. Some very large ones have been seen, but the largest ever taken here, and it is believed the largest caught in Lake Erie of late years, was taken from the pound net of Duval and Duclo, near Monroe on Tuesday, Nov. 8. The fish is a male, and weighed, two hours after landing, 18lbs. and 1oz. Its length is 31½in. from nose to tip of caudal fin. Measurement around body in the largest part 20¾in., and midway between first and second dorsal 18in.

The picture transmitted herewith is not a satisfactory likeness of this king of the *poissons blanc*, but it will give your readers some approximate idea of the royal proportions of his majesty. The "haul" which contained this fine specimen weighed a little over nine tons of fish weighing from 1½ to 3½lbs. each. The fish are shipped in ice to the East principally, though many of the fisheries are freezing their entire catch, and placing them in cold storage for the winter and spring trade. J. M. B.

MONROE, Mich.

TESTING THE STRENGTH OF TROUT.

THE article of Mr. Henry P. Wells, in your issue of Nov. 3, brings forward a subject that I have thought much upon, and I am glad to learn that some one has made experiments and taken notes of them for publication, for I think that if anglers did realize the amount of strength that a trout exerts when first hooked they would not report the loss of so many large fish.

Once while we were fishing through the ice for a fish called in northern New Hampshire and Vermont "lunge," and which, I think, is set down in scientific works as the *Salmo namaycush*, a discussion arose among us as to the amount of strength required to pull in a certain fish; and to test the correctness of my opinion I took one of these spring scales such as fishermen carry in their pockets and proceeded to make loops in each line, so that in case I should get a fish on either one of them (I had ten lines in all) I could hook on the scale at once. The depth of water was from 18 to 25ft. Following is the results as I have it now:

A lunge weighing $1^{12}/_{16}$ pounds pulled $2^{1}/_{4}$ pounds.
" " $2^{4}/_{16}$ " " 3 "
" " $12/_{16}$ " " $1^{15}/_{16}$ "
" " $1^{14}/_{16}$ " " $2^{1}/_{2}$ "
" " $2^{1}/_{16}$ " " $2^{1}/_{4}$ "
" " $2^{5}/_{16}$ " " $1^{3}/_{4}$ "

At this point the scales became frozen up, water being spattered into them, and I think that the last two tests were not correct, owing to this cause. These fish are very gamy in this lake and I do not know but that they are everywhere. They are built much like a landlocked salmon and I think have been so called, but they are not like them in color nor in any other way except outline.

The results of this experiment led me to think that we were using too fine leaders for trout fishing and that if we wanted to save our biggest fish we must use leaders that would at least stand the strain of as many pounds as the weight of the largest fish, and so whenever I started fishing I always selected leaders of a size that I thought ought to stand the strain of the largest trout in the water. But in order to know more about the matter, especially in regard to trout, I endeavored to make tests, as Mr. Wells did, and even went so far as to hold the rod upright with the scales fastened two-tenths of the entire length of the rod from the bottom, having the line fastened to the reel so as not to give at all and holding the butt of the rod in the hollow of my hand which rested against my knee. I found that that would not give the right results, for when the rod was bent the leverage was not the same and could not be computed.

At last I hit upon the following plan: After having cast out as much line as I thought was necessary it was taken into the canoe and a line a little longer than the rod was fastened to the line on the rod about 6in. from the top ring. This line was in turn fastened to the scales which lay in my lap. At first it bothered me a little in casting, but after a while I could do as well with as without it. After a fish was hooked I allowed the line to run from the reel until I could lay the rod down and bring the whole pull of the fish on the short line, and by keeping a close watch on the scales the number of pounds that the fish pulled was noted, but not so accurate as could have been done with registering scales. As Mr. Wells says, the scales were in constant motion and it was difficult to see the exact figures. By this method we got the strain of the first grand rush of the fish, which I think is much his best, unless it be the time when he is first brought to the top of the water. As soon as we had got the number of pounds pulled noted, and we were satisfied that he had done his best, the short line (which was fastened by winding three or four times around the long one and then brought up with a half hitch with a bowknot end) was passed to my guide, while I took the rod, and as soon as I had gained control of the fish, the guide pulled out the bowknot, his line became loose and the fish was landed in the usual manner.

While this test left much to be desired, still it gave me figures enough to base an opinion upon. I now think there is no doubt that a brook trout will pull more than his own weight when he is first hooked, but how much more depends very much upon the nature of the water in which he has lived and the time of the year in which he is caught. Pond trout will not pull so much in proportion to their weight as swift water fish, but will pull more in proportion to their length because they are deeper and can pull harder when going sideways. I give below the notes I have taken from time to time in different localities:

PAUL STREAM.

A trout weighing $^{10}/_{16}$ pound pulled 1 pound.
" " $^{8}/_{16}$ " " $^{8}/_{16}$ "
" " $^{8}/_{16}$ " " $^{9}/_{16}$ "
" " $1^{1}/_{16}$ " " $2^{1}/_{4}$ "
" lost " $2^{1}/_{2}$ "

In dead water of a swift stream:

MILLSFIELD PONDS.

A trout weighing $^{6}/_{16}$ pound pulled $^{1}/_{4}$ pound.
" " $^{8}/_{16}$ " " $^{3}/_{4}$ "
" " $^{4}/_{16}$ " " $^{1}/_{4}$ "
" " $^{8}/_{16}$ " " 1 "

With a fish of $^{12}/_{16}$ the line unfastened. Very fat fish; did not fight long.

GREENOUGH POND.

A trout weighing $^{3}/_{4}$ pound pulled $^{14}/_{16}$ pound.
" " $^{8}/_{16}$ " " $^{1}/_{2}$ "
" " $1^{2}/_{16}$ " " $1^{1}/_{4}$ "

Fish not biting well.

MAGALLAWAY RIVER.

A trout weighing $1^{9}/_{16}$ pounds pulled 2 pounds.
" " $2^{2}/_{16}$ " " $2^{3}/_{4}$ "
" " 3 " " $4^{1}/_{4}$ "
" " $^{12}/_{16}$ " " $1^{1}/_{4}$ "
" " $3^{1}/_{4}$ " " 5 "

These fish were caught early in May, when the water was high at the Grass eddy, and the large ones had the current to help them. At Pond de River, below Middle Dam, a trout weighing 3½lbs. pulled 4½lbs., and I think he was in comparatively still water.

I regret that I did not test those which I caught last spring, but I was so afraid I would lose them that I did not take any risk. I asked my guide how big a one we would catch, and he said of about 6lbs., and so I tested my leaders to 9lbs. I broke two in doing so, but I am now glad of it; the leader that stood the test of 9lbs. held a 9lb. fish that day, but was broken by a fish the next day. I learned one thing then, and that was that very much depends on the way the fish is hooked. If it can shut its mouth, it will pull harder and fight longer than if the hook is in such a position as to hold the mouth open.

I hope that Mr. Wells will succeed in his experiments in this direction, as we do not want to use any larger leaders than are necessary, but we want to save our big fish, if only to prove that "some of the lies we tell are true." C. D. O.

NORTHUMBERLAND, N. H.

UNDER THE WHITE-HEADS.

I'VE just got back from over the pond where some very decent fishing came my way, also three or four or five, may be it's six, fishing rods, which I hope to make you break the Tenth Commandment over with all your might. It's sad, but when it comes to first-class work we uns, with those honorable exceptions who tie their own rings on their own sticky sticks, are not "in it."

It was under the White-heads, in Belfast Lough, Ireland. The fish would not rise to any fly whatsoever. Jock-Scott, the silver-doctor, and several midge duns were all N. G., it was hopeless to persist with maggots, cheese-paste, white lurk, scoured brandlings, and even if potted salmon roe had been on hand it would have been despised. The fish were there and we had to get them, so we jigged. Let me confess utterly. Conceive four sets of stout crossed wires, soldered on to a central wire so that the ends are not over each other. Then clinch on to each end a small lozenge of tin, and a big bare hook fast to the lower end, put two pounds of lead at the bottom, may be more, get a string and drop overboard, jigging up and down until you catch on. Then the reel shrieks Yankee Doodle, the two and a half ounce masterpiece twists into a perfect corkscrew, until the big speckled beauty pants and palpitates in the boat.

I was rather successful, for my jig got rigged up with treble hooks while the other lambs had only single ones. Often six at a dip came inboard, and on one memorable occasion every hook save one was graced with a finny victim. You never had such sport, and nary a cent for bait. The exercise is grand, for hours at a time you yank up and down until some other man strikes the school and then you all gather round to hear him swear at your coming, by which time the fish have got scared and gone under to come up half a mile away. But while they come to you, and let me tell you that a speckled beauty—I mean a fresh herring that never saw solid salt—is so good that, as you can't get him any other way than above stated—well, I've gone for him accordingly. GRAY JOHN.

A CATFISH CAUGHT BY TROLLING.—Mr. E. A. Black, of Ottawa, a fisherman of some local reputation, reports a curious piscatorial experience on a recent canoeing expedition on the Upper Ottawa. One morning, when trolling at the foot of the Allumette Rapids, one of the party caught a very large catfish. As the canoe was heavily laden a bullet was fired through the creature's head to enable him to be landed. The hook of the troll was firmly fastened in the fish's mouth. The strangest thing was that the canoe was being steadily paddled all the time, so the troll never could have rested on the ground.—G. S.

ON THE GASCONADE.—II.

"For in the Prophet Amos, mention is made of fish hooks; and in the book of Job, which was long before the days of Amos, for that book is said to have been written by Moses, mention is made also of fish hooks, which must imply anglers in those times."—*Izaak Walton.*

IT seems singular that so many of our people should annually make pilgrimages north, south, east and west, in search of the picturesque and beautiful when they have it in their own State in such profusion and perfection. Talk of the sunny skies of Italy and the beauties of the Alps, the grandeur of the Rockies, the scenery of the Alleghanies, and the summer softness of the northern lakes! Can any of these excel in varied beauty and continued interest the views upon the Gasconade? Not one. Take the people of St. Louis, for instance; year in and year out there is the migration to this place and to that, at great expense for travel and hotel bills, when here, near them, for a trifling outlay of money, they can reach exquisite scenery, delightfully cool nights, and in air which the altitude renders pure and exhilarating.

The Gasconade finds its origin from crystal springs high up in the Ozark Mountains. One branch rises in Webster county, not far from Marshfield, the scene of the terrible cyclone on April 18, 1880, and the other from numerous brooklets in the southern portion of Wright county. Its main tributary, the Piney, has its manifold sources in the southern part of Texas county. These various streams, with the main trunk, are each 250 to 300 miles long. They are when not disturbed by heavy rains perfectly clear and limpid, running as they do over rocks and gravel. The scenery is varied and beautiful. Sometimes upon both sides, nearly always upon one, there rise from the river precipitous bluffs and mountains. These present as one floats down with the stream an ever-varying panorama. The bold faces of the precipices show strata of rocks, differing in color and formation so as to give a pleasing and ever-varying color to the scene. The vegetation, too, is different from that to which we are accustomed at home, as in the scanty patches of soil may be seen the stunted cedar and pine.

Upon either side, at times, are fertile bottom lands containing well-improved farms, but for the last hundred miles upon any of the branches these are like angels' visits, few and far between. The descent of the river is rapid, so much so that in places the fall is very perceptible to the eye, giving the stream a decided down-hill appearance. The result is that every mile or two there are rapids, frequently amounting to falls. Between these rapids are deep, placid stretches of water, densely populated with the finest of fish.

After paddling quietly along for a considerable distance one will hear the roar of the rapids, and dancing in the distance will see the brilliant flashing of the light upon the breaking waters as they go leaping from stone to stone, or over the gravelly edges of the decline. As your boat approaches it will come more and more under the influence of the accelerating current. Then, once glance to get your bearings, to see where the channel is, and, if there be boulders, to observe the best way to avoid them Then at it with might and main, paddle for all that is in you, for in order to have steerage way so that you can control your craft, you must be going faster than the current. As this goes ten or fifteen miles an hour at times, you can see that with the added elbow grease your light boat must be fairly flying. The sensation has just enough of the spice of danger in it to make it exhilarating.

The scenery, the dancing water and the motion, make it grand sport. Sometimes, where the descent is sudden and the boulders somewhat large, with deep water between them, there is real danger, but generally the rapids are shallow, and an upset would only result in a wetting of oneself and the contents of the boat.

Very few miles are passed that do not afford beautiful places to camp. There is no mud. The banks are gravelly and clean. In October, the witching time of year, when our American forests are in their beautiful garb of red and gold, there is no need to look for springs at which to rest. The whole river is a spring—the water as clear as crystal and as cold as need be. To those who can take the time much interest would attach to exploring some of the caves that abound in the mountains upon either bank of the river. Some of these are very large, consisting of a succession of rooms with limestone walls. Not infrequently they contain streams of considerable size, some of which subsequently burst forth as immense springs. While many of these caves are by no means *terra incognita* most of them are practically unknown, so that the spirit of adventure may find in them full sway. The archæologist can here find much to interest him—Indian axes, hammers, spear and arrow points, traces of a civilization probably older than the aboriginal races, the remnants of which are now upon our reservations.

Indeed, the more one thinks of it the more there is to wonder at the strange fatuity which takes, say St. Louis and Kansas City people, into other States to enjoy the beauties of nature when by a short run over the San Francisco and Missouri Pacific roads they can be conveyed to a region so full of loveliness, variety and interest.

It is, then, amid scenes such as these that we find ourselves quietly floating, too much rapt in the beauty of what we see to care much about fishing. During the day a few ducks and a luckless squirrel that runs out on a projecting limb are killed as we sit in our boats. After going some five miles we camp upon the left bank of the river, at Big Spring, an immense fountain of water which comes boiling up in the bed of the stream, most probably one one of those subterranean rivers of which we have spoken, debouching here. The baggage and the cook are hurried ashore, and the others pull away in their boats to try their luck with the bass. Here the old backwoods instinct comes out. This is a noted a camping place and has been used many and many a time before. The trees are full of big nails to hang things on, but as a compensation for the unexpectedness of this discovery there is no "down wood"—all burned up long ago. There is a hatchet, however, in the mess kit; well sharpened, too. Did you ever realize how much wood you can cut with a good sharp hatchet? Well, the mood was on me, and as I sank the blade to the eye in the green wood, there was a pleasure in piling up the branches until I had a respectable-sized wood pile for the night. There was only one drawback to the experience, the handle of the hatchet was too small for the grip and a little too short. If made a half inch larger in diameter and three or four inches longer, it will be, I think, an ideal camp axe, especially as the hammer end is very useful, a few nails being an indispensable part of a complete camp provision. I have seen a good many pages devoted to this subject, and I add these few lines as my quota of observation.

To an old outer the making of the camp has as much interest as any other of the experience of the wood, so after cutting enough fuel I found in the woods near at hand some nice, straight tent poles, which were soon cut and trimmed. A level place, but with drainage in every direction, was selected and the tent and poles deposited there to await the arrival of the boys. The bedding and other baggage were placed beside them, with the haversacks, &c., hung upon a tree that would be at the opening of the tent when stretched. Then to get the supper, that meal of meals in the woods. A fire is quickly made, not one of your bonfires to roast and smoke you out of camp, but a cosy little fire, between two 6in. logs, which will soon furnish some glowing hot coals upon which one can cook the victuals without roasting himself. As it burns I skin the squirrel and pick enough ducks to feed ten men at home. I cut them all up into moderately small pieces, put them in the camp kettle, with a good sized piece of breakfast bacon, cover them with two quarts of water, and hang the kettle on a pole fixed across the fire, to boil. While this process goes on I peel a half dozen good sized potatoes and three onions. After the meat has boiled an hour or more I add the potatoes and onions, and a little hot water, the mixture having boiled down somewhat. By this time the meat is so far done that a splinter can be easily run through it. I season with salt and cayenne peper, and let the mass simmer until the meat of the ducks is ready to fall from the bones, and then I ring the be—, no. I give a view-halloo! and the boys come in to eat the burgoo, a dish that would make a "Louis Quinze" lick his fingers as he called to a Pompadour in the *Parc aux Cerf*, for more. I stated that there were enough ducks in the pot to feed ten men, but the four men and a boy scooped it out clean, and though he did not make any remarks on the subject, there was a look in the corner of the mayor's eye that indicated that one plateful more might have been devoured. If thou dost not know the virtue of a burgoo, go to, thou sluggard, and learn! A pot of strong coffee, pickles, beat biscuit, nice, firm, yellow butter, a dish of dried apples, and a few little knick-knacks, made out a meal which the ozone and the exercise turned into an Epicurean feast. And just to think how easily the lean, dyspeptic grubber after money in bank and office, who can neither eat nor sleep, could find in these leafy vales the health and the appetite which he has bartered away for gold.

Supper over, Billy and the boy wash the dishes, while Will, Frank and I put up the tent. The dish washing is done in boiling hot water, with soap and mop, the table top is also washed and dried, the dishes, pans, etc., put away for the night as cleanly and neatly as if at home. This, *en passant*, is "a big thing," for nothing makes a camp more uncomfortable than dirty ways about the cooking and utensils. The tent once up and well secured, we make down our beds for the night, though it is not yet dark, and prepare for that delicious two or three hours of *dolce far niente* which is the quintessence of enjoyment in camp life. A bigger fire is made, each fellow settles into some little angle or nook, at the root of a tree or in the crook of a limb, that hits his backbone in the right place. Pipes are brought out by those who smoke, the adventures of the day are recited, reminiscenses are indulged in and yarns are spun. Sailors have a reputation for spinning yarns, but if the galley-fire beats the camp-fire in anything but cuss words I am wofully mistaken.

A healthy man, when well fed, will, under normal conditions, ruminate for a while. Let the boys chew the cud of their contemplations as they draw the first few whiffs of their dudeens, and I will tell you what our camp is like.

Have you seen pictures of beautiful rivers, with here a perspective of low land that borders the stream and narrows as in the distance it meets the rising hills upon the other side? The painter's art fills in with all of beauty that he can seize. You stand before the painting and exclaim, "O, it is grand!" Yes, no doubt it is. But no painter's canvas e'er bore such a picture as that which was spread before the members of our party. To produce it required the finger of the Almighty. At our feet flows the beautiful Gasconade. Its clear waters for many yards reveal the pebbles at the bottom. A few steps below our camp, and near the shore upon which we are, arises in the bed of the river the immense spring to which I have already alluded. Though without the comparison the water of the river seems to be clear, yet when this spring wells up and spreads itself about half way across the stream, it puts that to shame with its crystal purity and transparency. Above and about us in the bottom land are the mighty forest trees of Missouri, the oak, the elm, the sycamore, the hackberry, the cottonwood, the hickory, and others of the giants, bending their huge limbs toward earth and dipping their feathered twigs as if in courtesy to our presence, with the wind as it gently swayed them to and fro, sounding a requiem as tender and soothing as the cadence of an æolian harp. Opposite, rising sharp from the water's edge, almost, but not precipitously, there towers brown and rugged one of the mountains of the Ozarks. The timber it bears is of a different character. At the base small oaks predominate. Toward the top, which is more bare, a pine or cedar may be seen clinging to the rocks. A squirrel chatters in a tree near the water, and to complete the scene we have the camp, with a picturesqueness of its own. These are the outlines. The unimaginative soul who cannot himself fill them out into a thing of beauty, could see nothing in the scene if he were upon the spot.

"To him who holds
Communion with her visible form, she speaks"

A language that will bring the streams, the woods, the mountain and the sky into the picture which my memory so fondly recalls, but which my pen is inadequate to put upon the written page.

And now let us turn to the camp-fire. It is a cozy and a comfortable sight. The boys have gotten beyond the ruminating stage and are talking. Billy seems to be dissatisfied with the fishing. "I tell you what, boys," he is saying, "this won't compare with Spirit Lake. There you can go out at any time and catch as many pike and perch as you want. You don't have to wait an hour for a bite."

"Well," says Will in reply, "I don' see it in that way. I'd rather be on this beautiful river than on a half-dozen of your lakes at once. It is true we haven't caught many fish, but the river has been up from the rains and is falling very fast. In a day or two we will catch all the fish we want, and they'll be fish, the glorious small-mouth black bass, none of your pike that you pull up from the bottom of a lake thirty feet deep like a sobby stick. When I fish I want to get fast to something that has life in it and makes such a fight that it is some credit for me to get it in the landing net."

"That's all right," chimes in Frank, who has fished Spirit and Okoboji lakes and likes them very much, "that's all right, but let me tell you there is mighty good fishing in Spirit. Besides the pike, which is the most abundant, there is the crappie and the silver bass, the latter a beauty and a fighter too. But the Gasconade has as fine fish in it as any waters in the country. Men who know, for instance Col. John Reid, who was for years Fish Commissioner of the State, and who is familiar with its waters says that its bass cannot be surpassed either in size or fighting qualities."

"Yes," added the cook, "and they are a much better fish than the bass in the waters about home. There we have the large-mouthed, while these are the small-mouthed black bass. The former is probably the more common fish in American waters. He is game, but not so game as his cogenitor; his flesh is firm and flaky, much superior to the crappie, and he is an excellent fish. The best one I ever saw out West was sent to to me by Mr. Jeff. W. Bedford, of Omaha, who caught it in a lake near that place. It weighed six pounds and four ounces. I presented it to Col. John Reid, who had it prepared in excellent style, and it was discussed by four or five connoisseurs, who pronounced it one of the finest fish they ever ate. But the finest ones I ever saw in size and numbers was about two years ago in the fish market at Washington City, Frank and I were there together, and as we passed down one of the aisles our eyes were attracted to a sight that one seldom sees. Over one of the fish benches, on a long batten, there hung fifteen pairs of bass. To look at them, merely, one would have said that they weighed exactly the same. They were large-mouthed black bass from North Carolina, and the dealer told us weighed from six to six and a half pounds each. I never expect to see such an array as that again. Both of the fish are good. The large-mouth has his friends, some of them zealous enough to claim for him special merits, but my observation is that the small-mouth is the gamest and the best fish, and he exists nowhere in greater purity and excellence than in the Gasconade and its tributaries. About six pounds is his limit as to size, though a gentleman who lived at Competition, a little town on the upper middle fork of the Gasconade, told me once they had been caught there weighing twelve pounds, He probably was color blind and mistook a red horse for a black bass."

"Yes," says Bill, "and there is another difference between the bass of these waters and that of the lakes and sluggish streams about Lexington. Those frequently have worms in the flesh; these seldom, if ever, do; they are as sound as a dollar, and as hearty as a shark. There is a great deal of the quality and pluck of a fish dependent upon the water in which he lives, and these spring-fed streams produce fish at their very best. But even here a fish is better if he is eaten quite soon after he is killed. There is nothing that deteriorates so fast in keeping as fish, or that requires more care to properly preserve fit for food. If you want him as he should be, kill him and have him in the frying pan within the same ten minutes."

"This is the dark of the moon," says Bill; "what time in the moon do you think the best for catching fish?"

"Well," answers Will, "I don't plant potatoes in the moon, and I don't catch fish in the moon. I am not overly sure that the moon has anything to do with it, unless Henshall's reason is a good one. He thinks fish bite better in the dark of the moon, because when the moon shines all night, or the greater part of it, they feed then and are duller in the day time. There may be something in that, but I have seen all signs fail so often that I am a skeptic. I'll tell you one thing, you don't want to rely on signs for the small-mouthed black bass. He is the most capricious cuss you ever pursued in your life. One day he will rise to the fly; the next he will be on the bottom and won't take anything but crawfish; one day he will bite at minnows, and the next he won't notice them; and then sometimes he won't bite at anything. You may see him in the water, and put your bait before his nose, and he won't even condescend to notice it. O, he is a dainty fellow, I tell you. But when he does bite, look out! he's like a house afire, or a cyclone; when he is stricken he makes the water fly!"

And so the boys talk of the black bass until the pipes go out and yawning becomes catching. The lad has already gone to sleep, tired out with the experience and incidents of the day, leaning against the wood pile. He is hauled off to the tent, and soon the stertorous breathing of five vigorous pairs of lungs announces that "tired nature's sweet restorer, balmy sleep," is emperor of the camp.

At the peep o' day our old bachelor Frank, who had been out to get a sniff of the morning air and to resolve himself into a weather bureau, poked his head into the tent, crowed a long and loud imitation of the chanticleer, and shouted, on the same notes, "When the cock crows 'tis day!" As he kept this up, and after every crow slapped his arms down his sides like a rooster flapping his wings, all idea of further sleep had to be given up. We arose, each performed his ablutions in the deliciously clear and cool water of the river. Everybody turning to and doing something, we soon had a splendid, piping-hot breakfast ready, with coffee strong enough to make your hair curl and several enjoyable little tid-bits. When you can't in camp scare up a skillet full of game or fish, and take time to enjoy them, then times are hard, and the fun is out. Such fortune would rarely fall to our one shotgun and four rods. When we leisurely get ready to leave Camp Hamlett we do so with reluctance, for it is a bewitching spot, in which one would like to linger for weeks. But our time is marked out for us. In just so many days we must be at Arlington, and we do not want to have to hurry too much over any of the fifty miles that we have to make.

The day that we left Camp Hamlett was devoted to the river. Very little fishing was done and no shooting. The beauty of the stream claimed our attention, and some fourteen miles of it was covered with ease. The bluffs and mountains were unusually striking and pretty, and

the rapids frequent and exciting. In one of these we had a little adventure. Our boat being much the lightest and handled with paddles we kept the front as pilot. Coming to an unusually long and rapid decline Will remarked that absolutely it ran right down hill. Away in the distance the crystal sparkle of the water announced rapids. The other boat had evidently stopped somewhere, as it was not in sight. We ran very fast even before we reached the rapid, and at one place passed over a fall, but the water there was smooth clear across the river, which was quite wide. The rapids were before us. Standing up a moment to take our bearings we saw a number of large boulders, and the water dashing over them, raising a perfect cauldron of foam. To strike one of these boulders might mean a broken boat, if not something worse. Having chosen our route, we paddled with all of our strength, and darted through as if we had been shot out of a gun. Fortunately the rapids were not long, and we were no sooner in the vortex than we were emerging from it into smooth water. Thought is quick in such cases as this. Just before getting to the worst part of the river we observed the route that we had taken was the only one free from rocks, and that the passage was but a few feet wide. We shouted to each other that we must tell the other boat of this, and in order to do so the moment that it was practicable we heaved an anchor overboard and were brought up standing in pretty rapid water. We waited some little time before the boys came, and when they got near enough endeavored by pantomime to make them understand the best way to come. They intimated that they understood us and started in, but had not gone far until they struck a boulder and broached to. For a moment the boat heaved up as if it was about to turn bodily over, but the bachelors sprang to the upper gunwale and brought it to a safer position. Still they were in a precarious condition. We did not want to lose our bachelors, and I did not want to lose my boy. Besides the provisions were in jeopardy. They did not seem to be able to extricate themselves without help, but how on earth were we to get there against that current and through those rocks? The boys tried to help themselves with their oars, but once or twice they came very near going over. The situation became more precarious. Will exclaimed, "We've *got* to get to them!" and we did, but how I don't know. We paddled and pushed on the rocks, seized hold of boulders and pulled, getting a deluge of water over us in response, but in some way we got there. Coming to them from below by a little prying and lifting, we slid them off into the water, and having directed them as to the channel they slipped through as if they had been greased. Thanks to the staunchness of their boat it was uninjured. It is unnecessary to observe that during this eventful episode Scraps was a cool and unruffled occupant of the stranded boat. It seemed quite immaterial to him whether he was in the water or on board, and he only displayed emotion when some one in the general *bouleversement* stepped on his tail.

A. A. L.

LEXINGTON, Mo.

MACKINAW TROUT.

JERSEY CITY HEIGHTS, N. J. Nov. 10.—*Editor Forest and Stream:* Will you through your paper decide a controversy that has arisen between the undersigned and some other readers, and an ardent and very successful disciple of the rod from the Northwest? Recently Mr. J. Milton Matheany, Superintendent of the Grand Rapids & Indiana R. R., was on here attending as usual the yearly convention of railroad superintendents in New York city. After the business which called them together had been attended to, other topics arose. As is generally the case when gentlemen of brains and culture get together, there were met enthusiasts of the field and stream. Mr. Metheany was telling of his exciting experience and grand catches of salmon and trout around the Island and in the Straits of Mackinaw. He called the fish salmon trout, and remarked that the Mackinaw trout were the salmon trout and nothing else. One of the party intimated that, while the Mackinaw trout were a species of salmon trout, he thought there was a distinction, that they grew larger and that there were otherwise some differences, but what he could not say, but that he recalled, though rather indistinctly, that there was a difference. Upon consulting Hallock's "Gazetteer" we find (page 304) salmon trout and lake trout as *Salmo confinis*. Again (page 329), Mackinaw trout or great lake trout as *Salmo namayeash*. Now, here is a difference in technical names at least, though the description of fish correspond in many respects. Brother Metheany was not satisfied with Hallock, but insisted that the (his) Mackinaw trout was the genuine and only *bona fide* salmon trout, and to back his opinion gave the information that he had an engagement with a party for a trip to the Straits on his return, and if they had good (that is his usual) luck he would forward a specimen. And sure enough, yesterday there came to Dr. P. W. Levering, one of the old members of the J. C. H. Gun Club, with whom he had visited, two magnificent specimens of his (Matheany's) kind of salmon trout, one weighing 15¾lbs., the other 17¼lbs. What sport there must have been in bringing these fellows to gaff. Your delighted corespondent got one of them, and he does not care what you call it, *namayeash* or *confinis*. Wish they were not confined to the far west, but were more indigenous to the Hackensack and Hudson rivers hereabouts. A steak broiled for breakfast had richest flavor, and when boiled, first course, for dinner, words fail us to note its super excellence. But we are just as far from settling the ponderous question. Is this fish sent us the veritable same fish as our common and generally called salmon trout of the East? Is it not rather a species of the genus salmon trout, with some characteristic difference? Is Hallock right and Superintendent Metheany wrong? Or are both right and the other party wrong? We wait with "baited" interest your answer, for have we not been fixed with a specimen? JACOBSTAFF.

[The references to the "Gazetteer" are correctly given. The latest and best authorities, however, now class the Mackinaw trout, the Great Lake trout, the togue and the longe or lunge, as the same fish, *Salvelinus namaycush*. See Jordan and Gilbert's "Synopsis of the Fishes of North America," 1882, page 317, where the habitat is given as "Great Lake region and lakes of northern New York, New Hampshire and Maine, to Montana and northward; very abundant in the larger bodies of water; varying in form and color in the different lakes."]

THE GLENS FALLS, N. Y., *Ray* has published a special edition devoted to "booming" that enterprising town. A contribution from Mr. A. N. Cheney says of the fishing: "In the vicinity of Glens Falls are waters that once afforded the very best fishing. The Halway Brook was second to none as a trout stream; the Hudson River provided good black bass fishing; Lake George was and is noted for the excellence of its lake trout and its fine black bass, and Glen Lake has produced the largest black bass of the small-mouth species ever taken in any water on the globe. Constant fishing, without due regards for the means employed and little attention paid to protection and reproduction, impaired the fishing to a greater or less extent; but in recent years there has been an attempt to remedy these evils, and now there is a prospect that our waters may in the near future teem with fish that are native to them, and that new species may tend to make them a Mecca for anglers from all parts of the country."

IS THIS A TRUE BILL?—A Highland Park, Ill., contributor, who writes anent the jigging at Upper Dam, adds: "The FOREST AND STREAM deserves the thanks of all true sportsmen for the unflinching manner in which they take hold of such cases. In connection with the case alluded to I notice a communication from Colonel Nutt. We know the Colonel out this way as an enthusiastic sportsman, and we are glad to know he retains his love still for the woods and his rod and gun. There is a picture extant by a celebrated artist of an episode in the Colonel's life when fishing for grayling. The artist has chosen a moment when in making a powerful overhead cast, the Colonel fastens his fly in the seat of his companion's breeches. It's rich, and I wish you had it hanging up in the FOREST AND STREAM office to cure you of the blues when things go wrong.—HARRY HUNTER."

Fisheulture.

NEW YORK OYSTER FRANCHISES.

LAST week the New York Fish Commissioners met in their rooms in the Potter Building, New York city, to hear applications for grounds for oyster planting and to listen to objections to the applications of several persons for grants of perpetual franchises upon grounds in Huntington Harbor. This is a most important case, as it involves the right of the State to these waters which are claimed by the town of Huntington under its patents from Colonial Governors long before the State existed. Heretofore the people at their town meetings have ordered the harbor surveyed, mapped, and leased in plots of twenty acres, some of which have already been leased, and the trustees of the town deny the State any jurisdiction in their waters.

The rooms were crowded with oystermen and the full Board of Commissioners was present, several grants in Princes Bay and in Long Island Sound were made without objection, but when the application of Theo. S. Lowndes for a tract of land under water in Huntington Bay was reached there was much interest manifested, Messrs. Geo. A. Black and Martin Keogh appeared for Mr. Lowndes and Charles R. Street for the trustees of Huntington. Mr. Street's objections were as follows;

First—That the premises so applied for are a part of Huntington Bay and are claimed, controled and owned by the town of Huntington under three several colonial grants and patents, viz.: Grant by Gov. Richard Nichols, 1666; grant by Gov. Thos. Dougan, 1688, and grant by Gov. Benjamin Fletcher, 1694.

Second—That we are informed and believe that the applicant has not resided in the State of New York for one year preceding the date of his said application and is not now a resident of the State of New York, but resides in the State of Connecticut and has so resided for many years immediately previous to his said application.

Mr. Street said that the vital issue was contained in the first objection, viz: That the town claimed and owned the premises applied for by Mr. Lowndes, and therefore the Commission had no jurisdiction over the premises. That as this was the first case that had arisen under the law before the Commissioner touching the claim of Huntington, or any other town holding grants under Colonial Governors, it would probably be regarded as a test case and furnish a precedent for action on other applications for premises similarly situated, and it was therefore of the highest importance that the case should receive very full consideration.

The chairman replied that the Commissioners would give the matter a full hearing. But they would not regard a mere claim by the town as of much account; it must be such a claim as will enable the Commissioner to see that the town's claim was a valid one. It might be a fictitous claim. Mr. Street then offered in evidence the three patents of Huntington dated respectively 1666, 1688 and 1694, and read material parts of them from Volume I., of the printed Town Records. The production of these old Colonial Grants, yellow and musty by two centuries of time, created quite a sensation among the Commissioners and all present. There was no further intimation concerning fictitous claims.

Mr. Street then read from chapter 584 of the laws of 1887—the law governing the grant of fishing franchise by this Commission—as follows:

Sec. 9.—This act shall not apply to, nor be held to affect in any way, lands under water owned, controlled or claimed, under Colonial patents or Legislative grants, by any town or towns, person or persons, in the counties of Suffolk, Queens, Kings and Richmond.

He said that this section of the act plainly deprived the Commissioners of Fisheries of any jurisdiction over any part of Huntington Bay; the premises were claimed by the town under its colonial patents. It was not necessary here to prove that the town's title was good, it was sufficient to show that it in good faith claimed the premises under Colonial patents, and this claim ousted the Commission of any jurisdiction. Mr. Eugene G. Blackford, one of the Commissioners, said he thought the claim should be one which the Commission must see is such as constitutes a valid title, a title that would be sustained by the courts.

In answer Mr. Street said that this Commission could not try the question of title, it had none of the machinery or procedure necessary to try such a question. (The chairman admitted this was so). How are you going to tell whether the title is good or bad? If you assume that the title is bad because there has been no litigation in the courts about it, you will grasp nearly all the bays along Long Island Sound, and grant franchises in them, then when the courts ajudicate these titles, and if it turns out that the town owns these bays under these colonial grants, what will these oystermen do who have invested their property in these lands? They would be at the mercy of the towns and would lose their property unless the towns made them grants, for your grant would be void. This section of the law quoted, was intended to obviate just this difficulty; that is, where towns claim under colonial grants, you have no jurisdiction; confining your powers to the Sound and other outside waters not claimed, thus leaving the title to these bays and harbors, claimed under colonial grants, to be determined by the courts; in this way neither the rights of the town nor of individuals are imperiled. So far as Huntington was concerned he was prepared to go into any court and maintain the validity of the colonial grants, that they took in Huntington Bay and that the town held an exclusive right of fishery therein, and that this right of fishery included the control of the bottom of the bay for oyster planting.

At this stage of the proceedings, Mr. Theodore S. Lowndes withdrew his application to the Commissioners of Fisheries. The next case was the application of Mr. John H. Lowndes for a grant of premises near the head of Huntington Bay. As the circumstances of the case were substantially the same as in the case last heard and withdrawn, it was agreed that the evidence introduced in that case apply to this, and the sworn objections of the trustees to grant to John Lowndes was filed, setting up the same objections.

Counselor George A. Black, in behalf of the claimant, then went into an argument to show that the claim of Huntington was not good. He read from the patents for the purpose of showing that they only included upland and not waters. He also argued that the town must show more than a claim under colonial grants and must show a valid title.

Mr. Street in answer to Mr. Black, said it was a waste of time to discuss the question as to whether the colonial grants took in waters, bays and harbors, as well as upland. The Court of Appeals of this State had decided that they did and that was an end of it. It had decided that the Colonial Governors had power to make grants, taking in harbors, bays and waters, such grants being ratified by the Colonial Assembly of 1691, and afterward confirmed by the first constitution of this State and that where such terms as harbors, bays and coves are used they were included. The Court of Appeals in the case of Robbins vs. Ackerly had these very patents now here before it and had decided that they did take in waters, viz., Northport Bay. The title to Huntington Bay could not come up in the case because the premises involved were not in it, but in Northport Bay; but the same principles on which the court held one to be within the grant to the town would take in the other also. He cited the case of the town of North Hempstead against John J. Thompson, involving the title of that town to Cow Bay, in which the General Term of the Supreme Court had decided that the bay was within its patent and had given judgment of ejectment against a man who had held an oyster bed there 40 years. He said the only question remaining, as touching the title to Huntington Bay, is whether it is in fact a bay, haven or a shelter for vessels in time of storm and not a part of the Sound. If it is a bay or haven, our grants take it in. Upon this point he called the commissioners' attention to the affidavits on file with them, of captains of vessels showing the extent to which vessels resort to it in storms.

In conclusion, Mr. Street said the town of Huntington has claimed this bay under its colonial grants for more than two hundred years. Its claim is not founded on any late, fictitious device trumped up for the occasion, but its trustees come here holding in their hands these ancient badges of title, the patents. In the old time the town has been again and again assaulted in its boundaries at every point of the compass, and in all controversies with neighboring towns, and through a score of lawsuits covering two centuries, these old parchments, bearing the crown seal of England, and more than a hundred years older than the State of New York, have been adjudged valid and binding. If this title is good it is not in the power of any commission to take it away and grant it to others. Even the Legislature has no power to deprive the town of Huntington of any lands owned by it, whether above or below water, without making just compensation therefor, as the Constitution provides. He argued at some length the contention that if the law had not expressly deprived the Commissioners of jurisdiction over town lands they would have had no jurisdiction, for they could no more grant to others the lands owned by the town lying under water than they could grant to others the uplands, the farms and building lots owned by the inhabitants, for all were orignally obtained under the same title, the grants from colonial governors. He said he felt sure that when the Commissioners had carefully examined the law and the facts they would decide to make no grants now of lands owned or claimed by towns, leaving it to the courts to decide the title.

On motion of Commissioner Blackford the matter was referred to committee consisting of Commissioners Roosevelt and Bowman (both of them lawyers) with instructions to examine and report whether the Commission had jurisdiction, notice to be given both parties for further hearing in case it was decided that the Board had jurisdiction.

DISTRIBUTION OF CARP.—The U. S. Fish Commission has made many shipments of carp to various States. In some cases these are made to the individual applicants and in others to some local distributing agent. Mr. E. G. Blackford, Fulton Market, New York, has received a large consignment for distribution in lots of twenty to applicants in New York and other Eastern States.

RAINBOW TROUT FRY.—An advertisement elsewhere is to the effect that 500 rainbow trout are for sale by the South Side Club, Oakdale, L. I. They are genuine McCloud River, two years old next spring and average 7 to 9in. long.

FIXTURES.

DOG SHOWS.

Dec. 6 to 8.—Third Annual Dog Show of the Central Berkshire Poultry, Pigeon and Pet Stock Association. W. T. Webster, Secretary, Lee, Mass.

Dec. 6 to 10.—Second Annual Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill. W. J. Hamley, Superintendent.

Dec. 14 to 16.—Third Annual Dog Show of the Winsted Kennel Club. Frank D. Hallett, Superintendent, Winsted, Conn. Entries close Dec. 3.

Jan. 23 to 27, 1888.—First Dog Show of the Agusta Pet Stock and Poultry Association, at Agusta, Ga.

Feb. 21 to 24, 1888.—Twelfth Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

April 3 to 6.—Fourth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

Dec. 12.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

Jan. 10, 1888.—Second Annual Field Trials of the Texas Field Trials Club, at Marshall, Tex. W. L. Thomas, Secretary, Marshall, Tex.

Jan. 16.—Fifth Annual Field Trials of the Pacific Coast Field Trial Club, near Kingsburgh, Cal. N. P. Shelden, Secretary, 320 Sansome street, San Francisco, Cal.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5582.**

NEWS FROM HIGH POINT.

THERE is not much going on here at present. Many of the handlers are located near by and are busy preparing their dogs for the great contest next week. I hear lots of talk as to what will be done by many of the dogs, and if one half of it is accomplished I pity the judges, for they will never be able to decide the matter unless they divide first money among the starters. Possibly, however, some of the dogs may be a trifle off when the time comes, and only be able to get second place. This will simplify matters somewhat, but it seems a pity that third money should go a-begging, as the club is wealthy and well able to stand the expense.

Birds are reported to be very abundant on the club grounds and nearly all of them are well grown. There has been a great deal of rain here, and the ground is in splendid condition for the dogs, and we shall probably see some capital work. The Members' Stake promises to fill well, as the members of the club very generally have signified their intention to run one or more. The principal interest, however, appears to be manifested in the Derby. There is a very fine entry for this stake, nearly all of the best blood in the country being represented. It is impossible to tell at this time how many starters there will be, but from what I have been able to learn it is safe to say that the number will be quite large. It is also safe to say that the winner will have no easy task to get there. The All-Aged Stakes will also be quite interesting, as there are several "dark horses" that may surprise some of the knowing ones. The Champion Stake makes perhaps as much talk as any, and if the dogs that are entered go all right, it will truly be a battle of the giants. But few of the club members have put in an appearance as yet. Mr. Coster and Buckellew are on hand. Mr. Hitchcock and Tammany, Mr. Crawford and Nellie II., and Mr. Gray with Roy Monarch, are at Progress hard at work preparing to win the Members' Stake. Mr. Gregory and Flash R. are at Concord. Col. Merriman and Mr. Avent are located six miles out with thirteen of the Memphis & Avent Kennels' dogs. Mr. Tucker is at his old place, eight miles out, with a string of twenty-four. The Pittsburgh Kennels' dogs, under the charge of Mr. Seager, are seven miles south of here. Mr. Duryea and Hart Haight, with the Highland Kennels' dogs, are near Statesville. Luke White is at Thomasville with several sure winners. Dick Morgan is at Linwood, also with winners. Jess Whaite is at Newton. Mr. Rose with Daisy F. and seven others arrived Saturday night and is located a few miles out. Capt. McMurdo is still at home with his string, but will be here this week. Some of the other handlers are in the vicinity, but I have not learned their whereabouts. Many of the members will be here in a day or two, and by the end of the week there will be quite a crowd. I have been doing a little work every day, getting hardened up for the trials, and expect to come to the post in good form. I spent a few days in Williamsburg, Va., with my old friend Mr. A. E. Smith, formerly of this place, and had a most enjoyable time. Quail were not very plentiful, but we found enough to afford us some good sport, and one day we found the turkeys and were fortunate enough to bring one to bag. I am ashamed to say that I scored two beautiful misses, one on an old gobbler that crossed the road some eighty yards in front of us, and one at a young one that kicked a little but did not stop. I was so disgusted at this that I have not had the face to try for them since my arrival here, but "Old Turk," my hunting companion in former years, is talking turkey at a great rate, and I may get up courage to interview the very uncertain birds, or at least to visit their haunts, in which case I hope to be able to report a different result.

SHADOW.

HIGH POINT, N. C., Nov. 12.

INDIANA FIELD TRIALS.

THE first annual field trials of the Indiana Kennel Club began Monday, Nov. 7, at 1 o'clock P. M., at Bicknell, Ind., with the Derby, in which were eight starters, five setters and three pointers. These trials were something new in this part of the country, and had been pretty well advertised. There were a great many people from different parts of the State present, to see how such a show was conducted. Among the many visitors were Mr. W. A. Thompson, proprietor of the King Don Pointer Kennels of Attica, and several of his neighbors and friends. Owing to press of business, Mr. D. C. Bergundthal, the president of the club, could not attend, and Mr. C. M. Munhall, of Cleveland, O., and Mr. S. H. Socwell, the treasurer of the club, assisted Mr. Madison in judging the Derby. The grounds immediately adjoining the town were well stocked with birds, and if it had not been so very dry the work of the dogs would undoubtedly have been much more satisfactory to the handlers.

The Derby was won by the pointer bitch Cherrystone (Trinket's Bang—Pearlstone), owned by the Devonshire Kennels. She was broken by Mr. J. B. Carnahan, and handled by him in her first two heats, but as she and Zetta King Don, the winner of second, were both broken by Mr. Carnahan, and came together in the deciding heat for first, the judges selected Mr. J. B. Stoddard to handle Cherrystone in this heat. She was greatly handicapped thereby, and her owners should feel very proud of her. Cherrystone is a liver and white of medium size, good length, and has a great deal of speed, good judgment and a splendid nose. The second prize was won by Zetta King Don, a beautiful lemon and white bitch, owned by Mr. Charles Cole of Attica, and bred by Mr. W. A. Thompson, by King Don out of Queen Faust. She is very intelligent, stylish, with fair speed, and shows good judgment on game. She is a bird dog any gentleman would feel proud to own.

The third prize was divided between Queen of Tennessee, a black, white and tan setter bitch, owned by Mr. W. A. Evans, of Indianapolis, and Dash, an Irish setter dog, owned by Mr. John A. Hunter, of Sanborn. Queen of Tennessee is by Gath's Hope out of Freda and was bred by D. E. Rose, Lawrenceburg, Tenn.; she weighs 37lbs., is very fast and stylish, has a good nose and will be a dangerous competitor in another year; she only had ten days' work before entering the trials. Dash is a large dog, has an easy way of going, but is not fast enough for field trial purposes; would be an excellent dog for private shooting.

After competing the Derby the All-Age Stake was commenced with eight starters, six setters and two pointers. The stake was won by the black, white and tan setter dog Lark P., owned and handled by Mr. Curtis Wright, of Connersville; he was bred by Kyler & Keeling, of Oxford, O., is by Glen out of Topsy S. Lark P. is a dog weighing 40lbs., is very fast and stylish, has a good nose and is very obedient; this dog has merit enough to make a good race in any company. The second prize was divided between Change, a black and white English setter, owned and handled by Mr. S. H. Socwell, of Indianapolis, and Jim Blaine, an orange and white English setter, owned and handled by Mr. Joseph Becker, of Indianapolis. Change is a medium sized dog with fair speed and good nose and has plenty of bird sense. Jim Blaine is about the same size as Change, has more speed and style, but not as good a nose and is not so well broken.

The third prize was divided between Ben Lanier, a lemon and white pointer dog, owned by Mr. Harry S. New, of Indianapolis, and handled by Mr. Robert Riley, and Polly II., a black and white setter, owned and handled by Mr. J. B. Stoddard, of Kouts. Ben Lanier is a very handsome dog, but lacks speed and is deficient in nose, being very undecided on points. Polly II. I consider the best dog in the stake. She is very fast and stylish, very quick and decided in her points; she moves and works very much like Bob Gates and is about his size. In her heat with Jim Blaine she got lost from her handler in a cornfield (he having lost his whistle was compelled to work her with a strange one), and could not get her to him. The birds were driven from the corn into the woods, and by the time Stoddard got her there she was so badly winded that she made two flushes, while the other dog was making points. This accident put her so far behind that she was not able to overcome it. Had this accident not happened she would have made it very hot for the winner of first.

THE DERBY.

The starters in the Derby were drawn to run as follows:

QUEEN OF TENNESSEE (W. A. Evans), black, white and tan setter bitch (Gath's Hope—Freda),

against

LINK (Geo. Sluthour), liver and white pointer dog (pedigree not given).

GLENNIS (H. A. Comstock), red Irish setter bitch (Chief—Grace Glencho),

against

DASH (John A. Hunter), red Irish setter dog (Royal C.—Belle).

CHERRYSTONE (Devonshire Kennels), liver and white pointer bitch (Trinket's Bang—Pearlstone),

against

ROSE (Harry S. New), red Irish setter bitch (Elcho— ——).

ZETTA KING DON (J. B. Carnahan), lemon and white pointer bitch (King Don—Queen Faust),

against

SHOT (Joseph Bicker), red and white cross-bred setter dog (—— —Nellie B.).

Monday—First Series.

QUEEN OF TENNESSEE AND LINK.

At 1 P. M. the English setter bitch, Queen of Tennessee, handled by Frank Sheets, and the pointer dog Link, handled by Bob Riley, were cast off in a stubble field on the Horn Farm, one mile southwest of town. Queen showed the better speed and style. While working cross wind a covey of birds flushed wild. Queen coming up pointed where the birds had been. Going on, a single bird flushed wild. Both dogs were steady to wing. Working on down this stubble another covey flushed wild, and Queen was a little unsteady. Birds were followed to the woods, where a single bird flushed in front of both dogs. The dogs were then taken up and taken to woods where the last covey was marked, but no birds were found. Working on through the woods, Queen made game and finally located covey in a patch of weeds, and made a splendid point. Link backed indifferently. Sheets flushed the birds, shot and killed, both dogs were steady to shot. Ordered up. Queen declared the winner. Down 1h. 5m.

CHERRYSTONE AND ROSE.

At 2:40 P. M. Cherrystone, handled by J. B. Carnahan, and Rose, handled by Bob Riley, were started in a ragweed field near the woods, where the last heat was finished. Cherrystone soon pointed a hare, which she very much desired to chase, but Carnahan convinced her that he was after feathers instead of fur. Cherrystone had decidedly the advantage in speed and style. Working back to woods, where last covey had been marked down, Rose pointed in brush; bird was flushed by Riley, Rose steady to wing. Cherrystone pointed in fence corner. Carnahan flushed, shot and killed, both dogs steady to shot. Cherry then started in weed patch at a very rapid pace, soon had a point in a bunch of weeds, and was held for Rose to back, which she did nicely. Ordered up and the heat awarded to Cherrystone. Down 30m.

ZETTA KING DON AND SHOT.

At 3:21 Zetta King Don, handled by Carnahan, and Shot, handled by J. B. Hasner, were cast off in a hay field. Zetta started at a ratling gait and wheeled into a magnificent point. Shot was brought up to back, but refused to honor the point. Carnahan flushed, shot and killed. Both dogs steady to shot. The birds were followed into the corn, where Zetta made two more points. Ordered up, heat given to Zetta. Down 8m.

GLENNIS AND DASH.

Glennis failed to appear in the twenty minutes, and the heat was awarded to Dash.

Second Series.

QUEEN OF TENNESSEE AND CHERRYSTONE.

At 3:30 Queen of Tennessee and Cherrystone were cast off in same field where last heat was started. Cherry had the advantage in speed; they were about equal in style. Cherry pointed in thicket on edge of field. Queen refused to back. Carnahan failed to flush his bird. Working back to the weed patch where covey had been left, both dogs roaded, but birds flushed wild before they could be located. Queen pointed where birds had been, and Cherry backed. Moving on Cherry pointed single bird, was steady to wing. Queen flushed single and dropped to wing. While working down the fence a single bird flushed wild and Cherry dropped to wing. The dogs were then taken up and taken to a corn field, where there were some scattered birds. Cherry pointed but no bird was found. Moving on, she scored a flush; birds flew to stubble and were followed; both dogs pointed at same time; bird was flushed by Carnahan and killed over Cherry's point, both dogs steady to shot. Moving on about fifty yards, Cherry pointed, Carnahan flushed, Cherry dropped to wing. Ordered up and and heat given to Cherrystone. Down 50m.

ZETTA KING DON AND DASH.

At 4:45 Zetta King Don and Dash were cast off in the same stubble field. Zetta had the advantage of speed and style. A covey was flushed by spectators, Dash was steady to wing. Zetta pointed to where the birds had been running, and Dash backed well. Working through this field into a hollow where a branch ran, as Zetta started up hill she came to a grand point on a covey in weeds across the fence. Carnahan flushed and Zetta was steady to wing. Working back through stubble Dash pointed another covey. Hunter flushed birds, Dash steady to wing. Dogs taken up at five o'clock to be put down again in the morning.

Tuesday, at 7:45 A. M., the dogs were turned down in Horn's stubble fields, both showed good speed and went to work with a will. A covey was walked into by the handlers and both dogs were steady to wing. The birds were followed to the woods where they had been marked down. Zetta pointed a single bird, Dash backed, Carnahan flushed, shot and missed, both dogs steady. Moving on Dash flushed a single bird. Turning back into stubble both dogs showed great speed, Zetta having a little the best of it. Worked on through woods to hay fields. While Zetta was going down wind at a clipping gait she flushed a covey and dropped to wing. Birds scattered in corn and were followed. Zetta soon established a very pretty point. Carnahan flushed and Zetta dropped to wing. Ordered up and heat awarded to Zetta. Down 40m.

Third Series.

ZETTA KING DON AND CHERRYSTONE.

Zetta King Don, handled by Carnahan, and Cherrystone, handled by J. B. Stoddard, were cast off in a stubble field at 8:45. Both started off at a clipping gait. Zetta had the most style, but Cherry the most speed. Both dogs worked as if their lives depended on this heat. Carnahan was of course anxious to win, and Stoddard was equally desirous of winning, as it would be a great feather in his cap to beat the great Zetta with a strange dog; both handlers showed excellent judgment in handling. A covey was flushed by spectators and settled in same field. Following the birds Cherry pointed, birds flushed and she dropped to wing. Cherry again pointed, bird was flushed by one of the judges, steady to wing. Sent on, both dogs increasing their pace, a covey was flushed by handlers and followed; Zetta pointed, Cherry backed in magnificent style; Carnahan flushed, shot and killed, both dogs steady to shot; Zetta pointed again, but Carnahan failed to find the bird. Sent on, Zetta flushed, both dogs dropping to wing; sent on again, both dogs pointed a hare; both dogs pointed in a bunch of briers at same time, bird ran. Zetta moved on and pointed again, no bird could be found; Cherry pointed, bird flushed. Working through stubble into hollow, Cherry pointed and flushed almost immediatcly after; Zetta also flushed, moved on and pointed; Carnaha nflushed, shot and missed, steady to shot; both dogs pointed where birds had been running. Dogs ordered up and taken to stubble on Wampler farm, a quarter of a mile north. After ten minutes' rest the dogs were turned loose, and Zetta pointed in a few minutes, Cherry backing in great shape. Both dogs were steady to wing when birds were flushed; birds followed to corn, where Cherry pointed, bird flushed to order. Ordered up and heat and first place awarded Cherry. Down 2h. 24m.

Fourth Series.

QUEEN OF TENNESSEE AND ROSE.

Queen and Rose were put down at 11:04 to decide which should compete with the runner-up for second prize. In range, speed and style they were evenly matched; taken up at 11:45 for lunch, no birds being found. At 1:40 they were put down in a cornfield, which was drawn blank. Entering small stubble field some scattered birds were flushed by spectators, going to the woods. Dogs ordered on. Rose flushed, steady to wing. Sent on, Queen pointed a single bird, which was flushed to order. Queen here began to increase her speed and showed she was made of the right kind of material. Rose pointed falsely. Queen flushed a covey, the birds going to the corn, the dogs followed and both flushed. Queen again flushed, then pointed and was backed by Rose. Bird flushed, both dogs steady to wing. Going to stubble Queen pointed a new covey and was a little unsteady to wing. Ordered up and heat awarded to Queen. Down 1h. 31m. The owner of Zetta refusing to allow her to run another heat to-day, the deciding heat for second place was postponed until to-morrow, and the All-Aged Stake was called.

Wednesday—Fifth Series.

ZETTA AND QUEEN

were put down in a stubble field near town at 7:30 A. M., to compete in the deciding heat for second place. A slight rain last night made things more favorable for the dogs. In style they were about equal, Zetta being more rapid. A covey flushed wild some distance ahead of the dogs; moving on Zetta pointed a single in grand style. Carnahan flushed, shot, and killed, dogs steady to shot. Moving on, Queen flushed a single. Zetta then false pointed; going back she flushed a single, then false pointed. Entered an adjoining ragweed field which was drawn blank. Returned to the Horn farm where the Derby started. Zetta pointed, birds flushed wild, Zetta steady to wing; she again pointed, Carnahan flushed. Ordered up and heat and second place awarded to Zetta. Down 17m.

SUMMARY.

First Series.

Queen of Tennessee beat Link.
Dash beat Glennis.
Cherrystone beat Rose.
Zetta King Don beat Shot.

Second Series.

Cherrystone beat Queen of Tennessee.
Zetta King Don beat Dash.

Third Series.

Cherrystone beat Zetta King Don and won first.

Fourth Series.

Queen of Tennessee beat Dash.

Fifth Series.

Zetta King Don beat Queen of Tennessee and won second.
Queen of Tennessee and Dash divided third.

ALL-AGED STAKE.

The judges were Messrs. Madison, Freeman and Munhall. The starters were drawn as follows:

LARK P. (Curtis Wright), black, white and tan setter dog (Glen—Topsey S.),

against

CHANGE (S. H. Socwell), black and white setter dog (Dashing Don—Daisey Starlight).

JACK W. (E. M. Usher), orange and white setter dog (Sargent—Eva),

against

BEN LANIER (Harry S. New), lemon and white pointer dog (Jo Bowers— ——).

JIM BLAINE (Joseph Becker), orange and white setter dog (Don Nilson—Nellie B.),

against

GLADDES (P. Tindolph), black, white and tan setter bitch (Gladstone—Sanborn's Nellie).

POLLY II. (J. B. Stoddard), white and black ticked setter bitch (Josh Whitcomb—Polly),

against

POPSY (M. R. Williams), black, white and tan setter bitch (Sweep—Lady Pape).

First Series.

LARK P. AND CHANGE

were put down in a ragweed field at 3:10 P. M. In range, speed and style Lark P. had the advantage, he being a very swift and stylish dog. A covey was flushed by spectators and flew into an orchard; the birds were followed. Here Lark P. had quite a lively chase after a bird which was flushed by a spectator. After returning to his handler he soon got down to business. In the meantime Change pointed and Lark P. backed. Wright shot the bird and Lark P. broke shot, but retrieved the bird. Moving on, Lark P. pointed, handler flushed bird but did not shoot. Change pointed, but Socwell failed to flush the bird. Passing into a stubble field, Lark P. pointed handsomely. Passing on after flushing the bird, to which Lark P. dropped, he soon made three more points, all of which were perfect pictures. Ordered up at 3:45 and the heat given to Lark P.

JACK W. AND BEN LANIER.

Jack W., handled by P. Tindolph, and Ben Lanier, handled by Bob Riley, were put down in stubble field. In speed Jack W. was superior, in style they were about equal. This field was drawn blank, dogs ordered up to go to another field. While crossing a branch a covey flushed wild, the dogs were now put down and followed the birds in edge of a bunch of weeds. Ben pointed, Jack not near enough to back. Birds flushed. Jack then pointed a single bird in fence corner, bird flushed wild; steady to wing. Ben again pointed, bird flushed by handler, Ben steady to wing. Passed on to next field, where both dogs false pointed. Moved on to cornfield where Ben pointed. Riley flushed, shot and killed, and Jack rushed in and retrieved the bird. The bird was then thrown

for Ben and he retrieved in good style. Passing on into an orchard both dogs flushed and were steady to wing. Passed on into a ragweed field and a covey was flushed by handlers. Dogs ordered up ot 5 o'clock, to be put down in the morning.

Wednesday morning at 8 o'clock they were cast off in same field to complete their unfinished heat. A single bird was flushed by Judge Freeman, and two others by Tindolph. The rest of the field was drawn blank. In weed patch Jack pointed a rabbit and was steady to fur. Jack chased a rabbit in large stubble, but stopped to order. This field being drawn blank a cornfield was drawn, but was tenantless; then entered stubble, where Ben pointed falsely. After drawing a large cornfield and finding no birds the dogs were ordered up and taken to a stubble field about a quarter of a mile to the north. Here they were put down and a large covey flushed wild and went into the woods. Ben flushed twice and made one false point, and Jack W. flushed and made a false point. The extreme dryness was the cause of such poor work. Going on into the woods Jack W. flushed twice in succession. Ordered up, heat awarded to Ben Lanier. Down 3½h.

JIM BLAINE AND GLADDES.

Jim Blaine, handled by Becker, and Gladdes, handled by Tindolph, were cast off in a ragweed field. In speed and style they were equal. Jim flushed a large bevy, both dogs steady to wing. Moving on Gladdes flushed a single bird. Moving on a bird flushed wild, both dogs unsteady, and again Jim flushed a single and dropped to wing, then flushed another and was steady. In brier patch Gladdes flushed a single and was steady to wing; on a hillside Jim flushed. Ordered up and taken to a field where a bevy had been marked down by spectators. Jim soon pointed, Gladdes backed. Becker flushed, shot and killed, firing both barrels, which was quite amusing to Judge Madison. Becker succeeded in killing a bird and Jim retrieved it in good style. Jim then flushed a single and was a little unsteady; soon after he flushed a covey, but was steady to wing. Moving on he flushed a single and dropped to wing. Passing over the fence Gladdes flushed a single in a lane; soon after Jim pointed a covey. Becker flushed and both dogs were steady. Ordered up and heat awarded to Jim Blaine. Down 58m.

POLLY II. AND TOPSY W.

Polly II., handled by her owner J. B. Stoddard, and Topsy W., owned and handled by M. R. Williams, were put down in new grounds east of town. Mr. H. A. Comstock was substituted for Mr. Freeman as judge, Mr. Freeman being detained at home on business. The dogs were turned loose in a weed field. This was a very speedy brace and they went to work as if they knew what was expected of them. The field being drawn blank, the dogs were taken up and sent to a thicket near by, where a covey was seen to alight. Topsy pointed where birds had just arisen. Soon after another was flushed by the handlers. The briers being too thick for the judges to see the working of the dogs, they were ordered up and put down in a stubble field, a covey was found and pointed by Polly. Stoddard flushed, shot and missed. Following the birds into the woods, Topsy pointed, and the birds flushed almost instantly; she was steady to wing. Polly picked up three points here in one, two, three order and won. The dogs were ordered up and the heat awarded to Polly. This was the best heat run during the trials. Down 1h.

Second Series.

LARK P. AND BEN LANIER

were put down in a large stubble field adjoining the woods where the last heat was finished. After drawing the field blank the dogs were thrown into the woods; both dogs made an excusable flush. Entering another stubble, both dogs scored a flush; Ben again flushed a single bird. In the edge of the woods a large covey flushed wild; these birds were followed but could not be found, as no one had marked them. Returning to the woods, Lark P. pointed close to Judge Madison, who by request of Wright flushed three birds; these birds were marked down in the stubble at the edge of the woods. The dogs were ordered on, and before any of these birds were found a severe rain storm set in, and the dogs were ordered up, and every person started for a straw stack in an adjoining field, which was not reached before all were thoroughly drenched. This put a stop to the trials for the day. The dogs were taken up at 3:50.

Thursday the dogs were down at 9:30 on the Chambers farm. Mr. A. P. Craft was selected to judge in place of Mr. Munhall, who was called home. The weather was much cooler, and the ground was very wet from the rain of last night. The stubble in which the dogs were put down to finish their heat was all that a sportsman could desire. Working down wind Ben flushed and was steady to wing, Lark pointed scent where birds had been; going on, another covey flushed wild, and went into corn; Lark pointed in the edge of the corn. Wright flushed, shot and killed, Lark retrieving in good style. Ordered up; heat given to Lark P. Down 8m.

JIM BLAINE AND POLLY II.

were cast off in the same stubble field at 9:40. Jim pointed in edge of corn, bird flushed, Jim steady to wing. Jim again pointed, but was unsteady to wing. Birds were followed to the woods; Jim flushed and stopped to order. Polly flushed two singles in the woods. Dogs taken up and put down in stubble field a short distance away. In this field Jim captured and killed a hare, greatly to the amusement of the spectators. This field being drawn blank, we passed to another, where Polly pointed a covey in thicket on edge of stubble. Stoddard flushed but did not shoot, Polly steady to wing. Moving on she got another point. At the same time Jim pointed another covey in a bunch of briers a few yards to the left, then secured a point on a single. Becker flushed, shot and killed, and Jim retrieved in good style. Taken to stubble, Polly pointed, Jim backed indifferently. Moving on Jim flushed the covey. Following the birds into the woods, Polly pointed, and was steady. Jim pointed falsely. Both pointed singles. Jim pointed a bird on a bush; handler shot and missed. Polly then pointed and was steady. Working down wind Polly flushed; then Jim flushed a bird in a fallen treetop. Passing into stubble both dogs flushed; Polly soon after made another flush. These flushes were excusable on account of poor cover. Entering another field Polly pointed falsely. Passing on Jim pointed a single bird in a fence corner, which flushed almost immediately. Passing on Polly pointed three birds in briers. Jim pointed a bevy in another patch of briers. Dogs ordered up and heat given to Jim Blaine. Down 1h. 50m.

LARK P. AND JIM BLAINE

were put down at 12:10 in stubble field to decide first place. Lark showed superior range, speed and style. Jim pointed in edge of corn, bird flushed, steady to wing. Lark pointed a covey. Wright flushed, shot and killed, Lark steady and retrieved in good style. Jim pointed in corn, bird flushed by Becker, dogs steady to wing. Following birds to woods, Lark pointed and Jim backed to order. Jim pointed; Becker flushed, shot and missed, dogs steady. Lark pointed, moved on through woods; Jim flushed a single; Lark pointed a single, Jim ran in ahead and flushed. Ordered up at 12:48 and heat and first place awarded to Lark P.

Second Series.

CHANGE AND BEN LANIER

Were cast off in a stubble at 1:40 to decide which should run with the runner up for second place. Ben pointed and then flushed in woods where the covey had been marked down. Change flushed a single in the briers, steady to wing; moved on and Change pointed, Socwell flushed to order. Moving on Change pointed again; Ben false pointed. Moved on and Change pointed another single. Ordered up and heat given to Change. Down 20m.

Third Series.

JIM BLAINE AND CHANGE

were cast off in a stubble field at 2:20 to decide the winner of second prize. After running until 3:50 without either having any advantage over the other, the handlers requested the judges to divide the purse and honors, which was done, and the first annual field trials of the Indiana Kennel Club were a thing of the past.

SUMMARY.

First Series.

Lark P. beat Change.
Ben Lanier beat Jack W.
Jim Blaine beat Gladdes.
Polly II. beat Topsy W.

Second Series.

Lark P. beat Ben Lanier.
Jim Blaine beat Polly II.

Third Series.

Lark P. beat Jim Blaine and won first.

Fourth Series.

Change beat Ben Lanier.

Fifth Series.

Change and Jim Blaine divided second.

Sixth Series.

Ben Lanier and Polly II. divided third.

The officers and directors of the club are highly delighted with their success, and at a meeting of the members present at the hotel in Bicknell, Thursday evening, Vice-President Freeman in the chair, it was decided to hold trials again next year. A vote of thanks was tendered the citizens of Bicknell and the farmers owning the grounds on which the trials were run, also to Mr. C. M. Munhall, of Cleveland, O., for the able manner in which he had assisted the others in judging the trials. A special vote of thanks was tendered the secretary, Mr. Madison. RICHMOND.

WESTMINSTER KENNEL CLUB.

THE annual meeting of the Westminster Kennel Club was held at Delmonico's last week. It was well attended. Officers chosen are: President, J. Otto Donner; Vice-President, Robert C. Cornell; Secretary, Frank R. Hitchcock; Treasurer, Bradish Johnson, Jr.; Board of Governors—G. Lee Knapp, C. du Bois Wagstaff, Robert C. Cornell, W. B. Smith, J. Otto Donner, J. Coleman Drayton, H. Walter Webb, F. R. Hitchcock, George de Forest Grant, Lucius K. Wilmerding, Thos. H. Terry, Louis C. Clark, Francis O. de Luze, George S. Floyd-Jones, Bradish Johnson, Jr., R. H. Williams and Elliot Smith; House Committe—F. R. Halsey, George de Forest Grant, G. Lee Knapp, Bradish Johnson, Jr., R. H. Williams; Ground Committee—R. C. Cronell, C. du Bois Wagstaff, F. R. Hitchcock, Elliot Smith and T. H. Terry; Handicapping Committee—George de Forest Grant, G. Lee Knapp and W. B. Smith.

The club will hold its annual show on February 21, 22, 23 and 24, 1888. The premium list will be issued after the meeting of the American Kennel Club, on Dec. 4, and probably will be ready for distribution on Dec. 15. A large party of the Westminster Kennel Club members will leave here on Saturday next to attend the Eastern Field Trials Club's meeting, which commences on Monday next at High Point, N. C.

For many reasons in the opinion of exhibitors, the club has made a good move in starting the dog show season of the Eastern circuit. It is believed that a much larger entry can be obtained at that season, especially in the hunting dog classes, prior to the English snipe season. Heretofore the club has given its show after all the rest, and in consequence lost a large entry of young dogs, which succumbed on their rounds to distemper. Besides, in May, many of the people who would patronize the show are getting ready to go out of town for the summer and cannot attend it.

COCKERS FOR BENCH AND FIELD.

TORONTO, Nov. 5.—*Editor Forest and Stream:* Regarding this controversy I stand just where I did in my last communication. I assert that the style of cockers such as were shown and were at Detroit (these being the particular dogs that were called hard names in the outset), are able to work and work well if taken at proper age and given ordinary training. In addition to this, his style and general outline is most pleasing to the eye, his great girth, deep chest, strong loin, short but powerful limbs, flat coat, rich feathering, dark eye, style of head, set of cars, makes him the prince of dogs, a staunch little worker in the field, a companion at home or on the street that attracts attention at all times.

Compare him with the leggy, wavy-coated, tucked-up, specimens such as it seems Mr. Nelles desires to get back to if he can. It is not hard getting back. It won't require any tact or care and probably on that account may be made more profitable. Mr. Nelles says he has frequently gone out for a day or two with a couple of his prize winners. Will he kindly name the pair? I think I know all his prize winners (having sold him several of them), and I think I can venture the assertion that not one of them has had the benefit of a day's training and have scarcely ever had exercise enough to keep them in good health. How can Mr. Nelles expect dogs that are two or three years old and have scarcely had exercise to go out and work? I should also like Mr. Nelles to name the leggy specimens he used on same occasions, that I may satisfy myself as to whether the leggy fellows were as green at the work as the prize winners must have been.

I very much doubt if Mr. Nelles give his dogs work or handling sufficient to enable him to give an opinion; however, I am now open for evidence that my change may opinion. We will see. I think Mr. Nelles's proof will prove to be on paper after all. I once more say that I have never claimed that the cocker was as useful for purely hard field work as the field spaniel, but I do claim for him that he is not a toy. He has lost none of the natural instincts of the breed; he is strong, hardy, plucky and handsome, and as a show dog and for ordinary work in the field, he is not only a sportsman's dog, but a gentleman's dog. I believe we have succeeded in establishing a type that ought to be perpetuated. I believe the Spaniel Club are of the same opinion, and I have no fear of a change. We all know how much easier it is to breed the leggy cocker, with all our care they will come that style. I shall do my level best not to breed one of them, but I feel sure I shall always be favored with enough of them to enable me to compete at the shows if they are to become the fashion. If not I can pick them up for $5 or $10.

Mr. Nelles's quoting from "Stonehenge" does not reveal the fact that the cocker is a duck dog, and for rabbits I think we have a better dog.

Mr. Nelles accuses me of a want of the love I have claimed for the cocker in the fact that I had said "that any dog I had was for sale." Now, I think I could not well go on breeding (wherein lies the love I spoke of) unless I sold a few from time to time, except I emigrated West and took up a ranch.

Since writing the above, I have read Mr. Mason's letter, which I think sound and sensible. I have only to say in reply that I do not think I have owned or shown a cocker that, judged by the standard, would be considered too long in body for other measurements. Mr. Fellows I wish to set right regarding my reference to Tippo and Toronto Jet. I did not name them as typical cockers, but distinctly stated that our cockers had an intermingling of the field spaniel blood. I warned them to contradict Mr. Osborn's statement that all our Canadian cockers were either themselves imported from the United States or their sires or grandsires were.

The time has come and we have enough good cockers now in Canada and the United States to maintain them a distinct and desirable class. H. G. CHARLESWORTH.

THE PACIFIC COAST FIELD TRIALS CLUB will hold its annual meeting on Jan. 17, 1888, on Mr. S. C. Lilli's magnificent ranch, near Hanford, Cal. The ranch, which is known as El Rancho La Guna De Tache, consists of 62,000 acres, or about 100 square miles. It is on King's River, in Fresno and Tulare counties. King's River is the boundary on the south side for a distance of 36 miles. The natural waters along and through the ranch are more than 120 miles; three principal canals and their branches 140 miles in extent; 200 miles of fencing bound the ranch; 4,000 acres are in alfalfe grass. There are 16,000 head of cattle on the ranch, 400 horses and 6,000 hogs. The ranch is from 196 to 275ft. above sea level. It is located in the famous San Joaquin Valley, being 226 miles south of San Francisco and 253 miles north of Los Angeles. About 40,000 acres are now irrigated. There are large tracts of wild sunflowers, and in these and in the alkile bushes the valley quail, on which the trials are run, actually swarm. Besides the quail, the other game consists of a few deer, mountain lions and bears, wildfowl, snipe and rabbits. It was here on Mr. Lilli's kind invitation that the trials were run so successfully last December. The ranch is thoroughly preserved, and no one is allowed to shoot on it without a written permit from it owner. Several employed hunters see that this is enforced. The ranch is one of the finest in the world, and is probably the best stocked game preserve in America. When it was learned that Mr. Franklin Satterthwaite, of Newark, N. J., would probably visit California on a shooting trip this winter, he was at once written to by Judge C. N. Post, of Sacramento, to consider himself down for assisting to judge at the trials. Judge Post we learn expected to start three runners in the Derby, Sirocco, Stephanie and Sunlit, but distemper, the fell destroyer, got into his kennels about the middle of last September, and killed five three-month-old puppies by Harold out of Janet, and Stephanie. Sirocco is nearly a wreck from chorea, and Sunlit is just touched the least bit with paralysis of the loins. She will be all right in a few weeks, but too late to work for the Derby. The promising trio Sunlit, Sirocco and Stephanie were all out of Sweetheart (Count Noble—Dashing Novice) by Sportsman (Gladstone—Sue), Judge Post having sent Sweetheart to Tennessee to be bred to Sportsman. Another of the litter, Sirius, will start in the Eastern and American Derbys. Sunlit, Sirocco and Stephanie were grand lookers before their sickness, and it is with regret we learn of the ill luck to the genial judge's kennel. Mr. George T. Allender, who is beyond doubt the best professional field trial handler in California, is at present located at Watsonville, Cal. Mr. Allender handled a large string of dogs successfully last year, and will again attend the coming trials in January.—SCATTER GUN.

IMPORTED KINO.—Wrightsville, Pa., Nov. 7.—*Editor Forest and Stream:* In reply to "Malcom's" query concerning the importation of Kino, let me say that my authority for claiming the dog as imported comes from his former owner, Mr. Dan O'Shea, who entered him at Philadelphia show, 1884, as imported; who sold him to Mr. Satterthwaite as such, and who informed me verbally that the dog was imported. Suppositions have since been expressed concerning the breeding of this dog, but as none of them have been proven facts, I felt warranted in speaking of and advertising the dog as he had been represented to me. But whether imported or not, whether bred in America, Canada or England, the fact nevertheless remains that this dog, as a stud dog, has few equals; and of him one of our most noted beagle judges said, when speaking of show beagles, "He is the best I have ever seen." Every owner of stock sired by this grand stud dog will hail with delight the forthcoming of "Malcom," for, judging from the tone of his last item, he evidently knows all about the breeding, etc., of Kino, and can give us all particulars concerning him. The owners of champion Lou and the first-prize winners Tony Weller, Riot and a host of other good ones sired by Kino, will all thank him for this information, and the qualities of Kino will be credited where they properly belong, viz., to his breeder, sire and dam. So please let us have the facts of the matter, "Malcom," which you say are so generally known, but don't waste space with mere suppositions.—A. C. KRUEGER.

THE AMERICAN PET DOG CLUB was organized at a meeting in this city Nov. 15, with a membership of thirty and the following officers: Mrs. Chas. Wheatleigh, of New York, President; Dr. Surles, of Worcester, Mass., First Vice-President; Mrs. Eugene Clarke, of New York, Second Vice-President; C. Ormsby, of New York, Secretary; —— Clark, Assistant Secretary and Treasurer, 36 Liberty street, New York. The first show will be held at Madison Square Garden Dec. 14 and following days, in a room well heated; entry fee $2; judges to conform strictly to "Stonehenge" standards. Open to toys and to mature St. Bernards and mastiffs.

DEATH OF VANDEVORT'S DON.—Pasadena, Cal., Nov. 7.—It is with extreme regret we have to record the death of poor old Don. He died after a very short illness on Friday, Nov. 4. Language fails to express our deep sorrow for the poor old fellow, and we all feel as if we had lost our truest and best companion.—R. T. VANDEVORT.

"OUR PRIZE DOGS."—Mr. Charles H. Mason advises us that the work on his forthcoming book is progressing at a rate which gives promise that the book will be ready for delivery early in 1888.

THE ROCKFORD, ILL., SHOW premium list is out There are forty-eight classes, with prizes of $5 and $3.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Bob V. By J. V. Whitaker, Way's Station, Ga., for liver and white pointer dog, whelped July 15, 1887, by Fritz Croxteth (Count Croxteth—Lo Faust) out of Arch (La Guy—Darkness).

Ned Arlington. By W. Parry Kennad, Lowell, Mass., for dark red Irish setter dog, whelped Aug. 1, 1887, by Goldstone (Arlington—Flora) out of Dorcas (Glencho—Syren II.).

The Rambler. By J. M. Fromefield, Jr., General Wayne, Pa., for white, black and tan beagle dog, whelped May 8, 1887, by Marchboy II. (Marchboy—Myrtle II.) out of Lizzie (Ringwood—Nora).

Pride of the West and Lady Woodford. By Tower Grove Collie Kennels, St. Louis, Mo., for sable and black, white and tan collie bitches, whelped July 5, 1887, by Nullamore (The Colonel—Jessie) out of Dot (Rox—Jersey Lily).

Aldershot and Lady Rose. By F. L. Cheney, Pittsfield, Mass., for dark red Irish setter dog and bitch, whelped Oct. 13, 1887, by Chief (Berkley—Duck) out of Bizreena (Nimrod—Bizorah).

Fannie W., Kate W., Velda W., Nettie May W. and Baby W. By Harmony Kennels, Covert, N. Y., for black, white and tan beagle bitches, whelped Oct. 14, 1887, by Cameron's Racket (Rally—Louise) out of Pussie (Ringwood—Beauty).

Leslie W. By Harmony Kennels, Covert, N. Y., for white and tan beagle dog, whelped Oct. 14, 1887, by Cameron's Racket (Rally—Louise) out of Pussie (Ringwood—Beauty).

Harmony Kennels. By C. S. Wixom, Covert, N. Y., for his kennels of English greyhounds and beagles.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Nellie—William Tell. Wm. Wadsworth's (Lowell, Mass.) pointer bitch Nellie to C. A. Parker's William Tell (A.K.R. 2640), Oct. 1.

Daisy A.—William Tell. Chas. A. Parker's (Worcester, Mass.) pointer bitch Daisy A. (A.K.R. 3388) to his William Tell (A.K.R. 2640), Sept. 5.

Ada—Montrose. F. A. Clapsadel's (Painesville, O.) smooth St. Bernard bitch Ada (A.K.R. 3766) to Alta Kennels' Montrose (Wotan—Reka), Oct. 29.

Lady Alpha—Montrose. Alta Kennels' (Toledo, O.) rough St. Bernard bitch Lady Alpha (Tell—Norna) to their Montrose (Wotan—Reka), Sept. 7.

Nellie—Thyrus II. H. D. Brown's (Waterbury, Vt.) Great Dane bitch Nellie (A.K.R. 5211) to F. C. Evans's Thyrus II. (Thyrus—Caro), Aug. 24.

Morning Star—Gun. Chas. York's (Bangor, Me.) English setter bitch Morning Star (A.K.R. 1541) to his Gun (A.K.R. 1538), Nov. 3.

Daisey—Spider. W. H. Abram's (New Haven, Conn.) Italian greyhound bitch Daisey to A. B. Norcross's Spider (Storey's Dick—Posey), Oct. 24.

Belle Clifton—Ben Lomond. J. C. Curry & Bro.'s (Beason, Ill.) collie bitch Belle Clifton (A.K.R. 1569) to Tower Grove Collie Kennels' Ben Lomond (A.K.R. 3701), Oct. 19.

Lady Alice—Otho. Alex. M. Hughes's St. Bernard bitch Lady Alice (Valentine—Miss Meg) to Otho (Rollo—Lady Abbess), Nov. 4.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Lady Alpha. Alta Kennels' (Toledo, O.) rough St. Bernard bitch Lady Alpha (Tell—Noma), Nov. 7, thirteen (eight dogs), by their Montrose (Wotan—Reka).

Fanny B. H. D. Brown's (Waterbury, Vt.) Newfoundland bitch Fanny B. (Nero—Darkness), Oct. 7, five (two dogs), by his Brown Follie (Sir Arthur—Sis).

Dora Gladstone. Chas. York's (Bangor, Me.) English setter bitch Dora Gladstone (Boss Gladstone—Vell), Nov. 2, four (three dogs), by his Gun (A.K.R. 1538).

Marion. C. V. V. Sewell's (Tarrytown, N. Y.) cocker spaniel bitch Marion (Brag—Princess), Oct. 25, four (two dogs), by A. C. Wilmerding's Black Prince (Benedict—Madcap).

Our Girl. Black and white English setter bitch, whelped Sept. 14, 1885, by Hurry out of Nellie G., by Lake View Kennels, Boston, Mass., to M. Deming, South Boston, Mass.

Baratone and Soprano. White, black and tan beagle dog and white, black, tan and blue ticked bitch, whelped June 27, 1887, by Blue Cap (A.K.R. 4003) out of Constance (A.K.R. 2012), by F. B. Zimmer, Springfield, Mass., to Robert Oliver, East Hampton, Mass

Ben Lomond (A.K.R. 3701)—Frisco (A.K.R. 3707) whelp. Dark sable collie bitch, whelped Dec. 21, 1886, by Tower Grove Collie Kennels, St. Louis, Mo., to C. S. Seaverson, Same place.

Ben Lomond (A.K.R. 3701)—Lilly (A.K.R. 3819) whelp. Sable collie dog, whelped Jan. 30, 1887, by Tower Grove Collie Kennels, St. Louis, Mo., to E. H. Bradbury, same place.

Scott—Belle Clifton (A.K.R. 1569) whelp. Black and tan collie bitch, whelped June, 1887, by Tower Grove Collie Kennels, St. Louis, Mo., to R. W. Isenthal, Alleghany, Pa.

Glenmar II.—Nell whelp. Red Irish setter dog, age not given, by Onota Kennels, Pittsfield, Mass., to Geo. H. Newbold, Brooklyn, N. Y.

Gun (A.K.R. 1538)—Morning Star (A.K.R. 1551) whelps. Black, white and tan English setters, whelped July 8, 1887, by Charles York, Bangor, Me., two dogs to W. W. Burridge, Lawrence, Mass.

PRESENTATIONS.

Ben Lomond (A.K.R. 3701)—Frisco (A.K.R. 3707) whelps. Collies, whelped June 21, 1887, by Tower Grove Collie Kennels, St. Louis, Mo., a white, black and tan dog to Fire Engine Co. No. 23, and a sable and white dog to E. H. Cross, both of same place.

Ben Lomond (A.K.R. 3701)—Lilly (A.K.R. 3819) whelp. Sable collie bitch, whelped Aug. 3, 1887, by Tower Grove Collie Kennels, St. Louis, Mo., to J. F. Ryan, same place.

THE MEMPHIS AND AVENT KENNEL will offer a number of broken dogs for sale during the Eastern and American trials. Among those offered for sale will be their entire Derby, All-Aged and Champion entries. This kennel will not send dogs to purchasers on approbation, preferring for purchasers (or their deputized agents) to see the dogs at work during the trials and privately. This will be a rare opportunity to secure some first-class dogs from combined field-trial and bench-show winning strains, broken by Mr. J. M. Avent.—*Adv.*

Rifle and Tray Shooting.

RANGE AND GALLERY.

BULLARD MATCH NO. 4, SECOND SERIES.

SPRINGFIELD, Mass., Nov. 11.—*Editor Forest and Stream:* Following are the returns of 94 individuals who competed in our match No. 4, second series. We received 189 entries, but for various reasons many were unable to take part. It will be noted that the scores of Mat Grindele, of Cincinnati, Ohio, and Lieut. A. E. Chantler, of St. Paul, Minn., are a tie, and all ties are to be shot off, dates to be fixed by us. The targets and score cards of Mr. Grindele and Lieut. Chantler do not agree by two points in the former and one in the latter. Mr. Grindele was the winner of the gold medal in the first series of this match. The weather conditions in most cases were not favorable. The badge will be again competed for in May, and it must be won three times by an individual before it becomes private property.—BULLARD REPEATING ARMS COMPANY.

Cincinnati, O., Rifle Association.

OWENSVILLE, Ind., Nov. 8.—The Owensville Ballard Rifle Team had their second regular match Nov. 1, at 200yds., standard target. No wind, but poor light:

Capt. Daugherty's Team.

J Daugherty ..... 6 5 3 5 4 10 4 2 4 6—49
Summers ..... 6 6 9 4 9 9 4 8 4 8—67
G Wetter ..... 6 6 6 7 9 6 6 9 7 4—66
Roberts ..... 3 4 4 7 4 6 8 6 6 3—50
Stone ..... 3 2 3 2 7 2 3 5 2 3—33—265

Capt. McGrade Daugherty's Team.

McG Daugherty ..... 6 5 4 8 3 5 4 8 5 6—54
Montgomery ..... 8 4 5 5 5 6 5 3 8 6—54
Speck ..... 4 6 8 3 0 4 2 7 4 5—52
Mauck ..... 6 3 3 6 7 7 7 5 7 4—55
Gentry ..... 9 6 4 10 5 5 5 9 8 4—64—279

Averages for both teams 54⅔. Summers wears the gold medal, Stone the leather medal.

The third shoot, Nov. 8, shows a decided improvement over the previous contests. No wind, but atmosphere very full of smoke, caused by forest fires now raging along the river bottoms. Messrs. Gilmore, Howe, Yeager and Warnock, of the Princeton Rifle Association, were visitors and were invited to shoot in the team matches:

Capt. Gentry's Team.

Gentry ..... 3 3 2 4 5 4 6 6 7 9—49
Summers ..... 3 8 5 6 6 6 8 8 10 7—67
Montgomery ..... 5 10 8 8 7 4 7 7 9 4—69
J Daugherty ..... 6 8 8 5 5 7 2 6 5 8—60
Speck ..... 4 5 8 2 9 5 9 5 5 6—58
Dr Gilmore ..... 3 8 8 6 4 9 8 5 7 5—63
Yeager ..... 9 0 3 2 0 8 4 8 4 6—38—404
Total score without visitors 303

Capt. Roberts's Team.

Roberts ..... 5 6 8 7 5 8 5 7 8 8—65
G Wetter ..... 4 9 4 8 9 10 5 5 6 3—63
Mauck ..... 7 3 10 4 5 5 10 5 5 6—60
Stone ..... 5 5 3 9 2 6 7 4 5 2—48
G Daugherty ..... 5 6 7 4 7 6 9 3 4 5—56
Howe ..... 4 3 3 3 5 10 6 9 2 6—51
Warnock ..... 8 3 3 3 3 1 4 3 6 5—39—379
Total score without visitors 289

Average for team without visitors 59 1-5. Montgomery wins medal, Stone leather medal.—J. M., Jr.

JAMESTOWN, N. Y., Nov. 12.—Record of 50 shot match between Messrs. Gindele and Nieman, of Cincinnati, O., and Hazeltine and Burns, of Jamestown, N. Y. Conditions, 200yds., off-hand, American field target center, score sheets and targets to be exchanged by mail. This is the second match, Cincinnati having been victorious in both.

Cincinnati.

Holmes ..... 9 8 10 7 9 8 10 9 9 6—85

WELLINGTON, Oct. 31.—The Wellington Rifle Club met for weekly practice at the new range at Forty Acres this afternoon. The high cold wind interfered with the shooting, as may be seen by the scores, which are as follows on Standard target at 200yds., out of possible 100 points:

First Match.

S J Newman ..... 5 7 2 4 6 8 8 9 10 5—64
J E Newman ..... 4 5 7 6 6 10 4 4 7 2—55
W A Bacon ..... 5 5 4 2 3 7 7 7 9 6—55
W O'Connor ..... 10 9 5 5 4 4 2 6 5 4—54
J W Scott ..... 4 6 2 9 6 2 4 7 5 7—52
H A Heinel ..... 4 1 5 2 2 6 4 3 4 5—36
W Mahler ..... 2 3 2 3 6 10 1 2 4 2—35

Second Match.

S J Newman ..... 5 5 9 9 7 8 5 5 8 5—66
J W Scott ..... 5 7 5 6 4 7 9 8 6 5—62
J E Newman ..... 4 7 4 8 5 5 7 5 4 10—59
H A Heinel ..... 6 6 4 2 9 5 6 9 4 8—59
W O'Connor ..... 3 9 5 6 5 7 2 1 7 5—50
C Carleton ..... 3 2 7 6 3 6 4 5 9 4—40

GARDNER, Mass., Nov. 10.—At the last regular meet of the Gardner Rifle Club at Hackmatack Range, the members of the club entertained a delegation from the Leominster Rifle Club, of Leominster. There was a contest between two of each club, resulting as follows:

Gardner Team.		Leominster Team.	
C N Edgell	84 76 80 78 74—392	G F Prevear	79 63 75 75 60—352
W C Loveland	69 80 76 75 80—380	C A Joslin	71 57 74 74 78—354
	772		706

Subsequently there was a contest with the following results: G. F. Prevear, 86, 81—167; Geo. F. Ellsworth, 82, 84—166; C. N. Edgell, 84, 80—164; G. C. Goodale, 76, 78—154; C. A. Joslin, 74, 78—152; C. L. Leland, 72, 79—151; A. E. Knowlton, 75, 76—151; F. E. Nichols, 70, 77—147; C. J. Crabtree, 72, 75—147; F. B. Edgell with military rifle, 64, 64—127+10—137.

DOVER, N. H., Nov. 2.—At the rifle range to-day the following scores were made by members of the Strafford Guards. 200yds.:

Capt Demeritt ..... 0 0 3 3 3—9
Burns ..... 5 4 2 2 0—14
Hathaway ..... 4 2 2 2 0—10

300 Yards.

Foss (Strafford Guards) ..... 4 3 3 4 4—18
Ham (Sawyer Rifles) ..... 4 4 3 2 5—18

This gives Ham two shot buttons and a record as a second class marksman, which is quite a thing for a young man in this State.

ZETTLER RIFLE CLUB, Nov. 12.—100-shot match by two members of the club, B. Walther and C. E. Gensch, Jr. The match had been for some time expected. Distance, 92ft.; possible 1,200. The scores stood: C. E. Gensch, Jr.: 115, 111, 112, 111, 110, 116, 116, 115, 113, 115—1,134. B. Walther: 112, 111, 109, 112, 115, 108, 116, 113, 118, 116—1,130.

NEWARK, N. J.—The probabilities are that the next grand National Shooting Festival will be held in this city. This "Blankes Fest" is held every three years, and the one held in this section of the country was in 1878, and was the most successful of any ever held. The shoot will be in July, and the choice lies between Newark and Union Hill, with the odds in favor of the former. If held here the shooting will be open to the world, and a large number of the most prominent marksmen in Europe have expressed a determination to cross the ocean for the purpose of taking part. When these fests are held in the West, it is claimed, the rules are so altered that none but the local shots have any chance to win decent prizes; in fact, none others are allowed to enter the best matches. Western marksmen, as a rule, says the Newark *Call*, are jealous of the skill of their Eastern brethren, and do their best to bar them out. From 600 to 800 riflemen take part in the National Fests, which usually last from three days to one week.

THOMASTON, Conn., Nov. 12.—Only two members on the range this P. M. A cold and very strong, gusty 3 o'clock was blowing, but a good light; 200yds., off-hand, American field target:

F A Perkins ..... 8 7 6 9 10 9 6 6 8 10—79
G P North ..... 5 5 6 4 7 5 5 7 5 6—55

Nov. 5, being on the range alone, with a strong 3 o'clock wind blowing, Perkins made the following score:

F A Perkins ..... 7 8 7 7 9 9 10 6 7 7—78

NEWARK, Nov. 8.—A large number of crack marksmen from different sections of the country assembled at the Shooting Park to-day to participate in the fall shoot of the Newark Shooting Society, and some scores which rank far above the average were made. A strong wind blew across the line of fire, but did not seem to affect the shooting. On the German ring target the scores were as follows: John Coppersmith 72, M. Dorrler 72, William Hayes 71, F. Watts 68, C. E. Gentsch 68, G. Zimmerman 68, Flack 68, C. G. Zettler 68, B. Walther 68, D. Miller 66, A. Begerow 66, J. S. Case 65, Holges 65, Armbrust 64, Hecking 64, Vogel 64.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE DAYTON TOURNAMENT.

DAYTON, O., Nov. 2.—The word had gone around that a tournament was to be held at Dayton to close the trap shooting season, and the invitations were eagerly accepted by all of the crack shots of Southern Ohio who were not deer hunting in the northern woods, or on Bob White expeditions into Kentucky or Indiana.

Four or fifty of those who get to the front in all trap shoots were on hand to-day for the opening matches at the Fair Ground. Five traps were set for clay birds, 18yds.; five for blue rocks. 18yds., and five for live birds, 30yds. rise.

First Match.—The first match, shot when the men who were to participate in the tournament were assembling at the grounds, was really a practice shot, but goes into the programme of the day. Five American clays: Mud 5, Taylor 4, Winston 4, Heikes 4. Taylor won first money, W. H. J. second, Winston third.

Second Match.—Five American clays: Winston 5, Heikes 5, Taylor 5, W. H. J. 4, J. M. G. 4, Slover 4. In the shoot-off, Heikes broke 5 straight and took first money; W. H. J. 4, then a miss, took second money; Mud third.

Third Match.—Five American clays: Taylor 5, Winston 5, Mud 5, Heikes 4, J. M. G. 4, W. H. J. 4. Taylor, Winston and Mud divided first; Heikes, J. M. G. and W. H. J., second; Slover, Turner and Cain, third.

Fourth Match—Ten larks, $2 entrance:

Taylor	1101011111—8	Heikes	1110111011—8
W H J	1110011111—8	Chubb	1000011110—5
Winston	1111110111—9	Cain	1000101111—8
J M G	1111001010—6	Mud	1110111011—8

Winston won first money, Heikes second, J. M. G. and Cain divided third.

Fifth Match—Ten American clays, $1 entrance:

Heikes	1111111111—10	Chubb	1111001111— 8
Taylor	1111111111—10	Mud	1111101011— 8
Winston	1111111110— 9	Kessler	1110001111— 7
W H J	0111110010— 6	Cain	0111111011— 8
Turner	1111011011— 8	Emerson	1111011111— 9
J M G	0111011111— 8		

Heikes and Taylor divided first money, Winston and Emerson second, Mud and Cain third.

Sixth Match—Five live pigeons, $2 entrance:

Winston	11111—5	J M G	11110—4
W H J	10111—4	Ranger	10111—4
Heikes	11110—4	W Kiefer	11001—3
Cain	01111—4	Mud	01101—3
Taylor	11110—4	Chubb	01101—3
Webb	11011—4		

Miss and Out—Twenty-three birds were used in the shooting-off for second money, which resulted in a handsome victory for W. H. Jackson. Keifer, Mud and Chubb divided third money.

Seventh Match.—7 live pigeons, $5 entrance:

Chubb	1111111—7	Ranger	1111101—6
J M G	1111111—7	Winston	1111001—5
Billy Keifer	0111111—6	Mud	1100111—5
Heikes	1011111—6	Webb	0011101—4
Cain	1011111—6	Ritty	0110111—5
W H J	1111110—6		

Chubb and J. M. G. divided first money, and Winston and Mud divided third. In the shoot-off for second money, Billy Keifer and Heikes killed 3 birds each, Cain and W. H. S. 2 each, Ranger missed his first; Keifer and Heikes divided second.

Eighth shoot.—10 American clays, $2.50 entrance:

Heikes	1111111110—9	Mud	1111010101—7
Winston	0111111111—9	Smith	1110111100—7
Ranger	1111111011—9	B R	1010101110—6
W H J	1011111111—9	Billy Keifer	1111101000—6
Taylor	1101110111—8	J M G	1010101111—6
Webb	1111111100—8	Chubb	1101001001—5
Cain	1110111101—8	Lawrence	1000011010—4

Heikes, Winston, Ranger and W. H. J. divided first money; Taylor, Webb and Cain divided second; Mud and Smith third.

Ninth match.—5 singles and 3 pairs larks, $2 entrance:

Heikes	11111 11 11 11—11	Cain	11111 10 01 01— 8
Winston	11111 01 11 11—10	Chubb	01001 11 10 00— 5
W H J	11111 11 10 01— 9	Lawrence	10101 00 00 11— 5
Taylor	01011 01 11 11— 8		

Heikes took first money, Winston second, W. H. J. third.

Tenth match.—5 American clays, $1.50 entrance:

Winston	11111—5	Lawrence	10111—4
W H J	11111—5	Heikes	11011—4
Ranger	01111—4	Mud	11001—3
J M G	01111—4	Smith	11010—3

Winston and Jackson divided first money, and in the shoot-off Ranger won second, Mud third.

Eleventh match.—10 single larks, $2 entrance:

Heikes	1111110111—9	Chubb	1110001101—6
Winston	1111011110—8	Webb	1001010111—6
W H J	1001111011—7	Deim	1010011100—5
J M G	1111011100—7	Smith	0001010111—5
Lawrence	1001111110—7	Mud	0010010001—3

Heikes first money, Winston second, J. M. G. third.

Nov. 3.—The closing day of the trap-shooting tournament opened under the favorable conditions that prevailed through the first day's sport. The participants were on hand promptly, the crowd of spectators larger than on the previous day, and a skirmish line of bushwhackers stationed at short intervals, encircled the grounds. The coops were full of pigeons, therefore the contests were mostly live bird matches. The live bird matches were at 30yds., 5 ground traps; and larks and American clays, 18yds., 5 traps.

First match.—The programme of the day started with a 10 American clay bird match, $1 entrance:

Heikes	1111111111—10	Mud	1111111010— 8
Taylor	1111111011— 9	Jackson	0111111000— 6
Gerten	1011111111— 9	Kessler	0000111101— 5
Winston	1111111110— 9		

Heikes first money. In the shoot-off for second, "miss and out," Winston won by breaking 6 straight, Mud third.

Second match.—Five live pigeons, $2.50 entrance, 10 contestants:

Taylor	11111—5	Gerten	11011—4
Jackson	11111—5	Webb	11110—4
Mud	11111—5	Cain	11101—4
Heikes	11110—4	Chubb	01110—3
Winston	01111—4		

Taylor, Jackson and Mud divided first money. In the shoot-off for second, miss and out, Heikes and Webb tied on 6 straight, then divided; Chubb took third.

Third Match—10 larks, $2 entrance:

Winston	1111111110—9	Lawrence	1110011111—7
Jackson	0111110111—8	Taylor	1110101100—6
Cain	0111111011—8	Gerten	1010110110—6
Heikes	0100111011—7	Mud	1100011101—6

Winston first money, Jackson and Cain divided second, Heikes and Lawrence divided third.

Fourth Match—10 American clays, $2 entrance:

Winston	1111111111—10	Gerten	1111111110—9
Heikes	1110111111— 9	Chubb	1111011101—8
Taylor	1111111011— 9	Jackson	1011111110—8

Winston first money, Heikes in the shoot-off won second, Jackson won third.

Fifth Match—7 live pigeons, $3.50 entrance:

Winston	1111111—7	Gerten	0011111—5
Heikes	1111111—7	Lawrence	1010110—4
Webb	1111111—7	Chubb	1011001—4
Jackson	1111101—6	Mud	1001011—4
Taylor	1010111—5	Kiefaber	1101010—4

In the shoot-off, miss and out, Winston took first money, Jackson second, Taylor and Gerten divided third.

Sixth Match—5 live birds, $2.50 entrance:

Winston	11111—5	Taylor	11110—4
Chubb	11111—5	P Smith	01111—4
Gerten	11111—5	Reikes	01101—3
Cain	11111—5	Lawrence	01101—3
Jackson	11110—4	Webb	10110—3

In the shoot-off for first, Winston and Cain tied on 4 and divided, Jackson and Taylor divided second, Heikes and Lawrence divided third.

Seventh Match—7 live pigeons, $5 entrance:

Heikes	1111111—7	Jackson	0011111—5
Winston	1111011—6	Lawrence	1010111—5
Chubb	1101111—6	Cain	1110101—5
Eby	1111110—6	Webb	1001101—4
Gerten	1111011—6	Mud	0110011—4
Taylor	1101111—6		

Heikes first, Gerten second, Cain and Jackson divided third.

Eighth Match—5 live birds, $3 entrance:

Heikes	11111—5	S W	10111—4
Gerten	11111—5	Smith	11011—4
Webb	11111—5	Kiefaber	11110—4
Jackson	11111—5	Mud	01111—4
Lawrence	11110—4	Winston	11010—3
Chubb	10111—4	Cain	00101—2

In the shoot off Heikes won first, Smith second, Winston third.

Ninth Match.—It was to be a lively shoot for the wind up, and none but the good ones got in—seven of a kind: Heikes, Eby, Webb, Snyder, Chubb, Dolph Sander, Cain. Heikes killed 12 straight, Eby 10, Webb 6, Chubb 4, Randolph 1, and Cain got 0.

BUFFALO, Nov. 4.—The trap shoot tournament at Niagara, Ont., gotten up by Mr. John Bampfield, was a grand success in every particular, bringing out a large number of expert marksmen from different points in Canada and the United States. In fact it was an international tournament. The day was cloudy and a stiff nor'wester somewhat interfered with good marksmanship. The tournament took place on the Whirlpool Gun Club's grounds.

First shoot, distance 21yds., 10 pigeons. entrance fee $3:

G Briggs	1011111001—7	Peacock	1100000111—5
E Smith	1100000w.	Bugg	1010011000—5
B Menton	1101010011—6	Harvey	1110110000—5
Dr Neff	0110110011—6	Kilsey	1101001110—6
J Koch	0110011110—6	Aird	0011101110—6
W Hood	1010100011—5	J Bampfield	1011011001—6
G Rogers	1100000w.	White	0011100w.

Briggs took first money. In the shoot off of ties Dr. Neff, of Port Colborne, won second; Kilsey, of East Aurora, third, and Bampfield fourth.

Second event, entrance fee $3, 21yds., 7 live pigeons:

G Briggs	1110110—5	G Murphy	1101001—4
Dr Neff	0011010—3	E H Smith	1011110—5
W Hood	1111110—6	J Koch	0011111—5
C White	0000w.	Clark	1011110—5
W Bugg	1100100—4	J Bampfield	1110111—5
Kilsey	0110111—5	D Woodruff	1000w.
G Rogers	1101001—4	W Peacock	0011110—4

W. Hood, of Toronto, took first money. Kilsey and Clark, who tied in a shoot off of ties for second, divided second and third. Koch and Smith did likewise with fourth.

Third event, nine blackbirds; 18yds.; entrance fee $1.50:

G Brigs	010111001—5	W B Whiskers	001100011—4
W Hood	011111111—8	G Rogers	000101110—4
W Bugg	110111011—7	E H Smith	111101101—7
James Bampfield	101110110—6	G Murphy	111111010—7
H Clark	010110111—6	Mr Kelsey	101111110—7
Mr Peacock	100011101—5	B Menton	111001011—6
Mr Pond	101011011—5	J Koch	011011110—6

Mr. W. Hood, of Toronto, took first money. The ties for second prize were divided; the ties for third shot them off, and the contest was won by Mr. J. Koch, of Buffalo, by killing three straight birds. Mr. Clark, of Buffalo, took fourth money.

Fourth event, distance 18yds.; entrance fee $1.50; 9 blackbirds:

Mr Clark	00110011	Mr Peacock	010101110—5
G Briggs	011000011—4	Mr Pond	011000100—4
Mr Kelsey	110100011—5	G Murphy	000110100—3
W Briggs	101101111—7	E H Smith	111001111—7
W H Hood	110110111—7	J Koch	111011110—7

The ties for first place were shot off, Messrs. W. Hood and J. Koch again tieing by killing six birds each. They divided first money. Mr. E. H. Smith got second, Mr. Briggs third, and Messrs. Kelsey and Peacock divided fourth.

DUNELLEN, N. J., Nov. 9.—The attendance to-day at the regular semi-monthly shoot of the Middlesex Gun Club was unusually small, probably on account of the holiday yesterday. The weather was lovely, and the birds an excellent lot. Quinlan and S. G. Smith tied for the badge in Class A. Mr. Quinlan waived his claim to the badge in favor of Mr. Smith. D. Terry captured the trophy in Class B. Following are the scores:

Four live birds, handicap rise:

C Smith (30)	1011—3	Forrest (29)	0202—2
Seigler (30)	1212—4	D Randolph (27)	0110—2

Ties divided. Sweep No. 2, 4 live birds, handicap rise:

C Smith (30)	0012—2	Miller (30)	1221—4
Forrest (29)	2101—3	Randolph (27)	1100—2
Seigler (30)	2211—4		

Ties divided. Sweep No. 3, 4 live birds, handicap rise:

C Smith (30)	0111—3	D Terry (30)	1210—3
Forrest (29)	0110—2	Cannon (27)	0021—2
Seigler (30)	1010—2	Quinlan (30)	1111—4
Miller (30)	1100—2	J H Force (30)	1110—3
Randolph (27)	0001—1	Tee Kay (28)	1000—1
Manitz (30)	0201—2	S G Smith (28)	2111—4

Ties divided. Class A, badge shoot, optional sweepstake $5, 7 live birds, handicap rise:

Seigler (30)	1211011—6	Quinlan (30)	1221212—7
C Smith (30)	1110211—6	Forrest (29)	1110002—4
S G Smith (28)	1111111—7	Manitz (30)	1110101—5
Miller (30)	1121011—6	J H Force (30)	0201011—4

Ties not shot off on account of darkness. Class B, badge shoot, same as Class A:

D Terry (30)	2222201—6	Tee Kay (28)	1111010—5
Cannon (27)	1020002—3	Randolph (27)	0110010—3

DAYTON, O., Oct. 31.—The Stillwater Gun Club held their last shoot for the season at their grounds, one mile southeast of the city, to-day. Following are the scores:

Club shoot, 20 singles, blue rocks:

M Stocker	01011101101101100000—10
P Wahl	10101010101010101110—12
Hanauer	01010101010101001110—10
J Brecthel	01011010111010111010—12
B Bandon	01111110111101111111—17
Smith	10101001010010011100— 9

Special match No. 1, 5 singles:

J Brecthel	10110—3	Mike Stockert	11010—3
Phil Hanauer	10010—2	A Hanauer	01111—4
Phil Wahl	01001—3	F Hussong	00010—1
Smith	01010—2		

Match No. 2, 5 singles:

Phil Wahl	01010—2	J Brecthel	01110—3
Smith	01010—2	Stockert	00101—2

Match No. 3, 5 singles:

P Wahl	01010—2	J Brecthel	11011—4
M Stockert	01011—3		

Match No. 4, 7 singles:

P Wahl	0101011—4	M Stockert	0101111—5
Brecthel	0010100—2		

Match No. 5, 3 singles:

M Stockert	111—3	P Hanauer	101—2
P Wahl	101—2	A Hanauer	001—1
Brecthel	010—1		

Match No. 6, 3 singles:

M Stockert	100—1	J Brecthel	011—2
P Wahl	100—1		

DAVENPORT, Iowa, Oct. 29.—At the monthly shoot to-day of the Forester Gun Club live pigeons were used and some fine scores made. The first score was at 6 pigeons, 30yds. rise, both barrels:

F Davis	111111—6	J Racster	110110—4
G Shado	111101—5	J Sullivan	101011—4
Thomas Swiney	111101—5	H Pape	011101—4
E Berg	111101—5		

F. O. Davis took first money, Shado second and Pape and Sullivan divided third. The second match was at 3 pairs at 21yds. rise:

H Pape	11 11 11—6	E Berg	10 11 01—4
J Racster	01 11 10—4	G Ade	11 01 01—4
T O Swiney	11 00 11—4	G Shado	00 10 11—3
F Davis	00 11 11—4	J Sullivan	10 00 10—2

Pape took first money, Berg second and Shado third. The last match was at 8 pigeons, 30yds. rise, both barrels:

G Shado	11111111—8	H Pape	11011111—7
E Berg	11111111—8	J Racster	01101111—6
F Davis	01111111—7	T O Swiney	11100001—4
J Sullivan	11101111—7	G Ade	00011011—4

Shado and Berg divided first money, Sullivan second and Racster third.

KANSAS CITY, Nov. 3.—The return shooting match between the Independent and Kansas City Gun clubs took place this afternoon at the Kansas City shooting park, and resulted in another victory for the Independents by a score of 65 to 63. The weather was delightful and the attendance unusually large. The shooting was excellent, as the score shows:

Independent Gun Club.		Kansas City Gun Club.	
E Bingham	1111111100— 8	J E Riley	1111111110— 9
L Kuntz	0111111001— 8	J A Belen	0111111111— 9
F C Megley	1111110001— 7	J Underwood	0111111111— 9
J Anderson	1111111111—10	G Mock	1011100911— 6
W V Reiger	1111011101— 8	A B Cross	1111110110— 8
R C Van Horn	1111111010— 8	D Williams	0111100111— 7
G Stockwell	0111111001— 7	J Allendorf	0101111001— 6
W Anderson	1110111111— 9—65	D Underwood	1111111101— 9—63

After the match two sweepstakes and a match at double birds were shot. W. Anderson won the first sweepstake after shooting out the other contestants. The second sweepstake was a tie between W. E. Reiger and E. Binkham, who divided first money. Messrs. Holly, D. Underwood and J. Anderson tied for second money and divided it. The match at double birds was between R. C. Van Horn and Drury Underwood on the one side, and J. E. Riley and D. Williams. The agreement was that each should have three doubles, but it was necessary to have five double birds to decide the match, which was won by Messrs. Riley and Williams by a score of 14 to 12.

TORONTO, Nov. 10.—The first annual shoot of the West Toronto Junction Gun Club took place on Wednesday and to-day. The following is the score:

First Class—15 live pigeons, 26yds. rise, 2 barrels:

A Purse	14	W Clarke	11
D Blea	13	B Jones	11
J Worden	13	Staneland	11
D Black	13	George	11
Dollery	12	And eight others.	

In shoot off Blea took second, Worden third, Black fourth, Clarke sixth, Jones seventh, Staneland eighth and George ninth. Special prize for highest score with single barrel won by Purse.

Second Class—15 live pigeons, 26yds. rise, 2 barrels:

V W Clarke	11	A Royce	8
Walton	11	Deady	8
Hinton	11	Power	8
Wickham	8	And seven others.	

In shoot off the prizes were won in above order. Clarke special.

Third Class—10 live pigeons, 21yds. rise, 2 barrels:

S Rice	7	F James	4
Davidge	5	W Blea	3
Lascelles	5	And four others.	

In shoot off Davidge won second. Rice special.

SARATOGA, Nov. 4.—Mr. Bockes was the winner of the club trophy for the second time at Glen Mitchell to-day, his score of 45 out of a possible 60, and Mr. Levengston's of 56 out of 60, are the highest ever shot in the country. The score at 50 birds stood:

Bockes	11111111111111111011001111011111111111111101111—45
Levengston	10111011111111111111111111111111111111111111111—44
Pike	11110111110110111111001111001100110100001001110010—31

Individual match at 10 birds each:

Levengston	1111101111— 9	Bockes	1001011111— 7
Re-entry, one hand	1111111111—10	Cramer	1010010011— 5
Thomas	1110111110— 8		

NEWTOWN, N. Y., Nov. 8.—North Side Gun Club, of Long Island. Election occurring the same day only few members attended the regular monthly shoot at 5 live pigeons, King's patent trap, handicap rise, 80yds. boundary, club rules, club badge and money prizes:

Eberhardt	1111111—7	Duryea	1111111—7
Lyon	0110011—4	Merckens	0001110—3
Barlow	1101111—6	Grau	1111001—5
Dr Franz	1011011—5		

Ties on 7, 3 birds, 28yds.: A. Duryea 111—3, A. Eberhardt 110—2. A. Duryea winning badge.

NEWARK, Nov. 12.—Gustave Freche and C. Reinhardt, of this city, shot a pigeon match at John Erb's grounds this afternoon for $150 a side, 28yds. rise, 5 traps and both barrels. Each shot at 44 birds, Reinhardt killing 30 and Freche 20. After the match C. M. Hedden and Samuel Castles, two well-known builders, shot a friendly match at 10 birds each, 30yds. rise, both barrels. Hedden missed his second bird and killed all the rest; Castles missed two. Then Charles Heath and Gustave Freche shot a 10-bird match at 30yds., Heath killing 8 and Freche 7.

SHENANDOAH, Pa., Nov. 9.—In the pigeon shooting match today between Enoch Davis, of this town, and Hilderbrant, of Minersville, the latter killed 10 and Davis 12 out of 19. The stakes were $400, with five times as much in bets. The second match of the series of three will be shot here on Dec. 9 for the same amount of money.

Yachting.

SELFISHNESS IN YACHTING.

UNDER the above title the *Scottish-American* comments as follows on the new deed of gift:

"As was expected, new rules regulating future international yacht races for the America's Cup have been issued. Only in one respect can they be considered an improvement on those hitherto existing. They abolish the course of the New York Y. C., inside the Narrows, as one of those to be sailed over in future contests. All foreign competitors will rejoice at this, for it is well known to be a most fluky and unfair course on which to test yachts, as the result depends more upon the local knowledge of the pilot and accidental circumstances than upon the merits of the competing yachts. On this account all foreign competitors hitherto have objected to that course. At last the crust of selfishness which influenced American yachtsmen in insisting upon that course has so far been broken through that they have given it up, but only when they saw that public opinion was decidedly against them, and that they could no longer insist upon it with the least show of decency to give fair play in the contest.

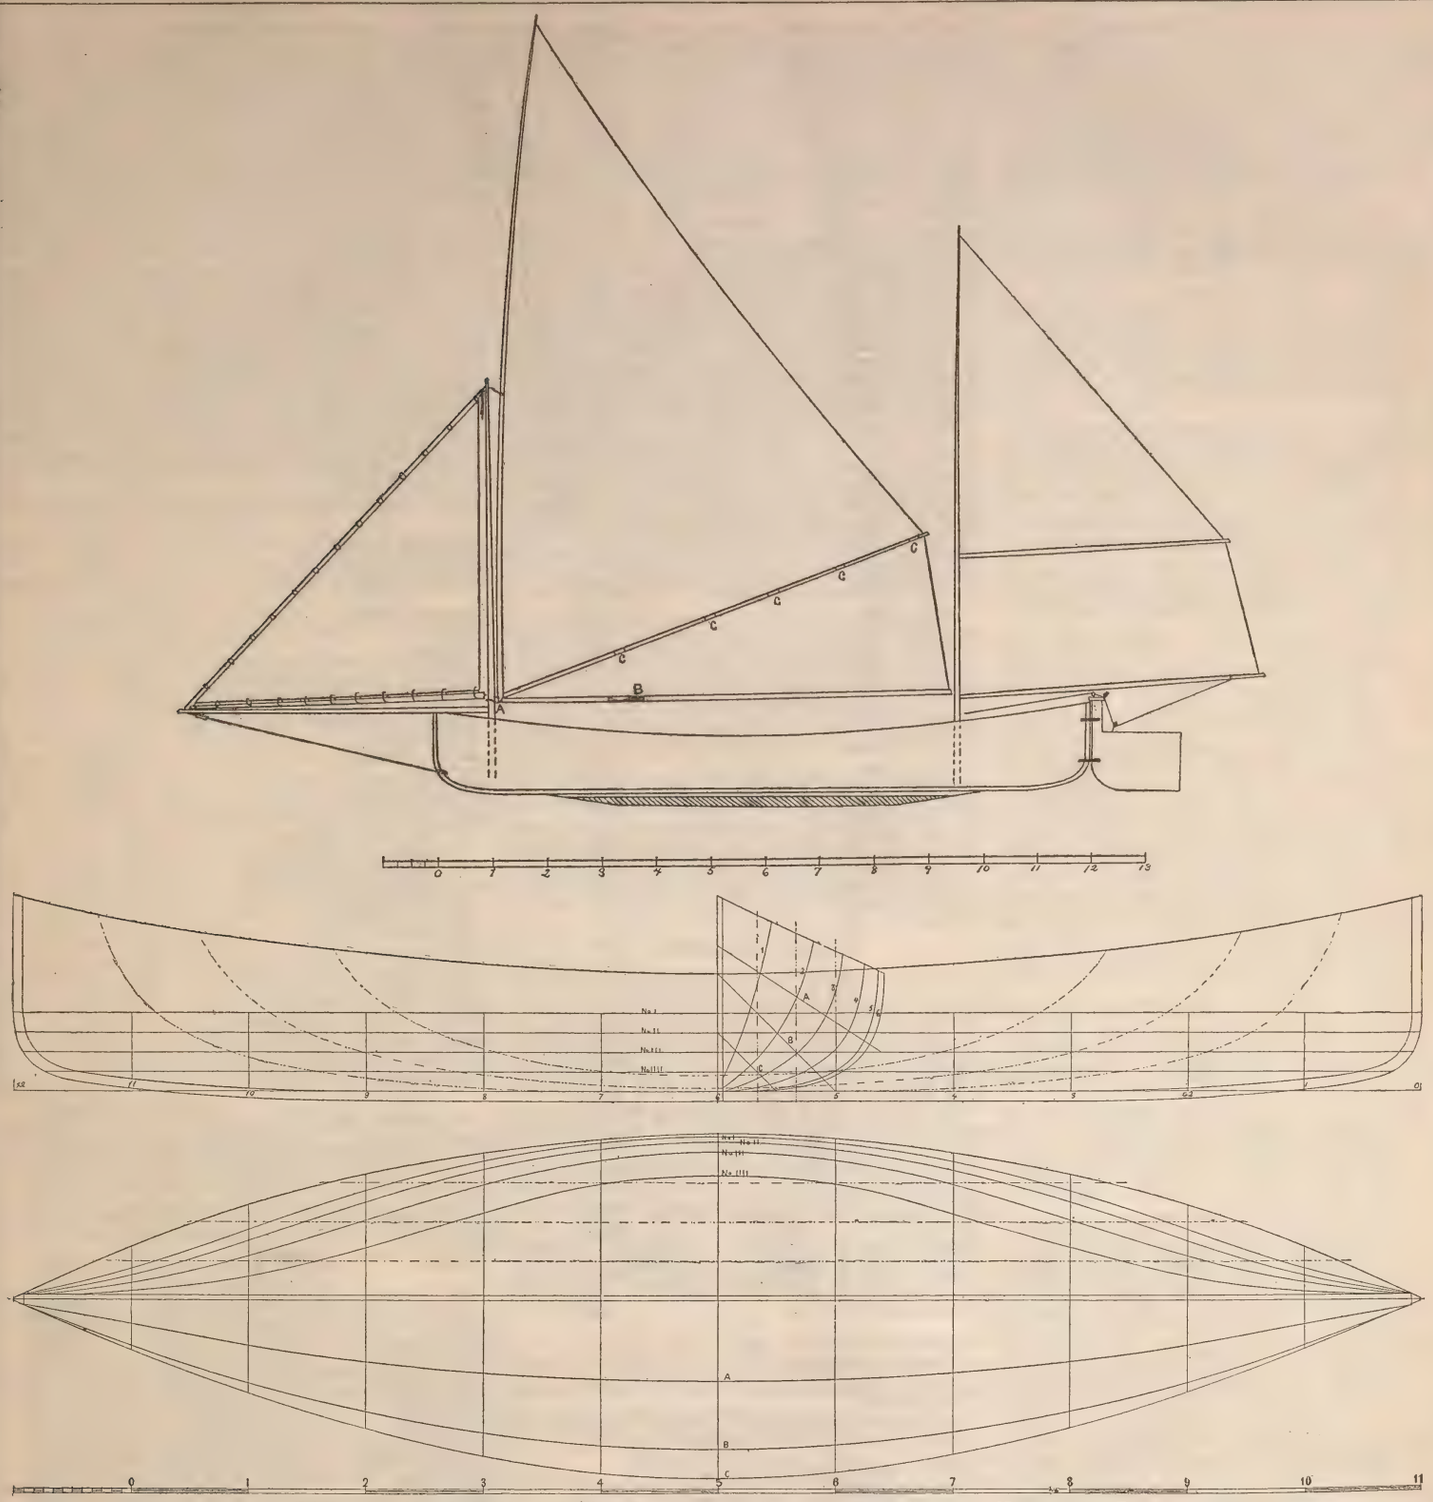
"But the same spirit of extreme selfishness still pervades the new rules, they are evidently framed with the special object of throwing all the difficulties possible in the way of any foreign competitor winning the Cup, and the testing of the respective merits of national yachts is altogether a secondary consideration. We see no fair reason why a challenging club should be required to give such a long notice as ten months. Why yachtsmen have thus scarcely time to turn round after one contest before they must send in their challenge for the next. It leaves challengers no time to study or experiment so as to improve on their type of yacht, although they must build a new yacht, seeing that losing yachts are debarred from competing again. On the other hand, the holders, the Americans, have the whole year for this purpose, up to the hour of starting on the contest. Not only so, accompanying that ten-months' prior notice must be sent 'the name of the owner and a certificate of the name, rig and following dimensions of the challenging vessel, namely, length on load waterline, beam at load waterline, and extreme beam and draft of water,' which dimensions it is stipulated shall not be exceeded, and further, 'Custom House registry of the vessel must also be sent as soon as possible.' There is no set-off requiring the Americans to give any prior information whatever regarding the yacht to be pitted by them against the challenger; on the contrary the new rules provide that 'the challenged club shall not be required to name its representative vessel until the time agreed upon for the start.' This gives the American holders of the Cup every possible advantage; in fact effect compels the challenger before playing to fully expose his hand, and yet leaves his opponent free to select his cards in secret with which to win. For instance, the rules provide that 'the competing yachts or vessels, if of one mast, shall be not less than 65ft. nor more than 90ft. on the load waterline; if of more than one mast they shall be not less than 80ft. nor more than 115ft. on the load waterline.' Thus if the challenger intimates that his yacht is 65ft. on the load waterline, then the American holders have it in their option to build one of 90ft., or *vice versa*, whichever they think gives them the most advantage over the other. And be it further observed, the new rules especially provide that no time allowance whatever is hereafter to be given on account of disparity of measurement."

BUILDING IN NEW YORK.—Mr. Saml. Pine will build a steam yacht 110ft. over all, 96ft. l.w.l. and 16ft. 6in. beam, of wood, for Mr. Jacob Lorillard. The dimensions of the centerboard boat now building by Mumm for a member of the Atlantic Y. C. are length over all 40ft., l.w.l. 33ft., beam 13ft. 6in., draft 3ft.

MOHICAN.—Com. Clark and a party left New York in the Mohican on Nov. 5, running as far as Fortress Monroe and returning on Nov. 13 to New York, having encountered some heavy weather. She will leave soon on a long cruise to the West Indies and perhaps South America.

OPEN BOAT SAILING.

WHILE the localities in which yachting in the proper sense is possible, are limited to the seaboard and the great lakes, there are thousands of miles of water throughout the United States and Canada which are suitable for sailing and racing small boats with as much benefit and as keen sport to the sailor as is found in yachts of the largest class. Already these streams and rivers float an immense pleasure fleet of canoes, sailing skiffs, catboats and similar craft, to say nothing of rowing boats and the various hunting skiffs; and there is no reason why the number should not be vastly increased, as the pleasure to be derived from such sport becomes more generally appreciated. To be sure, river work, especially on narrow streams and in a hilly country, is not to be compared with open water, but there are comparatively few sections of the country where the boat sailor cannot find water enough for some sort of small craft; and if properly managed, racing too of the best sort. The great difficulty, however, is the same as in yacht sailing on a large scale, and when sailing for prizes is once inaugurated in any new locality it usually goes through in two or three seasons the same course of development that yachting has experienced in the past fifty years.



At first the fleet includes a lot of odd boats of all models and builds, perhaps a few rowboats with sprit sails, a duckboat or two, a sneakbox, and a few canoes, the dimensions varying from 12 to 16ft., with beam from 2½ to 5ft. The racing is begun without rules or allowance, or at best with some crude rule such as "mean length," and the result is that one boat is soon top of the heap, thanks sometimes to superior model and equipment, but oftener to mere size. The second season is apt to bring a general improvement in the right direction, the influence of one or two good rigs is plainly seen in better sails and gear, improved ballasting, and a greater attention to details, while the standard of seamanship has also raised considerably. As a result the honors for the year may go to the best modeled, rigged and sailed boat, as they should, but they are far more likely to go to the biggest boat; or at any rate the fact that size tells is sure to be well demonstrated. The result is seen next season in several newer and larger boats built to take every advantage of the existing rules and local conditions, the sport is apt to be very closely followed by half a dozen, with the result of increased cost; and by another season, if not before, the end is reached in the development of a special racing class, too often of little use except for racing, comparatively expensive, and by no means the best type of boat. It is soon evident that time and money are what win the prizes, the man who sails constantly and spares nothing on boat and crew soon drives out the original sailors who started from pure love of sport, and the mug-hunter is apt to be left, sooner or later, in full possession of the course.

Many in different localities can bear witness to the correctness of this sketch, and can supplement it from personal experience. Improvements must come, and should be encouraged, but the tendency is entirely in the direction of over-development, and from the first every care should be taken to stop it, and to encourage not only the fastest, but at the same time a reasonably safe and useful boat. This can be done by suitable rules, the best method for any specified case depending on local surroundings. It is an extremely difficult matter to form a rule which will afford fair racing to the mixed fleet of boats, canoes and sneakboxes that are usually found in first forming a club, and yet it is necessary that all be given a fair chance. At the same time a rule must be framed that will be suitable for the reconstruction of the fleet which is sure to follow one or two seasons' racing, and to create, from the mixture of models and rigs which first presents itself, a type of boat which will be generally useful and within the means of all the members. No such rule is applicable to all cases, but limits must be set to any excess in sail or ballast which may seem likely to add to the cost or to detract from the desirable qualities of the boat for general purposes. In some cases a limit is set on sail, as in the Philadelphia tuckups, where a length of 50ft. of boltrope, around the sail, is allowed; and if shifting ballast and large crews are prohibited this is apt to work well. In some cases the depth of the boat is included in the measurement either directly (as in the Western Y. C., of Scotland, where the limits are 18ft. length, 6ft. beam and 3ft. 6in. extreme depth, measured from bottom of keel to gunwale) or indirectly, by a measurement of girth. Whatever rules may be adopted, that of mean length, or waterline length alone, should be rigorously excluded, as no rule is so apt to foster a machine. The great desideratum seems to be a hull of moderate cost, say under $150, with little or no weight of fixed ballast and a rig so small and well arranged that the expense of new sails is but moderate, while the owner can sail his boat with the aid of one or two friends, and without a large trained crew, either amateur or professional. At the same time if the boat is adapted for fishing, cruising and family use it will be apt to bring many into the club who care less for racing than for the other uses, but still would enter if their boat were suitable.

We give herewith two boats used by sailing clubs in different localities and under different conditions. The first of these is given not so much from any special excellence in model or sail plan as because she illustrates a very interesting case of the evolution that we have alluded to above. The Gracie is a row-boat 12ft. long and 34in. beam, designed and built by her owner, an amateur and a novice in boat building, Mr. E. A. Leopold, of Norristown, Pa. The only guide, both in designing and building, was "Canoe and Boat Building for Amateurs," and the boat was intended only for rowing and fishing on the Schuylkill River, a narrow and winding stream with very squally and variable winds, running through Norristown, a short distance from Philadelphia. The boat is a lapstreak, weighing 60lbs. when first completed, with a keel 1in. square, and fitted with Allen's bow-facing oars. During the first year, 1885, she was used solely for pleasure rowing, duck shooting and fishing, proving easy to row, stiff for shooting and fishing, and light enough to be handled conveniently. The next season a small sail was added, with several styles of leeboards, but the latter were in turn discarded for a variety of weather grip, while the sail grew to 56ft., some very fair sailing being done toward the latter part of the season. This season the sail was increased to 85ft., as shown, while the weather grip was improved after many trials. The results of these changes are seen in the races of the Montgomery Sailing Club, reported through the season in the FOREST AND STREAM, in which the Gracie has raced against some fast boats of much greater size and power, and sailed by full professional crews, she sailing singlehanded and without ballast. She has started 13 times and won three firsts and three seconds, a very good record when the relative sizes and the reputation of the tuckups are considered. Of course she has had a good allowance, but it is hard to say whether it is too much as things now stand. At first the crew of one sat on the floor, then two cushions were added, replaced a little later by a seat 5in. below gunwale, which seemed very high at first. It was soon evident that the crew could sit far out to windward, and with more comfort, while the pad, sewn in the back of the coat, to protect the backbone when sitting inside, was discarded. The next move was to place a seat, canoe fashion, across the gunwale, a very great improvement, as a better command of the boat is obtained with less effort. In sailing with but two sails the area was too small for racing, while the balance was bad, the boat constantly luffing. The addition of a jib cured both faults, the boat being faster except when free, and steering to perfection. In every puff she will cat herself to windward without a touch of the tiller, only a slight motion of the body forward or aft being necessary to luff her up or throw her head off. It is to this that she owes much of her gain, as little steering with the rudder is needed to make her work well in the constantly varying puffs that rush down from the hills in all directions. She is sailed without a fly, such as is used by most of the other boats, as it is very deceptive. In running free or in tacking the rudder is used, but most of the steering is done by the body only. The boat's worst point of sailing is before the wind, her best reaching. She receives about 9min. in five miles from boats 15ftx4ft. 6in., and sailed by four or five men hanging out to windward by means of ropes. The dimensions of the Gracie are as follows:

Length extreme	12ft.
Beam	2ft. 10in.
Depth, amidships	1ft.
at ends	1ft. 8in.
Mainmast, from stem	1ft.
above deck	5ft. 10in.
diameter, deck..1½in., head	1¼in.
Main boom	8ft. 5in.
diameter	1¾in.
Yard	12ft. 4in.
diameter	1½in. and ¾in.
Battens	8ft. 5in.
Mizenmast, above deck	8ft. 9in.
diameter	1½in. and ¾in.
from stem	9ft. 7in.
Mizen boom	5ft. 8in.
Battens	4ft. 10in.
Bowsprit outboard	4ft. 6½in.
Jib, on luff	7ft. 6in.
foot and leech, each	5ft. 3in.

The jib halliard and downhaul are in one length, the bight belayed to a cleat on the port side, a small club is laced to the foot of the jib. The mainmast and yard are of bamboo, mainboom

ROWING AND SAILING BOAT.—Designed and Built by E. A. Leopold, Norristown, Pa.

yellow pine, mizenmast of white pine. The mainsail is fitted to reef to a lateen by means of a jaw at *B* on the boom, so placed that no change of the halliard is necessary. The batten is fitted with cleats *C, C, C, C,* of spring brass, with a single reef point opposite each. The boom is lifted, a reef point made fast by one turn about the cleat, then the boom is shifted until the second jaw engages the mast. The other reef points may then be made fast at leisure, though in a short squall the jib is dropped, the mainboom made fast by but one reefpoint, and shifted to set by the inner jaw. The mizen is never reefed. In making the sails the spars were bent to position on the floor and the shape marked, then the stuff, a single width of sheeting, was cut and sewn. The weather grip, adopted after many experiments, is 3ft. 7in. on top, 2ft. on bottom and 1½in. deep, being immersed 10in. The top edge is ⅝in. thick, bottom ¼in. The distance from side is 2ft. 4in. and the immersed area 295sq. in. A keel has also been added, 4in. deep in all, of which the lower half is lead, 25lbs. The area of keel is 338sq.in., or with grip 630sq.in. The grip is hung from the sockets for the rowlocks by two crosspieces of wood in the form of an X, rivetted where they cross and also to the top of the grip. The boat does not point as close as some of her competitors, but goes enough faster to make up for it, making sometimes five tacks to their four.

The table of offsets is as follows, both ends being exactly alike:

Stations.	Deck, Height.	Half-Breadths.				
		Deck.	No. 1.	No. 2.	No. 3.	No. 4.
0 and 12.....	1 8	0^{4}	0^{1}	0^{1}	.....	.....
1 and 11.....	1 5^{3}	5^{4}	3^{2}	2^{4}	1^{6}	0^{7}
2 and 10.....	1 3^{3}	9^{6}	7^{2}	6	4^{5}	2^{5}
3 and 9.....	1 2	1 0^{6}	1 1^{2}	10	8^{2}	5^{2}
4 and 8.....	1 1	1 3	1 2^{1}	1 1^{2}	11^{6}	8^{6}
5 and 7.....	1 0^{2}	1 4^{3}	1 4	1 3^{3}	1 2^{2}	11^{7}
6.....	1	1 5	1 4^{6}	1 4^{1}	1 3	1 0^{6}

Some particulars concerning the club and its boats were given in our last issue.

GALATEA AS A SEABOAT.

WE have received the following abstract of Galatea's log from Lieut. Henn:

Oct. 11. Weighed and proceeded from Bay Ridge toward Sandy Hook. 3:30 P. M. took departure from Lightship; distance, 1½ miles.

Oct	Course.	Distance	Wind.	Remarks.
12..	S. 85 E.	223	N. N. W.....	Fresh, sea smooth.
13..	N. 87 E.	122	W. N.W. to S.W.	Moderate to light.
14..	N. 85 E.	187	S. S. W. to N. W.	Moderate, sea smooth.
15..	N. 88 E.	224	W. N. W. to N...	Fresh, sea moderate.
16..	N. 73 E.	257	N. to N. N. W....	Strong, heavy squalls, sea rough.
17..	N. 68 E.	110	Northwesterly...	Light; hove to 3 h. Fishing Bank of Newfoundland.
18..	N. 74 E.	92	Calm to easterly.	Heavy ground swell.
19..	S. 87 E.	159	E. to N. E.....	Moderate.
20..	N. 73 E.	197	N. N. E. to N. E.	Fresh, head sea.
21..	N. 68 E.	136	E.N.E. to East'ly	Moderate, head swell.
22..	N. 45 E.	142	East.....	Moderate, sea do.
23..	N. 74 E.	151	E. to S. E.....	Moderate, sea lumpy.
24..	N. 68 E.	196	S. E. to S. by E...	Fresh, heavy head sea.
25..	N. 45 E.	67	S. E. to S. S. E...	Gale, heavy confused sea; hove to 13 hours.
26..	N. 74 E.	127	S. to W. S. W....	Strong to light; hove to 2½ hours.
27..	East...	209	Westerly.....	Fresh, squally; high sea.
28..	S. 86 E.	225	Westerly.....	Fresh, squally; high sea.
29..	N. 85 E.	200	W. to S. W.....	Moderate to light.

2:30 P. M., passed Roche's Point, Cork Harbor. Actual time from Sandy Hook Lightship, 17 days, 18 hours, 30 minutes. At 3 A. M. sighted the Fastnet light, one point on lee bow, and passed it at 6:00 A. M., the wind falling light all the time and petered out after passing Roche's Point. Total distance sailed 3,023 miles; close hauled and unable to lay course for nearly 1,000 miles. Hove to 18 hours (15 hours in a gale). Ran 1,918 miles in 9 days, a distance equal to that of England to Malta.

It will interest the many American friends of Mr. and Mrs. Henn to know that they have reached home safely, all hands on board being well, down to the coon. The following extracts are from a private letter, and not intended for publication, but they serve to show what Galatea is as a seagoing vessel. Lieut. Henn writes: "We had one heavy gale from S.E., and had to lay to for fifteen hours, and though the ship behaved splendidly and made good weather of it, the gale and the east wind which we had for 1,000 miles spoiled our run. The cutter was on her keel all the time. During the last three days we were running before a strong breeze and high following sea. The ship ran like a hare and never shipped a drop of water, though it looked pretty awkward at times, and I was getting the oil bags ready. We caught enough cod and haddock to last all the way across, the cod weighing from 18 to 20lbs. We are all well pleased with the ship's seagoing qualities. she is without doubt the finest sea boat I have ever been on board, easy, buoyant and dry; and to see her getting through the heavy seas at a high speed was delightful. We never carried away a rope yarn, and the fore scuttle was closed for only one day."

Galatea left Queenstown on Nov. 2, and reached Plymouth after 26 hours, being hove to for 3 hours in a very heavy gale, which she weathered in good shape.

YACHT BUILDING IN BOSTON.—Mr. Burgess has an order for a design from Mr. John Stetson, a steam yacht, 115ft. on l.w.l., a fast boat, with triple expansion engines and steel boiler. She will be built of wood, probably at Bath, Me. Among his smaller orders are the two 39ft. 6in. sloops for Messrs. James Means, of Boston, and C. R. Flint, of Larchmont, both of which will be built by the Lawleys. Of keels, Mr. Burgess has in hand a cruising yacht, 62ft. l.w.l., 19ft. 6in. beam and 10ft. draft, of course with a clipper stem; and also two 29ft. 6in. boats, one for Mr. C. S. Eaton. This one will have 10ft. 2in. beam, 6ft. 9in. draft, a flush deck, and will displace 11 tons, with 6½ tons of lead on keel. A small cutter of 19ft. 6in. l.w.l. has also been ordered by Mr. W. M. Jameson. Mr. Burden's schooner will be 79ft. 6in. l.wl., 21ft. beam and 11ft. draft, a centerboard boat, too. The timber is ready and the moulds are now being made. The work on Grayling has been nearly completed 27 tons being placed outside. The fisherman will make her trial trip this week. Her ballast is partly iron and partly copper dross. A race is talked of between her and the pilot boat Hesper, to take place in the spring. Lawley & Son have in hand the schooner for Com. Meers, and they will build a single-sticker from the same lines for Mr. C. A. Welch. They have also an order for a 28ft. l.w.l. yacht from the owner's designs. Smith is busy with the new Speedwell, her keel of 37 tons being already cast, a very large lump. Beside some repair work and alterations on Mist, Posy, Barracuda and other boats, two new ones of 41 and 25ft. l.w.l. are in prospect.

SEAWANHAKA C. Y. C.—The first lecture of the season will be held at the club house on Saturday next, the subject being—"Hydrography History, Theory and Methods of Chart Making.'

THE LOG OF THE THISTLE.

THE following log of Thistle's return voyage is given in the *Field* of Nov. 5:

Friday, Oct. 14.—Got under way from Tompkinsville, Staten Island, at 7 A. M.; moderate breeze and fine clear weather; all possible sail set; 9:10, passed Sandy Hook Lightship, distant one mile, from which our departure was taken. Streamed the log and set the course. Noon, fresh breeze and fine; wind veering aft; set spinaker to port; 8 P. M., increasing breeze and cloudy weather.

Saturday, Oct. 15.—Strong breeze, with increasing sea; same weather throughout the remainder of the day; at 10 o'clock passed full-rigged ship bound east and a steamer bound west. Course, E. ½ N.; distance run, 270 miles from Sandy Hook; lat. 40.40 N., long. 67.50 W.

Sunday, Oct. 16.—Strong breeze and heavy sea; at 8 P. M. increasing breeze with showers; took in gafftopsail and stayforesail; at 4 A. M. more moderate; set gafftopsail and latter stayforesail; from that till noon moderate breeze and fine clear weather. Course, E. ½ N.; distance, 210 miles; lat. 41.2 N., long. 63.10 W.; direction of wind, N.W. by W.

Monday, Oct. 17.—Fresh breeze and cloudy, with heavy N.W. sea; midnight, wind veering aft, set spinaker; at 6 A. M., fresh breeze and clear throughout the remainder of the day. Course, N. 81 E.; distance run, 184 miles; lat. 41.30, long. 59.10; winds, N.W. to S.

Tuesday, Oct. 18.—Decreasing breeze and cloudy; at 2 A. M. moderate breeze with slight passing showers; 6 A. M. steamer passed bound E., brigantine rigged, hoisted number; at 4 A. M. exchanged signals with Red Star steamer bound E. Course, N.E. ¼ N.; distance run, 95 miles; lat. 42.44, long. 57.46; winds, S.E. to S.W., light and unsteady.

Wednesday, Oct. 19.—At 2 P. M. moderate breeze; at 4 P. M. fishing schooner, J. Bertram, boarded us for water and position; fresh breeze with confused easterly sea; at 8 P. M. all possible sail set; midnight, fresh breeze and fine clear weather; at 8 A. M. fresh breeze, cloudy and overcast at intervals. Course, E. by N. ¼ N.; distance run, 222 miles; lat. 43.40, long. 52.53; winds, S.W. and S.E.

Thursday, Oct. 20.—At 2 P. M. fresh breeze and cloudy weather; passed fishing schooner, and later had fresh breeze with heavy banks of clouds and S.E. sea. Course, S. 89 E.; distance, 220 miles; lat. 44.36, long. 47.58.

Friday, Oct. 21.—Strong breeze, heavy cross sea, and cloudy, increasing breeze; took in gafftopsail, tacked to eastward, double-reefed staysail and single-reefed mainsail. Later, moderating; set whole mainsail. Course, E. by N. ½ N.; distance run, 178 miles; lat. 45.18, long. 43.54; winds, S.E. to N.

Saturday, Oct. 22.—Moderate breeze, confused sea; 8 P. M., tacked to N.E.; at 10 P. M., tacked to S.E.; at 2 A. M., strong breeze, cloudy, with heavy sea, and vessel pitching heavily; at 8 A. M., wind increasing, took in stayforesail. The same weather prevailing at noon. Course, east; distance run, 102 miles; lat. 45.16, long. 41.32; wind, E. and N.E.

Sunday, Oct. 23.—At 2 P. M., strong breeze, and a very heavy easterly sea; vessel pitching and rolling heavily; at 10 P. M., less wind, and set stayforesail; at 2 A. M., dark and cloudy weather, with occasional showers, and sea still heavy; at noon, fresh breeze and weather cloudy. Course, E. by N. ¼ N.; distance run, 75 miles; lat. 45.36, long. 40; wind, S.S.E.

Monday, Oct. 24.—At 2 P. M. fresh breeze with heavy head sea, vessel pitching very heavily; 6 P. M. there was an increasing breeze with heavy head sea, double reefed mainsail and set foresail; midnight, strong breeze and heavy sea. The wind hauling afterward to the southward, and sea more regular, set whole mainsail and stayforesail. At 8 A. M. there was a fresh breeze, cloudy and overcast, and set gafftopsail. Course E. by N. ½ N., distance run 166 miles; lat. 46.24, long. 36.20.

Tuesday, Oct. 25.—Moderate breeze; at 6 P. M. light breeze and thick fog, but later on the breeze started from N.N.W., and, increasing in force, the gafftopsail was taken in. A heavy confused sea followed, and the main and stay foresail were double reefed. At 4 A. M. the jib hallards were carried away; moderate gale followed with heavy cross sea, and took a third reef in the stay foresail and set it. Same weather at noon. Course E. by N. ½ N., distance run 172 miles; lat 47.9, long. 32.18.

Wednesday, Oct. 26.—Moderate gale and heavy sea; at 4 P. M. heavy gale on with high sea; reefed mainsail. The vessel shipped some water occasionally, but behaved very well under the circumstances. Midnight, less wind and sea; more moderate at 2 A. M., the wind veering aft, and the weather improving. Set whole mainsail and spinaker and then gafftopsail. At noon, increasing breeze and fine. Course, E. by N. ½ N.; distance run 126 miles; lat. 47.40, long. 29.22, wind, W.N.W.

Thursday, Oct. 27.—At 2 P. M., moderate breeze and cloudy weather; later two barks in company bound east. At 8 P. M. wind and sea increasing, took in spinaker and set squaresail; a strong breeze and very heavy sea following, the gafftopsail was taken in and the mainsail single-reefed; bark bound east, distant eight miles. At 8 A. M. moderate gale on with heavy sea, but vessel doing very well. At noon there was a strong gale with high sea, and the mainsail was close reefed. Course, N. ½ E.; distance run 233 miles; lat. 48.48, long. 23.42; wind N.W.

Friday, Oct. 28.—Strong gale and high sea; vessel running under close-reefed mainsail and squaresail. At 6 in the afternoon the oil bags on board were taken out, and the oil used with great advantage when the sea was running heavy; at 8 P. M. there was less wind, but the sea was still very high, and vessel laboring very much; at midnight the wind was blowing strongly from the westward, and the mainsail was reefed and the squaresail set; at 6 A. M. heavy squalls prevailed, but at noon there was a moderate gale with heavy sea. Course, E. by N. ½ N.; distance run, 197 miles; lat 49.38, long. 18.45.

Saturday, Oct. 29.—At 2 P. M. moderate gale and heavy sea; at 10 P. M. the wind decreased in force, but the sea was still very heavy, and the vessel rolled very much; at 4 A. M. the weather was very cloudy, with a fast falling barometer; at noon, light breeze. Course, E. by N.; distance run, 172 miles; lat. 50.11, long. 14.22.

Sunday, Oct. 30.—Light breeze and cloudy weather; at 4 P. M., moderate breeze from N.W., and set whole mainsail, jib and foretstaysail, and took in squaresail; at noon this day Cape Clear bore north true, distance 32 miles by observation; distance run, 232 miles.

Monday, Oct. 31.—Strong breeze; at 6 P. M. Fastnet Light abeam, distant 9 miles; at 8:40 P. M. Kinsale Light abeam, distant 13 miles; at midnight, strong breeze with heavy sea, and heavy lightning to the southeast; at 4:30 A. M. Tasker Light abeam, 3 miles; at 7:30 A. M. Arklow Head abeam, distant 3 miles; passed Rockabill at noon, distant 8 miles; distance run, 258 miles; wind N.W.

Tuesday, Nov. 1.—Fresh breeze and cloudy weather; at 5 A. M. passed St. John's Point, distant 5 miles; at 10 P. M. Corswall Point right abeam, distant 7 miles; heavy gale and heavy sea on; at 1:50 A. M. Lamlash Light abeam, distant 3 miles; past the Cumbraes at 2:30 A. M., and at 4:30 A. M. came to anchor in Gourock Bay in about 6 fathoms of water. Total distance sailed, 3,163 miles.

THE DEED OF GIFT ABROAD.

THE latest English exchanges had not received the new deed of gift, but the following comments in the *Field* of Nov. 5 are quite timely, and show what a very useful thing a long memory sometimes is. The question of the right of the New York Y. C. to change the conditions under which it held the Cup has arisen in the past, but has never been made a serious issue. Had the changes been of a less radical nature and obviously in the interests of fair sport, no question of their propriety would ever have been raised, but the restrictions imposed by the new document are likely in time to lead to a serious questioning on the part of some future challenger of the right of the club to alter the original deed. We concur heartily with the suggestion of the *Field* that the new deed of gift should be torn up; and if conditions more nearly in accordance with the obvious demands of modern yacht-racing cannot be laid down by the New York Y. C., then it will be simpler and better to go back to the original and *bona fide* deed and to quarrel over that, rather than to supplant by something that is not only no more perfect, but is lacking in the stamp of utheuticity. The *Field* says:

We last week called attention to the projected alterations in the conditions ruling the America challenge cup, and said that the proposed revisions were all in favor of the holders of the cup. This also appears to be the view taken in America; and as Mr. George Schuyler once said (speaking of the contention that a whole fleet should be sent against the Cambria), if winning the Cup is made so difficult, it might as well be put aside as a piece of family plate. Mr. Schuyler, it should be said, is the only surviving donor of the Cup, and two or three years ago was appealed to to revise the conditions. He did so, and the committee of the New York Y. C. are now about to appeal to him again to make further alterations; but we question whether any of the alterations are valid and are of opinion that any foreign yacht owner could claim to challenge and compete for the Cup under the original deed of gift, dated July 8, 1857. The deed was signed by the five owners of the America—J. C. Stevens, Edwin A. Steyens, Hamilton Wilkes, J. Beekman Finlay and George L. Schuyler. On July 20, 1857, a copy of the deed of gift was sent to all British yacht clubs by direction of the New York Y. C., with the following remarks from the secretary:

Sir—I am directed to inform the members of your club that the 100-guinea cup, won by the yacht America at Cowes, Aug. 22, 1851, as a prize offered to yachts of all nations, has been presented to the New York Yacht Club. * * * The New York Yacht Club, having accepted the gift with the conditions attached thereto, considers this a fitting occasion to present the subject to the yacht clubs of all nations, and invoke from them a spirited contest for the championship, and trust that it may be the source of continued friendly strife between the institutions of this description throughout the world, and therefore request that this communication may be laid before your members, and earnestly invite a friendly competition. Tendering to any gentleman who may favor us with a visit, and who may enter into a contest, a liberal hearty welcome, and the strictest fair play, I am your obedient servant, N. BLOODGOOD,
Secretary New York Yacht Club.

This friendly challenge was practically unheeded, as, although a proposal was made in March, 1858, that a syndicate should be formed for building a yacht to rescue the Cup, nothing came of it, and the cup remained forgotten until 1868. In that year the American yacht Sappho visited us, and met with a signal defeat from the Cambria and other British yachts. Mr. Ashbury, owner of the Cambria, thereupon, at a dinner given in the Royal Victoria Y. C. house, Ryde, proposed that a fund should be started for prizes for a match to America, and there compete with American yachts, he himself offering £100. The secretary of the New York Y. C. then addressed a letter to the English papers, calling attention to the fact of the existence of the America Challenge Cup. Mr. Ashbury promptly challenged for it, and, although he did not win it, he can claim to have lifted the Cup from obscurity, and given it a fame it never before had.

At this date (1869) all the donors of the Cup were dead except Mr. Schuyler, and he was appealed to as to the interpretation of the word "match," the New York Yacht Club contending that the word match did not preclude their sending a fleet against the Cambria; Mr. Ashbury said that it did, and that match in this case meant vessel against vessel. Mr. Schuyler replied very emphatically that match had been inserted in the deed of gift advisedly to mean vessel against vessel, as the donors rejected the difficulty they had of getting a single-handed match at Cowes in 1851. However, as the other donors of the Cup were dead, Mr. Schuyler was not listened to, and, moreover, it was contended that the Cup and the deed of gift were now out of the hands of the donors, and that the conditions must be interpreted by the actual wording of the deed.

Notwithstanding this, the club re-assigned the cup to Mr. Schuyler in 1884, in order to get the conditions altered; but we are of opinion that the whole proceeding was illegal, and that a surviving donor had no more right to alter the conditions than any one donor during the lifetime of the others. Moreover, the third condition of the original deed of gift was as follows:

"It is to be distinctly understood that the cup is to be the property of the club, and not of the members thereof or owners of the vessel winning it in a match; and that the condition of keeping it open to be sailed for by yachts of all foreign countries, *upon the terms above laid down, shall for ever attach to it.* [The italics are ours.]

In the face of this we do not see how any one donor of the Cup could legally alter the conditions; and it seems to us that the revised deed of gift and conditions should be torn up and the original deed abided by.

We hear that one result of the alteration of the conditions as proposed would be that Mr. Sweet would not challenge for the Cup. His yacht of about 60 rating will, however, be built, and she will be put in competition at home at most of the regattas. There are rumors of two other 70 rating boats being built, as well as a much larger craft, and if there were two or three for the 40 and 20 rating class as well, the outlook for next season would be very pleasant.

LAKE ONTARIO.

BELLEVILLE, Ont., Nov. 8.—Your correspondent had the pleasure, a few weeks ago, of closely inspecting the Burgess yacht Merle at Oswego, and, taking into account the purpose for which she was built, would sum up his conclusions in the favorite monosyllable of the Indian, "Good." She is undoubtedly the most powerful craft of her inches that I have seen, and, under the sail area and length rule, it will be hard to design a craft of her class that will beat her in heavy weather. Our Iolanthe is her superior in a gafftopsail breeze, or possibly in a drift—though the Merle's admirers say she is a wonder in very light airs—but not, I should think, in winds above wholesail strength.

Nothing is doing with us in building this season, our yachtsmen seeming content to rest on their laurels. We have the champion Merle in Class A and the champion Iolanthe in second class, and that seems to be glory enough. There is a rumor that the latter will have her topsides raised 6 or 8in., with the object of increasing her power and rendering her able to beat the Merle in high winds. The success of this experiment seems to me very doubtful, as the yacht has not sufficient body under water to fight her way to windward with the Merle in a heavy sea.

An old sailor here is building an experimental steam craft of about 35ft. keel and 6ft. beam, with straight sides like a wedge. The engine is also a novelty of his own invention. A great deal of fun has been poked at this novel craft, which has been dubbed the "corn crib," the "hog trough," and so forth. She certainly does not look very handsome or promising. Time will tell what her qualities are, however. PORT TACK.

HAMILTON YACHTING.—On Nov. 1 a large meeting of yachtsmen was held at Hamilton, Ont., and the Hamilton Y. C. was organized. The interest is now very great, and the new and old boats together will make a very fine fleet on Burlington Bay when the season opens.

THE PAINE-BURGESS TESTIMONIAL.—The total amount raised is $10,500, part of which will be devoted to the purchase of a silver vase for Gen. Paine, the remainder being presented to Mr. Burgess.

A NEW TORPEDO BOAT.—It is reported that the Herreshoff Co. has signed a contract for a twin screw torpedo boat to make 25 miles per hour, the price being $82,750.

GITANA.—Com. Weld's schooner will follow the fashion and come out in white next year.

Canoeing.

Address all communications to the Forest and Stream Pub. Co.

BROOKLYN C. C. CHALLENGE CUP.—The final race for this club trophy was sailed on Election Day (Nov. 8), and proved one of the best in the annals of the club. There were four entries, but the stinging northwester which blew all the morning caused the withdrawal of all but Messrs. Brokaw and Ward, the holder and the challenger respectively. Mr. Whitlock was starter and judge. The course was the regular club course for this event, a triangle from a buoy off the club house one mile and an eighth northwest to Channel Buoy No. 20, thence E. by S. seven-eighths of a mile to buoy off the Phœnix Chemical Works at Thirty-ninth street, and home S.S.W. one mile to starting point. A strong ebb was running and the wind was fresh from the nor'west. The start was flying, with one minute to cross the line, and at 3:32 the word was given. Mr. Brokaw, in the Minx, carrying 50ft. of sail, crossed the line on the port tack in 5s., followed by Mr. Ward, in the Sunbeam, 30s. latter, carrying 60ft., but nearly 100yds. to windward, the Minx being apparently hunting an inshore eddy. Sunbeam soon went about, a strange proceeding, as she held the weather gauge, only explained afterward by Mr. Ward's excited statement that he thought he was to leeward. He was followed by Minx, and on the next tack both fetched the mark, Minx leading by exactly her advantage at the start, viz., 30s. On the run in, Sunbeam, carrying 60ft. of sail, made up some time, rounding the chemical docks buoy but 15s. behind the Minx. With a strong, favoring tide the reach home was made in very quick time, Sunbeam crawling up slowly but surely, until within 300yds. of the finish a luffing match was inevitable. This was bravely contested, but the champion, Minx, had to relinquish her honors, Sunbeam crossing the line just 4s. ahead, winning the cup for Mr. Ward for the first time by a bare length. His elapsed time was 57m. 52s., remarkable time, as the windward work was against the tide also. This cup has now been raced for nine times and won as follows: Three times by Mr. Whitlock, five times by Mr. Brokaw, and once by Mr. Ward. It has been of great value to the club in keeping the interest up, and has done much to give them the prominent place which they hold among neighboring clubs.—GUENN.

RED DRAGON C. C.—A club with this name has been organized in Camden, N. J., the secretary being Mr. H. M. Kreamer, 117 North Front street, Camden, N. J.

A. C. A. EXECUTIVE COMMITTEE MEETING.

PURSUANT to the call of Com. Gibson, the members of the Executive Committee of the A. C. A. met in Albany on Saturday last for the regular fall meeting. Beside the Commodore there were present Vice-Commodores Stanton and Jones of the Central and Eastern divisions; Rear-Commodore G. M. Barney, of the Eastern Division, Secretary-Treasurer Mix, Pursers Brown and Davidson, and Messrs. P. M. Wackerhagen (as proxy for Rear-Commodore Bailey), French, of Buffalo, and Huntington, of Rome. None of the Canadian or Northern representatives were present. The session of the Committee was an open one, and there were present beside the members, Messrs. Wilkin, Oliver, Nickerson, Carter, Foster, Shedd, Stephens, Palmer, Whitlock, Davis, Ruggles and Blake, beside members of the Mohican C. C., who called during the day. On motion of Vice-Com. Stanton all members of the A. C. A. who were present were allowed to speak on the important points which were discussed, and the meeting was entirely a public one.

In the morning all gathered at the Delavan House, but as Messrs. Barney and Jones had not arrived, the meeting was delayed until 2 P. M. After the call to order the minutes of the last meeting, at Bow-Arrow Point, were read and on the motion of Vice-Com. Stanton they were ordered amended in respect to remarks of Mr. Barney. After the minutes were amended and accepted, ex.-Com. Wilkin presented to Com. Gibson the commodore's flag made for Com. Nickerson in 1883, and passed by him to Commodores Oliver, Rathbun and Wilkin in succession. The name of each of the holders is inscribed on the flag, which Com. Gibson will fly for the present year. Several letters were read from the officers of the Northern Division, regretting that they could not be present, also one from Rear-Com. Bailey appointing Mr. Wackerhagen as his proxy. The Sec.-Treas. then read the following reports, a statement of the finances of the Association for the past year, and a report of the auditing committee, both of which were accepted.

RECEIPTS AND EXPENDITURES OF THE AMERICAN CANOE ASSOCIATION, 1886-7 (TO NOV. 1).

Cr.		
Balance received from C. A. Neidé		$41 33
Dues and entrance fees		1,079 00
Donation from T. C. Buddington		3 00
Sold lumber at Bow-Arrow Point		5 00—1,128 33
Dr.		
Stamps and postals		$46 30
Stationery and printing		24 33
Books		16 75
Incidentals—		
Express on books from C. A. Neidé	$1 85	
Express on envelopes for certificates	25	
Express on mail bags from C. A. Neidé	70	
Express on mail and books to Bow-Arrow	1 25	
Express on Washington C. C. resolutions	40	
Telegrams	45	
Money order	10—	5 00
Camp programmes		14 00
Year books		52 66
Map of camp site, 1887		3 00
Ribbon for badges		2 34
Constitution and by-laws—printing		13 60
Dues and fees returned—		
G. W. Strickland, entrance	1 00	
J. O. Shiras, overcharge	2 00	
E. S. Williams, '88 dues refunded	2 00	
W. L. Egerton, '88 dues refunded	2 00—	7 00
Camp expenses at Bow Arrow—		
Three waterclosets	35 52	
Flag pole and sheave	1 15	
Camp-fire wood	3 00	
Sign at dock	2 00	
Setting buoys	3 00	
Watchman	3 00	
Man and boat, 4 days	10 00	
Carrying mails	8 00—	60 47
Delaney estate bill, 1886		154 34
Com. Rathbun incidental bill, 1886		77 75
Com. Wilkin incidental bill, 1887		32 92
Regatta committee incidental bill, 1887		128 85
Clerical allowance, March to October		200 00
Eastern Division, per capita		97 00
Northern Division, per capita		137 00—1,072 61
Balance		55 72

NEW YORK, Nov. 10, 1887.

Robt. W. Gibson, Esq., Com. A. C. A.: SIR—The undersigned, a committee appointed by ex-Com. Wilkins to audit the accounts of Mr. Carter, the out-going secretary and treasurer, beg leave to report that the books of account and vouchers for expenditures, together with a balance, having been sent to your committee, the same were carefully examined and in all particulars found to be correct. Your committee desires to assure Mr. Carter that his work in bringing order out of chaos is appreciated; and to express the opinion that the services he has rendered as secretary and treasurer richly entitle him to the thanks of the Association, all of which is respectfully submitted.

(Signed) HENRY STANTON, WM. WHITLOCK, } Auditing Committee.

The committee on camp site for 1888, Messrs. Foster, of New York, and Shedd, of Springfield, made a report recommending Long Island on Lake George as the best site. A long discussion followed, in which the outside members took part. Mr. Whitlock read a resolution lately passed at a meeting of the Brooklyn C. C. favoring the vicinity of Huntington Bay, on the north side of Long Island, as a location for a salt-water meet, presenting charts and speaking strongly in favor of a meet near New York, as well as the advantages of this particular locality. Vice-Com. Jones also spoke in favor of a meet on Long Island Sound. Mr. Wilkin spoke in behalf of a meet nearer to New York than any that have been held, and favored the site recommended by the Brooklyn C. C. Mr. Stephens, of the New York C. C., spoke strongly in favor of a meet that would be easily accessible to canoeists about New York, and that would serve to stimulate canoeing and the growth of the A. C. A. in the same section. Messrs. Oliver and Shedd spoke against the proposed location on salt water and in favor of Lake George, the latter offering a letter from the Springfield C. C. in favor of Lake George. Mr. Davis recommended a meet in central New York, on one of the interior lakes as acceptable to the Rochester C. C.

The chief objections which were urged against a salt-water meet were the difficulty and expense of transporting a large number of canoes across New York city, the rise and fall of the tide, and the necessity for some extensive system of floats, and also the question of fresh water supply. The most determined opposition to a salt-water meet came from the Eastern Division; in fact, from those who first proposed and who worked so hard for such a meet last year, and their opposition carried great weight with those unfamiliar with salt water. There were few who cared to take the responsibility of recommending a salt-water meet and bringing to it men used only to fresh-water cruising. In behalf of Lake George it was urged that it was a far more central location for all divisions than one near New York. The question was thoroughly argued, and after a resolution of the Knickerbocker C. C. in favor of Lake George was read, Vice-Com. Stanton moved that the report of the committee be adopted, which was carried without a dissenting voice. From the tenor of the discussion it was brought out that few of the inland men care for a salt-water meet; while nearly all the men who live and cruise on salt water were strongly in favor of a meet on fresh water for their annual vacation. It was also evident that those most desirous of a meet near New York were afraid of the result should the experiment be tried. The location selected is very near Lorna Island, the old camp site of '81 and '82, but there is more room for a large camp. The facilities for reaching Lake George are now very good, and the location is undoubtedly as nearly central as can be found.

Of course in carrying out the idea of rotation it was expected that the meet would move from place to place each year, but the actions of the Eastern Division, in declining the meet and the commodoreship this year, and also in opposing a salt-water meet, have delayed the carrying out of the plan this season. The expectation was that with an Eastern commodore, the meet would be in the Eastern Division, or what is practically the same, in the waters of Long Island Sound, convenient to the East and New York. The action of the Eastern Division has made this impossible, and it is not likely that a meet will be held on salt water for some time. One result, however, of the present meeting, though no official action could be taken, was the determination to form a new division out of the Central, to include the vicinity of New York city, the States of New Jersey and Pennsylvania, and perhaps as far south as the Potomac River. Of course the movement for such a division must come from within the proposed locality, and the executive committee could take no official action; but the question of desirability of such a step was informally discussed by the officers and members present during the two days spent in Albany, and it was decided to go ahead at once with the work of organization and to apply to the A. C. A. for recognition. After the question of location was disposed of Vice-Com. Stanton proceeded to offer the amendments to the constitution, notice of

which was given in the FOREST AND STREAM of Oct. 27. The first amendment, to Art. V., Sec. 3, relating to the date of taking office, was carried. The second amendment, to Art. VI., Sec. 1, that the location of the next meet shall be decided by the executive committee in November, instead of at the camp, was also carried. The third amendment, to Art. V., Sec. 2, to do away with the enforced rotation of the commodoreship and meet, provoked a long discussion by all present, the feeling being strongly against the amendment. In view, however, of the fact that one division had already declined to avail itself of the offered privileges, it was finally decided to amend the article so as to secure the right to the camp and commodoreship to each division in succession, but to allow any division to decline them. A committee, Messrs. Stanton and Wilkin, were appointed by the chair to frame an amendment in this shape. The amendment relating to the ex-commodores was not offered, as the opposition to it was general.

The fourth amendment, to Art. VII., was amended so that the commodore may pass upon all names of canditates, giving him the power to reject any, while at the same time it is provided that he shall pass on all appeals from the decisions of the vice-commodores in regard to candidates. The proposed new article relating to the removal of officers and the expulsion of members, was carried, and the by-laws amended to conform with it. An amendment to the by-laws, Art. I, Sec. 2, providing for dues of absent members, was also carried. Art. IX. was so amended as to define more clearly the relations between the A. C. A. regatta committee and the regatta committee of the division in which the meet is held. A letter from the secretary of the Western Canoe Association, proposing a conference between the regatta committee of the A. C. A. and the W. C. A. to decide on uniform rules, was referred to the regatta committee with instructions to correspond with the regatta committee of the W. C. A. on the subject. Vice-Com. Stanton made some remarks on the Trophy races, and offered a motion to the effect that changes in the rules governing the races for the A. C. A. Trophy should only be made with the consent of the executive committee. A letter from Mr. Orange Frazer in regard to transportation of canoes was read, and Messrs. E. W. Brown, R. S. Oliver and E. A. Moseley were appointed a committee to confer with the Interstate Commerce Committee and the various railroad, express and steamboat companies, in regard to better rates for canoes. A motion of Purser Brown that the commodore appoint an auditing committee for the secretary-treasurer's accounts and the vice-commodores appoint similar committees for the accounts of their respective pursers, was passed, the same to form an amendment to the constitution.

Mr. Wm. Whitlock requested that his number be changed to the lowest vacant number on the list. After a thorough discussion of the advisability of such action, and also of a reallotment of numbers among the present members, a motion to renumber the whole list was put and unanimously voted down, Mr. Whitlock's request being refused. It was found that such action would probably involve the issuing of some seven hundred new certificates bearing the new numbers, and would give rise to endless confusion.

The following names were proposed for honorary membership and were accepted: Misses Ledyard, Cazenovia, N. Y.; Miss Helen Firman, Trenton, N. J.; Miss Louise B. Fredericks, Newark, N. J.; Mrs. H. L. Thomas, Miss Kate Wackerhagen and Mrs. F. L. Mix, Albany, N. Y.; Miss Sinclair, Brooklyn; Mrs. W. P. Stephens and Mrs. Chas. Eddy, Bayonne, N. J.; Miss Marion Vaux, New York, and Mrs. H. E. Rice, Springfield. The date of the meet was fixed for Aug. 12 to 26, 1888. The revised constitution and by-laws were ordered printed and sent to all members.

The Sec.-Treas. reported informally that the number of members is now about 650, and while all of these are probably desirous of continuing their membership, the addresses of a number are still defective and no responses are made to the various communications sent. The publication of the list of defective addresses in the FOREST AND STREAM of last week answers, but there are many still in doubt. All members who have not received the Year Book for 1887 and the new constitution lately sent out, are requested to send their correct and full address to the Sec.-Treas., F. L. Mix, 756 Broadway, Albany, N. Y.

After the meeting adjourned the visitors assembled in the banquet hall of the Delavan House, most of the members of the Mohican C. C. being also present. The evening was pleasantly passed with songs and speeches after an excellent dinner offered by the Turtles to their guests. On the following day the visitors inspected the club canoes at the Mohican club house, most of them leaving for their homes in the afternoon. Some comment has arisen from a notice in the newspapers that the Mohican Club would hold a reception on Sunday, and protests have been received from several, but the notice referred to a political club in New York by the same name, and not to the Mohican Canoe Club of Albany.

The decision in favor of Lake George will doubtless be a disappointment to some, but it will meet the approval of the great majority of those who attend all the meets. The location in itself is a good one, and the meet no doubt will be large and successful. The scheme for the formation of divisions seems to be taking form with at least as little friction and trouble as could be expected. The Canadian canoeists unfortunately were not represented in person at the meeting, but some will be at Lake George, and further they will have a large division meet at Stony Lake this year. Next year it is likely that the A. C. A. meet will go to Canada, probably to the Bay of Quinte, or some other bay on Lake Ontario. The Eastern Division still clings strongly to the old A. C. A., and really no actual division has yet taken place between the Eastern and Central Divisions. Still the Eastern Division is strengthening itself locally by its home meets, and will, when its turn again comes, be well able to manage a large A. C. A. meet. It has been understood from the first that the Central Division would have to be divided in turn. Its composition has been rather complicated, as it is really the remnant of the original Association. The Eastern and Northern Divisions when formed have each taken definite shape with clearly marked limits, leaving to the Central, beside the bulk of its membership in the Middle States, the distant members in the West, in California and in the South. The proposed new division will take in New York city, New Jersey and Pennsylvania, perhaps Delaware also, making a compact division that will remain practically unaltered. The Central Division will then comprise New York State, with the scattered canoeists of the West and South. The new division should bring in a very large number of canoeists who have thus far taken little interest in the A. C. A. and should further offer wider facilities to the old members about the Atlantic coast, from the Hudson to the Delaware. The local meet will allow the majority from this section to be present, though it is doubtful whether it will be regularly held on salt water. The general desire of the salt-water men now seems to be to get to fresh water for the two weeks' camp, making what short cruises they can through the season on salt water. The many charms of the latter make salt-water sailing the most delightful form of the sport, but the change for a short time to such waters as Eel Bay or Lake Champlain only make the return to salt air the more delightful.

The balance sheet before given is worthy of some notice, as it is a matter that concerns all members. The balance in hand this year is but small, only $55, but it will be seen that a large part of the expense is in the form of legacies from the previous year, and as the business is now conducted the expenses will be materially reduced. Of the items, about $250 is on old accounts, another $200 is the allowance to the Secretary-Treasurer, while $230 was returned to the divisions, according to the constitution. The allowance to the Secretary-Treasurer has not been offered this year, as a large part of the work will fall on the Pursers, but the question was discussed at the meeting, and the general opinion was that the traveling expenses and the living expenses in camp should be paid by the A. C. A. There is little rest or pleasure at a meet for the Secretary-Treasurer; he is required to spend about three weeks on the ground and to work all the time, and it seems only fair that if he gives his time for this object he should not be required to pay as well. It is likely that in the future the expense mentioned will be allowed to him. In the case of the last incumbent of office, there was an enormous amount of work involved in re-adjusting the books and in connection with the adoption of the division scheme, and the late secretary-treasurer spent more than the amount allowed him, making up the difference himself. In the future no such labor or expense is likely to be attached to the position, and the old allowance will be saved to the Association. A considerable item of expense this year was the prize flags, as a large number were purchased by the regatta committee, but in general the expenditures have been quite moderate, and with good management in the future they need not be exceeded. The receipts are the greater on account of the $2 dues of last year, but the prospects for a greatly increased membership as the divisions are more fully developed is very promising, while though the dues are now but $1, the new charge of the same sum on each member attending the meet will go very far toward paying the expenses of the meet, and will remove one objection long urged by outsiders for not joining, that they would not pay for what they could not enjoy. Altogether the condition of the Association is very satisfactory, while the well-known ability of the men at its head is a sufficient guarantee that its prosperity is likely to increase with each year.

PASSAIC RIVER CANOEISTS AND THE A. C. A.—*Editor Forest and Stream:* Will you allow me a little space in this week's paper to reply to my fellow Jerseyites who pitched into me so unmercifully in last week's FOREST AND STREAM? I am puzzled to know what is the matter with them. If they had read my comments carefully they would have seen that in favoring Lake George as the site for next year's camp I presumed to speak only for A. C. A. members in New Jersey, and I fail to find the name of any of your correspondents in my A. C. A. book. Of course, Mr. Editor, all canoeists from these parts would like to have a salt-water meet if it was only practicable, but for the reasons stated in FOREST AND STREAM last week, such a meet seems to me out of the question. The writer has full faith in the wisdom and judgment of the officers of the Association, and I am satisfied that nothing but the best interests of the Association has actuated them in determining the A. C. A. camp for 1888. I am very sorry for those canoeists (especially the Jersey ones) who are going to hold themselves aloof from the A. C. A. until the meet is held just where they want it. How much I should have lost if, like them, I had remained out of the A. C. A. until the meet came my way.—ESSEX.

IANTHE C. C.—The races on Nov. 8 were spoiled by light winds, Essex, G. D. Cox, winning the main sailing race, with Will O'Wisp, L. B. Palmer, second. The passenger sailing race was won by Atalanta, L. B. Palmer, with Idlemere, J. L. Douglas, second. Class 1 paddling was won by Mabel, W. R. Burling, with Atalanta, L. B. Palmer, second. In the tandem paddling Ida, Casebolt and G. Douglas, won; with No Name, Walker and Scott, second.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

A. W.—Write to Mr. K. E. Hopf, Arlington, N. J.

H. H.—Letter for you at this office. Send address.

G. H. H., Lynn.—The dog is owned by Pierre Lorillard.

J. S. W., Toronto, Canada.—Write to Wm. R. Schaefer & Son, 61 Elm street, Boston, Mass.

E. R. M.—You will find good fishing with hotel accommodation at Charlotte Harbor, on the west coast.

A. J. E. R.—When did champion Hero II., owned by Dr. J. Frank Perry, of Boston, die? Ans. He has been dead for more than a year.

J. B. F., St. Louis.—1. "Hallock's Gazetteer" will be the best thing for your purpose. 2. The gun has been used with satisfaction.

T. A. S., Cadiz, O.—Gladstone and champion Gladstone are the same; owned by the Brysons, Memphis, Tenn., who can tell you about the other things.

CONSTANT READER, Syracuse.—Try the country adjacent to Memphis, Tenn., or if you can go further be guided by the Texas note in our gun columns to-day.

C. K., Columbus, Neb.—1. You can begin the training when six months old. 2. There are good working strains among those owned in this country. 3. The coat and ears are likely to improve after six months.

R. M.—1. Make application to the Audubon Society, 40 Park Row, New York. 2. The Jersey City Heights Gun Club, Washington Heights Gun Club, Algonquin Gun Club and Fountain Gun Club, of Brooklyn.

H. A., Providence.—The hotel proprietors are J. Tomlinson & Bros. Salisbury, N. C., and points in that region will give you what you want. We have no information just now of any party going South for quail shooting.

L. C. M., England.—To obtain a position under the U. S. Fish Commission, you should apply to the Commissioner, stating qualifications and experience. There are several departments in the Commission, and you should say whether you wish to engage in scientific investigation, statistics, or fishculture.

CELT, Fort Worth, Texas.—All three of the arms named are reliable and proved by use. We cannot draw distinctions of merit between them; they are all of standard make, and the choice is much a thing of individual preference. The .40-60 would answer your purpose. The Lyman sights are highly esteemed.

S. A., New York.—About two or three weeks ago I noticed a horse-chestnut tree near the northeast corner of 34th street and Lexington avenue (on 34th street) which was in full bloom, although it had apparently blossomed last spring. Is this not a very unusual freak of nature? Ans. Yes, it is unusual, but like phenomena have been recorded.

F. K. G., Noroton, Conn.—I send by this mail, under separate cover, a piece of my 16-bore barrels which have been cut off, and would like to have you inform me through your paper what kind of metal it is. The piece is from a cheap gun list, $25, and is stamped "Laminated Steel." The gun is a most remarkable shooter. Ans. It is all-iron twist.

J. H. W., Riverside, Cal.—Can you send me the name of any good breeder of stag-hounds in the West? I wish to try them after our coyotes and would prefer dogs bred for and accustomed to just such work. Ans. See papers descriptive of hunting in the Cherokee Strip, in FOREST AND STREAM for July and August, 1887. Probably some of the strains there described would suit your purpose.

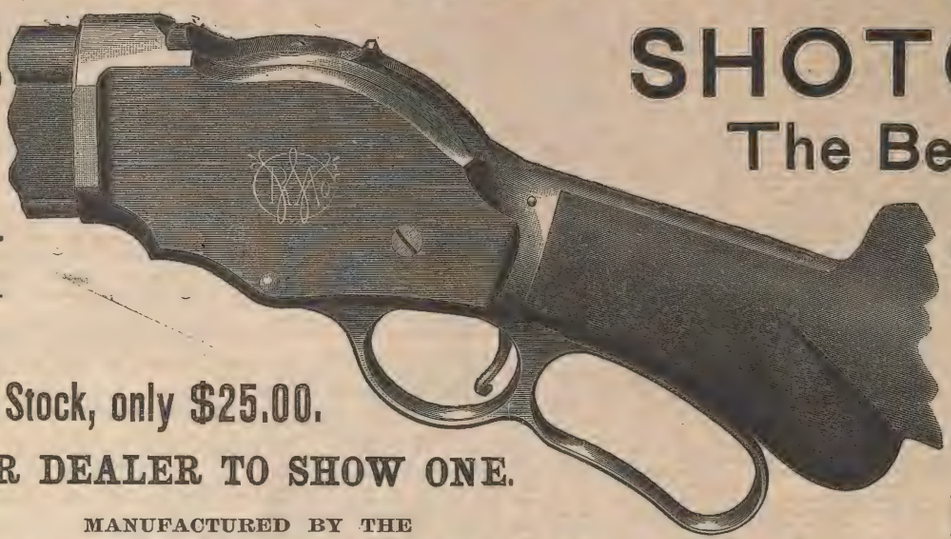
TO THE TRADE!

Have you heard of **Chubb, the Fishing Rod Manufacturer?** Of course you have. We might say nearly every DEALER and ANGLER throughout the length and breadth of the land, either knows him or of him as one of the ORIGINALS, who in 1869 turned out the first entire machine-made Rod in the States, or the World, for that matter. His Rods have now a NATIONAL REPUTATION, and are shipped to all parts of the Globe.

He employs no Agents or Travelers, but sells direct to the trade. He GUARANTEES to give prices FIVE PER CENT. better than any other manufacturer, when the QUALITY of goods is taken into account.



SEND FOR A TRADE CATALOGUE AND DISCOUNT SHEET, with a few sample rods for comparison.

DON'T FORGET that we are MANUFACTURERS and ship direct from the factory. Address,

THOS. H. CHUBB, Post Mills, Vt.

A NOTABLE ART ENTERPRISE

The Sportsman's Reverie.

A SERIES OF PICTURES FOR SPORTSMEN.

READERS of the FOREST AND STREAM cannot fail to recollect Mr. Thomas F. Watson's poem entitled, "The Sportsman's Reverie," printed in this journal about two years ago. Later on a few stanzas were added to cover other scenes of typical American sport with the gun. The author depicted vividly the varied visions which come before the view of the veteran sportsman as he sits in easy chair before the fire. Of the author and his poem the *Detroit Free Press* said in an appreciative notice: "The author is evidently a man of the most acute sportsmanly enthusiasm, as well as of nice literary taste. His poem is built upon a very simple plan. Before a cheerful fire—like Ike Marvel's hero—sits a veteran of rod and gun; he grows half drowsy over pipe and fire and the poet has caught—with a nice and sensitive appreciation—the reminiscences of a hundred hunts which flit through his brain. One experience after another is described with graceful pen touches; the quail, the woodcock, the snipe, the deer, fall before the crack of the gun; a long day's sport—a glorious day such as no man ever compassed between sun and sun—is described, even the trout, from the clear rapid, paying tribute to the prowess of a dreamland sportsman, until at last, with the fall of the quiet night shadows, the sportsman draws his boat to the shore, his tired retriever crouches at his feet, and, with his ducks, the final trophies of his sport, at his side, he looks back over the darkening water; and then, once again at his fireside, the end of the vision comes naturally and gracefully."

And now these "word pictures" of the poet have been complemented with the actual canvas pictures of the painter. Artist-poet and poet-artist have united to give us the poem in a magnificent setting. Mr. Robert Hopkin, the celebrated artist of Detroit, has painted a series of twelve pictures, each telling in color what the poem tells in words. From these paintings have been made superb heliotype engravings, each having beneath it the particular verse of the poem illustrated. The series is remarkable for strict adherence to nature fidelity in portraying action, and artistic merit.

THE TWELVE PICTURES:

No. 1 shows the hunter seated in an easy attitude in an arm chair, gazing reflectively into the fire on the hearth. Above the fireplace are the head and antlers of a deer. The sportsman's right arm is around the neck of his dog, which is resting on his haunches beside the chair. His left hand holds his pipe. The firelight flickers on the floor and around the legs of the chair.

No. 2 represents dawn breaking over a small lake. The night shades are fleeing. A mist is rising from the eastern end of the lake, of which trees fringe the edge. A plover is circling in the air, and in the foreground is a mallard lazily flying out over the glassy water.

No. 3 represents snipe shooting. In the foreground is the sportsman, his body twisted around to the left in the attitude of making a double on snipe. Standing beside him is the setter, waiting for the word to retrieve. To his right is the border of a wood, the branches bending to the strong wind. In the distance are the sails of craft on the lake.

No. 4—woodcock shooting—shows an opening in the copse around whose border a brook is winding. In the foreground, standing deep in the ferns and rank vegetation, is a setter on a point. Behind the dog is the sportsman in the attitude of shooting at a bird flying directly over him.

No. 5 shows a quail hunter in the foreground, walking along ready for the shot, which will follow the rise of the birds, on which the dog is drawing to a point. A haze is over all, and the sky is that of a day in Indian summer.

No. 6 depicts grouse or partridge shooting in the beech woods. The hunter is walking down a slope. The dog has come to a point ahead of him. The bird has flushed and the hunter is shown aiming. The pointer has stiffened into an attitude of strained attention, as he watches the bird fly away. The upper part of the sportsman's body is in the shadow, the lower part in the strong light of the sun rays.

No. 7 shows an angler reeling in a trout. A brook is tumbling down through the woods and over the rocks into the pool. The sky is cloudy and the sunlight is struggling through.

No. 8—deer shooting—is a forest scene. In the foreground a buck, just shot, is falling on the edge of a lake. Tearing down the slope behind him are two hounds. To the left, behind the roots of an upturned tree, are seen the head and shoulders of the hunter, whose rifle is still bearing on the deer.

No. 9 represents shooting over decoys. A gale is blowing and the water of the channel outside is lashed into whitecaps. In the bay the decoys are tossing in the chopping waves. In the foreground is a point of rushes, in which the skiff of the hunter is partially concealed. The flock of ducks, which has just swung in outside the decoys, is broken by the discharge of the first barrel. One section is wheeling out over the river. The other has broken off to the side and is wheeling out again to meet the first section. Some scattered birds are dashing above the head of the hunter, and he is twisted around in his skiff aiming at a bird flying above and behind him.

No. 10 shows flight duck shooting. The scene is a marsh, on whose broken surface the sun is setting behind the clouds. In the foreground, on a grassy point, are the hunter and his spaniel. The hunter is in a kneeling attitude and in the act of firing his first barrel. The spaniel is plunging into the water to retrieve the bird which has fallen to the first barrel. In the distance are flying ducks.

Nos. 11 and 12 represent the hunter retiring from the marsh and at home, and these two are among the strongest of the set.

The pictures are printed on the best 150lb. plate paper; size of paper 24×30in.; size of print 14½×17½in. The pictures have the tint and tint border, and the artist's remarque and signature, and form artist's proofs, an édition de luxe.

PRICE, $30 FOR THE SET; SINGLE PICTURES, $3.

ANSWERS TO CORRESPONDENTS.

THOSE MYSTERIOUS RIFLES.

EVERY few days there floats through the newspapers a story giving alleged facts about some new rifle which has been or is about to be adopted by some one of the foreign powers. The writer manages to give some very startling half-facts, and one is tempted to believe that at last the coming small arm has come. The new arm has generally a very small caliber, a very long range, a very low trajectory, a very slight recoil, uses a powder which gives a very small report and a very small amount of smoke, and the bullet is very peculiar in many respects. In fact, the whole arm is very "very" in many respects, and the government makers are very careful about letting a single sample get out or a single fact as to its performance come to the public ear.

Now and then a bit of evidence does get out. A bottle-neck shell ejected from some of the experimental pieces is picked up and those who know the history of what has been done in this line know at once that an old and discarded feature in American small arm progress is in use in the phenomenal paper piece. There are wonderful targets made with shots bunched in a fashion which would rouse the jealousy of the most pronounced muzzle-loader lover, but the targets are not published. The pencil-shaped steel bullets have a fashion in the story of tearing along through planks and sheathing of metal, but the holes and the punctures are not shown to the doubting ones on the outside. In the story each government is supposed to have the most perfect arm and each flatters itself that no other power knows what it is doing, while as a matter of fact, every sensible person knows that the army-ridden continent of Europe is also overrun by an army of spies, noting down every item against every power which may in a twist of the political whirligig become an enemy in the field.

The explanation for all this mystery is a very simple one. The foreign armies are like our own, overrun with petty jealousies; one department of the service looks with green eyes at the success of another; a clever infantry officer or an artisan in his employ concocts a new arm, and at once the whole flock of infantry officers call for that arm, lobby for it, and shut their eyes to the merits of the arm which an engineer officer has elaborated. There is money in a fat government contract for a supply of small arms. Army officers have often very lean and hungry purses.

There is no doubt that in the line of the chemistry of explosives European savants have made important progress, and have reached or are close to some important discoveries, but when it comes to the mechanical get-up of a small arm, guaranteed to work well and "get there" every time, we venture to assert that American ingenuity will always hold the head of the line. It might save European cash, even at the expense of European self-esteem, if a jury of experts from leading American armories were invited over to give a few points on the models now considered with such favor abroad.

PRIZE CUPS AND CODFISH.

THAT there is an intimate connection between yacht architecture and the fleet devoted to mercantile pursuits, has received a striking illustration in the success of the new fishing schooner, Carrie E. Philips, recently launched from the yard of A. D. Story, of Essex, Mass. This schooner was designed by Mr. Ed. Burgess, of yacht building fame. An an improvement upon present practice in the fishing fleet of the banks, the Philips will no doubt serve as a guide to further advance. She represents a combination of speed, seaworthiness and adaptability to purpose not hitherto attained among the bankers, to say nothing of the superior beauty of the Philips. Her rig is an adaptation of the English schooner yacht, with single stick bowsprit, staysail and jib, short foremast and mainmast stepped well forward, a rig to which our schooner yachts are destined to conform, just as our sloops have accepted the cutter rig. In model the Philips appears to be first cousin to the Grampus, designed by Capt. Collins, of the U. S. Fish Commission, the plans of which can be found in FOREST AND STREAM, Jan. 13.

LICENSES IN DELAWARE.

THE Delaware Game Protective Association held a meeting at Dover, Nov. 14; and among the topics discussed by the members was the $25 license fee for non-resident gunners which was passed by the late Legislature. This license was issued by the Game Protective Association of Delaware. One-half of this fee was to be given for the school fund and the other half for the use of the Association. At the meeting the Association resolved to disregard the law; they hold it unconstitutional because they being an incorporated body it takes a two-third vote of the General Assembly to alter or amend their charter; and this $25 section was passed by a bare majority. The law is loosely drawn as it does not say how long the license is good. The president of the Association holds that the license is good forever unless the law is changed or until a new law is made to the contrary. The Association will therefore continue the $5 license fee as heretofore and will protect all holders of it. This will be good news to Philadelphians, for in that city 300 sportsmen hold licenses.

NATIVES AND OUTSIDERS.

IT has been hinted from time to time, and more than once spoken out loud, that the Maine game officials shut their eyes to offenses committed by residents or "natives," and give their attention only to visiting sportsmen, who are counted profitable game because able to pay heavy fines. Elsewhere a communication is printed, whose author assumes that the recent official proceedings against two visiting sportsmen at the Upper Dam were prompted by this sordid motive of plucking outsiders.

A moment's consideration of the case as set forth in our columns will show to any reasonable mind that such insinuations are unjust and unfounded, for the action of the warden was prompted in the first place by a visiting angler, and it was only at the determined instance of gentlemen from New York and Pennsylvania that the initial steps were taken. By no possible twisting of the facts, so far as they have come to light, can it be maintained that this discharge of duty by the warden was prompted by any other than highly laudable motives.

Unquestionably Maine residents do violate the laws; there is abundant evidence to that effect. But if there is anything to show that the Commissioners or their subordinates are wilfully deaf, dumb and blind to transgressions by natives and are only on the alert for offenders from abroad, it has not been demonstrated. More than this, the plea so often advanced, that a guilty man should go scot free because ten other guilty ones have eluded detection and punishment, is not a basic principle of the modern social system. No person who valued his life would care to dwell in a community where such sentiments prevailed. Nor is the proposition that one offender must not be punished until all the rest have had their deserts a rule of official conduct that any sane person caring for the esteem of his fellows would have the audacity to advance at home among his business associates and townspeople. It is only when he goes off into a remote locality, defies the laws he finds there and is caught at it, that he professes virtuous indignation at being singled out from among the rest of the culprits.

When the Maine fish and game protectors concede that they ought not to do a portion of their work because they cannot do it all, it will then be in order for them to resign, and for the State to abolish the commission.

SNAP SHOTS.

HON. EMERY D. POTTER, a veteran among fish commissioners, has been reappointed to the Ohio board; and he has gone to work in an energetic spirit to advance the fishery interests of his State. In another column is noted the beginning of the task of breaking up the illicit destruction of fish in Lake Erie; and here is an extract from a letter written by Judge Potter, which gives ample evidence that the Ohio Commissioners propose to keep up with the times. He writes: "The first official act after my appointment was to offer a resolution instructing our secretary to subscribe for five copies of the FOREST AND STREAM, one for each member. As we serve the State for no other compensation than our necessary expenses, we deemed it but just that she should furnish us with all the light needed to qualify us for an intelligent performance of our duties, and my resolution passed *nem. con.*"

The season's record of accidents in the field is growing with alarming rapidity. If the geniuses of the Salvation Army who devote their artistic talents to bedaubing the rocks with exhortations and mottoes of a more or less sacrilegious character would inscribe "Don't shoot a man for a bear," "Don't peep into your gun muzzle to see if it is loaded," and other useful advice for gunners, they might serve an useful end. Such advice heeded would have saved the life of one poor fellow in Sullivan county, Pa., the other day, who, having climbed a tree near camp, was shot by a returning companion, who mistook his friend in the tree for a bear.

There are all grades of shooting galleries in this city, some on Broadway and others on the Bowery; and the distinctions between them is that between the characters of the thoroughfares themselves. The typical Bowery gallery is a gaudy establishment, where the range is short, ammunition cheap, target a swinging human effigy, and the shooter often "loaded." Just now the Bowery gallery keeper is reaping a harvest from sinister-visaged, shaky-armed Anarchists, who waste their substance in getting a steady aim, to be in readiness for the revolution when it gets here.

There is something in luck after all. When the Robins Island Club went down to run their field trials last week they found their club house in ashes. When the Western Field Trials Association repaired to the grounds selected, they found the condition of the cover, the weather and the game supply all unfavorable for work. On the other hand, the Eastern Field Trials Club meeting at High Point has been marked by capital weather, grounds in good condition and birds in abundant supply. So much for bad and good luck.

Capt. Frank H. Stott and Mr. W. W. Durant have bought a tract of land comprising 51,000 acres in the Adirondacks. The preserve borders upon Raquette Lake, and the wonderful stories that Capt. Stott tells of tons of trout being seen in some portions of it every May are well worth believing, on the principle that it is always easier to believe than to look for proof.

SAM LOVEL'S CAMPS.

SECOND SERIES.—I.

FOLLOWING out a plan conceived during his spring campaign on the Slang, when he had been amazed at the numbers, size and variety of fishes inhabiting Champlain waters, Sam Lovel and some of his friends with a wagonload of camping outfit were one day slowly jolting down the steep winding road to the landing below the first falls on Little Otter.

It was one of those lazy afternoons in June when all nature basks in the new warmth, and nothing seems better to all things than to be still and enjoy laziness. The bullfrogs sitting on the rafted logs at the mill tail only winked their enjoyment of sunshine as they dozed beside their voiceless brothers, the little turtles. A kingfisher sat motionless on a fishing stake, apparently regardless of the swarm of minnows poised beneath him. A big fish, finding himself floating too near the glassy surface, broke it with a languid flap of his tail as he sought cooler depths, the slow wavelets just stirring the young water weeds and lapsing softly on the shores. High overhead a hen hawk swung in a wide circle as slowly as swept the lazy drift of silver clouds above him, and almost at rest upon the wing. The voices of the birds were hushed; the merry bobolinks jangled only occasional snatches of song in the meadows, where loitering strawberry pickers lounged in the long shadows of trees, and a wood pewee in the great elm over the mill was the only one of the thousand singers that sang continuously, and his sweet pensive notes seemed like the fragrance of flowers, more exhaled than sung. The pervading spirit of indolence had fallen upon mankind as well. The miller lounged in the doorway of his mill with no sign of his vocation but the dust on his garments, while no sound was in the misty precincts, but the drowsy murmur of the waste water dribbling from the flume, and from the wide portals of the sawmill only at rare intervals was heard the creak of the sawgate, the swish of the saw eating its way through the log, and the clink of the ratchet in the rag wheel; and then the sawyer only moved along his jerky seat on the log when it had brought him into dangerous proximity to the saw, reluctantly, and wishing the log was longer. Then he rode back on the carriage, and after due deliberation set the log up an inch sidewise, dogged it in place with slow strokes, and when he could think of no pretext for longer delaying, hoisted the gate and set the squeak and swish and clink agoing again, and fresh terebinthine and balsamic odors afloat on the air. Women lolled in doorways with elbows on knees looking intently at nothing, while children, too young to be at school, were taking their afternoon nap. But the curiosity of these good people was awakened and unwontedly stirred by the arrival of Sam's party, for a camping outfit was an unusual sight in those days, when camping was not in fashion with those who were considered quite respectable. Only white vagabonds and bands of Canadian Indians who had not much better shelter at home were supposed to live in shanties and tents for the pleasure of it even in the pleasantest weather. Perhaps the memory of the hardships of the pioneers, some of the younger of whom were yet living, was not enough obliterated for such primitive ways of life to seem at all desirable to their descendants. At any rate the folks about the falls wondered to see such decent-looking men as these coming of their own free will to take boat here to go to the lake for some days of vagabondizing. This they signified their intention of doing when the miller and the sawyer with moderate haste drew near, with some others who suddenly emerged from neighboring houses, rubbing the traces of recent slumber from their eyes.

Sam inquired for the owner of a roomy boat to take their effects to the mouth of the creek, and the miller looking at the sawyer said, "Wal, there's ol' Uncle Tyler hes got a tollable big scaow boat, an' haint nothin' much t' du. Mebby he'd take ye daown t' the san'bar. S'pose he would, Sargent?"

"Yaas, I sh' think like 'nough he would."

"Yes, he'll du it," the miller said very confidently now.

"Goin' fishin'? Thought most likely ye was. Uncle Tyler lives up yunder in that leetle haouse wi' the linter on the west side on 't—that leetle heater piece is his'n, an' there he is a pokin' raound in his garding. There, he's comin' daown t' see what's a goin' on—thought he would—haint nothin' else t' du. Most on us putty busy this time o' year; ha' no time tu be foolin' raound day times."

"So I see," Sam said. "C'n we git someb'dy t' keep aour hosses a week er so?"

"Wal, Sargent's got a parstur handy," the miller replied, questioning the sawyer with his eyes.

"Jump?" Sargent asked.

"No, sir," Sam answered, "do' wanter, 'a' can't," which statement the subdued mien of the ancient and clumsy animals seemed to verify. So a bargain was made with the sawyer for their keep, and Uncle Tyler being now present, bestowing a slow, senile, lop-jawed stare impartially on each of the newcomers, negotiations were entered into with him. "They wanter hire yer boat tu take 'em daown tu the san'bar," the miller shouted with great distinctness, making it apparent that Uncle Tyler was hard of hearing. "Your boat! san'bar!" yet louder and pointing to the scow drawn up among the willows, and then down the creek.

"Ooo-h!" said Uncle Tyler, slowly looking them over again. "Where'd ye say ye come from?"

"Haint said," Sam answered.

"Stanstead? Why that's way up beyund Canerdy line! Hoss thieves up there!" Uncle Tyler said severely, turning the focus of his dull stare on to the horses.

"We—live—up—tu—Danvis," Sam proclaimed with slow and loud distinctness.

"Ooo-h! Danby!" said Uncle Tyler, "'Way saouth o' here—Quaker taown. Haow come ye t' come 'way up here? Haint Quakers, be ye?"

"Dan-*vis*," Sam roared.

"Oh, ooo-h, yis! Danvis, yis, yis, over here," and the old man pointed vaguely eastward. Sam nodded assent. "Yis, yis, Danvis," Uncle Tyler repeated; "Danvis; got relations up there, er my ol' woman has; 'maounts tu 'baout the same thing, gen'ally—name o' White—White by name but not by natur'—dark complected folks; know 'em?"

Yes, Sam knew a family answering to that name and description.

"Yis, I guess I c'n take ye daown termorrer mornin', arter breakfus. Shill want a little suthin' for't; orter be workin' in my gardin—weeds just a bilin' up aouten the airth naow. S'pose yer willin' tu pay reson'ble? Hev ye got any terbarker 'at's fit tu smoke? I meant tu ha' sent up t' the store an' got me some, but I forgot it." While the price of Uncle Tyler's prospective services was being fixed upon, and he was filling his pipe from Sam's blue paper of "long cut," Antoine returned from an inspection of the craft in the harbor, rejoicing as if he had met an old friend. "Say, Sam!" he cried, "you ant b'lieved it, Ah'll fan dat sam' raf' we was helped it dem feller buil' las' sprim! Yas, sah; bah gosh! He'll got dat lett' on en' of log of it, feesh hook, an' hoxin's foots!"

"J. B.," Sam suggested.

"Yas, bah gosh! yas! Wal sah, Sam, 'f Ah'll can' haire aout some boats, Ah'll goin' borried dat raf's an' pole hum daown de crik, bah gosh, hein?"

"I guess, Antwine, 'at necessiation won't impel us tu sech ways o' navigation," said Solon, glad of an opportunity to let these proud lowlanders know that although he lived among the mountains, he was not to be outdone in the elegant use of their common language by any one in the lake region, "for Sammy well is a negoturatin' with this elderly an-cient gentleman tu export us an' aour defects in a occupacious boat o' his'n."

When he had done Joseph Hill heaved a sigh of relief, and said aside to Sam, "Wal, I swan! I begin tu be afeard 'at Solon 'ould git stuck, an' never git red of all that 'thout chokin'! I'll be gol darned 'f his thrut haint the size of a saw lawg; not quite the size o' some o' these mebby," slowly measuring with his eye some of the largest logs piled in the mill yard, "but the size of a middlin' sized, sorter sizerble saw lawg."

Arrangements were made with Uncle Tyler to take the most cumbersome of their baggage to the lake in his scow next morning, and accommodations for the night were found for the party at the miller's house. The remainder of the day was passed by them in comfortable lounging about the neighborhood of the mills, watching the boys catching rock bass at the foot of the rapids, themselves taking a hand occasionally in the sport of capturing these vigorous biters, and in informing themselves concerning a desirable camping ground, and the best places for fishing.

"You c'n fish anywheres 't the' 's water 'n' ketch suthin' 'nuther," said the miller, "but 'f you want a ri' daown good campin' place, arter you git beyund the Slab Hole, you turn int' the left, on the wes' side o' the crik, 'posite the san'bar, where the's a lot o' willers, an' you'll find the neatest place 't you ever see! Ye needn't build ye no shanty, for the' 's rocks a hangin' over 'at'll shelter ye, an' the' 's lots o' cedar browse tu make yer beds on, an' wood! the Slab Hole's full on't—lawgs, an' slabs, an' sticks o' fo' foot wood, 'n' everything, f'm kin'lin' tu back lawgs. An' there ye be, right t' the lake, 'n' right t' the crick, an' Lewis Crik an' the seinin' graound not mor' 'n a quart' of a mild off!"

Uncle Tyler's appointed hour of departure, "arter breakfus," came in good time, and the party was afloat not long after sunrise. Sam and Antoine led the flotilla in the birch and dugout, which had been transported from Danvis on their wagon, and Uncle Tyler, Solon and Joseph were captain and crew of the scow. The old man steered with a paddle, and struggled with his latest borrowed pipeful of damp plug tobacco, while each of the others manned an oar and wrestled desperately with it, for rowing was a new and painful experience for them. Now they "caught crabs," and now they dug the bottom with the oar blades, bringing up on them specimens of aquatic plants that would have rejoiced the heart of a botanist; and they bumped their noses and their knees with the handles, while the splashing of the water, the creaking and thumping of the clumsy oars, and the grunting and puffing of the rowers, intermingled with the directions of the helmsman, delivered in the loud, unmodulated tone that deaf persons are apt to use, made a confusion of sounds most wonderful to hear. If the ancient mariner laid aside his paddle for a moment to give his pipe its often-needed lighting, Solon's oar was sure to be midway in or at the beginning of a stroke, while Joseph's blade was pointing at some quarter of the heavens between the zenith and the horizon, and presently the scow was headed for the shore, her bottom brushing over the young rushes and sedges of the marsh. "For gosh a'mighty's sake! Didn't nary one on ye never have a holt of a noar afore?" he would shout, as with lateral sweeps of his paddle he got the boat upon her course again, "Don't dip so deep! Keep the blades o' yer oars jest onderneath the water—but ye got tu stick 'em *in* the water! ye can't row in the air!" as one of them skinned the surface with his blade. "Oh, good gosh a'mighty, can't ye hear nothin', er can't ye onderstan' nothin'?" The old man's patience was almost exhausted, when his pipe, turning over in the unstable grip of his gums, emptied its now well-fired contents upon his knee, unnoticed till it burned through his trousers to his leg. "Good—gosh a'mighty! I thought I smelt suthin' a burnin'!" he cried, slapping wildly at the smoldering fire. His pipe dropped and was shivered at his feet, and just then Joseph missed a stroke into which he had put much strength and good intention, and went sprawling heels up in the bottom of the scow, while his oar blade came down with a thud on Uncle Tyler's pate.

"Good gosh a'mighty dum ye! *Be* ye tryin' ter kill me, er what be ye tryin' t' du? Breakin' my pipe, an' a knockin' on me in the head, an' a burnin' on me up alive! Gimme a holt o' them oars, an' git aout o' that dum quick!" crawling over the baggage toward them. "Lay daown—er git aout an' go afoot! I don't keer a dum mite which! Ketch me a goin' a bwutin' agin along o' a passel o' idjits 'at do'know a noar f'm a pudd'n' stick! Ye can't row a bwut no more'n a goose c'n gobble!"

One bestowed himself in the bow, the other in the stern, while the old man, as speechless with wrath as they were with mortification, sent the boat forward with long, even strokes that made the water surge under her broad bow. The young lily pads danced madly on the waves of her wake, and the little whirlpools that spun away from the oars twisted into tangles the slender new leaves of wild rice, and engulfed fleets of water beetles.

The commotion on board the larger craft had caused Sam and Antoine to cease paddling and wait to ascertain the cause.

"What a dev' hail dat hol' can' hear not'ing man?" Antoine asked as they looked back. "He'll don't goin' trow Solem an' Zhogzeff board over, ant it? Oh, bah gosh! Ah'll bet you head Ah'll know what was de matter be! Dey'll can't *roar!*"

"Wal, by the gret horn spoon! I sh'd think by the saound 'at he c'ld roar 'nough for the hull three on 'em!" said Sam, as the steady rumble of Uncle Tyler's angry bawling came over the water.

"Oh, damnashin! Ah'll ant meant roar a nowse! Ah'll meant *r-r-r*-roar dat hol' boats wid r-roar! Ant you'll on'stan', hein? Oh, bah gosh! Ah'll ant never see so dam langwizhe lak Angleesh, me!"

"Wal, Antwine, I never did nuther—not as you speak it." The scow seemed to be making fair progress now, and they went on their way.

Solon, after long and intent study of the Tyler method of handling the oars, at last said: "I du raly b'lieve, Jozeff, 'at I hev got a clear an' intercate idee of the modus upperdandy, as they say in Latin, an' 'at I c'ld naow, arter a leetle practyse, expel this boat putty nigh as rapid as what he does."

"Wal, it *looks* tollable easy, but I haint faound it so; that is, not so turrible easy," said Joseph.

"Naow, she's a-goin'!" proclaimed Uncle Tyler, unconscious of their conversation, and sending a grim but somewhat mollified glance fore and aft.

"She?" queried Solon, after scanning each distant shore, "who's she? I don't discover no one of the femaline sect nowheres."

"What she is a-goin'?" Joseph shouted at Uncle Tyler.

"Hey? Oh, good gosh a'mighty! I never see such dum'd ign'nt creeters. Why, this bwut is 'she.' It haint he, is it?" and the old man was obliged to quit rowing a moment to unburden himself of wheezy laughter.

"That is a most cur'osity idee," Solon said, after some consideration of the subject, "a-speakin' of a onhumern, onanimit boat as if it belonged tu any sect. I don't see nothin' phillysoffycable in it!"

"Wal," Joseph said, "I do' know. Mebby it's 'cause if they take a notiern tu go, they're a-goin', an' if they don't, they haint, erless a feller knows haow tu make 'em 'thaout lettin' on 'em think they're bein' made, which it is a knack 'at few on us hes—er mebby it's 'cause they take a feller jest where they're a minter—I do' know."

"It proberbly deriginated someway aout o' their contrairiness. Haowevertheless, it 'pears tu me it 'ould be more properer tu call 'em 'he,' bein' 'at they hev starns, which men is spoke of frequent as the 'starn sect.'"

"An' then there's the baows, tu. Women allus curcheys."

"That's the way to row a bwut!" Uncle Tyler said, only knowing by the motion of their lips that they were speaking, and imagining that they were expressing admiration of his skill.

"Goin' ahead looks easy 'nough," Joseph said, pondering, "but s'posin' a feller wanted ter hev him—no, 'she' is what he calls the dum'd ol' thing—hev her go t'other way, what's goin' ter be did then? What d' yer du when ye wanter back her?" loudly addressing the ancient mariner.

"Hey?" he shouted, suddenly alert and resting on his oars. "Want terbacker? Course I du, but ye broke my pipe an' I can't smoke thaout you lem me have yourn, an' I haint got no terbacker; meant tu sent up tu the store an' get me some yist'd'y, but I forgot it."

Joseph began whittling a plug of tobacco, and filling his own pipe, handed it with a match to the old man, who, dropping his oars, at once set himself to lighting it. "Ol' as he is, he haint forgot haow tu suck," Joseph remarked in an ordinary tone as he watched him pulling at the pipe with resounding smacks. "Don't ye see the flame o' that match a comin' aouten his ears? I do' know as I see the flame, ezackly, but I'm sartin I du the smoke."

"That's the way tu row a bwut!" Uncle Tyler repeated when having got his pipe in satisfactory blast, he resumed the oars and sent the scow snoring on its way. The sound of its progress was not unlike the heavy breathing of a sound sleeper, the long, grating squeak of the swivels simulating the indrawing of the breath, the gurgling swish of the water during the stroke, its exhalation. "It's just as ea-sy!"

"I know it is," said Joseph, "leastways, I think it is, tu look at it. I c'ld set an' look at ye duin' on't, an' never git the least mite tired; an' I do' know but what I c'ld larn, jest a settin' an' a watchin' on ye. Any ways, I'm willin' tu try larnin' that way a spell. Golly blue!" inspecting his palms, "the's blisters on my han's bigger'n ac'rns, an' a dum sight tenderer! That ol' dried up critter haint juice 'nough in his hull carkiss tu make one sech blister. Mebby the' is in his hull carkiss, but the' haint in his han's, I don't b'lieve. An' his back hes got jest the right hump for the business. Tell ye what, Solon, I b'lieve ol' folks is the fellers 'at is ezackly cal'lated for 't. If I was tu set here an' watch him till I git tu be as ol' as he is I shouldn't wonder 'f I could oar one o' these she boats, but I do' know, it don't scasely seem, 's I feel naow, as 'ough I keered 'baout tryin' much afore."

When the two canoes came to where the tributary East Slang somewhat widened the slow current of Little Otter, Sam pointed with his paddle to the low cape, now green with water maples in full leaf, even now standing ankle deep in the still brown water, whose weedy surface dully reflected their greenness and graceful ramage, and the flash of the starlings' wings that flitted among them. "Up there, Antwine, is where we camped last spring, an' hed fun. I wonder haow it looks naow 'at summer's come, if the shanty 's standin', an' whether that 'ere dum'd little squirrel sets there a chitterreein' on that hemlock yit? Dum'd 'f I don't go an' see haow it looks some day; lunsomer 'an it did then, I guess."

"Yes sah! Oh 'f Ah'll ant have it good tam dere, me! An' dat de place you'll see dat crookit tree where Ah'll leek dat mans. Ah'll bet you head you can fan de brark scrape off the tree yet, an' de hairs scratter 'raoun'—prob'ly de blood all wash away 'fore naow."

"Most likely," Sam said.

The scow having now drawn near, they passed on together toward the lake. "I was a cal'latin'," Uncle Tyler said, addressing the fleet in general, but particularly his crew, "for ter troll some comin' 'long, but you be so okkerd! I got a rig there an' posserbly you might hang on to 't so 's t' snag a pickril," and reaching before him he took up a short pole with many crooks in it for its length whereon was wound a stout line which had a hook baited with a piece of pork rind and a strip of red flannel. While he kept the boat slowly moving he unwound thirty feet or so of the line, and handing the pole to Joseph went on at a leisurely stroke. "The' haint no better trol-

lin' graound in the hull crik 'an the is atwixt the tew S'angs," he said, and as they neared the mouth of the South Slang, Joseph returned jerk for jerk on the trailing line with a grunt thrown in. "What be I a-goin' t' du naow?" he asked in dire perplexity, though he set his teeth and held to the bending pole with a will, "I can't get him 'thin twenty foot on us wi' this dum'd little short pole?"

"Gim me a holt on 't!" said Uncle Tyler, dropping his oars and rising to the occasion. Laying hold of the pole he drew the tip far behind him, and grasping the line hauled it in hand over hand with deliberate celerity, till the wide-mouthed pickerel came gaping alongside and was lifted on board by the hook, forgetting to resent his injuries till he dropped on the bottom of the scow, which he then belabored with strokes of his tail, while he snapped his ugly jaws. He was a slab-sided fellow, whose six pounds of weight were spanned by two feet and a half of length, but he was admired as a beautiful monster by Solon and Joseph, and almost as much by Sam and Antoine, who came alongside to look at him.

"Good gosh a'mighty?" cried Uncle Tyler in wondering pity," "it does beat all natur haow you folks does vally these 'ere goo'-for-nothin' pickerel! I'd a gre' deal druther have a nee. Wait till ye git aholt of a fo' fi' paound pike, an' then you have a fish 'at's wuth a-havin'! Pickril! Good gosh a'mighty!" Uncle Tyler emphasized the "good" as if upon occasion a bad "gosh" might be invoked.

The trolling line was let out again as they went forward, and to keep it clear of the weeds Joseph now ventured to direct their course with commands, or rather friendly advice, which would have puzzled a strictly nautical man to obey or follow. "'F I was you I'd gee a lee-tle mite. Naow haw more 'n ye gee. Now oar the hardest wi' yer north oar. Guess ye'd better oar most wi' the saouth one naow—guess it's the saouth one—do' know but what it's the west one, lem me see," taking a look at the sun and the eastern hills—"yes, oar the west one."

"Oh! go 'long wi' your tarnal geein' an' hawin', an' your northin' an' saouthin'!" Uncle Tyler droned loudly. His father had migrated to Vermont from the seacoast, and something of his salty flavor had been imparted to his son. "This 'ere haint a nox cart, it's a bwut, an' this side on her is starb'd and that's larb'd er port. When you're a wantin' on me tu pull this oar, holler 'starb'd!' an' when you're a wantin' on me tu pull t'other, holler 'port!' But I guess you'd better shet yer head altogether. Anyways, quit yer dum'd geein' and hawin', I haint a yoke o' oxen!"

Now came a heavy, dead pull on the line, and Joseph, following the recent example of Uncle Tyler, laid the tip of the pole forward, and snatching wildly at the line, caught it at last and hauled it in with such haste and excitement that it was snarled in an almost inextricable tangle about his feet and legs when the hook came alongside with a great burden of lily stems and pads and water weed. His look of disappointment when he saw his worthless catch was not dispelled when he contemplated the tangled confusion of the line, and he was not comforted by Uncle Tyler's assurance, "You've got a job 'at 'll last ye till ye git t' the lake, a onravlin' that 'ere line! If you'd a had it aout a passin' the Saouth Slang, you'd a got one! The' 's allus a good one a layin' there."

Now they were on the last reach of the channel, bending here in a long curve through the "wide ma'sh," as Uncle Tyler informed them this portion of the stream was called. Through the willowy gateway of the creek's mouth they could see the lake, the "Bay of the Vessels," with Garden Island, green and white with leaves and blossoms, set like a nosegay on its shining bosom, clasped in the rocky arm of Thompson's Point. They soon passed the "Slab Hole," a great drift of flood wood lying along the western shore, and presently landed among the willows at the place the miller had told them of. They found the shelter of rocks under the bluff, but decided to pitch their tent, for the overhanging ledge looked like a pokerish roof to sleep under.

The pickerel was dressed and fried for dinner, and even Uncle Tyler, despite his unfavorable opinion of pickerel, made way with a generous portion of it. The old man was paid for his services and made preparations for his homeward voyage. He pushed his craft afloat and embarked, but presently came ashore again, and they returned to the landing to see what he had forgotten.

"I wish 't some on ye 'ld gim me a pipeful er tew o' terbacker. I'm a goin' tu send right up t' the store an' git me some jest as soon as I git hum. I meant tu yiste'd'y, but I forgot it." For some minutes after he left them they could hear the smacking of his lips as he pulled at Joseph's pipe, and for half an hour longer the squeak and clank and surge of his laborious progress, while they busied themselves with the arrangement of the camp.

They had not finished pitching the tent before they were assailed by swarms of hungry mosquitoes, the constant warfare with which left them little time for peaceable labor, and soon made it apparent that there was no comfort nor rest for them in this place. Sam and Antoine made their way to the top of the rocky bluff, and finding their persecutors much less numerous, the tent and camp equipments were carried thither, and their temporary home established among the cedars. Northerly winds from the lake and southerly winds from the cleared fields landward swept their winged enemies away and filled the air with balsamic fragrance that reminded them of Danvis woods, and through the green clots of cedar boughs and meshes of trunks and branches, they caught glimpses of the blue lake crinkled with gold and silver waves. The thin soil and the rocks were spread with a soft carpet and cushions of fallen cedar leaves and moss set in various patterns of russet and green, and about the bases of the rocks were springing the young shoots of mountain fringe, ready to overrun them with a graceful invasion of vine and flower.

"Ah'll tol' you, boy!" cried Antoine, looking with admiration on the carpeting of the tent floor, just finished with his last armful of cedar twigs, "'f he ant mek you felt sleepy for jes' look at dat beds! Oh, bah gosh! 'F we ant took comfor' here! An' don't dat neat fireplaces you'll buil' dar?" inspecting the result of the other's labors, a broad fireplace built of flat ledge stones. "Jes' as handle as stofe was; yas sch, more handle, 'cause you'll don't got for hopen no door for put hwood, an' you'll don't got for took off no gribble for brile you pot of it! Bah gosh, dat mek it all de hwomans in Danvit cry 'f he'll see it! Naow 'f we can honly jes' git some bullpawt, dey ant nothing more in dis worl' we'll as' for it! But Ah'll fred, me, we'll ant ketch it much dat kan', 'cause de she one he'll settin' on hees aegg naow, Ah b'lieve, an' de he one, he'll watch of it. But Ah'll goin' try it. Ant you go 'long to me, some of it?"

Solon expressed a desire to test his "fishcatorial skill," and the two went down the bluff and launching the dug-out paddled out to a convenient stake set in the further edge of the channel. More than once as the narrow craft lurched along its course and Solon grasped the gunwales, he wished the broad and stable bottom of Uncle Tyler's scow was beneath him, but he felt safer when the canoe was made fast to the stake and the green weeds of the marsh were within reach, though under them were 6ft. of water and unfathomable mud.

"I tell ye what, Antwine," he said, drawing the first full breath since leaving shore, "If I'm agoin' tu persecute fishin', I'm a goin' tu du it in suthin' diff'ent f'm these 'ere lawg and birch bark c'ntraptions. They haint got no stubility. I'm a goin tu hev me a boat suthin' arter the partern o' the one 'at that ol' gentleman fetched me an Jozeff an' t'other things daown dere in, infactotum a femaline or she boat, 'at is capacious o' kerryin' suthin' right end up withaout oncessant discumbobberation."

"Bah gosh! Solem, 'f you can fan' dat kan' o' boats Ah'll willin' you'll go in it! Ah'll 'fred all a tam every minutes you'll speel bose of it. Seet steel! Dis can-noe don't fret 'f you'll ant jump an' weegly every tam he'll top over leetly mites!" And Antoine swung his full baited hook abroad and dropped it gently into the water. Solon's splashing cast, made with an awkward motion, set the canoe to rocking and his companion to swearing and re-awakened his own fears. When quiet was restored he got a bite, and after several ineffectual twitches hooked and pulled up a broad sunfish, and as he swung it back and forth, making futile snatches at it as it quivered past and circled about him, always just out of reach, the danger of capsize became imminent, till the fish, by a twist, as lucky for them as for it, unhooked itself and dropped into the edge of the weeds.

Antoine rejoiced aloud, while Solon gazed with a rueful countenance upon the spot where the fish had disappeared. "Ah'll tol' you Solem, you'll ant goin' feesh some more 'less Ah'll go 'shore. Bah gosh! Ah'll ant want no fun for be top over here, me!" Solon agreed to content himself with being only a looker on, while Antoine fished. But the Canadian's skill and patience faithfully exercised an hour longer, were rewarded by nothing better than a dozen perch and sunfish, which though he cursed, he saved for supper. "Yas sch," as he drew out his hook and cleaned the fragments of worms off it, tossing them begrudgingly far away, and widely scattered. "Ah'll tol' you so, de she bullpawt was all settin', an' he ant goin' stop for heat notings. Wal, le's we'll go." And after winding up his line, he untied the canoe and paddled into the black shadows that had now fallen along the western shore. His labors faintly illumined by the last glimmers of departing daylight straggling through the willows, he scaled and cleaned the fish while Solon squatted near, assisting little but in the free offering of sage advice. Then they climbed the bluff, bearing the slender catch to camp, where reinforced by generous slices of pork, it furnished a bountiful supper. Smoking and chat filled the short hour between supper and early bedtime, when they fell into the sound sleep which blesses honest campers.

Natural History.

SAILING THROUGH THE AIR.

Editor Forest and Stream:

A few days ago in common with several others, I was witness of a singular proceeding. I was walking along a street of Abilene, when my friend, the county surveyor, cried out to me from the opposite side, asking me if I saw that balloon passing over us? He was gazing into the clear heavens and pointing upward as he spoke. Instantly a large crowd gathered around to get a look at the wandering aeronaut. It was a few moments before I saw anything, but presently the balloon, or whatever it was, so turned in its movements that it caught and reflected the sunlight, and then it became distinctly and beautifully visible. It seemed very far up and was as white as snow. It was moving to the southesast. For a moment or two it would cease to be visible, and then again it would reflect its pure white light upon us. It seemed a balloon beyond doubt, and all the crowd fell to wondering where the bold navigator came from and what was his destination. As for me, my admiration of his boldness was much mixed with fear for his personal safety, and I thought also of how much he must suffer from the intense cold of that dizzy height. I felt no desire to be a companion of his.

While we were thus gazing and wondering, suddenly we beheld three more balloons following not far behind the first, and a moment later more than a dozen others burst upon the view, all so radiantly white and trooping along so majestically. Their motion was poetry and the sight of them was lovely. One of my friends said, "It may be a troop of angels circumnavigating the globe, for what else could be so beautiful?"

I rushed away for my strong field glass, determined to penetrate this mystery if I could. I was confused, and if they were angels I wanted to see their lineaments and wings. I imagined that I might also hear their song as they swept gloriously by. Soon my powerful glass was upon them, and lo and behold, what did these things prove to be? They were nothing but cobwebs, and they were not so high up either as they looked to be. There they were, all before me perfectly distinct, wending their way to the southeast before a favoring breeze. Every cobweb had a number of long streamers hanging far down, which glittered like threads of silver. They were balloons in fact, but the aeronauts were those ugly beasts called spiders. No doubt they felt a prescience of the approach of winter and were traveling to the far south, perhaps to the islands of the Gulf or far beyond. Perhaps they had come hundreds and hundreds of miles.

But if the aeronauts were indeed mere spiders, we cannot help but be lost in admiration of their perfect skill in aerial navigation, which man has not attained yet and probably never will. What were those long streamers, pending far down from their balloons, thrown out for? It was undoubtedly a sort of ballast to keep their craft from upsetting and thus spilling out the occupants, or at least making their position uncomfortable. Also doubtless they were used as rudders to guide their crafts on the right way. Thus they have shown us what man must do when he comes to build his ships of the air. He must have long ropes hanging down, with weights attached, to keep his ship from turning over when struck by a strong wind. Thus all the sense in this world is not held by man. Even the little ugly spider far excels us in some things. I strained my eyes to get a glimpse of these wise little sailors as they moved above me in their ships, but it was in vain. Perhaps they were all snugly wrapped up under their silken coverlets, to keep warm in the chilly upper spaces.

ABILENE, Tex., Nov. 16.

RATTLESNAKES IN TREES.

BALTIMORE, Md., Nov. 15.—*Editor Forest and Stream:* That rattlesnakes do occasionally climb trees is, I think, verified by the following story, related to me while a guest at his hospitable home last December, by my friend, Mr. Elliott G. Solomons, a cotton planter, residing near Lawtonville, Hampton county, S. C.:

While Mr. Solomons—who is a keen sportsman, living in a perfect paradise (from a sportsman's point of view) of deer, turkey, quail and woodcock—was out coon hunting one night with two darkies, the dogs treed a coon, and one of the boys climbed the tree to shake the coon out, in order to let the dogs shake him a little. Just as the boy reached the coon and began to shake the limb on which it had taken refuge, the terrifying warning of the deadly rattler was heard a little below the climber. With an agonizing yell the scared darky called out, "Mus' I fall out, Mars' Elliott? Oh, Mars' Elliott, mus' I fall?" "No, you idiot, keep still. If you fall you will dislodge the snake, and it will strike you as soon as you touch the ground. Stay where you are, and stop that infernal noise, I tell you, and I will soon locate the snake with this torch and shoot it." "Oh, no, Mars' Elliott," pleaded the poor fellow, "please doan' shoot, fo' you will shorely kill dis po' niggah." After circling around the tree several times, during which Sambo's eyes stuck out like pump handles and glowed like a panther's, the snake—a huge fellow—was located and shot. This is the only instance that I have known of, but I can vouch for its reliability.

NOAH PALMER.

A PISCATORIAL RAT.—On the Flatbush avenue side of Prospect Park, Brooklyn, is a lake which forms the home for numerous swans, Egyptian ducks and goldfish. On the Park side is a summer-house, perched high up on the bank, with seats and parti-colored awnings. At the time of this occurrence there was a plank, resting with its outer edge in the water, at an angle of thirty degrees. The children and nursemaids on the platform were tossing bits of cake into the water for the benefit of the hungry swans and goldfish. The fish fairly teemed, as if all those in the lake were collected in a seething mass in that one spot. A two-third grown rat was on the plank, without rod, line, hook or even bait beyond that furnished by the children overhead. He watched his opportunity and seized by the back a fish about 10in. long. The fish being fully aware that he was "endowed with certain inalienable rights, viz., life, liberty and the pursuit of happiness," made a desperate attempt for liberty. "Hard, hard indeed, was the contest for freedom and the struggle for independence!" But the gray rascal, by superior knowledge, strength and skill, held his wriggling victim and carried him to his hole. The fish, probably, constituted his Friday's meal, though whether the rat was High Church or Romanistic in his views we are not informed. How a comparatively young rat, with only the leverage of his hind feet resting on the sloping plank, could seize and land a fish weighing at least half a pound, is a difficult problem to solve. It was, too, the act of an instant, but it is true nevertheless.—J. S. L.

DOMESTICATING WILDFOWL.—Cold Spring Harbor, N. Y., Nov. 19.—The wood ducks raised this year were in full plumage by November. The young drakes could be distinguished by the red on the bill early in September. The old birds were earlier in getting their fall coat. I have received a female widgeon (*Mareca americana*) from Mr. Francis Endicott, which he wing-tipped on Barnegat Bay. This bird will be mated with an Europeon widgeon (*M. penelope*). The latter is quite different in plumage from our native bird, the prevailing color being a reddish brown instead of gray. Mr. John R. Tracy presented a black duck (*Anas obscura*), sex unknown, which he wounded in Connecticut. None of the young Chinese mandarin ducks lived this year, rats and awkward hens interfered. The old ones are healthy, as are the teal. The pintails were lost, and no mate has been obtained for the widowed green-winged teal.—FRED MATHER.

HOW DID THE FISH GET THERE?—We were conversing with a gentleman from Sierra Valley a few days ago. He is a gentleman of truth and veracity and we vouch for the truth of the following, which he told us: There are a large number of artesian wells in that valley and, curious to state, many of them flow large quantities of hot water. Last August a well was bored on the ranch of J. B. Hathaway, near Beckwith, the result of which was a flow of about 150 gallons of water a minute, with a temperature of about 160deg. It is nearly boiling hot, so hot in fact that eggs can be cooked in it in seven minutes. During the past few months the waste water from this well has flowed into a depression in the ground nearby, and the result is that a small pond has been formed. This pond has no connection with any other stream or body of water and the ground had been absolutely dry for several months previous. Lately it has been noticed that it was full of small fishes from 1in. to 2in. long. Upon examination it was found that these fish were different from any found in the streams of the neighborhood. It has been generally supposed that fish spawn will spoil in a short time if exposed to the sun and weather.—*Truckee (Cal.) Republican.*

HOW THE CROW BECAME BLACK.—The Indians of the extreme Northwest have some very remarkable legends about the creation, in which the crow takes the leading part; bringing order out of chaos. Perhaps the most curious is that which accounted for the raven coat of the crow. One night, while making a tour through his dominions, he stopped at the house of Can-nook, a chief, and begged for a lodging and a drink of water. Can-nook offered him a bed, but, on account of the scarcity of water, he refused to give him anything to drink. When all the rest were asleep the crow got up to look for water, but was heard by Can-nook's wife, who aroused her husband. He, thinking that the crow was about to escape, piled logs of gum wood upon the fire. The crow made desperate efforts to fly through the hole in the roof where the smoke escaped, but the Can-nook caused the smoke to be denser and denser, and when the crow finally regained the outer air he had black plumage. It was previously white.—*San Francisco Monitor.*

Game Bag and Gun.

HUNTING IN FLORIDA IN 1874.—II.

THE log cabin of our teamster was double, the two rooms being connected by a thoroughfare. But it was a palace in comparison with all the other residences in the settlement. A mile on our way we came to the cabin of Tom's companion-assassin, consisting of a single room made of logs loosely piled upon each other, in which dwelt a family of four. A track of loosely scattered feathers leading from a sapling close by the cabin to the swamp indicated where a wildcat had dragged away a hen the previous night, snatching it from within 2ft. of the sleeping inmates. A mile further on we reached the shelter of Tom's father's family. It was a roof of palmetto leaves, supported on posts, the four sides entirely open to the air. Here dwelt the father and mother, two grown-up sons, two grown-up daughters and four younger children. A short distance beyond we swam a creek, just narrow enough to save the cart from going to the bottom before the steers gained footing on the other side. Hard by we passed the last evidence of "Cracker" life, consisting of a shelter of boughs in the form of one-half of an A tent, beneath which a hermit had slept for five years. Soon, the trail pursued thus far ended, and following the wheel-tracks of our predecessors we struck the Alligator Flats, and during the rest of the day, mile after mile, waded axle deep in the mud and water. Instead of riding on the cart, as was promised us, we were in constant fear of our oxen giving out from sheer weakness, so that Fred and myself carefully avoided adding even the weight of our guns to the load, though Tom did not hesitate to mount his burly form upon the cart-tongue most of the time, pretending that he could discern the guiding track beneath the water better by looking down upon it. As the deadly poisonous moccasin snake, more to be dreaded than the terrible rattlesnake, abounded in the flats and frequently rose up within 6ft. of us, throwing themselves into a striking attitude and displaying their crooked fangs in fearful warning, we plodded most of the time behind the cart, that the splashing of the oxen might frighten away the reptiles. At length in the greater depth of the water and thickness of the grass Tom declared himself unable to distinguish the cart-ruts, and it became necessary for Fred and myself to go before and indicate guiding tracks by each taking one and beating it out with our feet. Thus we passed hour after hour constantly whipping the water with long sticks to frighten away the snakes, though occasionally chilled with the sight of a moccasin gliding off a tussock of grass and concealing himself, neither could tell where. Toward sundown we came to a pine island a few feet in diameter, with just enough of dry land for our fire and Tom to lie down beside it. Beyond, being one stretch of water as far as the eye could reach, we haul up, turn the oxen out to feed, bake our yams, barbecue our meat, curl up on the top of our luggage in the cart and go to sleep winking at the stars.

The next day is but a repetition of the previous, only the wading is deeper and the wriggling snakes are more numerous. "Familiarity," however, "breeds contempt," even in the matter of exposure to the cold, clammy touch of a snake and danger from its deadly fangs, as well as in dissimilar experiences of human nature—a contempt leading Fred and myself to often ease our blistered feet by throwing our high-topped boots upon the cart and substituting brogans, or even going barefoot. A distinguishing feature of these water-prairies is an occasional stretch of cypress-clumps—clusters of trees presenting beautiful rounded outlines, very appropriately termed "Blue Mountains." Their attraction, however, is entirely upon the outside, and in the far distance. Approached, their blending foliage separates to the view and becomes scraggled, while their bases are sunk in a most forbidding morass. Through such a "cypress-slue" we forced our way, and emerged upon a clear, open prairie, where we camped for the night. Crossing this, we found ourselves during the forenoon of the third day entering an old military trail and on solid ground. Surmising that we must be near the fort, Fred at 11 o'clock pushed forward, and I saw no more of him till sundown, when he returned and reported an interminable prairie three hours in advance and no signs of the Kissimmee. Not much like overtaking the advance party, we thought; but there was no alternative, and while we were deliberating what was best to do on the morrow, the double-yoked team hove in sight on its return, having that morning left the Explorer and his party at Fort Bassinger as agreed, but found the fort sixty miles from the lake, instead of ten. Nor was there any neighbor's boat at the deserted fort, the Indians having probably stolen it, etc., etc. The truth now flashed upon my mind, and I needed no more proof that the teamster's story was manufactured for the purpose of alluring me on to secure his four dollars per day. Lesson third in "Cracker" honesty.

Our encampment for the night was near a creek whose bed was dry, but in which our teamster affirmed he had sometimes found water flowing south, and at other times north, according as the region on either side of the east and west trail had received more abundant supplies of rain. A careful observation of the whole region fully convinced me that here we find in the wet season one (perhaps the most southern) of the many affluents of the mighty St. John's. So little, however, is the change of level that out of the same reservoir, and by the same channel, there heads, at times, another creek taking a southward direction into St. Lucie Sound, and on the northwest border of the same reservoir is found issuing at high water an affluent of the Kissimmee, by whose channel a portion of the waters of this same great central reservoir find their way into Lake Okechobee, from whose more exposed surface excessive evaporation is constantly going on. This opinion is sustained by the rain charts of the Smithsonian Institution, which "show that the peninsula of Florida is the region in which the rainfall is heaviest east of the Rocky Mountains, and further, that in the peninsula itself the curves of the greatest rain encroach upon the headwaters of the St. John's, though still more upon those of the rivers flowing south into Lake Okechobee, and west into the Gulf of Mexico."

Fred and myself had hardly erected our tent when it began to drizzle, with indications of abundant rain, but fortunately for us, not realized. Ere we slept, a brother of the teamster appeared from beyond the Kissimmee with his mother, wife and seven children ranging in age from three weeks to twelve years, all riding in a cart drawn by a single yoke of oxen. Two of the older children were shaking with the fever and ague, to whom my prescriptions of quinine brought speedy relief. The children found shelter during the night beneath the cart, while the adults lay down upon the damp ground, wrapped in blankets. Long before light we were cooking our breakfast, preparatory to an early start, when a demand was made upon our scanty store to feed the hungry mouths of the new-comers—a hospitality we were poorly prepared to extend, but which it was not in our heart to refuse, especially when pleaded for by the wistful looks of the little innocents.

Relieving our jaded oxen by tranferring to our cart one yoke from the teamster's unladened wheels, it fell to me to handle the ropes and goad. So long as I kept in the rear of another team all went well; but if I essayed to lead, my Yankee brogue was utterly unrecognized by the half-tamed creatures. Halting at noon beside a forsaken log-house, I amused myself with catching lizards, tree-toads and ant-lions, while Fred left his dinner half-eaten to bag a flock of Carolina parrots, the first and only ones we met in Florida. True to their reputation, curiosity to know what had happened to a fallen companion seemed to keep them lingering around till all were shot without the shooter hardly stirring from his first chosen position. There can be little doubt that this bird, once so abundant in all the Southern States, and even ranging into New York State, is fast becoming extinct east of the Mississippi River. After dinner, while waiting for our lazy teamsters to snooze, I still further amused myself with skinning a sandhill crane, in the midst of which operation rapid stinging sensations about the naked ankle, caused an investigation, only to reveal a centipede or scorpion amusing himself with my nervous system. The application of hartshorn to the half dozen puncture reduced the swelling, and in two or three days I was no longer reminded of the insect that menaces with its head, but wounds with its tail.

The monotony of the afternoon drive was varied about four o'clock with the cry of "turkey ahead." Fred and Tom undertook the task of providing us with fowl for supper, and with such success as to bring in a bird apiece. Just as we were congratulating ourselves on something better than hog and hominy, a party of six more, parents and children all told, overtook us and fastened themselves upon our party. The cracker's coach—the inevitable ox-cart—bore four of them, while two rode ponies. Taught by the experience of the morning, the dreams of Fred and myself vanished, and we resigned ourselves to the thought of little more than sniffing the perfumes of the savory repast. The larder of the latest comers proved as lean as that of the earlier, and when all had partaken sparingly of the supper, the teamster declared that such as had horses, including himself, must push on at midnight, and leave the rest on short allowance, to reach his home by sundown on the following day, as not more than a spoonful of hominy to each was left. On further consultation it was decided for all to start at light and make a few miles before breakfast. After a brief repast at the foot of a tree, our oxen were yoked and all fell into line. A wildcat springing out of the path was soon overtaken by the dog, but instead of being held by the dog, it turned the scale and held the dog, till Tom came up and released its victim by a charge of buckshot. Skinning the cat at our next halt, and throwing the carcass into the low scrub, I was surprised to find both the turkey buzzard and the Caracara eagle gathering around it in large numbers in less than twenty minutes, though when thrown away there was not a bird in sight.

Both in going out toward the Kissimmee and in returning, wherever the water had dried away upon the prairie, numerous hillocks of freshly-formed pellets of sand, five or six inches in height, were discovered. Digging beneath the hills would invariably discover a small crayfish, that evidently maintained its home in the moist earth by keeping beneath the influence of drought.

As we neared the home of the teamster, Tom whispered in my ear, "We are going to have a party at our house to-morrow night," and as he said it, I observed a smile upon his countenance for the first time since we had met.

Excursion No. 1 from our camping base on Ten-Mile Creek proving fruitless, so far as seeing Lake Okechobee was concerned, and Fred being disinclined to spend any more time searching for it, I undertook the matter alone, and bargained with the teamster—whom we will hereafter call Mr. J.—to provide me with a mule, and guide me at the beginning of the week to the Indian village some forty miles distant, and reputed to be in the vicinity of the lake.

Our provisions being exhausted and one kind of shot, it was necessary for Fred to go to Fort Capron to replenish our larder and ammunition. We also hoped to receive letters, as we had heard nothing from home to this time. Tom's services were again secured, but this time as driver of a mule cart, which could, however, only reach Bell's grocery, a mile short of the post office grocery, where our ammunition was stored. Under the disappointment of no letters for either of us, Fred undertook to carry by a tangled foot path to Bell's grocery two bags of shot, five pounds of coffee, and a handleless jug containing two quarts of sugar syrup for hominy, neither grocer having any sugar. A boat was at hand, but the boatman must have a dollar and a half for the mile of sailing; nor would he help carry the load on land for less. Being "Yankee" pluck against "Cracker" generosity, the former triumphed, but a kind Providence threw a man in his way soon after starting—probably one of the loungers about the grocery—who for fifty cents relieved Fred of a part of his load. This deposited in the cart, it started homeward, while Fred made a detour of three miles to get at another grocery five pounds of hominy and his singlebarreled gun he had left there when first starting for the lake. In a little time the paper hominy-bag gave way, and the contents commenced marking his track. In this exigency he remembered the big pocket in his hunting coat extending over the whole back, and designed as a receptacle for game. Into this goes the remnant of the hominy and is saved. In swimming Five-Mile Creek the jug of syrup rolled out of the cart and was left in the mud at the bottom. So all the delicacy we had for either coffee or hominy, we hadn't.

While Fred was gone I skinned a pair of coons, male and female, both secured at one shot. The male had marks of great age, and, judging from his mutilated ears, must have been a hard fighting character in youth. One bone had also been broken square off, and no surgeon being at hand to reduce the fracture, it had healed with the two ends lapping, through contraction of the muscles.

As suggested by Tom, toward sundown of the day following our return I observed men, women and children gathering at the cabin, mostly on foot, but some on horseback and others in ox-carts. At length a man rode up of graver mien and with horse more richly caparisoned than any other I had seen. Soon Mr. J. brought him to my tent, and taking me aside, said, "This man is a justice of the peace, and has come sixty miles to marry Tom to my daughter to-night, but there is a hitch in the arrangement, as the last week's mail has failed to bring the license sent for. Now what do you advise, as the justice cannot wait two weeks for another mail, and my neighbors for ten miles around are all gathered to witness the ceremony?" As the malfeasance would be wholly on the part of the justice, inasmuch as should he perform his part with their consent, they would be legally married to all intent and purpose, it was finally decided that Mr. J. and Tom should give the justice a written obligation, with myself as witness, to send him the certificate as soon as possible, which document they both signed by making their mark, after I had assured them it was written correctly. Nothing further hindering, Tom and his bride took position on the platform connecting the two rooms of the log cabin, while the justice pronounced them, without any questioning or pledging, husband and wife. Tom had exchanged his teaming suit for a similar one, only more cleanly, and his bride contented herself with plain calico without ornaments of any kind, but with shoes and stockings—the first time I had seen her wear any. After the ceremony, the bride's mother and grandmother stepped up and shook hands without kissing, and were followed by her father without coat or vest, shoes or stockings, but with shirt-sleeves rolled up to his elbows, and his pants to his knees. After a long pause, I considered it my turn to shake hands with them, though, with all my knowledge of their antecedents, and at how fearful a price Tom had gained his bride, I could hardly bring my mind to congratulate them upon their union. The ice broken, there was a rush for handshaking, after which Mr. J. brought out a fiddle with two strings and called for dancing. Unable to aid in this part of the festivity, I soon retired to my tent, though disturbed till daylight with the music and toe-tripping. There might have been some whiskey-drinking, but it was not apparent, nor did I see any one inebriated, though Mr. J.'s prolonged efforts to extract music from the two-stringed fiddle had evidently overtaxed his nervous system and somewhat disguised him. During the forenoon the guests were scattered about the premises, sleeping off the weariness of the night, and by sundown all had departed, even the guests from beyond the Kissimmee. It was, however, discovered that many equipments had changed hands, either intentionally, on the principle that "exchange is no robbery," or in the confusion of a half-wakeful condition. My own premises were undisturbed except by the wandering hogs, whose long snouts thrust between my tent-coverings rooted me up, and interfered with my slumbers more than the squeaking of the fiddle.

While waiting for Mr. J. and Tom to sleep off the weariness of the wedding festivities, Fred and myself busied ourselves in preparing skins of such birds and animals as were vicinous to the camp, such as turkey-buzzards, brown-headed nut-hatch, hawks, lizards and snakes. While skinning the coons a buzzard alighted on a branch within 20ft. and patiently watched the operation, expecting, no doubt, to feast upon the carcasses. His sauciness tempted my gun beyond endurance, and an off-hand shot quenched his appetite forever. Dropping into a mass of palmetto scrub, I requested Fred, who was cooking our supper, to bring him in, lest the hogs should appropriate him before I could leave my work conveniently. Ever accommodating and respectful, he essayed to fulfil my request, but quickly returned, blurting out snappishly between the retchings of his stomach, "Go get the stinking thing yourself!"—the first and only impatient expression that fell from his lips in all our trip. It was his first experience of close proximity to the foul bird, while my childhood Virginia experience had made me familiar with its habits. Instantly suspecting the reason of his disgust, I forgave him in my heart his unintentional disrespect, and laughingly rallying him on the weakness of his stomach, picked up the bird myself and put it in a safe place from the hogs, notwithstanding the unsavoriness of the ejections from its nostrils.

The wily "Cracker," Mr. J., having by this time concluded he had found the goose that lays a golden egg, began to tell of heronries a few miles away in different directions that would furnish us all the variety of birds and eggs we could desire. To test his word, Fred went with him the second day after the wedding to the nearest one, Mr. J. on horseback and Fred afoot. Five miles, most of the distance through water from ankle to knee-deep, brought them to the heronry. It was a cypress-slue with tall trees, twenty-five feet in height to the lowest limbs, and thick undergrowth of bushes, ten to twenty feet in height. Most of the nests were in the trees, though some were in the tops of the bushes. By wading, in some places waist-deep, and climbing the bushes, Fred was able to secure twenty-seven eggs of the snakebird and white heron. The bushes and nests were dripping with the excrements of the birds, giving Fred a second lesson in some of the unpleasant experiences of a naturalist. Stumbling over an unseen slimy log, he dropped his gun, and in recovering that completed the drenching of all his garments. On his way out he had shot a snakebird and a white heron, and left them to secure on his return. Arriving on the spot a few feathers only were found—a dozen or more buzzards on the trees contiguous explaining the absence of the bodies of the game. Nearing the camp, he secured for me a ground rattlesnake, a species about two feet in length and much smaller than the diamond, but more venomous. One morning, shaking up my bed of palmetto leaves, I noticed one of these reptiles crawling away from my couch. Wishing to secure one of the larger species, I offered a ten-year-old son of a "Cracker" passing our camp a dollar if he would bring me one not less than four and a half feet in length. In less than fifteen minutes he returned, dragging at the end of a string fastened around his neck an adamanteus five and a half feet in length and seven inches girth, with ten rattles. Between rattlesnakes on the land and moccasins in the water, it became us to be ever on the alert.

When making arrangements for the lake, Indian Charley, son of As-se-he-ho-lar or Osceola, the famous

Seminole chieftain, happened to pass the camp. He wore a heavy turban on his head, a frock reaching half ways to his knees and moccasins on his feet. His skin had the genuine copper color of the wild Indian, and his hair hung over his shoulders in long, raven-black locks. He had a deer slung on his back, with a bundle of tanned deer skins for trading. I learned from Mr. J. that the Indians first soak their deer skins till the epidermis with the hair drops off and then pound them in a wooden mortar with the brains of the deer to tan the skins and make them pliable. Charley acted very stupid, pretending that he did not understand us. Further acquaintance showed that this was only Indian caution before strangers, putting you off your guard till, by listening to your remarks in apparent indifference, they have made up their mind concerning you, and then relaxing or maintaining their stolidity, according to the impression you have given them—a lesson in human nature their more enlightened white brethren might learn and practice with profit.

Having become disgusted with our high-top boots and brogans for swamp travel we importuned Charley to make each of us a pair of moccasins. Showing him paper money he signified he would make a pair for a dollar, but would discount 50 per cent. for silver. Having fortunately, the morning I sailed from the North, exchanged at a bank twenty-five dollars in paper currency for silver, paying 9 per cent. for the difference, specie payment not having been resumed, I now had the best opportunity afforded me for speculation I had ever experienced—a gain by the trader's own offer of 41 per cent.; and thus far I regard it as the silver-letter day of my life. The bargain struck, Charley unrolled his bundle of buckskins, measured my foot with a stick, and with only a knife and a bone awl, in half an hour made me a pair of moccasins that did me excellent service for weeks afterward, and are now deposited in the museum of Brown University as a sample of utilitarianism respecting our pedal extremities it were well a more boastful civilization should progress to instead of torturing nature with cramping shoes, in obedience to a slavish servility to fashion and for the benefit of corn doctors.

I learn that Mr. J. has the credit of causing the last Seminole war in 1857, by wantonly and purposely shooting an Indian squaw, that the remnant of the tribe left in the swamps around Lake Okechobee, after the removal of the greater part in 1843, might be more circumscribed in their already narrow limits guaranteed to them by a solemn treaty, and thus enable the constantly encroaching frontier settlements of outlaws from northern Florida and Georgia to enlarge their cattle ranches—the main dependence of Cuba for beef. I met many "Crackers" who participated in that war of intended extermination of the tribe, and it was their universal testimony that the whites were, in every instance, the aggressors. One thing is certain, the word of the Indian and his general adherence to the golden rule were far more to be depended upon than the majority of the whites whom I met in that locality.

Daylight Monday morning found me mounted upon a mule, starting again for Lake Okechobee in company with Mr. J. Guided across the country by my pocket compass and map, and disregarding turkeys, deer and game of all kinds, about sundown we turned our creatures loose, kindled a fire, cooked our supper, and lay down to sleep at the foot of a tall pine. The night was clear but moonless, and I slept soundly despite the mosquitoes, till the unearthly hooting of a large owl right over my head awakened me. To raise my gun without raising myself and drop him at my feet, was the work of a moment, and to drop to sleep again was the work of another moment. In the morning I found the bird within 3ft. of me, and was severely reproved by my companion for not throwing it into the bushes when it fell, fearing it might have attracted the "varmint" to us. Within half a mile of our camp we struck the trail that led us in an hour to an Indian lodge—simply a roof-shelter of palmettto leaves, supported by four posts, with the sides wholly exposed to the winds. A platform of rails but two feet high, covered with deer skins, formed the couch. Outside upon the ground was a fire with sweet potatoes and a corn cake baking in the ashes. Upon a log near the fire sat a squaw nursing a pappoose, while a boy and girl of ten or twelve, entirely naked, were swinging a younger child in a hammock. As we came in sight, the *pater familias*, known among the "Crackers" as Tommy Tiger, planted himself in front of the lodge, with folded arms, standing full six feet two, clothed only in a frock reaching half way to the knees. To Mr. J.'s "Good morning, Tommy," not a word of reply or movement of a muscle. "Yank, Okechobee, here night, you guide, silver," was uttered by Mr. J., partly by words, but more by signs. A shake of the head only in reply. "Where's Chief Tustenuggee?" A wave of the arm by Tommy signified that he was way off hunting. I then broke in, "Me Yank, Okechobee, one day, silver," suiting my action to my word by displaying a handful of the shining halves and quarters. His eyes sparkled, and turning upon his heels without a sign struck a bee line for the woods. "He's gone for his pony," said the guide. Observing a child enter a swamp, we followed, and crossing a creek on narrow footlogs, came out upon a hummock of pine land, where we found half a dozen more lodges, and plenty of women and children, but no men. The women were grubbing the ground preparatory to planting corn. The children were amusing themselves with their bows and arrows.

These Indians, to the number of about forty families, are a remnant of the Seminoles left in the Everglades at the close of the war of 1857. They are not recognized by the Government and maintain their original habits of living by hunting and fishing in a tribal relation; electing and deposing at pleasure their chief, whose word is absolute. No missionary labor has been dispensed among them, nor do they seemingly need it more than the neighboring whites. Their singular custom of loading down the female children with glass beads—necklaces obtained originally from the Spaniards and passing down the generations as heirlooms, must have some physiological significance, which, in my ignorance of their language I could not discover. A single necklace is put on at birth and additions made from time to time, till I counted over a hundred around the neck of a maiden of eighteen or twenty, the whole weighing not less than 25lbs. A very aged squaw tottered around beneath a similar burden, and from her erect form, I inferred the object of wearing them might be to develop and preserve physical symmetry.

On the border of the creek I found an outcrop of coral rock greatly worn and decayed, with north and south strike. This find strongly countenances the correctness of Mr. C. J. Maynard's conclusions respecting the geological "process of land-making" by which the peninsula of Florida has been formed. Simply premising that the theory requires there to have been in geologic ages past a more or less extensive ridge of rocks along what is now the western coast, as a foundation for coral building, I will quote at length from the *Sportsman*, in which paper Mr. Maynard first published his views in 1874:

"Ages ago these breakers which roll upon this eastern sandy beach, dashed on the rocks of western Florida, more than a hundred miles away. Then it was that the little polyp, living far down beneath the sea, began to abstract lime from the surrounding waters and build a line of coral reef, just like the one which now lies along the Florida Keys. When the coral rock had risen to the surface of the water the action of the waves continually cast sand and shells over it, gradually filling the space between it and the shore. These accumulations arose more rapidly immediately behind the reef and soon overtopped it, rising above the surface in a long ridge. This grew wider and wider, and finally became covered with vegetation, presenting the appearance of a veritable beach ridge like the one on which we stood.

"The waves with their ceaseless motion ground and beat millions of shells to pieces, just as they are now beating and grinding them. The wind swept the lighter fragments into the lagoon which was now formed beyond, while the waves during storms rushed over the ridge and carried with them the larger shells. The sand being heavier, settled down, and the shells gradually accumulated over it until the lagoon was filled and dry land was formed, which was soon covered with vegetable mold upon which grew the luxuriant vegetation of the South.

"Thus it was that a great level plain was formed, with enormous depressions, in which fresh water collected. These hollows then formed swamps, which overflowed, and the water striving to escape to the sea marked out the river beds. It can now be understood how it is that the foundation of Florida is composed of lime rock. This immense bed of loose fragments of shell became cemented together by pressure with the help of water, and now forms the underlying strata just below the surface of the soil.

"This in general is the plan of the formation of Florida. Two of these partly filled lagoons are now to be seen on the eastern coast; Indian River—which, as it has a supply of fresh water continually sweeping through it from the swamps at the north, will probably always remain much as it is at present; Mosquito Lagoon—which, as the shelly beach on the western side indicates, is now slowly filling and before many seasons have passed will be solid land. The water of this lagoon is very salt. The tide ebbs and flows but a short distance from the inlet, which is shallow and narrow, while on account of constant evaporation, the waters of the southern end of the lagoon sometimes contain 25 per cent. more salt than that of the neighboring ocean. Where the beach ridge is narrow the coral reef can be see just below the surface of the water. The beach ridge is 25ft. higher than the surface of the ocean; yet during storms the waves dash over the top."

According to this theory the St. John's flows in the latest formed lagoon west of the Indian River, while the southern terminus of the peninsula must once have been north of Lake Okechobee and have been continued southerly by successive reefs curving to the southwest.

In about half an hour Indian Tommy returned bestride a pony without saddle or bridle. Girting on a blanket, with stirrups of deerskin and a bridle corresponding, and binding on his moccasins, with a few sweet potatoes tucked into the bosom of his frock, he mounted and started for the woods in a bridle-path without a sign of any kind indicating his intentions. We mounted and followed in true Indian file at a stiff trot for an hour, without a backward look from our guide. Coming to a creek bordered on either side for 50ft. with thick underbrush, he dismounted and sounded the quagmire with a large stick, till, finding a fording place, he led his pony by the thong reins across the slough. We followed his example, but when we emerged from the thicket he was trotting at double speed, full quarter of a mile distant. At the end of another hour he suddenly dismounted, hung all his horse equipments upon a branch, turned the pony loose, and sat down composedly to eating his potatoes. Imitating him we built a fire, boiled our coffee, broiled our venison, and at one o'clock signified that we were at his service. Immediately he struck into a blind trail in the unburnt grass, that terminated in quarter of an hour in a cane-brake. Signifying to one of us to follow a few feet to the right of him, and to the other a few feet to the left, he plunged into the morass parting the cane with his hands. In half an hour the water was nearing my waist, when we came upon four canoes hollowed from logs. Tommy selected the best, and motioning to us to get in, with some difficulty we succeeded, lying close in the bottom. He then went still further into the cane, till lost to view, but soon returned with a long pole and a paddle. Bounding into the canoe like a cat, he poled us along for an hour, when we entered a cypress swamp, with open water among the huge trunks, though greatly impeded by cypress-knees from beneath, and bramble growth from above. For once, his Indian keenness was at fault, and after fruitless efforts for an hour, to penetrate the cypress slough, we worked our way back to where we entered, when Tommy started off waist deep in the water, prospecting. When 100ft. away a low chuckle reached our ears. "He has found it," exclaimed my companion, and speedily he appeared with an approximation to a smile upon his countenance, the first I noticed. Poling the canoe through the cane and saw-grass to the spot, I noticed a twig broken half off, 2ft. above the water and bent to the left; also flags, a sure indication of a sluggish current or channel. Fifty feet further on a twig was broken similarly, but bent to the right. Though in a creek, no current was perceptible, and often a thick curtain of brambles had to be lifted by Tommy's pole while we dragged ourselves beneath. In other places logs impeded our track, which we sometimes crawled under, and at other times hauled the canoe over, Tommy, giant that he was, depressing the bow or elevating the stern. After toiling another hour in forcing our way through the cypress, and disturbing not a few "'gator, moc'sins and such like varmin," as my "Cracker" companion called them, we found ourselves suddenly debouching on the lake, with only a water horizon in front, and limitless banks on the right and left. The problem is solved—there *is* a Lake Okechobee, and even my "Cracker" guide, who had been five years searching for it, is obliged to give up his doubts and confess that I had enabled him to find it. Before landing we paddled out from the shore for a quarter of a mile. Sounding with a pole, we found it eight feet deep, and were assured by Tommy it was nowhere deeper than that. Its shallowness permits light winds to stir up the bottom, and hence its destitution of fish, the fine sand being troublesome to their gills. My first impulse, as I stepped from the canoe, was to climb the tallest tree and see if I could discover the boat or camp of the Explorer and his party. Seeing nothing of them, I contended myself with cutting my name in the bark of a huge box tree, in hopes, if they had not already passed this point in their circumnavigation of the lake, they might find it, and thus Erwin know ere we met, how well I had fulfilled my promise to see the lake before leaving Florida. Two weeks later they passed the point, but not near enough to discover signs of occupation. It is now known as the result of their exploration, that "the lake is about forty-five miles in length, from north to south, and thirty in width, from east to west, near the center." With the exception of two small islands on the southwest border, it is an unbroken expanse of water, terminating at the south in "the Everglades, through which, without creek or river, the accumulated drainage of thousands of square miles of territory slowly percolates by millions of channels with countless ramifications, to the ocean and the gulf." Convinced that the shores of the lake, where I examined it, were utterly barren of animated natural history, and warned by the low descending sun, I gave orders for our return.

Having gratified my curiosity as to the existence of the lake, I more carefully inspected the skirting cypress slough on my return, and was amazed at the gigantic ferns and flaming epiphytic air plants. Overarching vines and Spanish moss festooned the trees, while variegated leaves of beautiful lilies tinted the waters. But hideous snakes and repulsive alligators alone represented the animal kingdom to enjoy these rare charms of the vegetable—leading me often to ask, "Why does the Creator so frequently display His selected skill in places inaccessible to mortal man?"

Reached the hiding place of the canoes at sundown and the halting place at dusk to find our horses all right. It being too late to go further, we built our camp-fire, and sharing our supply with Tommy, I lay down to sleep, with a known murderer and outlaw on one side and a wild Indian on the other, in a wilderness at least fifty miles distant from any semblance of civilization. It was impossible to prevent intrusive thoughts of suspicion that my watch and silver might prove a stronger temptation than their honesty could bear—especially when I awoke about midnight and found Tommy stepping noiselessly near my head. Instinctively one hand grasped my pistol and the other searched for my hatchet, till I discovered his intentions were only to recruit the fire. To thwart the clouds of mosquitoes that settled down upon every exposed part of my body, and even pierced readily through my sail cloth pants and blue flannel shirt, as soon as Tommy lay down I parted the fire and laid myself down between the two heaps, that the wind might blow the pine-knot smoke across my face. As a result from the gathering of the soot upon my hair and beard, I was, in the morning, far more of an Indian in appearance than Tommy, to his great amusement—the second time I had seen anything like a relaxing of his facial muscles.

Observing numerous stumps of large trees, that had evidently been cut by a civilized axe, I learned from Tommy that we were encamped upon the site of General Taylor's great battle with the Indians in 1837, when he was most disastrously defeated. Tommy explained in his pantomimic way how the soldiers fled in their retreat, and also how the Indians scattered, in the final issue of the war, to the swamps we had just penetrated.

But where are our horses? Tommy climbed the tallest tree, but could see nothing of them. Descending he took a circuit, till, discovering their tracks, he darted off in a tangent, returning in a couple of hours driving them before him. Having Tommy to feed, we were on short allowance for breakfast, but on reaching Tommy's lodge at noon, he brought out sweet potatoes in abundance, with jerked venison, and, as a luxury, he drew into a broken gourd some honey from a bottle made of the skin of the leg of a deer, stripped off whole and plugged up at the ankle end with a wooden stopper. We all dipped our bread together into the gourd with a good relish—so readily does real hunger do away with squeamishness. After lunching, I offered the promised silver. Tommy held his open palm toward me, but turned his face from me. I dropped into his palm one, two, three, four half dollars, when he closed it, tucked the silver away in his frock, and started off, without any more of a farewell than of a welcome the day before.

For fifty years an Indian relic constructed of a dozen box-tortoise shells, bound together by deer skin thongs, each one partially filled with wild beans, had lain in a physician's office in Providence, R. I., with the tradition that it came from the Seminoles, though nothing more could be said about it when it was presented to the museum of Brown University. At my first sight of the Indian lodges I was gratified to observe the same article suspended under the roof af each one. As Tommy turned to leave me I signified my desire to purchase a pair of them. At first he flatly refused, but as I urged he commenced a dialogue with his squaw and aged mother, which ended in his holding up one finger for one and two for two, meaning a dollar for one and two dollars for a pair. I readily took a pair and then desired him to put them on and show me how to use them. At that he straightened up to his full height of 6ft. 2in., folded his arms and looked down upon me with such a withering frown as completely cowed me. Mr. J. instantly grasped his pistol, so threatening was his scowl. But Tommy quickly recollected himself, pocketed the insult and contemptuously pointing to his wife with the exclamation, "Squaw dance," turned upon his heel and left me. I at once saw my mistake and how grievously I had insulted him by intimating that he, a brave, should demean himself to put on an article which, I afterward learned, was worn only by the squaws as a musical accompaniment to their green-corn dances. Going over to her, I held out a silver quarter, when she readily bound them below the knee, and gave me a specimen of a Seminole reel.

AN OCTOBER BAG.

ON the afternoon of October 31, 1883, I started up into the country for a fortnight's shooting, and reached my destination, the residence of my cousin Jim, an ardent sportsman, just in time for supper. We discussed the game prospects, which were finally decided to be quite favorable, taking into consideration the comparatively short distance from the city to the ground over which we were to shoot. We then loaded shells until bedtime. On awakening in the morning I heard the clear *ha-onk, ha-onk* of wild geese on their way to a small lake a few miles away. Was down and out in short order, although in the east were only seen the first faint tinges of dawn, and the moon had just gone down behind the western trees. I let loose the setters, Dash and Tillie, and we three took a short walk down the road, and upon returning found the household aroused. A pair of beagles were to be brought along in the rear, in charge of a boy, to be used on rabbits.

After breakfast we started, Jim H., Tom J. and the writer, and came to a big brown buckwheat stubble, bounded on two sides by bog meadows, thickly grown with rank weeds—a favorite roosting place; on another by a dense thicket, and on the remaining side principally by three sportsmen, two breechloaders, a muzzleloader and two English setters, with the boy, Kaiser, and the beagles in reserve. The dogs were waved on, quartered the field over, and in the corner toward the bogs Dash suddenly caught on and pointed handsomely, Tillie backing. We stood still contemplating the scene for some few moments, it being the first point of the season, and I noticed that my hands were trembling with buck fever in a mild form. We moved up, Tillie leading the way until even with Dash, who jealously took a couple of quick steps in, when with a rush up whirred a good-sized bevy of full-grown birds, fifteen or eighteen in all, and notwithstanding the care we had taken to keep between them and the thicket before mentioned, six or seven rose over our heads and made for it, the majority of the bevy, however, going into the bogs. Jim and I paid our respects to those going for the brush, Jim getting a double, while my bird, struck in the brain, started for a hole in the clouds about five miles up, when I got in the left and he stopped. Tom had added the two reports of his Scotch muzzleloader to the general hubbub, blanking with both and was wondering how it happened. In justice to Master Tom, I must say it was his first and up to the present time last attempt at wing shooting, and I afterward learned that he disposed of his gun and accoutrements the following week at a raffle.

After the dogs retrieved we started into the bogs, and then the battery opened, and in a short time we added eight more quail to our bag, three birds getting back to the thicket. We started in, but got only one more bird out of that bevy, the brush being too heavy. Further on we started a cottontail in some briers along the edge of a large swamp, so, calling in the boy who took charge of the setters, the beagles were put on the track (being with us on Tom's account), and Tom was stationed on a bridge into the stonework of which the rabbits were accustomed to run. We were now in a position to salute "Brer Rabbit" upon sight without grace. The hounds' merry music was awakening the echoes, Jim occasionally catching a glimps of the dogs as they pushed the rabbit along the swamp's edge.

Suddenly he called out to me that he had seen the beagles flush a woodcock, so leaving Tom to guard the bridge we started in. Jim had marked him down in a long, narrow and very dense thicket; so, without dogs, Jim walked along one side and I along the other, expecting the bird to get out wild, which he did. I heard the flap of his wings, called Mark, and as he topped the brush about 25 or 30yds. ahead pulled, and was very much surprised at the cloud of feathers which drifted away at the loud report of my gun, the shell being loaded with wood powder, "I've got him," I called out; "So have I," came the answer. We had both got him, and as Jim remarked after we picked him up and inspected him, "it saved one the bother of picking." He certainly did look rather bald. Just then a shot from Tom announced that he had seen bunny, and a prolonged shout that he had stopped him. The beagles came up and were taken care of by Kaiser, who turned the setters over to us again.

We went along for some time through a swampy piece of woods, with thick underbrush in places; the dogs were ranging rather more freely than the nature of the cover warranted, when, through an opening I saw Tillie stop and draw off to one side as though she had winded something. I hurried up, but out from a big pin oak some 30yds. away, boomed an old cock partridge which I reached for with the left barrel; got a number of feathers as a memento and Jim's sarcastic comment, "That it was all right to pick them but not to do it for some one else's benefit," (and some rabbit hunters found the bird dead in a field just outside the edge of the woods.) I have worried about that bird ever since, and generally look up very closely any birds which leave feathers behind. We put up and knocked down six woodcock in a big patch of alders further on, and by the look of the droppings and borings there had been a great many more there only a short time previous. We now crossed over into a large brush lot, where we expected to find some more quail. I presently walked right into them, killed the old cock, which rose high, the rest going off low through the brush. On looking around, I saw Tillie at a charge; she had doubtless been pointing when I stumbled upon the bevy. It was almost impossible to shoot the birds in that place, our object was to drive them out. At my call of Mark! Jim had jumped upon a stump and saw the birds leave the lot, some alighting in a field of high weeds while the rest kept on to a bog meadow. We crashed along through the brush in their direction, and a woodcock got up some distance ahead of Jim; I caught a sight of him but too far away. He went in much the same direction as the quail, a little off to one side in a clump of white birches.

As we came out into the weed field we saw the quail which had lit in the weeds and run together, rise and go on to the dogs, so that we now had the whole bevy in them. Jim now declared his intention of having that woodcock, which was an unusually large one. I kept on for the bogs, on the edge of which Dash pointed, the bird rose, and at the report, slanted down into the bog grass, wing-tipped, and although we tried for some time to work him up, failed to find. Finally gave it up disgusted, as it is a great shame to wing or wound a bird severely and have him get away and become food for vermin. Just then I heard "snap, bang, bang, bang;" and glancing quickly around at Jim's cry of "Mark," I saw the woodcock crossing behind me at 30 or 40yds. distance, and as Jim said afterward, and it seemed to me at the time, "he looked as big as a hen." But he shrank considerably before he came to bag, which was not to my gun, for, as Mr. Peggotty says, "I'll be corned" if I didn't pull both barrels and never moved him; that capped the climax. I told Jim about where I had marked him down and he went on alone. I sat down meanwhile to get into a better state of mind, as it always made me angry to miss such an open shot. I thought the matter over; it must must have been the fault of the shells, which, from knocking around in my pocket, had lost the shot. I finally decided it must be so and began to feel better. Tom now came up and we sat on a stone fence waiting for Jim to come, when we all intended to get square on the quail in the bogs. Tom now told me that he had flushed the woodcock and had a beautiful shot, but his first barrel missed fire, and he had a very easy shot at a rabbit which jumped out in the bush lot, but had another misfire, and for the balance of the day he had misfire after misfire with that right barrel, although he picked the nipple clear, and re-primed it with fresh powder, and snapped his cap regularly at every opportunity.

Jim got a point on the woodcock which had gone back to the brush lot; the bird jumped up, got tangled in the heavy brush, and Jim cut the top of his head off with a snap. He had now joined us, and we were just about to charge into the bogs, when I heard the sharp yelping of the beagles out in the meadow, and out came the whole bevy (which we had marked in and which had run together) like sparks from an anvil; Jim killed an incomer, I got a long left quarterer, and the game was up. We found that Kaiser, not having heard anything of us, had for his own amusement let the beagles loose, in consequence of which we lost that bevy, as they were scattered to the four corners of the earth.

We had engaged to be back by three o'clock, so started, coupling the setters and letting the beagles run, and on the way home, over much the same ground, picked up a brace of partridges, a gray squirrel and a number of rabbits, which Mr. Kaiser had to carry as a "reward of merit." Reached home in time, and upon examining Tom's gun, found the right barrel to be empty. He had omitted to reload it, and had put a cap on, thinking it already loaded. This ended one of the most pleasant days I ever had. Every fall since, Jim and I have been afield together (Tom having renounced hunting as a delusion and a snare) and expect to have some good times the coming season. Jim and myself hope it is not too late to express jointly our sincere thanks for a kindness rendered us by your valuable paper. We wrote you some time ago in regard to a case of dog sickness, and your prescription effected a complete cure. RAGWORT.

IN THE SAWTOOTH RANGE.—IV.

MONDAY we took horses to pack our deer in, and had quite a time on account of the steep hill and fallen timber, getting down at last to the trail, where we left my buck with one horse until we should return with Charles's deer, which was on the same trail only a good deal further. On our way we met a party of prospectors, the first people we had seen in three weeks; they promised to visit our camp the next morning. Getting to Charles's deer, which was still larger, but lying in such an impassable wilderness we only took the hind parts, but as the antlers were so large and beautiful I packed out the head for preservation. We were a long way from camp, the trail, through miry meadows and marshy bottoms, was a dangerous one for our horses, and we felt very glad when we caught sight of our cheery camp-fire. The next day we rested, as we had been traveling or hunting since we started. Our prospectors paid us a visit; we told them the latest news we knew, and received directions and information of our further route. According to their description the country they were coming from must be a perfect hunters' paradise, deer, elk and moose abundant, and not hunted; so tame that they killed almost all their meat from their cabin door; no trapper ever visited there; on one stream they counted one hundred beaver dams, besides plenty of martins, foxes, fishers and wolves and other varmints. They were leaving the country for fear of being snowed in, and knowing the dangers they warned us that to enter it now would be a desperate, mad and daring adventure.

Commenting on our horses and outfit, they noticed a rather striking pack saddle, which I had shipped with the rest from the East, but which had ruined every horse's back; I offered to exchange it for one of theirs, and both sides felt satisfied with the bargain. I had my eye on a fine-looking dog in their outfit, and after a little persuasion, and a sociable smile, we secured Pedro for a small consideration.

Wednesday the 19th we were early in the saddle, going five miles above where we had built the bridge to follow the elk. Picketing our horses in a suitable spot, we hunted faithfully but in vain for elk or bear. A singular incident happened to me that day. Hunting back in the afternoon toward our horses I jumped a buck with large, tempting antlers, giving me a fair but running shot. At the crack of the rifle the buck dropped. Pedro, our lately acquired dog, was with me, and at my command went bounding to the deer, which got up again, and with Pedro in close pursuit, soon out of sight. I expected the powerful dog would soon catch the wounded deer, but Charles, attracted by my shot, told me that Pedro was running far down the river. We looked for blood, but not a single drop could we detect, neither where he fell nor in his tracks. I must have creased, or, the bullet striking his antlers, knocked him down, paralyzing him for an instant. Getting back to the horses we made for camp, Charles going ahead, while I helped Bill take up his traps, he had caught some foxes but no beaver: a trapper who shortly preceded us had cleaned them out.

Thursday we packed and struck for Deadwood. Made it next day by noon in a drizzling rain. This fitly named town consisted of half a dozen deserted log shanties, which we took possession of; putting our camp duffle in one, cooking in another, and sleeping in a third.

Half a mile down we found an old pioneer, who kept a few supplies: he owned a placer claim, but being without sufficient water had some men engaged digging a ditch, leading Deer Creek with its plentiful watershed to his claim. He told us the town sprung up in 1867 and had quite a boom, the population increasing to 150 men, but all had deserted when the next excitement was boomed.

We moved our camp next day down to the Payette River, where we were told of beaver, but they were trapped out, or had become too wise for us. Billy noticed considerable sign up the river, and concluded to leave us for a few days, to find out. Giving him a few cooking utensils and grub, and telling him that we would keep on the trail to Garden Valley, he started up the river, while we went in the opposite direction, and camped at night at the foot of the divide. In the morning our horses had a hard time to get down; the descent was so rough and steep that the packs kept slipping forward. At last we got down to Onion Valley and camped.

After setting our tent and a cold lunch, we took a stroll through the small valley, and found camped not far below us an old packer, with his mule team. He was taking his midday meal, and being invited to join him we took a cup of coffee, hot bread, and fresh butter, a luxury we had no tasted since our start.

In the morning Charles and I went in different directions, but did not see any game, though plenty of sign that indicated bears been feasting on the wild ripe rosebuds. That night at supper time Billy made his appearance, he had again been disappointed and hurried on after us.

Thursday we pulled out early and had to cross Lightning ridge, the meanest trail we had traveled, sometimes up large smooth and slippery rock, actually pushing the horses which could get no footing, or through narrowly hewn paths, where they had to perform goat acts of jumping, climbing and sliding. It was specially rough on the pack horses, but at last we overcame the worst and came to some springs, but not finding feed for horses here we pushed on to the foot of the Garden Valley amid a lively snow flurry, thanking Providence it did not snow in the morning, for this would have made it impossible to cross the divide. We quickly set our tent on the creek near the river, and no sooner had it up with our things inside than the snow changed into pouring rain, which lasted all night.

In the morning the mountains around us were covered with a deep mantle of snow. Billy straightened things out in camp while we went out to reconnoiter. A mile below camp we found a well-kept and well-stocked ranch and in the owner (Mr. Pinney) a sociable and hospitable gentleman. Telling him from where we came and what we were after he advised us to stay; to turn our horses, which needed rest, in his pasture. In regards to game he spoke very favorably, but recommended us to see and get acquainted with D. Bunch, the "boss hunter of Idaho."

The next day Charles and I rode down through the beautiful and well settled Garden Valley to find this mighty hunter, stopping at the post office to mail some letters. Mr. Mills, the postmaster, who keeps a kind of road house and a store of all trades, sent his son along as guide to Bunch's, who lived at the lower end and a few miles up on the south fork of the Fayette. We met him on his way to the river, where he was hauling lumber for his new house. We soon imparted to him the nature of our visit; he was sorry not to be able to go along with us, having to finish his house, but willing to give us good advice and information. After a longer chat and a little more persuasion, his hunter's blood got up, and he promised that if we would come up to his place with our outfit he would manage to go three or four days with us. Highly pleased with our success, we thanked him, and promised to be on hand. It was dark when we returned to Pinney's ranch on the upper end of the valley. We left our horses in his pasture, and as our camp was on the other side of the river, we had to use a foot log, shinning it across, and feeling greatly relieved reaching again *terra firma*. In the morning we packed up and moved down the valley in a pouring rain. At the post office we met Bunch's oldest boy, Lee, and Alex. Carpentier, a neighboring chum; and, after purchasing a few needed supplies, they piloted us to the hunter's cabin. We did not set our tent, but slept in the cabin. It was well we did, for it rained great guns all night.

Next morning it cleared, and after breakfast we assorted our camp duffle, leaving all unnecessary truck, antlers, skins, etc., and in the afternoon started for Bunch's old hunting grounds, following the fork up until we came to a high, steep mountain, which we climbed, tacking down the other side, equally as steep, and camping at the base on Big Creek. Next morning we started out in pairs; Mr. Bunch and the scribe for the higher ridges in quest of elk or bear, Lee Bunch and Charles, while Alex. Carpentier took Billy in tow. We ran across several deer, but our object was larger game; we knew the boys would kill some venison in a better locality for packing out, and we soon heard them turn loose. Reaching the top of a high overlooking mountain, commanding a magnificent and extended view, we sat down to watch. Bunch soon saw a black bear on the next ridge, bending down the bushes, and feasting on the ripe berries. We sneaked down and got within 200yds. unnoticed by him, when both of us fired together. One of the bullets must have struck him; he turned to run for the next gulch, when Bunch stopped him again; he was the most nonplussed bear I ever saw; he changed his course and came straight for us; then discovering his mistake stopped, giving me a splendid shot. This bullet finished him; he fell and rolled near the creek. It was a large bear, with beautiful glossy fur, and very fat. Though we noticed plenty of fresh sign, we saw no more bears that day. Reaching camp by sundown we compared notes. Lee had killed a nice doe and wounded a buck. Charles had hung up a buck and a doe, Billy had killed a doe, but Felix had not run on anything.

In this splendid game locality we hunted for a week with various results, Lee succeeded in killing a large cinnamon bear; the rest of us brought in several deer, and a great many grouse. One day when Bunch, Felix and I were coming home from an unsuccessful drive, hunting along an extended sidling mountain, Bunch on the top kept rolling down large rocks and boulders, thorugh the intervening thickly grown gulches, Felix being at the base of the mountain, while I kept between the two, on the side. Bunch kept sending down perfect avalanches of rocks and logs, but nothing showed itself. We had come

our quarters at the Belvidere Hotel. We found the host accommodating, the table excellent, and the rooms comfortable, with the exception that, owing to the absence of chimneys, and means for heating other than the dining room and hall, it would have been rather trying at that season for ladies and children to stand the temperature. You will remember that one of my objects in making the trip was to find a place where I could take my family, and find good fishing or shooting near by. I think I have succeeded, and as the hotel people talk encouragingly of "warm rooms next year," we are already looking forward to a repetition of our visit, when our stay will be a more extended one, and we can proceed more understandingly.

Our fishing was mostly done in Mill Lake and the Seguin River, and we were rewarded for our efforts by the capture of a fair amount of fine bass, not large, as they averaged about 2lbs. each, but splendid fighters, full of pluck and strength, and we also secured some moderate sized pike and pickerel. To come down to figures we caught the first day 34lbs. of black bass (not to mention other fish), the largest of which weighed 3¾lbs., and I did all the fishing, my companion obtaining some very good views of the lake and river. We did not fish early, nor late, just took it easily, and had several days of it, with results similar to those of the first day, although at no time did we exceed the first day's catch. On our last day, as I was fishing at a narrow part of the river, we were interviewed by a bear and cub, which came down the hillside to the water's edge presumably to drink. They were within 150ft. of us and seemed to take very little notice of us, although we talked loud enough to be heard. After getting a good look at us they turned to go, and I could not resist the temptation to tickle the old lady with a charge of bird shot (we unfortunately had no rifle with us), and upon doing so they both made off at a good rate through the brush.

While we were at Parry Sound we met two gentlemen who had been camping on Moon River for a couple of weeks and fishing Crane and Blackstone lakes. This, I imagine from your letters, is your "stamping ground." They reported excellent luck and the successful landing of a 20lbs. muscalonge with an 8oz. trout rod.

We left Parry Sound on Saturday, drove over to Rosseau, passing nine beautiful lakes during the ride of twenty-four miles, and remained at Rosseau over Sunday. Leaving there Monday morning we enjoyed the lovely scenery of lakes Rosseau and Muskoka, the varied hues of autumn foliage to be seen on all sides adding greatly to its usual beauty, and at noon reached Gravenhurst, there taking the train for Toronto.

The next day we reached home well satisfied with our trip and both enthusiastic over Parry Sound and its environs. The Muskoka Lakes, while all that could be desired as to scenery, etc., have of late been overcrowded, as we learned, and we found the accommodations at Parry Sound superior in many respects, while the scenery is equal to Muskoka and the fishing better.

We had no fly-fishing. Bait was used, the worm being the staple article; and as they are scarce in the Muskoka region and command 10 cents per dozen, it is well to follow the advice which was given me before going, but was not heeded, viz., to "take a gallon of worms along."

ON THE GASCONADE.—III.

WE went into Camp Morrison, the first camp on the right bank of the river. Good place to camp; beautiful cove for the boats, just as if made a purpose; big trees all about; good place for tent, not under any tree; had a fine fish supper. Down wood plentiful. After supper we built up an old-fashioned army fire, and then we had our usual *conversazione*.

The boys are in fine feather. They have enjoyed the day, and they have a great deal to say of different things of interest which they have noted, and particularly of the narrow escape of the crew of the big boat from a ducking.

"We came pretty near getting spilled out, sure," said Frank. "But I wasn't scared as I was the time Alex and I were caught in a storm on the Missouri River in his tin boat. Will remembers it, too; he was in a larger boat with us at the time. We had all been up to Willow Creek fishing and had started back home. The river was high and very wide then opposite the mouth of the creek. Just as we came out of the creek a squall struck us, it suddenly got as dark as night, the wind was blowing up the river and raised tremendous waves, and they were choppy and irregular. Alex was rowing and I was sitting in the stern of the boat, which was a little tin, sectional thing, belonging to a fishing club, with sides about 8in. high. The more we got out into the river the bigger the waves got and the harder the wind blew. The big boat struck out for home by the shortest route. We tried to do the same thing, but soon found that we were shipping so much water that we had to face the wind and waves, which took us across the river rather above Lexington. Every time a wave would strike the boat, ker-flop! it felt as if it was going to stave her in, and, some way, I'd rise in the boat as if that would help her over. When we got about half-way home I wouldn't have given fifteen cents for our chance of ever getting there, but if she was small she was buoyant, and though the waves slapped her pretty hard, she always raised over them, and at last we touched the shore, just above the eddy, to take a rest before pulling in to the landing. Maybe I wasn't glad to get to land! I tell you the old Missouri won't do to fool with! When it gets mad it is the worst river on earth. No one can appreciate the force of its current until he tries to contend with it, and when a heavy wind and the current get at war with each other they kick up a lively sea."

"That's so," said Will. "I've had many a narrow escape from a ducking in it, if not worse. But talking of duckings, the best thing in that line happened when John ——, Phil. —— and myself went down to Baltimore bar one winter. It was on the seventh of December and cold. There was a skim of ice near the shore and the water would chill a man to the marrow in two seconds. As we were going down to the river a friend of ours presented us with a quart bottle of splendid old blackberry brandy. It tasted so mild and nice that the boys touched it pretty freely, and it began to tell on them. First John got sleepy and laid in his oars and went to sleep in the stern of the skiff. Then Phil, who was in the bow, did the same thing. That left me to row by myself, but as it was down stream and easy pulling, I didn't mind it. By this time it was getting quite dark. I took a steady stroke, and we were going at a lively rate, pretty near the bank, when all at once I ran upon a snag. The boat tilted up a little, and I hallooed at the boys to get up and help me. John waked up first, and being somewhat dazed, he thought we had reached the bar and run against it, causing the jar to the boat, so he yelled out, "You Phil, why in the —— don't you jump out and pull the boat on the bar!" Phil, awakened suddenly from a dense sleep, took him at his word and jumped out of the boat in 30ft. of the coldest water you ever saw. You know how fat he is; he couldn't stay under water long if he tried, so in two or three seconds up he popped, puffing and blowing like a distressed porpoise, and after some effort got to the boat. As he rested his capacious bread-basket on the gunwale, he looked reproachfully at John and said, in the most doleful tone imaginable, with his teeth rattling like castanets, "W-e-l-l, y-o-u p-l-a-y-e-d t-h-u-n-d-e-r, d-i-d-n't y-o-u!" If the salvation of the crew had depended on it I couldn't have helped it; I threw myself down in the bottom of the boat and laughed till the tears ran down my face. Phil finally crawled into the skiff, and we went on down to our destination, with no effects of blackberry brandy visible on any of us. The next day we caught, in the pockets around Baltimore Bar, 3,600lbs. of fish, mostly buffalo."

"That reminds me," said the cook, "of a ducking I got once in Cowskin River. The name is not poetical nor euphonious, but the river itself is beautiful. It runs through McDonald, the southwest corner county of Missouri. We camped near its banks in 1861, as Will and Frank remember. My first experience with the stream was when I went to bathe in it one day. When I got ready to leap in I looked off the bank which was 3 or 4ft. high and nearly perpendicular, and the water seemed to be about 3 or 4ft. deep, so I made an easy jump, feet first, expecting to bring up about waist deep. The next thing I knew I was going down, down, down, and before my feet touched the bottom there must have been 5 or 6ft. of water between my head and the top. The water was as clear as crystal and 10 or 12ft. deep. One day Gillogly, Salmon, Kinsella, myself, and and one or two other of Kelley's old company, in walking down the stream observed a stretch of about three-quarters of a mile of rapids —lively ones at that, regular boiling, rip-roaring rapids. We had seen a big canoe chained to the bank a short distance above, and some one proposed that we go back, get into it, and shoot the rapids. No sooner suggested than acted on. Anything would do for a lark in those days. We worked the old canoe loose in some way, and got in. It was 20ft. long, I reckon, and we did not make much of a load. Gillogly got in the bow and I in the stern to steer. It was not long until we were in the rapids, and when we got fairly under their influence our big canoe did not seem to be more than a feather. We were swung from one side to the other as a rivulet would toss a straw. Once or twice we came near broaching to, but by vigorous yelling at each other and superhuman exertion we managed to keep 'end on.' All this in a minute or so of time. We hadn't more than half made the run before we came to grief. The stern of the canoe swung in toward the right bank, and as I was working with all my might to throw it out in the stream I failed to notice an overhanging limb of a tree that reached nearly to the water. When we came to it, it swept me out of the canoe pretty much as one might brush a fly off the corner of a table. I never felt as light in my life as I did while in that water. It tossed me about as if I had been a cork. Fortunately I didn't strike any rocks, nor strangle when I was turned over and over by the tumbling waters. I got to the bank pretty quickly, and when I did it was to see the canoe, about 100yds. below, a total wreck. When I went out control of the thing was entirely lost, and coming to a long log extending over the water the end of the canoe went under it, became fast, the other end swung around in the stream and the craft broke in two, spilling its whole load about as unceremoniously as it had dumped me. I believe my loss by the accident was the most serious. I had taken off my coat, containing my pipe and tobacco, my shoes and stockings, none of which were recovered. This was pretty severe, as I had never gone barefooted in my life, and the road to camp was covered with flinty rocks. However, I managed to get back. The next day the owner of the canoe came into camp and demanded payment. Six dollars, I think, was the value he placed on his primitive gondola. We convinced him that in its old and tender condition it wasn't worth the money, and compromised on the payment of two or three dollars. We had many a good laugh over the adventure, afterward, but while it was 'a-happening' it wasn't very funny."

Two or three more ducking stories were told, when we all got sleepy and went to bed.

Morning on the Gasconade. Very early morning. The gray of daybreak just perceptible. The cook is up first looking at the weather-signs. A dense fog covers the surface of the waters. The boats, but a few steps away, are barely visible riding lightly in their little cove. Scraps raises his head and looks for a sign. Poor fellow, he cannot hear. The cook pokes his head in at the tent door, and with a yell that might have been heard a half mile, hails the boys with, "Hey, you fellows, going on to noon! What are you sleeping your senses away like that for? Turn out and let's be moving!" Pretty soon a good fire is crackling away, the coffee is made, a dish of something piping hot is prepared, and breakfast is ready. In the mean time the tent has been struck and the bedding tied up. So we enjoy our breakfast comfortably and leisurely, and still get afloat before the fog has raised. Take it all together this was the red-letter day of our trip. The fog soon dispersed, giving place to a gloriously bright sunshine, which away from the fire was necessary for comfort. Ten or twelve miles of the river were passed over, the scenery of which was lovely, and the rapids were among the prettiest and most exciting we had seen. After fishing a while the cook concluded to try for some turkeys and accordingly was landed on the left bank of the river at the foot of a wild and rugged looking mountain. He had't walked far until he realized that the chances were slim. The ground was covered with dead leaves, big, round, dry, stiff leaves, as they are early in the autumn, moving through which in silence is a matter of impossibility. There was only one thing for it, to try the art of "sitting on a log." There are grand possibilities in this "art" when it is patiently practiced in likely places for game. I had not been seated long in a leafy little bower, partly natural and partly constructed with two or three oak sprouts, until I heard on an opposite hill a short distance away, the gobble of a turkey cock and the tender response of the hen, the old, old, old story being repeated here under the green and leafy canopies of the grand old forest trees, the wooing of the male and the shy response of the love-smitten mate. Presently there seemed from the gobbling, strutting and scratching to be several of the wary, lithe and nimble creatures in the party. I could hear them plainly, but I could not see them. I was afraid to move, for the least noise in those rustling leaves would have sent them scurrying away in the silent, yet long and effective stride for which they are noted. With my gun at full cock lying in my lap, peering out from amid the oak leaves, I waited patiently to get a shot, though I knew it would be a long one. For some minutes, they seemed long to me, I continued to hear the gobbling, clucking, scratching, but finally it died away in the distance without my getting a glimpse of the turkeys. I patiently waited for them to stroll back my way, but they did't come, and though I was among good squirrel timber I did not catch even a glimpse of a curly tail, so after a while I made my way back to the river, without game, but with an experience that had put the woods fever to coursing through my veins. *Aber was wollen sie?* the day's run of the river had to be made and I had to give it up.

When I got to the river I found that Will had paddled on before, and I took passage in the big boat to overtake him and resume my place. When we got within hailing distance of him Will began to pantomime, which every fisherman understands. He motioned to us "to take surroundings" and to come to his boat from down the stream, as in a certain place he was catching fish. Of course we obeyed, and coming softly from below I transferred myself from one boat to the other as noiselessly as a moccasined foot would walk over a soft grass plot. The other boys silently floated away, and then I had leisure to look at my friend Willum, and he presented a picture. It seems when he reached this point he observed a pool, just above the roots of an overturned tree lying embedded in the stream, and he concluded to make a cast there. He quietly dropped out an anchor, one of which was ready in either end of the boat, and made his cast. No sooner had his minnow settled in the water than his float disappeared, and striking he felt himself fast to a lively bass. His slight rod bent, and his line whistled through the water as he checked his fish because of the proximity of the tree roots. Then away it went toward the middle of the stream, and his Kentucky reel whizzed as the line flew out. Then up the stream he goes until snubbed by a touch of the butt, when the line is rapidly retrieved as it slackens and the fish comes gradually back toward the boat. Quicker than thought it darts again for the shelter of the tree roots, the line swishes through the water, and the rod bends nearly to the hand as it meets the strain. He must be stopped, or good-bye to line and hook and fish! But he is stopped. It was almost his last effort. Drawn by the rod out toward the stream he makes one dart for the bottom of the boat but is brought up stiffly, another for his old refuge, but again he is stopped, and then at last he submits to being drawn over the landing net and is lifted into the boat as game and beautiful a fish as one would wish to see, a small-mouthed black bass, not as heavy-bodied as we have seen, but some 15in. in length. This is not, perhaps, that poetry of fishing where there is deep water all around and the fish may be killed by the reel, with an occasional touch of the tip of the rod, but it is more exciting and requires more skill and dexterity.

The minnow has passed through the battle uninjured, and once more is cast into the pool. Again the float disappears, and a strike fastens the hook in the jaws of a fish, and the same fight is fought over again. It ends as before, and after a battle royal the bass is landed. A fresh minnow is impaled and a third and a forth bass are added to the creel. Then comes the event. Having struck the fifth fish it proved to be a fighter. It tried every stratagem known to the finny tribe to shake itself free from the stinging steel from its jaw. It flew up the river, then down. It leaped from the water and tried to shake the hook from its mouth. It doubled back toward the tree. Snubbed in that direction it darted back for deep water again, only to turn suddenly and fly toward the boat. The line cut the water like a knife; the rod bent again nearly to the fisherman's hand; the strain was immense; it seemed to check the fish, and Will thought it was giving to the steady tension, but it seemed that it had merely steadied itself for a supreme effort; it churned the top of the water as it took a new start, and—the rod snapped in two about five feet from the tip. Here an amateur would have been lost, but Will is a veteran. He seized the line and succeeded in recovering the five-foot tip of the rod, just as it was about to disappear under the boat, and as good luck would have it in checking his fish, which had evidently stopped when it reached shelter. Then by persuasion and humoring he at last got it out into the pool, and by drawing it first in one direction and then the other he finally wore it out and brought it to the landing net, the king of the expedition, measuring seventeen inches in length, but slender and not weighing over four pounds. The breaking of the rod was a catastrophy, of course, but the capture of that fish was a victory sufficiently glorious to compensate for many losses. Will was in no sense discouraged. He fished on with his five-foot pole, and if he had hooked another prince of the pool would have given him a "powerful good fight." It was at this time that I came in sight, and the picture I alluded to was Will, squatted down in the stern of the boat, fishing for small-mouthed black bass, the gamest fish of our waters, with five feet of rod a quarter of an inch in diameter. "Allee samee," as the Chinaman would say, the "Melican man" didn't give up, and after I reached him he managed in some way, though not without many a struggle and narrow escape from discomfiture, in making his catch in that pool number fifteen. I caught two or three on my side of the boat, and we moved on. In describing our tackle at the outset I stated that the pretty rod came to grief, and I have told you the story of its disaster.

After leaving this place the cook killed a few ducks as they flew over, and as Billy had killed a few in the morning and one squirrel, there was material on hand for a burgoo.

The day's journey was through enchanting scenery. The mountains upon either side, sometimes upon both sides at once, were mostly precipitous, and the rocks of different strata and hues presented exquisite blendings of form and color. When the hills rose upon both sides of the river beautiful vistas would sometimes be formed, with the light almost shut out overhead, but appearing far in the distance. The rapids, which were frequent,

s parkled and glittered, and whirled our boats along at times as if they had been toys. We went into Camp Alex rather late, upon the left bank of the stream, by the side of a country road. As we were getting things into shape an old lady passed on horseback with whom we exchanged compliments, the result of which was that after supper her son-in-law, Mr. Elias Riddle, his friend, a deputy sheriff of Pulaski county, and two young gentlemen called on us at our camp. Mr. Riddle is a substantial farmer who resides near by. He and his party were very polite to us and gave us all the information in their power. They told us that the vicinity had once been full of game, and that deer had been killed not far away the day before, but that game of all kinds was much scarcer than it was a few years ago. We suggested that the enforcement of the game laws might do good in this respect, but we found that Mr. Riddle did not take very kindly either to game or fish laws. We had observed along the river a large number of basket nets or traps, say from 5 to 8ft. long—most deadly contrivances at some seasons of the year, and clearly in violation of the fish law. Mr. Riddle did not see any special harm in using these traps, though he had admitted that they had been the means of pretty nearly exterminating the blue cat of this river, one of the handsomest and gamest of fish, and an excellent one on the table. He informed us that there were a good many jack salmon in the Gasconade, beside catfish, red horse, buffalo and bass. And he told us of a wonderful animal which he called a water puppy, much like the young of the canine, which frequently gets caught upon trot and other lines, and is a slimy and disgusting object, besides being a vicious fighter. He explained to us the *modus operandi* of jigging fish, when the river is low in winter, and the fish lie in the deep stretches between the rapids. At that time, the water being perfectly clear and transparent, the fish may be seen very easily, and Mr. Riddle said it was "no trick at all" for a man who knew how to jig, as he did, to kill his sixteen or eighteen hundred pounds of fish a day. These are readily marketed at the railroad. The cook of this expedition had the honor to present in the Missouri Legislature the law creating the State Fish Commission, and providing severe penalties for the destruction of fish by seines, nets, traps, weirs, or any other device in which to catch fish, in any of the waters of the State, and hence could not well be in sympathy with Mr. Riddle's views, and he only now regrets that he did not manage to have included in the law the obnoxious instruments of extermination, the jig and spear.

Mr. Riddle's friend, the deputy sheriff, surprised us a little by recognizing our Scraps as a dog which he had formerly owned. He said his real title was Dan, and he gave him an excellent name barring the deafness, which we ourselves had discovered to be his weakness. He promised to take him off our hands in the morning, but failed to put in an appearance in time, so Scraps still continued in our company. As Mr. Riddle departed we remembered that we had not inquired his name, so we called after him for his patronymic. He turned his head over his shoulder and hallooed back: "My name is Elias Riddle—E-l-i-a-s, Elias; R-i-d-d-l-e, Riddle; and so he sifted away in the gloom of the forest.

The cook got sleepy early and went to bed, but Will, Frank and Billy, who have a mechanical turn, amused themselves making a fish box before they "turned in," as it was becoming burdensome to lug our fish after us in live-nets and on strings. At last even the fish box was completed and quiet settled upon the camp, as Frank, the last to seek his couch, contemplatively soliloquized, as he hung by the tent pole gazing at the heavens:

> "I love night more than day—she is so lovely;
> But I love night the most because she brings
> My love to me in dreams which scarcely lie."

"You' better lie down and go to sleep, you incorrigible old bachelor," said Will, "instead of star-gazing out there, and quoting love-sick poetry. Don't you hear Billy sawing gourds a'ready? You would better be snoring, too."

And very soon the deep bass of the senior bachelor was added to the treble of the boy, and the various-sized frogs paused to listen to a new-found rivalry. A. A. L.

LEXINGTON, Mo.

WASHINGTON AS AN ANGLER.

IT looks as if some wag were making light of George Washington's character as an angler. Here is an historical contribution to the New York *Sun:*

I see a good many things traveling round in the columns of newspapers relating to George Washington as a fisherman, and as what follows relates to the same subject and never has been published, you may like to print it. It is part of a letter written by Col. Cogswell, who was one of the thirteen who, "dressed in the uniform of Federal soldiers," rowed the barge bearing the immortal Washington around Portsmouth harbor at the time of his visit to New England in 1789. O. ODIORNE.

I had the high honor, with twelve others from neighboring towns, to be one who rowed the great red-white-and-blue-striped barge around the harbor. Nature lent its best day for the occasion, said our town poet, though the wind came heavy out from the northeast before we got ashore again. We left the little wharf amid the acclaim of hundreds, who had stretched themselves, hand in hand, along the shore to honor the greatest and most beloved of mortal men. Old and young wept with joy and thankfulness as they looked at their great deliverer.

As Gen. Sullivan had proposed that we should pass over our fishing ground in our sail, hooks and lines were taken with us. Col. Hackett and I dug the clams after we were dressed in our uniforms, and it is fortunate we didn't dirty ourselves, but we didn't. After we passed the line of townspeople along the shore, in which I saw your Uncle Ebenezer a-waving his hat and hallowing like mad, we struck off to the Big Ledge and laid on our oars to fish. 'Squire Langdon got in the first line, as President Washington, God bless him and all of us, declined to let anybody bait his hook for him. Gen. Sullivan didn't fish, as something of a swell came up just as he had clammed his hook, and 'Squire Langdon pulled in a windfish, deprecating his luck as deacons do when they don't catch anything. Washington then had a jerk that almost upset the barge, and made a French officer who had come with us dreadfully sick. But as soon as the hook got unhitched from the rocks, it let go so suddenly that Gen. Washington sat violently down, and upon the bait pipkin, happily without injury. He smiled as he rose.

The next fish was a polluk. Gen. Washington caught it. There didn't seem to be any cod in the neighborhood. Mr. Nehemiah Stevens, of Boston, who managed the oar in front of me, vowed aloud enough for all on board to hear him that he believed the music in the boat that followed us, and laid on their oars about a hundred feet astern, scared the fish, and if it would stop a-playing we could catch something. It seemed that Elnathan Brown, who blowed the recorder, was trying to attract the attention of the distinguished passenger in our barge. He ought to have been spoken to before we started, for I do believe that he really did frighten off all the fish that were worth the bait. I was a little mistaken, however, for just as we were asked to resume our oars something took the clam of Washington, and he lifted a half-pound codfish into the boat, smiling as he took the barb out of its ear. Was it not too bad that he didn't hook a halibut?

So many got sick that we had to head for Kittery. Joe, who was in the barge with the band, will tell you how he fared. Every one of the musicians except Brown was puking sick from the time we left the Ledge for Kittery till we landed. I noticed that when President Washington bid us adieu on the shore at Kittery, that one of his eyes was bunged black and blue, and that he held his kerchief to it most of the time. Prescott thinks he jabbed a corner of Squire Langdon's hat into it when he was precipitated on the bait pipkin.

This letter was addressed to the wife of Col. Cogswell, and is dated Portsmouth, Nov. 5, 1789. C. O.

MAINE FISHING ABUSES.

Editor Forest and Stream:

I am glad to see that the "jigging" of big trout in the Maine waters has at last been exposed, for this is one of the reasons why the day for good fishing in the Rangeley Lakes has gone by. A person reading your praiseworthy exposé would imagine that the parties mentioned were alone guilty of the thing. Now let me whisper a little truth into your right ear, Mr. FOREST AND STREAM, which is to wit: this business of wantonly murdering big trout by "jigging" has been practiced for years at the Rangeley Lakes to my certain knowledge. I have seen it done at all hours of the day and at midnight by torchlight, but always by residents of the vicinity or State. I don't intend to champion anybody in this villainous business, but I rather imagine the two individuals implicated in your exposure were presented with this "racket" because they were non-residents of the State.

Three years ago I tossed my last fly on these beautiful waters, where for fifteen years I had sojourned annually for some weeks. Fishing had become disgustingly poor, an example of which will be seen in the fact that during September I cast flies morning, noon and night for thirteen days without a solitary rise. Yes, fishing was poor, and I knew the agencies that had made it so. I had seen one of these agencies practiced daily, and becoming disgusted I quit those waters, and wrote a statement of the facts, which were printed in the New York *World* on July 12, 1885, and in which the "jigging" process was exposed. I said, "Two or three hooks of great size are fastened together, forming a sort of grapnel, and with this deadly implement fastened to a weighted line and pole, the big trout are snatched from the water in the most cruel and outrageous manner."

These statements brought a long array of denials from the lakes, but none of them were printed. Notably there came one from a party who signed himself "Captain," and is supposed to have been head cowboy on a line of steamers. He called me a sort of mammoth liar, but with all his talk proved nothing, for "go to" and "get thee hence," I had told only the plain, silver-plated truth. Yes sir, this "jigging" big trout has been "worked" for years down there. I say big trout, because the butchers will not or cannot "snake" the little ones of a pound or two. I recall looking from my window one night about 12 o'clock and saw two men "jigging" by torch or jack light, and I have wondered ever since if trout can be attracted at night by a light. These men were in the employ of the Union Water Power Co., who control the Androscoggin waters. I saw them lift a large one into the boat, and then I shouted "You murderers." Instantly the light went out, and I saw them no more. I mentioned the affair to several people connected with the company, but nothing further was heard of it.

Shortly afterward I saw an alleged sportsman "jig" a fish on the boom below the Upper Dam, and after nearly an hour's play the fish was landed. It was a magnificent 6lb. trout, and when I saw him an hour later there was a cruel wound in his mottled side—the result of the treacherous method by which he was killed. This piece of scoundrelism was perpetrated in broad daylight, and drove me away from these haunts of murder. I have taken trout with worm or fly in nearly every quarter of the globe where they exist, but never, save at the Rangeley Lakes, have I seen them murdered in such a manner. It could have been stopped years ago had the authorities availed themselves of the facts given in my letter to the New York papers—but they didn't. They simply denied the facts that were absolutely true, and laid low until strangers could be "held up" for an example.

I would like to ask why somebody don't rise up and tell the truth about the illegal method used in taking the big trout at the Upper Dam. It is said the fish weighed 11lbs., and to this day his picture fills a page in the guide books, but somehow they fail to illustrate the method of his capture.

If the warden wants an interesting job why don't he investigate the well-authenticated incident of the 120ft. gill net that was dropped into the narrows many a time and oft hard by Portland Point. I heard of it often, and I have no doubt some of the sturdy and honest guides—men like Morse, Whitney, Sargeant, Brooks or Danforth—could, did they feel disposed, tell its perfidious story. The warden would find some further amusement if he would occasionally "drop" upon one of the very many spring-time marauders—the butchers who follow the disappearing ice and with wicked "gangs"—more merciless by far than any "jig"—deplete these once glorious fishing waters, and boast of it afterward.

I merely direct attention to these facts because I do not like to see such an extraordinary display of official virtue practiced upon two strangers, while the same deed they perpetrated has been in steady operation for many years by those who live "right thar," and not a word is ever heard of it.

In no place in the world could brook trout be found so large as at the Rangeley Lakes. Four and five-pound fish were common, and I have taken them on a silver-doctor that weighed 7 and 8lbs. It is a shame and a disgrace that so rare a repository should not have been managed with more regard for the noble fish, not to say for the pleasure of sportsmen. Aside from the illegitimate methods used, the honest fishing done there will soon empty the range. It has been estimated that 1,000 visitors fish these lakes each season. Suppose each takes out the 50lbs. allowed by law we have a total of over fifty tons; and this does not include the catch of the log drivers and the numerous private camps. The above supposition is, however, the fortune of but a few, and the 50-pound law, I think, is in no danger of being broken by any man's catch at present—fish are too scarce.

One would imagine that the facts written here would sufficiently account for the poor success fishermen now meet at the lakes, but there is one more, far worse than any mentioned and for which the Water Power Company is responsible. The workingmen at the dams took the trout in great numbers during autumn from the spawning beds, and every fish so taken means the destruction of hundreds of thousands of their species. They were speared by daylight and by torchlight; dynamite cartridges were exploded in the water and the fish were destroyed by wholesale. Mr. Straw, superintendent at the Upper Dam, was told of these facts, but it seems he did not trouble himself about them.

The Oxford Club, on Rapid River, is closed up and the club have leased grounds elsewhere. Forest Lodge is a ruin. Portland Camp has long since disappeared, and the Boston Club is little used now. Why? Well, principally because fishing at the Rangeley Lakes is a thing of the past, it is ruined, and nobody regrets it more than KIT CLARKE.

NEW YORK, Nov. 12.

TROUTING ON THE PASSADUMKEAG.

III.

WE were awakened the next morning by Pettengill, who told us that the morning was fine, and as the day was likely to be a hot one, we must be ready to start by sunrise if we wished to travel with any degree of comfort. We had planned a trip of twelve miles up the Passadumkeag to the Upper Taylor Brook, intending to go across from Maple Ridge to Spring Pond, and remain all night in a lumberman's camp, which we were informed we should find there.

The object of this trip was to become more familiar with the country, as well as to test the trout fishing at the mouths of the several streams emptying into the Passamdumkeag. We had noted quite a difference in the color and flavor in the trout taken from the Pistol from those taken from the main river, and we wished to determine if they were the same in the smaller streams, considered from the standpoint of edibility. We intended to do our fishing on our up trip.

Partaking of a hasty breakfast, we packed what articles we should require in the batteaux, not forgetting to take along the cubs also, as they were of too much importance to be left to themselves; besides, having slain their natural protector, we had, at it were, adopted them into our family.

We had a most delightful row for eight miles up the river, stopping from time to time to try the trout in the most favorable places. We passed Duck Stream, which our guide informed us was a great resort for black ducks in the fall, on account of the great abundance of wild rye which grew along its banks (I think the wild rye is much like the wild rice which grows so abundantly along the Upper St. Lawrence).

Just above the stream we surprised a doe with two fawns at her side. Heald involuntarily raised his rifle as the deer sprang to cover, and as quickly lowered it again as she came into full view. The fawns were beautifully spotted with white and appeared to be four or five weeks old.

We cast our flies for a few moments at the mouth of Spring Brook, and were surprised at not getting a rise. This was indeed strange as the place seemed especially favorable, the water being clear and cold, but there were none there, for us, at least.

We proceeded on to the mouth of the Lower Taylor, where Heald shot the bear, and examined the place with considerable interest, as we listened again to the Doctor's account of the adventure. Here we found the trout very abundant and beautifully spotted, and almost as light as silver in color, of the average size, varying but little from three-fourths of a pound. Here we intended to go across to Spring Lake; but after going a short distance we found the trail rough and obscure and the older members of our party declared it a failure; and we decided to go back to the boats and continue our trip up river to the Upper Taylor and return to camp that night. Reaching the mouth of the stream we disembarked, and as it had become very warm, and each of us having taken a turn with the oars, we were inclined to rest, for we had found the current quite strong in several places, which made vigorous pulling necessary. We had rowed twelve miles in seven hours, including the stops, and although we had enjoyed every moment of the time, we were, as the Doctor expressed it, "beat out."

Pettengill and Lord soon prepared a dinner for us which made us feel sorry for our friends at home, who were restricted to home fare, and thank our stars we were here. After resting for a couple of hours, we began our return voyage, which was uneventful, save the killing of a fine specimen of the great gray owl (*Syrnium cinereum*), the only specimen I have ever seen alive, and a pair of pileated woodpeckers, the latter of which seemed to be quite abundant in the vicinity of Maple Ridge. Stevens was much elated at receiving the birds as a present, and at once prepared their skins for mounting.

Our trip down the river was as pleasant to the sight as it had been going up, and vastly more agreeable, as we had little pulling to do, the current favoring us. We reached camp at 7 o'clock, feeling that we had accomplished a day's work that would count to our advantage in the future.

The next morning we decided to break camp and start for home, determining to stop at Enfield for a day if possible and try the togue and trout in Cold Streem pond.

Reaching Enfield we chartered the little steamer Fairy, owned and commanded by Mr. Treat, whom we found to be the right sort of a man to fall in with, and disposed to take us where we could find good fishing and enjoying it with us. We went to the east inlet where we successfully landed seven trout, that weighed in the aggregate 21lbs., and three togue the largest of which tipped the scale at 14lbs.

We left the fishing grounds with great reluctance. Our trip had been full of enjoyment from the start, and

we had left all our business cares behind us; but now our vacation was ended and we must return to them again, but we returned invigorated in body and mind.

We made annual trips to this region for several years, then we varied our trips to other fishing grounds, more remote from civilization. Our trip this year, 1887, was to the old camping ground, and on the 20th of September, after an absence of ten years, we found ourselves again in camp at the mouth of the Nicktous. Very little save the river itself looked natural. The forest had been stripped of its magnificent growth of timber, fire had laid waste thousands of acres, the logging road, over which we traveled on our first trip with so much difficulty, had been transformed into a turnpike. The roar of the Grand Falls was still to be heard as of yore, and the trout were there, "not the old residents," but their descendants, in sufficient numbers to give us all the sport we desired. As we revisited old localities along the river, and sought for old and cherished landmarks, and found them not, we were filled with regret that the progress of civilization and the want of mankind make it necessary for him to take from nature so much that is grand and beautiful, without a possible restriction.

W. G. F.

UNITY, Me.

A NEW FANGLE IN RODS.—A patent was granted to S. G. Monce, Oct. 25, for an "improvement in metallic tubular spring tempered fishing rods, the object being to produce an article of simple, cheap and convenient construction, elegant appearance, uniform flexibility and strength in every direction of flexion, and adapted to be made in the very lightest as well as in the heavier grades of rods." It consists in spirally winding a metallic ribbon over a series of forms, giving it the proper taper and size, each form being of the proper size for the particular section designed. The sections can be made to telescope, or joint together like any ordinary rod. "Preferably the edges of the strips are lapped edge over edge, and with an increase of lap in proportion to the increase in diameter, whereby the required gradation in stiffness from the tip to the butt of the rod is secured. Preferably also the edges of the strips are firmly united by soldering or brazing." "By spirally coiling the metal" he is "enabled to make a rod not only of extreme lightness, but of uniform flexibility and strength." We understand that Mr. Monce is intending to go into the manufacture of these rods. He has applied for an English patent, and expects to take out one in Canada also.—*The Bristol (Conn.) Press.*

DR. W. F. CARVER writes to the U. S. Cartridge Co., Lowell, Mass., under date of Nov. 10, 1887, as follows: "I have just closed a successful season, using your Climax shot shells. Should be happy to give you any indorsement you wish of the perfect workingof your shells."—*Adv.*

Fisheulture.

PROTECTION FOR LAKE ERIE.

Editor Forest and Stream:

Some weeks ago in response to a petition largely signed by the fishermen of Toledo, the Governor appointed Hon. E. D. Potter, Sr., of this city, to fill a vacancy on the State Board of Fish Commissioners. At the ensuing meeting of the Board, Judge Potter was authorized to expend $500 of the appropriation in the Board's control for the enforcement of the fishing law in his district, which includes all the territory draining into Lake Erie from the Maumee River eastward to Sandusky. Subsequently a strong local association has been formed called the Fish and Game Protective Association, with the avowed purpose of co-operating with the State Board in every way possible, and of taking such further steps as may tend to further legislation should it prove desirable. Yesterday the venerable commissioner accompanied by some of his deputies from this county, went in a tug to Niagara Reef, in Lake Erie, where parties were fishing in violation of law, and captured thirty-two gill nets. These will be destroyed, and where proof of ownership can be obtained the offenders will be arrested and tried.

The awakened public sentiment of this subject finds violent opposition here and at Sandusky from the commercial fishermen, who go on depleting the supply of fish without any regard to the future.

B.

TOLEDO, O., Nov. 19.

THE NEVADA COMMISSION.—We have the bi-ennial report of the fish commissioner of Nevada for 1885-86. The natural supply is very limited and therefore fishculture is of especial importance. The work in Nevada is very recent and it is too soon for definite results to be obtained, but the success so far is gratifying. Owing to the limited appropriation there has been difficulty in shipping fry to distant parts of the State. A new hatchery is needed. Each change of commissioners involves the removal of the hatchery to a point near at home, the present incumbent, Mr. W. M. Cary, having built one on his own premises. Co-operating with California in stocking the Truckee River is invited and the stream is capable of furnishing a large supply of fish. The following is a list of fish or fry distributed: Trout, 93,750; carp from the U. S. F. C., 295; catfish, 681; bass, 807. The report closes with an account of expenditures and a list of the various fish commissioners. We would recommend to Mr. Cary that the proof sheets of the next report be more carefully read; proper names are fearfully mangled, Prof. Baird appearing as Prof. Bird, and similar errors pervade the list of commissioners.

OREGON HAS A COMMISSION.—The State of Oregon has created a fish commission, and three commissioners have been chosen by the Legislature, according to the law passed last February. These are: F. C. Reed, Astoria; R. C. Campbell, Ranier; and E. H. Thompson, of Rogue River. They hold office for two years. The president has a salary of $2,000, and the others receive $5 per day for time actually employed. An appropriation of $10,000 for the maintenance of the commission and for a hatchery on the Columbia River or its tributaries and also one on Rogue River.

THE U. S. FISH COMMISSION.—In the re-organization of the work Commissioner Goode has made the following appointments in the division of the work, each having his own department: Administration, J. H. Kidder, Assistant Commissioner. Fishculture, Marshall McDonald, Assistant in charge. Scientific Inquiry, Richard Rathbun, Assistant in charge. Statistical Inquiry, R. Edward Earle, Assistant in charge. To one of these four divisions all employees now or hereafter to be appointed will be assigned.

NEVADA FISH COMMISSION.—Carson City, Nevada, Nov. 10,—*Editor Forest and Stream:* There is but one fish commissioner in Nevada and that is myself.—W. M. CARY,

The Kennel.

FIXTURES.

DOG SHOWS.

Dec. 6 to 8.—Third Annual Dog Show of the Central Berkshire Poultry, Pigeon and Pet Stock Association. W. T. Webster, Secretary, Lee, Mass.

Dec. 6 to 10.—Second Annual Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill. W. J. Hamley, Superintendent.

Dec. 14 to 16.—Third Annual Dog Show of the Winsted Kennel Club. Frank D. Hallett, Superintendent, Winsted, Conn. Entries close Dec. 3.

Jan. 23 to 27, 1888.—First Dog Show of the Agusta Pet Stock and Poultry Association, at Agusta, Ga.

Feb. 21 to 24, 1888.—Twelfth Annual Show of the Westminster Kennel Trial Club, Madison Square Garden, New York. James Mortimer, Superintendent.

April 3 to 6.—Fourth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Dec. 12.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

Jan. 10, 1888.—Second Annual Field Trials of the Texas Field Trials Club, at Marshall, Tex. W. L. Thomas, Secretary, Marshall, Tex.

Jan. 16.—Fifth Annual Field Trials of the Pacific Coast Field Trial Club, near Kingsburgh, Cal. N. P. Sheldon, Secretary, 320 Sansome street, San Francisco, Cal.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5582.**

THE EASTERN FIELD TRIALS.

THE ninth annual field trials of the Eastern Field Trials Club began at High Point, N. C., Nov. 17, with the Members' Stake. There were ten entries against seventeen last year. A larger number would have been made, but the dogs were not right. Mr. Hitchcock had the misfortune to lose by death Swatara or he would have won with him. He also lost the pointer bitch Aerolite, his best Derby entry. The work on the first day was none of it very good and much of it was very poor, and but little progress was made. On the second day the work was better and birds were found very plentiful and the stake was finished before night. First was won by the pointer dog Tammany; Bang Grace and Buckellew divided second and Roy Monarch winning third. A marked improvement in handling was shown this year, although some of the members are not quite proficient yet and the dogs were handicapped in consequence. Mr. Boggs, of Pittsburgh, judged the stake, assisted by Mr. C. Fred Crawford, of Pawtucket, R. I., in the first heat; Mr. W. A. Coster in the remainder of the heats in the first series and Mr. Crawford the remaining heats. The decisions were satisfactory to all. Following is the list of entries in the order in which they were drawn:

BUCKELLEW (W. A. Coster, New York), orange and white English setter dog, 8yrs. (Druid—Ruby),

against

GLOSTER (J. L. Breese, Tuxedo, N. Y.), black, white and tan English setter dog, 3½yrs. (Dashing Rover—Trinket).

ROY MONARCH (C. C. Gray, Providence, R. I.), black and tan dog, 4yrs. (Dashing Monarch—List),

against

TAMMANY (F. R. Hitchcock, New York), liver and white pointer dog, 4yrs. (Tory—Moonstone).

LUCIA (D. S. Gregory, New York), liver and white pointer bitch, 6yrs. (Croxteth—Belle),

against

FOREMAN'S LASS (C. Fred. Crawford, Pawtucket, R. I.), black, white and tan English setter bitch, 2yrs. (Foreman—Grace B.).

BANG GRACE (J. L. Breese, Tuxedo, N. Y.) lemon and white pointer dog, 3½yrs. (Bang Bang—Grace),

against

FLASH R. (D. S. Gregory, New York), liver and white pointer bitch, 4yrs. (Ranger—White Lilly).

NELLIE H. (C. Fred. Crawford, Pawtucket, R. I.), black, white and tan English setter bitch, 6yrs. (Count Noble—Rosalind),

against

COUNT BELTON (J. N. Cochran, Philadelphia, Pa.), black and white English setter dog, 2½yrs. (Yale Belton—Polly Druid).

BUCKELLEW AND GLOSTER.

Leaving the hotel at 8:20, the dogs were put down in a field of weeds near the school house at 8:31. Both dogs are well known. Buck is in fact considered a worthy member of the club, this being the fifth year that he has competed in the Members' Stake. In four of them his name has been the first one drawn. He was in good form, showing up much better than last year. Gloster won this stake last year, and made a decidedly good impression by his stylish and gamy way of going; he was not up to his form of last year, and appeared to be off in nose, as he did not locate his birds at all well, neither did he show the speed of last year. The brace were drawn together last year, Gloster winning, but "old reliable" turned the tables this year and beat his opponent. Birds were reported very plentiful on the club grounds, but much ground was drawn blank that in former years had held a number of bevies, and it was some time before anything was done. At the send off Gloster showed up the fastest, but Buck soon got agoing and cut out the work in good style. Gloster was the first to find, making an elegant point to a single bird in the sedge near a thicket. Buck came up, refused to back and also pointed just as the bird flushed; both dogs were steady to wing. Turning up the hillside Gloster pointed a few seconds, drew on and then made a short cast in the opposite direction, and nailed a bevy in fine style, Gloster at once honoring the point. Coster flushed the bird, but his safety catch was "safe" and so were the birds. Had Gloster been given a little more time to work out the trail he would probably have found the birds, and it would have been no more than justice to have given him the chance. When the dogs were ordered on Buck went straight to the birds and got in a point, and drawing on a few steps located them. Gloster did not see Buck, and casting ahead also pointed an outlying bird that flushed as Breese came up, and then the rest went. Coster had the catch all right this time but failed to catch on to the birds and wasting a couple of cartridges. We then took a long turn, or rather several of them, but failed to find the birds and nothing was done for some time except that Gloster made a nice false point that Buck refused to back. We then worked toward the edge of some woods where a bird had been heard calling and Gloster struck the trail where they had been running and alternately pointed and drew for quite a distance. Buck meantime was worked along the edge of the thicket and having the wind pointed the same bevy just as Gloster had thrown his head in the air and decided that he had got close enough. Breese went in to flush but they were to one side nearer Buck and Coster put them up. Sent on, both dogs challenged at probably the old scent as they could make nothing of it. A little further on both pointed at nearly the same time a woodcock that flushed as the handlers came up. Then turning back Buck pointed a single and Gloster backed him in fine style. Coster put up the bird but failed to bring it to bag; Buck then made flush and soon after in some pines and sedge he made a nice point and a second later Gloster also pointed and a bird was flushed to each, Coster keeping his record good. Buck then got in a good point to a single that was flushed just under his nose. A little further on Gloster pointed a single that flushed as Breese came up but the judges didn't see it and he got no credit. Gloster then made a very nice point that Buck refused to back and was dropped by order. Nothing was found and they were ordered up and the heat was awarded to Buckellew at 10:16. Down 1h. 45m. Buck did not know that the heat was finished and making a short cast nailed a single that Coster put up, when the old dog wagged his tail as though satisfied.

ROY MONARCH AND TAMMANY.

This brace was put down five minutes later in the sedge. Both ran last year and are well known. Tammany was in better form and went better than we have ever seen him; Roy was handicapped by not being used to his owner, and in consequence did not show up at his best. Both went at a fair rate of speed, Tammany having the best of it in this respect, as well as in range and style. Roy got in the first point to a single at the edge of a brier thicket; Gray put up the bird, but did not shoot. Tammany then came round and pointed 20yds. below; Hitchcock tried to call him away, but he drew on a step or two and straightened out in nice style to a single that his handler to order flushed. Both dogs pointed once or twice, but soon went on, and as the briers were very heavy, we turned through the woods to the Snow farm and beat out the orchard where, in former years, we have found one or more bevies, but they were not at home, and we worked out the knolls west of the house, where both dogs ran near but did not find a small bevy that flushed in front of us. Following them down to a small branch one flushed in front of Tammany, and he dropped to wing; beating out the opposite hillside we found no more except one that flushed near the judges. We then swung back to the fence, where Roy made a nice point to a bevy, part of which flushed as Mr. Hitchcock crossed the fence; Roy held his point, and Gray put up a large bevy in front of him and scored a miss. Following them into some woods, Roy made a flush and stopped to wing and half pointed, but moved on, and another one got up. Tammany flushed one while going at speed down wind and dropped to wing. We then turned back into the open, where Tammany whirled on a gamy point to a bevy that Hitchcock put up and hit one that flew a short distance, and one of the others went in the same direction, and the dogs were ordered that way. Tammy half pointed near where the bird settled, but did not locate it and went on; Roy came round and pointed and drew on, the bird flushed and he took a jump or two after it, but stopped to order; they were then ordered up and the heat was awarded to Tammany. Down 1h. 53m. Tammany was then sent for the crippled bird, which he found and retrieved. We then went to lunch, which was spread for us in the barn of the Model Farm.

LUCIA AND FOREMAN'S LASS.

This brace was put down in the open field south of the house at 1:22. Lucia is well known, having run in previous trials. Lass is a very good-looking nice-moving bitch of medium size, with quite a turn of speed, very quick in her motion and with lots of style, having the best of it in these respects. She was not accustomed to her handler and went as she pleased. She appeared to be capable of doing brilliant work. Working through the field Lass challenged near the weeds and half pointed. Lucia came up and also challenged, and jumping the fence pointed a second or two before a brace of birds flushed in front of her, and then a large bevy rose and went into the woods. Failing to find them, we swung back and turned down to the creek, where Lass challenged just as a bevy flushed wild a short distance beyond her. Following them one got up near Lass, and then several more rose. Lucia then made a point, but moved on as Gregory called her and flushed the bird. Lass then ran up one and soon after one got up near Lucia. We then went into some pines, where Lass made a stylish point to a single that Crawford put up and missed. Lass soon had another one that flushed itself before the judges came up. Lucia then half pointed and commenced roading a bird that flushed near the judges before she had time to locate it. A little further on one flushed near Lass. We then crossed the creek and worked up toward the bridge. Lass challenged at the edge of a thicket, but went on, and as she came along a bevy flushed a short distance away, and soon after another bevy rose near the judges and dogs. Both bevies went into the pines, and we crossed the creek and the dogs were sent after them. Lucia was the first to find, scoring a good point to one that Gregory put up but did not shoot at. A little further on Lass pointed just as one rose, and soon after she pinned one that went before the judges came up. Lucia then got in a good point that Lass refused to honor, but went on and got too close and scored a flush. The dogs were then sent into some tall weeds where a bird had been marked down, but they failed to find it, although a colored boy hunted it up and pointed it out to the spectators. We then crossed the road to a strip of woods on top of the hill, where Lass made a beautiful false point. We then crossed the creek, where Lucia challenged and roaded very prettily, what was probably the back trail of a bevy, a long distance. Lass came round and half pointed just as a single bird flushed close to her, she then pointed and a small bevy got up all around her and settled on top of the hill a short distance away. Following them up Lass flushed one and two or three more went, she then winded one but drew close up and scored a flush, and the heat was ended with Lucia the winner. Down 2h. 6m.

BANG GRACE AND FLASH R.

Both these dogs are well known, having run here at previous trials. Bang was not up to his last year's form, although he went fairly well. Flash has lost her speed and dash and followed Bang most of the time instead of hunting on her own account. They were put down near the creek where the last brace were taken up and worked toward town. After an hour's work with nothing done except that they backed each other very prettily two or three times they were taken up to go down again in the morning. Friday morning it was cloudy with a raw cold wind from the northwest. Leaving the hotel at half past eight we drove a mile northeast of town and cast off the dogs at 8:48 in a cornfield. Both went better than on the previous day and beat out the ground fairly well. Working round a patch of scrub oaks to an old field Bang made a very nice point to a large bevy and Flash backed him in her best style. Breese put up the birds and made a very brilliant double, Bang retrieving the birds in good style. These birds were not followed, the dogs being ordered to work out the remainder of the field. Bang, in a patch of scrub oaks, made a nice point and Flash backed him very prettily. As Breese went to his dog a large bevy flushed and settled in a dense scrub thicket. In going to them a single bird flushed in front of Judge Boggs and his horse instantly stopped to wing. Taking a turn in the thicket to get the wind we turned back and Bang made a point to a single that Breese put up to order. A few steps

further on a bird flushed close to Breese just as both dogs pointed and this started several more. Working out to the edge of the thicket Bang pointed an instant, but losing the scent went on, and as his handler came along two birds flushed near them. Crossing the fence Bang put up one and dropped on point to two or three more that laid close by, Flash backing him nicely. Breese thought that no more birds were there and tried to call Bang off, but he knew better and held his point and the birds were flushed in front of him. They were then ordered up and the heat awarded o Bang Grace. Down 39m. Altogether 1h. and 37m.

NELLIE II. AND COUNT BELTON.

This was the last brace in the first series. Nellie is well known, having run here before. Count is a good-looking, well-made dog, above the medium in size. He moves fairly well, but is not fast. He appears to have an excellent nose, but is over-cautious and inclined to potter over old scent. They were put down in an old field near where the last brace was taken up. Nellie had the best of it in speed, range and style, but she was entirely beyond control, and had a great deal more fun out of the heat than her owner. Count soon pinned a stray bird from the last bevy. Nellie refused to back, went ahead, and scored a flush. Soon after she ran up another and chased a short distance, but turned back to whistle. Count then made a point through a fence to a single; Nellie refused to back, jumped the fence, and pointed just as the bird went. Count did not hold his point staunchly, but was a bit uneasy when Nellie went past him; but under the circumstances he behaved very well. A little further on Nellie made a stylish point, which Count at once honored in good style; but nothing was found, and she scored a false point. Count then pointed a hare. Nellie came up, refused to back, and also pointed in a short time, and went on and started the hare and dropped, but soon after she started after it and had lots of fun roading him out at speed, for which she got a taste of the whip. Soon after Count took two or three jumps for a hare, but at once came back to whistle. Working back into a thicket, Nellie ran up one, but paid no attention to it. We then crossed to a thicket, when Count made a nice point to a running bevy and began roading them out in good style. Nellie refused to back, drew ahead and made two or three casts, waking up to the birds very nicely, but she got too close and scored a flush. A little further on Nellie made two or three points, but went on and could make nothing of it; several birds were flushed by the spectators 50yds. to one side of her, probably the ones that she had been working on. We then went into some woods where a bird was flushed by the handlers and Nellie made a jump or two for it but stopped to whistle. Count made one or two points from over-caution, but soon went on and soon had one fast. Nellie refused to back and was dropped by order and the bird flushed as the handler came up. They were then ordered up and the heat awarded to Count Belton. Down 36m. This ended the first series with the following result:

First Series.

Buckellew beat Gloster.
Tammany beat Roy Monarch.
Lucia beat Foreman's Lass.
Bang Grace beat Flash R.
Count Belton beat Nellie II.

Second Series.

BUCKELLEW AND TAMMANY.

This brace was put down in some sedge at 10:19. In speed and range they were nearly equal, Buck having a trifle the best of it, Tammany beating him in style. Working down along the edge of some woods Buck made a point, and soon after Tam came round beyond him and also pointed. Buck then made a short cast up wind from the bevy, which flushed as Coster moved up. A little further on a single bird got up near Tammany. We then turned into the woods, when Buck challenged and then pointed but went on, and as the judges passed some 50yds. from there they flushed two or three birds, and a little further on one got up near Tammany in the thicket where he could not be seen. Both then challenged and pointed where the birds had flown from. We then turned into the open field and worked up along the woods to the top of the hill and then turned toward the Holton farm and beat out a lot of likely-looking ground without result except that Tam made a very stylish point to a hare. Finally when near the Holton farm Buck challenged near a thicket, and a man informed us that he had just flushed a bevy from them that had gone to the thicket. Following them, Tammany found them first and made a nice point. Buck came round and also pointed the same bird, which flushed as Hitchcock went to his dog. A little further on Tam pointed another one and Buck backed him. Hitchcock put up the bird and probably hit it, as it went but a short distance and was again pointed by Tam, who made an effort to catch it, but it got away. Buck also backed this point. Buck thought it time for him to get in some work, and he made a short cast toward the edge and stopped on point about a second before one rose. Buck dropped, and as Coster came up another one flushed just in front of the dog. It is worthy of note that Coster departed from the usual custom in such cases, as he did not claim anything, but left it to the judges without saying a word. In fact, all through the stake we do not remember an instance where a handler undertook to instruct the judges or to convince them that bad work should score a merit mark. If handlers in public stakes would adopt this course, we can assure them that they would lose nothing, for their talk, be it never so plausible, never by any chance is recorded in the judge's book as they only score by eye and not by ear. A little further on Tam made a stylish point and a second later Buck also pointed. Hitchcock put up the bird and scored a miss. Tam was getting around more lively than his competitor and soon had another point, Buck backing partly to order, but the bird had probably run as nothing was found. Buck then nailed one in a treetop, Tam stopping to order, as he did not see Buck, who soon drew on and located his bird nicely. Tam went round and also pointed or backed, we could not determine which as he was partly behind the brush. Coster put up the bird and scored a kill and Buck retrieved it nicely. We then turned back through the woods and swung out in the open, where Tam made an excellent point to a large bevy, Buck stopping to order. Hitchcock put them up and killed one that Tam retrieved indifferently. They were then ordered up and the heat was awarded to Tammany. Down 1h. 35m.

LUCIA AND BANG GRACE.

This was a short heat and not much work was done, Bang having the best of it. They were put down in an old field, and Bang soon pointed and Lucia backed him. He drew on a short distance but could make nothing of it. We then went into some pines, where the bevy found by Tammany had been marked, and Bang soon had one fast, that Breese flushed but did not shoot at. Several were then put up by the handlers and spectators, and we swung down to the branch where Lucia challenged and roaded very nicely a running bevy for some distance, but she got too close, and between her and Gregory the birds were flushed before she located them. Swinging back into the pines after them, Bang made a very nice point to another bevy. As Breese came up one flushed and then the others went. This ended the heat with Bang Grace the winner. Down 30m. It was now half past 12, and we went to the school house near by to lunch. This ended the second series, Count Belton having a bye. Following is the result:

Second Series.

Tammany beat Buckellew.
Bang Grace beat Lucia.
Count Belton a bye.

Third Series.

COUNT BELTON AND TAMMANY.

This was also a short heat, as Tammany had the best of it in nearly all respects. They were put down at 1:30 in a field of sedge, and had not fairly got started when Count ran up a single bird. Tammany started off slow, but soon got agoing. Count went better than in his previous heat, but was much of the time over-cautious, making several false points. Working into the pines, where the last three bevies had gone, Tam flushed a bird and dropped to wing; catching the scent of another one, he pointed a second or two before it went. A little further on one flushed near Tam, and soon after Count put one up, and then several more went. Count then made a point and Tam backed him; Cochran put up the bird, but did not shoot; Tam soon made a stylish point, and Count backed him nicely. Hitchcock put up the bird and scored a miss. A little further on Count made a point, and a single bird flushed as the judges came up, but it was some distance from him, although it may have been his bird. His behavior after the bird was flushed, however, led us to believe that it was not, as when he went on he did not go to the place where the bird rose from, but drew in another direction and gave it up; then coming round there, he made a quick point at the place, showing that he at least had not followed the scent, although the wind was in his favor. Soon after this he made a nice point that there could be no mistake about, as Cochran put up the bird in front of him and missed it. Just after this Tammany got tangled in some briers and somehow got one of his forefeet through his collar. He was soon liberated, however, without sustaining any injury. A short distance further on Count made a nice point, but nothing was found, and the heat was ended, with Tammany the winner. Down 27m. Bang having a bye, this ended the third series, with the result as follows:

Third Series.

Tammany beat Count Belton.
Bang Grace a bye.

Tie for First Place.

BANG GRACE AND TAMMANY.

This was the deciding heat for first place. Two pointers were left in and the pointer men were not a little elated in consequence. The result was never in doubt, as Tammany had the best of it in all respects. He had slowed down somewhat, but was still going well and did his work in good style. They were cast off in sedge on a knoll and worked round to an open field grown up to weeds and briers, where Tam made a very stylish point with his head high in the air to a large bevy that flushed as Hitchcock came up. The birds settled a short distance away and Tam soon had them again; a second or two later Bang also pointed a few yards from him. Hitchcock put up the birds and killed one that he picked up as he went on. Tam took a few strides and pinned another one that his handler put up. Bang then got in a good point and Tam also nailed another one and birds were flushed to each point. Bang then pointed, and as his handler came up he drew on a step or two and the bird went. He soon had another one that Breese flushed, and we then took a turn in some thick scrub oaks, and as we came back into the open Bang challenged, but went on and a bird flushed near him. Tam then got in a capital point to a brace that his handler put up and the heat was ended with Tammany the winner, and he was declared winner of first prize. Down 30m. The judges decided that Buckellew was the best dog previously beaten by Tammany and he was called up to run with Bang Grace for second money, but their owners concluded to divide and they were declared equal winners of second prize. This, of course, could not have been done in a public stake, but in a friendly contest like this there could be no objection, especially as had it been run out the stake could not have been finished until the next day, and nearly every one had made arrangements to go shooting. The judges selected Gloster and Roy Monarch as the best of the remaining dogs, and their owners, confident that the dogs would do much better work than they had done in their heats, decided to show that their belief was well founded by running it out.

Tie for Third Place.

GLOSTER AND ROY MONARCH.

They were put down where the last brace was taken up and worked back past the school house. Gloster started off at a rattling pace and showed up something like his form of last year. Roy just loafed along for a while and his chances looked decidedly gloomy, but he soon got agoing and demonstrated that his owner's confidence in him was not misplaced, by running the remainder of his heat without committing a fault. Working over the hill beyond the school house we turned down to a hollow where Gloster challenged and half pointed to the scent of a bevy that were running down toward a small branch; not getting it just right he made a cast up the opposite hill but soon came back and striking it a little lower down pointed but soon went on and made another cast up the hill, but came back and tried it again still lower down, and finding the scent better made a gamy point and drew on and apparently located the birds. Breese went in to flush but worked too far up the slope, and as the birds ran away Gloster, thinking that Breese could smell them, made a cast in his direction but soon came back and again pinned them a little further down. Breese then repeated the performance, making the same mistake, and Gloster trusted to him once more and made another cast that way, but soon returned and again located them in grand style; Breese got them right this time, and put them up and killed one with the second barrel, and Gloster retrieved it nicely. This was a grand piece of work, and deserving of more credit than we fear it received. Meantime Roy was lost, and his owner and Mr. Crawford went in search of him and finally found him on top of the hill standing guard over a bevy that he held through all the racket, and as we came up Gray put them up and made a very neat double miss. This was also a capital piece of work, and opinions formed by those who had seen Roy's previous work underwent a radical change. These birds settled in the bottom along the branch, and the dogs were ordered in that direction. Roy had apparently marked two or three birds that stopped in a thicket under the bank and went straight to them, and very gracefully sat down on point and awaited events. Gloster came round, but could not see him, and was stopped by order. Gray put up the bird and made an excusable miss this time, as it was going pretty fast. We then went round the thicket for the wind, and as Gloster jumped the branch a bird flushed and he started to drop to wing, but catching the scent of another one, pointed it, and Roy backed him. Breese put it up, and, not wishing to wound the feelings of his competitor, he very gracefully missed. Roy then got in another good point to a single that flushed as Gray came up and several more went. Gloster then made a very stylish point where they rose from, and Roy backed him nicely, making a very pretty picture. Roy then pinned one at the edge of a brier thicket and Gray put it up, getting very nearly on this time, as we saw the briers drop not more than three or four feet behind the bird. Roy did not seem to care for the meat, and soon had another one fast, which Gray flushed, but there was a bush in the way and he did not shoot. Gloster backed this point nicely. Turning up the branch, Gloster nailed one, Roy backing him very prettily. Breese flushed the bird and also had a bush in the way, and of course missed. Roy then cast up along the edge of the thicket over a bank out of sight and pinned one, Gloster swung in behind him and half pointed and drew to the top of the bank, where he apparently caught sight of Roy and at once backed him. Breese thinking it a point went to his dog, and looking over the situation very candidly stated that Gloster was backing Roy, although from where the bird was flushed there was ground for a reasonable belief that both were pointing it. Gray put up the bird and they were ordered up and the heat was awarded to Roy Monarch, and he was declared the winner of third prize and the Members' Stake was finished. Down 46m. This was much the best heat in the stake, and had these dogs showed up in their first heats in anything like the form they ran in this, the result would have been different. Previous to running the stake we had seen nearly all of the dogs at work, and judging from their performances we thought Gloster a sure winner. The very high character of his work in this heat confirmed our belief that when he is right he can do first-class work in first-class style. Although Roy had six points to Gloster's three, leaving out the last one to which he may have been entitled, the quality of the work done would go far toward equalizing this, and no fault could have been found had more time been given them. Take it altogether the Members' Stake was a success, and we hope next year every member owning a dog will help to make it still more interesting by entering and competing in the friendly contest. Following is the

SUMMARY.

First Series.

Buckellew beat Gloster.
Tammany beat Roy Monarch.
Lucia beat Foreman's Lass.
Bang Grace beat Flash R.
Count Belton beat Nellie II.

Second Series.

Tammany beat Buckellew.
Bang Grace beat Lucia.
Count Belton a bye.

Third Series.

Tammany beat Count Belton.
Bang Grace a bye.

Tie for First Place.

Tammany beat Bang Grace and won first prize.

Tie for Second Place.

Bang Grace and Buckellew divided second prize.

Tie for Third Place.

Roy Monarch beat Gloster and won third prize.

THE DERBY.

HIGH POINT, N. C., Nov. 21.—Of the 92 nominations for the Derby, 35 filled and were drawn to run as follows:

Memphis & Avent Kennels' Joey B. against R. B. Morgan's Pearl Mandan.

Gen. W. B. Shattuc's Noble Dido against Pittsburgh Kennels' J. O. Donner.

H. E. Hamilton's Dashing Joe against R. V. Fox's Foxchase.

Memphis & Avent Kennels' Claude against Sanborn Kennels' Countess Poppet.

J. E. Dover's Cincinnatus against O. W. Donner's Go-Bang.

Fisher and Dudley's Dave R. against Ohio Kennels' Count Noble, Jr.

H. S. Barney's Merry Girl against J. N. Cochran's Guymard.

J. S. Wise's Romeo against F. R. Hitchcock's Mars.

J. E. Doyer's Toledo Blade against Highland Kennels' Lizzie Lee.

Gen. W. B. Shattuc's Latonia against J. B. Downing's Chief.

Thos. Bennett's Sirius against E. Dexter's Jack Modoc.

J. E. Gill's Lady Zeal against P. T. Madison's Ossian.

Highland Kennels' Dexter against Pittsburgh Kennels' Lady Smoke.

L. W. White's Roger Williams against Middle Tennessee Kennels' Miss Dudley.

R. B. Morgan's Rose Mandan against Gen. W. B. Shattuc's Hector.

O. W. Donner's Merry Legs against Latonia Kennels' Tempest.

Pittsburgh Kennels' Daisy Fair Oaks against Memphis & Avent Kennels' Cinch.

Pittsburgh Kennels' Waterford a bye.

At a meeting of the Board of Governors, held Nov. 20, Messrs. C. F. Crawford and W. A. Coster were appointed to act with D. C. Bergundthal in judging the Derby.

The following telegram from Gen. W. B. Shattuc, president of the American Feild Trials Club, was read:

"CINCINNATI, O., Nov. 19.—Washington A. Coster, Secretary Eastern Field Trials Club, High Point, N. C.: After having supported your bar of Mitchell as a matter of right, will your club consent for Mitchell to handle at our trials in December only as a personal favor to some entries. Answer by wire.—W. B. SHATTUC."

In answer to the above, the secretary was instructed to answer as follows: "It is the opinion of the Eastern Field Trials Club that it would not be advancing the cause of justice nor the interests of field trials to give consent to W. T. Mitchell to handle at your trials."

[Special to Forest and Stream.]

HIGH POINT, N. C., Nov. 21.—The Derby began to-day, and it bids fair to be a very interesting event. Nine heats were run, and quite a number of the dogs showed high field qualities. The weather has been delightful, although it was rather cool, and the dogs have had opportunity to do good work. Birds were found very plentiful. The heats run resulted as follows: Joey B. beat Pearl Mandan, doing some brilliant work. Jo. Donner beat Noble Dido in a very moderate heat. Dashing Joe beat Fox Chase, the work ordinary. Claude beat Countess Poppet, both doing very good work for youngsters. Go Bang beat Cincinnatus and acquitted himself in capital style to do it. Dave R. beat Count Noble Jr., doing some magnificent work. Romeo beat Mars in a well-run heat. Lizzie Lee beat Toledo Blade, showing the best nose in a moderate run. Latonia and Chief ran an unfinished race, and will go down in the morning.

Quite a number are present, but some of the prominent members have not arrived. If weather and work are favorable the stakes will finish by Friday.

RIGHTS AND WRONGS OF THE COCKER.—Detroit, Mich., Nov. 17.—*Editor Forest and Stream:* I am very sorry that Mr. Charlesworth would not test his dogs against mine in the field, but I am fully convinced that I could beat him "hands down" in short order. There are a number of the crocodile sort in this city, but I have yet to hear of one that can do a fair day's work. The great wrong that has been done the cocker must soon be righted or else we shall soon have a race of cockers only fit for the show bench. Why would it not be a good plan for the bench show committee at New York, Philadelphia and Boston to ask Mr. Fellows to judge the spaniels, and turn the tide in the right direction. Surely no one can be more competent than he is, for I think he is the oldest breeder of spaniels in America, and as one of the original members of the standard committee, he certainly must know what the standard calls for. I have received many letters indorsing my views on the working cocker, and many offers to wager that in the event of a match my dogs would win easily.—B. A. OSBORNE.

PHILADELPHIA CLUB TRIALS.

THE fourth annual field trials of the Philadelphia Kennel Club have passed into the record as the most successful of any yet held by the club. We congratulate the club for their determination to make these annual trials a success. The early attempts were very discouraging, owing to the scarcity of birds in any locality which was suitable for field trial work; and when birds were found, jungles and cedar swamps were always within a short distance of every bevy and they were of such density of brush and brier and such depth of mud and water that when the quail were flushed that was the last seen of them; so such work as roading, backing, dropping to wing, sensational points, etc., which is only to be witnessed by the spectators in open country, was seldom seen. The section in Delaware now used by the club was suggested, and tried for the first last year. This year nearly all the members were present. Last year only two professional handlers were working their dogs; this year there were six. Those on hand last year have kept themselves well posted and were quite up to all the tricks of the trade. James Shewsbrook, the veteran handler of the club, is deserving of much praise for bringing the dogs under his charge to such perfection. Jim's dry wit and ready answers always cause a laugh between each heat.

Mr. Schreiber, the celebrated live stock photographer, daily followed the dogs from morning until night, and has made a number of pictures of the dogs. Theo. Predmore, an old hand at the business, seems to have discovered a new method for handling, as the Irish setters belonging to the Chestnut Hill Kennel Club under his charge did such work as to make one think, as Mr. Charles Thompson says, that the reds can be bred "so they will get there." Desmond, one of the brace recently imported, shows a fair style and goes with a vim, quarters and ranges nicely, is of an excellent disposition and understands her business. Molly Bawn is a field bitch of much merit, while champion Bruce and Victoria ran a heat of two hours duration, making as many as twenty points and backs, seven in an open piece of woods, seven without a flush or a mistake. But the finest piece of work of the trials was that done by the Laverack setter bitch Volley in her heat with Victoria. Volley won the Derby last year, and the Members' and All-Age Stakes this year. She is peculiar and unreliable, as she does both poor and beautiful work, but seems to gauge her competitor, and does just enough work to win. In the heat with Victoria both dogs were handled by Shrewsbrook, who seemed much annoyed at the circumstance. The description of the heat will be found in its regular order. But how strauge that immediately after this brilliant work of Volley's it came to pass that she was to run against Princess Alba, who is quite a puppy and inexperienced, but if even she ran up to her previous performances Volley would surely have suffered defeat, unless, as before stated, she gauged her competitor.

It was also encouraging to see the pointers represented, four being present, all belonging to Mr. James H. Winslow. There is some good blood represented and when Mr. Winslow's young handler has drank deeper of the field trial wisdom cup the dogs will do better work.

The weather was, with the exception of the first wet morning, Nov. 15, very pleasant up to the finish on Thursday afternoon. Birds were sufficiently plenty, but as at all trials difficult for poor dogs to find.

The accommodations at Frederica are good. Ample provision was made for the accommodation of the members, their friends and the judges, Messrs. A. P. Vredenburgh and Percy C. Ohl, of New York. As no dissatisfaction was manifested we conclude everything was satisfactory. There not being a cake walk this year, Mr. Ohl had to return empty-handed. Monday night it rained very hard, but slacked up sufficiently to admit of a start.

THE MEMBERS' STAKE

had four entries, drawn in the following order:

CASSINO GLADSTONE (E. Comfort), English setter bitch (Gladstone—Countess Druid),

against

CLYDE T. (L. Shuster, Jr.), English setter dog (Thunder—Cornelia).

VOLLEY (Col. B. Ridgway), English setter bitch (Antic—Princess Mix),

against

BANG (I. H. Winslow), pointer dog (Price's Bang—Salter's Luna).

CASSINO GLADSTONE AND CLYDE T.

were put down Tuesday morning at 9 o'clock. It was still raining and the underbrush was very wet. Clyde T. goes with tremendous speed and is lost to sight for some minutes (in which it was afterward learned he flushed a bevy of birds), then returned to his handler and made a wide cast, and ran into an outlying single bird. Clyde tried to stop in time, but the bird was up, which also flushed the bevy some 10yds. away. These birds flew for miles, and were not followed. Clyde dropped, and when ordered on went with his usual speed and soon located another bevy in a cornfield, which he pointed. Cassino backed. The birds were seen running and they flushed wild. A single bird was killed and nicely retrieved by Clyde, who was steady to shot and wing. Cassino unsteady, but stopped on command. The birds went for cover, but could not be located. In some underbrush Clyde could not be seen, but after considerable whistling a bevy rose, which he was evidently pointing. Later, while going down wind, he flushed a single, and then roaded and pointed a bevy along a fence. Cassino was making game, but acknowledged the point. The birds were flushed. Then crossing the fence, Cassino pointed a bird, which was killed by Comfort and retrieved by Cassino. Cassino was not up to her usual form and seemed to be off. The heat was awarded to Clyde T. Down 2h.

VOLLEY AND BANG.

This heat was very short, as it was but an instant before Volley had a point which Bang refused to acknowledge and worked in ahead of the bitch, apparently looking for some one he knew, as the dog did not recognize Mr. Winslow as owner. The birds were flushed, with a kill, which was very cleverly retrieved by Volley, who, after delivering it, was off again like a dart, and had another point. The bird was flushed and the heat awarded to Volley. Down 10m.

Second Series.

VOLLEY AND CLYDE T.

In this heat both dogs did poor work; it was after lunch and possibly the dogs had eaten something that did not agree with them, but both seemed to be completely off in their noses, and if they had not done such brilliant work before, they would have been ordered up for want of merit. Later Volley came to herself again and made several pretty finds and handsome points. Her points, generally on single birds, are on the drop order. The heat and race were given to Volley. Down 2h. This ended the Members' Stakes, Volley winning first and Clyde T. second.

THE DERBY.

DESMOND (Chestnut Hill Kennels), Irish setter dog (Frisco—Grouse),

against

PRINCESS ALBA (E. Comfort), English setter bitch (Thunder—Cassino Gladstone).

BETSY LEIGH (W. H. Child), Irish setter bitch (Bruce—Leigh Doam II.),

against

TUIHANNA (J. H. Winslow), pointer bitch (Guess—Viola).

WINNIE II. (Chestnut Hill Kennels), Irish setter bitch (Frisco—Grouse),

against

BRUNETTE (J. H. Winslow), pointer bitch (Graphic—Zitta).

CHARLIE WESTCOTT (Col. Ridgway and Clarke), English setter dog (Thunder—Cassino Gladstone),

against

LEIGH DOANE III. (I. H. Roberts) Irish setter bitch (Bruce—Leigh Doane II.).

PRINCESS ALBA AND DESMOND

ran the prettiest heat in this class. Both dogs have considerable style and a very merry way of going. Desmond gave Mr. Thompson, his owner, perfect satisfaction. They were down in open fields, which were drawn blank, but on the edge of some short timber they both pointed. But the birds were running and the dogs unsteady. Birds flushed wild; both dogs dropped to wing. Going to timber Princess Alba made two points on single birds, which were nicely backed by Desmond. Princess Alba showing the best nose, while in other respects they were equal, Alba got the heat, after being down 2h. 30m.

BETSY AND TUIHANNA.

This heat was of no interest. Betsy did the only work and was awarded the heat.

BRUNETTE AND WINNIE II.

In a short heat Winnie showed to be the better field dog and was awarded the heat.

CHARLEY WESTCOTT AND LEIGH DOANE

did about equal in false pointing, breaking shot and chasing and field work. Leigh Doane got in better work on finding game and getting points and was awarded the heat.

Second Series.

PRINCESS ALBA AND BETSY.

Betsy was no competitor for Princess, who easily won the heat.

WINNIE II. AND LEIGH DOANE III.

were put down Tuesday night, but the heat was not decided until the following day, and awarded to Leigh Doane III., who, aided by fortune and probably better nose found the birds.

Third Series.

LEIGH DOANE AND PRINCESS

ran the final heat in which the latter won easily first money and the honor. Desmond was awarded second, being considered the best dog beaten by the winner, Leigh Doane coming in for third place.

ALL-AGED STAKE.

CHAMPION BRUCE (I. H. Roberts), Irish setter dog (Elcho—Noreen),

against

VICTORIA (James Stovel), Irish setter bitch (Berkley—Norah.

VOLLEY (Col. B. Ridgeway), English setter bitch (Antic—Princess Mix),

against

BELLE (Geo. Eslerick), lemon and white English setter bitch (Temple Bar—Belle).

MOLLY BAWN (Chestnut Hill Kennels), Irish setter bitch (Glencho—Biddy),

against

LURAY (I. H. Roberts), Irish setter bitch (Chief—Leigh Doane).

GOLDEN ROD (J. H. Winslow), pointer bitch (Beaufort—Zuba),

against

BEGORRA (Chestnut Hill Kennels), Irish setter dog (Blarney—Lady Clare).

PRINCESS ALBA (E. Comfort), English setter bitch (Chalkley D.—Cassino Gladstone),

against

CREOLE (I. H. Roberts), Irish setter bitch (Grafton—Megg).

First Series.

BRUCE AND VICTORIA.

This heat commenced at 2:30 on Wednesday, in the field where the Derby was decided. It required a long hunt before birds were found, Victoria proving herself of more speed and pace and better in action. In going through a wild carrot field a single bird was flushed between Bruce and his handler. The field was carefully hunted without success. Following the single bird to cover, Bruce pointed, backed by Victoria. This sight refreshed all hands. A bevy was flushed, which flew but a short distance in among some pines, where there was not a particle of underbrush, the trees were not close together except in their branches, which grew so dense and so closely interwoven that the sky was not visible. The earth was covered with moss and pine needles, so not the slightest noise from walking was made. The light, while apparently shut out in all directions, was sufficient to see everything. It was a picture we cannot describe, but with these surroundings, and probably twenty to thirty quail nicely scattered and lying well to the dogs, you can imagine what a sight it was, with two dogs doing perfect work, first one pointing and being backed by the other and then *vice versa*, only that each point was handsomer than the previous one. Not a bird was flushed except to order, and fifteen to twenty points thus obtained were witnessed by all the spectators. Hardly a word was spoken. The only noise was the whirr of the flushed bird. The clamorous, noisy crowd had been hushed to silence by the weirdness of the scene and the phantomlike forms of the dogs as they ran over the moss without making a particle of noise. It was one of the prettiest sights we ever had the good fortune to witness. The work of the dogs was equal; not a bird rose but both dogs instantly dropped, not a point was made by one but it was immediately acknowledged by the other, while the retrieving was done by both dogs in a handsome manner. The heat was awarded to Victoria after being down 1½h. Belle was withdrawn and Volley got a bye.

LURAY AND MOLLY BAWN.

This heat lasted but a few minutes as Luray did not show sufficient merit, and the heat was awarded to Molly.

BEGORRA AND GOLDEN ROD.

This was also a short heat, as Begorra was interested in a bitch that was in season and would not hunt. He is, we understand, a rattling good dog. The pointer made a very beautiful point on a bevy. She was a little unsteady to shot and wing. Begorra backed well. Heat awarded to Golden Rod. Down 12m.

PRINCESS ALBA AND CREOLE.

Another short heat. Princess Alba out-styled the red in every way. Creole, being in whelp, was too much handicapped. The heat was awarded to Princess Alba.

Second Series.

VOLLEY AND VICTORIA.

In this heat Volley did the most brilliant work of the trials on some birds that had broken in the timber. The bevy Volley had previously located and pointed, but her work on single birds in the timber was marvellous, as in this heat she shot through the trees like the sunlight from a moving mirror, and jumped into six or seven points so quickly that Victoria was puzzled, and seemed glad she could get around in time to back and play second fiddle to her. They were down about 30m., and the heat was awarded to Volley. The work in this heat could not well be excelled. Speed, action, style, obedience, every desideratum possible for a dog, were gloriously shown, with the exception that at times she dropped on her points.

GOLDEN ROD AND MOLLY BAWN

were put down to contest the honors on Wednesday evening. Molly Bawn had decidedly the best of the heat when ordered up on account of darkness. On Thursday morning Golden Rod the pointer astonished his owner by doing really excellent work, which, considering her to be over 2 years old and just put in harness, was remarkable. She roaded very handsomely, got several points and retrieved. Molly seemed unfortunate in not getting where the birds were. Time being short the dogs were ordered up and the heat given to the pointer.

Third Series.

VOLLEY AND PRINCESS ALBA.

This heat was run immediately after the Volley—Victoria heat of the second series but Volley seemed metamorphosed, her vim was gone, her action was changed completely and she acted quite like a potterer. Later she did some work, which won the heat; but had Princess Alba worked up to her previous performance, Volley would have been beaten. Down 35m.

In the second heat, third series, Golden Rod had a bye.

Fourth Series.

The first heat was between Golden Rod and Volley. The pointer had become frightened at the crowd, who, while the work was stopped to allow Volley a breathing spell (it being her third consecutive heat), amused themselves by shooting at targets. The effect was very bad, as Golden Rod was apparently afraid to leave her handler. So Volley won the heat and first money.

Golden Rod and Victoria contested then for second money which was won by Victoria.

Third prize was awarded to champion Bruce.

With the ending of this heat at 1:30 P. M. the meeting closed. That same night supper was served in Philadelphia to the New York delegation, and then they were in time to reach New York before midnight, which illustrated how convenient the grounds are for a field trial. If birds were plenty the grounds would be more suitable for pretty work than those of the Eastern Field Trials Club in North Carolina.

O.

WESTERN FIELD TRIALS.

THE third annual trials of the Western Field Trials Association were run at Carthage, Mo., beginning Monday morning, Nov. 17, filling six entire days, and winding up a few minutes after sunset on Saturday. The conditions were extremely unsatisfactory. No rain had fallen for five weeks. The grass, the weeds, in fact all of the cover was dry and dusty; and only on one day was there a fairly decent temperature, the weather being usually sultry and warm. The birds were very scarce indeed. The grounds, on which the club secretary had found plenty of birds the week before, had been invaded in the meantime by market hunters and nearly all of the birds had been killed. This is as much as the protection the members were promised amounted to, and it is a contingency that the Association has determined not to permit to arise again.

The judges for the Derby were Messrs. Theodore Mosher, Louis Kuntz and R. C. Van Horn (in place of J. W. Munson absent). Mr. Munson served in the All-Aged Stake until Friday afternoon, when Mr. B. Waters was made referee. Under these circumstances there was no opportunity for adequately testing the merits of the competing dogs; but the dogs were placed to the satisfaction of the judges and almost without argument; in the final settlement there was none whatever, the only differences of opinion occurring in the earlier stages of the trials, and they were always run to a settlement and not argued. The dogs were placed by their judges unanimously and harmoniously, according to the merit shown in competition. Following is the running summary:

DERBY STAKES.

First Series.

LITTLE GIFT (Bert Crane, Chicago), English setter (Roderigo—Queen Bess),

beat

NELL (R. S. R. Randolph, Trenton, Tenn.), (Guido—Bell).

KING MARK (J. I. Case, Jr., and F. K. Bull, Racine, Wis.), English setter dog (King Noble—Belle Belton),

beat

MOLLY, JR. (A. T. Harridge, Alma, Kansas), pointer bitch (Frank—Flora).

PRAY'S GLADSTONE (J. A. Bolen, Kansas City), English setter (Paul Gladstone—Bessie A.),

beat

BUBERT (E. C. Sterling, St. Louis), pointer (Mainspring—Dell).

BELLE OF KANSAS CITY (Drury Underwood, Kansas City), English setter bitch (Paul Gladstone—Bessie A.),

beat

JILL (J. I. Case, Jr., and F. K. Bull, Racine, Wis.), setter bitch (Dashdale—Bonfil's Dot).

TRINKETT'S COUNTESS (Paul Franke, St. Joseph, Mo.), pointer bitch (Croxteth—Trinkett).

beat

QUEEN NOBLE (J. I. Case, Jr. and F. K. Bull, Racine, Wis.), English setter bitch (King Noble—Belle Belton).

Second Series.

King's Mark beat Little Gift.
Pray's Gladstone beat Belle of Kansas City.
Trinkett's Countess a bye.

Third Series.

King's Mark beat Trinkett's Countess.
Pray's Gladstone a bye.

Fourth Series.

Pray's Gladstone beat Mark for first prize.

Fifth Series.

King's Mark beat Belle of Kansas City for second prize.
Mollie, Jr., Trinkett's Countess and Belle of Kansas City third.

ALL-AGED STAKES.

First Series.

SPRING (R. M. Hutchings, Galveston, Tex.), pointer dog, 2yrs. 4mos. (Mainspring—Curfew),

beat

BOHEMIAN GIRL (W. G. Mellin, Kansas City, Mo.), English setter bitch, 2½yrs. (Count Noble—Mollie Belton).

BUN ROY (L. B. Suggs), setter, 2yrs. 7mos. (San Roy—Queen Bess),

beat

KING'S MARK (J. I. Case, Jr., Racine, Wis.), English setter dog, 1½yrs. (King Noble—Belle Belton).

SPOT (J. B. C. Lucas, St. Louis, Mo.) pointer dog, 4yrs. (Drake—Fan),

beat

CORNER STONE (A. A. Whipple, Kansas City, Mo.), pointer dog, 3yrs. (Meteor—Accident).

RUBY BUCKELLEW T. W. Stoutenburgh, Davenport, Ia.), English setter bitch, 2yrs. 3mos. (Buckellew—Brimstone),

beat

QUEEN NOBLE (J. I. Case, Jr., Racine, Wis.), English setter bitch, 1½yrs. (King Noble—Belle Belton).

KING'S DAN (J. I. Case, Jr., Racine, Wis.), English setter dog, 2yrs. (King Noble—Elsie Belton),

beat

BESSIE B. (Laredo Kennels, Racine, Wis.), English setter bitch, 2½yrs. King Noble—Elsie Belton).

KING NOBLE (J. I. Case, Jr., Racine, Wis.), English setter dog, 4yrs. (Count Noble—Rosalind),

beat

DANA (G. J. Gray, Kansas City, Mo.), pointer bitch, 1½yrs. (Corner Stone—Nellie True).

Second Series.

Ruby Buckellew beat Bun Roy.
Spring beat King's Don.
Spot beat King Noble.

Third Series.

Spring beat Ruby Buckellew.
Spot a bye.

Fourth Series.

Spring beat Spot for first prize.

Fifth Series.

Ruby Buckellew beat Spot for second prize.
Spot, King's Dan and Queen Noble third.

The officers of the Association elected at a meeting Nov. 8, are: A. A. Whipple, President; Theo. Mosher, First Vice-President; J. I. Case, Second Vice-President; D. Underwood, Third Vice-President. Executive Committe: Louis Kunz, A. C. Walmsley, H. P. Dillon, J. W. Munson, L. H. Faulkner. Board of Appeals: G. N. Huling, R. M. Hutchings, E. C. Sterling, G. W. C. Rohrer.

THE ROBINS ISLAND FIRE.

BROOKLYN, N. Y.—*Editor Forest and Stream:* On Monday of last week the writer formed one of a party of jolly sportsmen who left this city by an early afternoon train of the Long Island R. R., for the purpose of being present at the sixth annual field trials of the Robins Island Club. Among those composing the party were Messrs. Stanley, Wells, Wellington, Bruce, Lewis and others whose names at this writing I cannot recall.

Reaching Jamaica, an hour's ride from your city, a report reached us that the club house was on fire and that no hopes were entertained of saving it. From that point until reaching Manor Station—an hour's further ride—all was doubt and uncertainty. We hoped for the best, but all feared the worst. At Manor the conductor received a telegram from Cutchogue, which said the club house was gone entirely, and that nothing of its contents had been saved. As we could not return, there was no alternative but to go forward. At Cutchogue we found club members Wm. Van Amden and S. B. Duryea, the only ones of the club who had been on the island when the fire first broke out. We rode from the station to New Suffolk, a sad, dispirited party.

The only hotel of the place had been closed for the season, but its kind-hearted proprietor, Wm. McNish, opened his doors, built up fires, and got up a good supper for his unexpected guests. We have to be fed no matter what else is given up. The evening was passed in a recounting of the events of the day, a relation of the happenings of the fiery hour. Upon a table in our sitting-room quietly rested sixteen guns, sad reminder of what had occurred a short time before. An equal number had been destroyed. The trials were but alluded to, for while a few were ready the majority were in favor of a postponement, for the secretary of the club was not present, and no one had a list of entries or knew the names of the would-be competing dogs.

After breakfast Tuesday morning a start was made for the island to look over the ruins. It was, indeed, a sorry sight. Nothing was left of the fine building but the brick walls of the older, original structure, which was on the island at the time of its purchase by the club. Two tottering chimneys stood like warning towers above the brick foundations, and one of them fell with a startling crash before we had made full inspection of the destruction.

The grass was burned away in front of the ruins for a space covering at least an acre, leaving the sod black and sere. Had the wind been blowing at the time of the disaster from the north instead of the south, the whole island would have been burned over. Everything would have gone—barns, outbuildings, kennels and timber. The latter a calamity indeed. Buildings and barns can be put up again, but this generation would not have seen a growth of such oak timbers as now almost covers the island. As it was, the ice house and coal house were saved, with the winter's fuel, 30 tons. That this was so was chiefly owing to the exertions of two brothers, James and Ed Seymour. They took the lead and were ably seconded by the men of New Suffolk, who reached the island in all sorts of craft, starting as soon as the fire was discovered from the mainland.

The fittings of the club house went with it. Pianos, pictures, library, silverware, furniture, bedding—all were gone. From the kitchen were saved the stoves and ice box, with a pot or a pan; naught else of the portable property was rescued.

The superintendent, Mr. Short, was more fortunate, saving the larger part of his household goods; but his loss on club supplies was heavy. He had but just purchased a large stock of provisions, liquors and cigars, not a cent's worth of which was saved. Mr. Van Amden busied himself here, and gallantly brought from the burning building a baby carriage, and then thinking of the two little ones, went in the almost furnace again and captured for their use a pitcher of milk and a tin of crackers. Mr. S. B. Duryea occupied himself at the main building, and through his efforts mainly the club's books of record were saved, together with the guns before mentioned and quite a lot of ammunition.

The loss to the club was at least $15,000, only a small portion of this being covered by the insurance. A meeting was to be called as soon as notices could be sent to the members, at which is to be considered the propriety of holding a trial this year or leaving the matter in abeyance until next season. At an informal talk upon the subject, Mr. S. B. Duryea said that he should move that an open trial should be held this year. He, for one, was anxious to know how his dogs compared with others in work on game, and he knows no better way of finding out than by having an All-Aged Stake ran for. He said he felt sure many of the members thought as he did, and he trusted to see the thing carried through. This is a capital idea as well as a generous thing to do. There is a large number of birds on the island and it is to be hoped the project will be carried through. In a walk in the neighborhood of where the club house stood—certainly not over a quarter of a mile—the writer put up four bevies of birds, containing together not less than 150, all apparently strong and vigorous. Should such a trial be held, the excitement attending the old meetings of the Eastern Field Trials Club would without doubt be seen again. The accommodations at New Suffolk are sufficient for all when appropriate notice is given. With so few quail to be killed as are shot during a field trial, the stock of birds would suffer but little, for apart from showing the retrieving quality of the competing dogs, none are "done to death." Let the good work be forced to a successful termination. PECONIC.

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the dogs entered in the November number of the *American Kennel Register:*

BEAGLES.

5493. Glen Mills Bess, T. Willis. 5494. Hilo Jack, F. C. Rochester.

COLLIES.

5495. Scotty, S. H. Whitten. 5497. W. Scott, John P. Lansing.
5496. Victoria, S. S. Eldred.

GREYHOUNDS.

5498. Highland Laddie, L. H. Broome. 5499. Highland Lassie, L. H. Broome.

MASTIFFS.

5500. Bruno, Miss Fanny Howe. 5508. Moses, J. L. Winchell.
5501. Coon, Lafayette Cole. 5509. Nydia, Geo. B. Ayres.
5502. Cora, James McCradie. 5510. Persia C., Chas. Campbell.
5503. Fancy, W. A. Power. 5511. Phœdra, Wacouta Kennels.
5504. Flora II., L. S. Dow. 5512. Portia II., J. M. Harder.
5505. Lady Dufferin, James McCradie. 5513. Rex III., H. K. Howsey. 5514. Wacouta Dora, Thomas Wallgate.
5506. Lu Lu II., Henry Barnett.
5507. Monarch, E. B. Sears.

POINTERS.

5515. Flirt III., A. L. Rountree. 5518. Harry, E. E. Jenkins.
5516. Gipsey, Chas. W. Sanders. 5519. June, Geo. W. Waite.
5517. Grafton's Roy, C. F. Jordan. 5520. Nell II., J. Treadwell.

PUGS.

5521. Bradford Thera, C. A. Peterson. 5524. Meg, Charles J. Tanner. 5525. Minnie Warren, Henry C. Burdick.
5522. Dandy II., F. T. Caho.
5523. Judith, O. D. Allen.

ST. BERNARDS—ROUGH-COATED.

5526. Beda II., Matthew Goldie. 5532. Madeline, J. R. McAlpin.
5527. Ben Bow, V. E. Macy. 5533. Nardo, C. W. Goodrich.
5528. Brachen, Jos. R. McAlpin. 5534. Night, W. F. Filton.
5529. Glen, Mrs. R. A. McCurdy. 5535. Ponce de Leon, O. D. Seavey.
5530. Judy, Jos. R. McAlpin. 5536. Punch, Louis Dejonge.
5531. Lord Rochester, C. W. Bickford. 5537. W. Scott, James Tolman.

SMOOTH-COATED.

5538. Don Cameron, W. S. Guffey. 5541. Nanco, M. Goldie.
5539. Fan, M. Goldie. 5542. Victor, R. DeWitt Burnham.
5540. Mora, E. B. Sears.

SETTERS—ENGLISH SETTERS.

5543. Bessie II., L. Hopkins. 5548. Nellie II., C. Macfarlane.
5544. Don Leroy, F. H. Libby. 5549. Queen Belknap, M. Morrill.
5545. Joe Johnston, B. H. Williamson. 5550. Queen Mab II., F. Murphy. 5551. Squibb, A. J. Easterby.
5546. Lady Bessie, J. R. Bolton. 5552. Wayne Buckellew, M. M. McMillan.
5547. Moxie Cline, M. McMillan.

GORDON SETTERS.

5553. Kid, W. A. Dewitt.

IRISH SETTERS.

5554. Beppo, H. B. Young. 5557. Patsy, R. Q. Taylor.
5555. Dixie, A. Fitzwater. 5558. Sakta, H. B. Young.
5556. Nettie II., W. Shackelford. 5559. Tippie, W. T. Shackelford.

SPANIELS—CLUMBER SPANIELS.

5560. Drake, F. H. F. Mercer and W. B. A. Hill. 5561. Johnny, F. H. F. Mercer and W. B. A. Hill.

FIELD AND COCKER SPANIELS.

5562. Baby Obo, J. P. Willey. 5572. Mac Obo, H. K. Boyer.
5563. Barkis Ransom, D. Ransom. 5573. Nell II., C. Smith.
5564. Ben B., C. Smith. 5574. Newton Abbot Beau, J. P. Willey.
5565. Bessie W., J. P. Willey.
5566. Black Nancy, J. P. Willey. 5575. Niagara Prince, D. L. Ellsworth.
5567. Daisy III., C. Smith.
5568. Dot W., J. P. Willey. 5576. Sambo, S. Daly.
5569. Dreka, C. G. Lincoln. 5577. Sambo W., J. P. Willey.
5570. Goldie, J. P. Willey. 5578. Smutt T., F. M. Thayer.
5571. Judge II., C. Smith.

TERRIERS—BULL-TERRIERS.

5579. Lady Winchester, Girard Bros.

FOX-TERRIERS.

5580. Daisey, R. S. Waddell. 5582. Trap, F. M. Cookson.
5581. Sam Weller, O. W. Volger.

CHESTNUT HILL KENNELS, Philadelphia, Nov. 18.—*Editor Forest and Stream:* We beg to advise you that the partnership heretofore existing under the name of The Chestnut Hill Kennels, will be dissolved on Jan. 1, 1888, by mutual consent, and Mr. Thompson will retire. This will make no change in the management of the kennels, which will be continued under the same title by Mr. Harrison, who has bought out Mr. Thompson's interest in our well known dogs. It is our purpose to add some of the best specimens of the Irish terriers to our stock of other breeds, and we beg to assure you and the public that the quality of all our dogs will be, as in the past, of the highest.—MITCHELL HARRISON, CHAS. T. THOMPSON.

AMERICAN FIELD TRIAL CLUB.—Cincinnati, Ohio, Nov. 15.—*Editor Forest and Stream:* Arrangements have been made with the Southern Passenger Association whereby parties attending the American field trials at Florence, Ala., in December, may secure one-third rate returning to points in that territory, on certificate that they paid full fare going. Dogs will be passed free in both directions, when in crates and accompanied by owner or handler, at owner's risk. Those wishing to avail themselves of this reduction in rates, should apply at once to C. W. Paris, Secretary and Treasurer, 48 West Fourth street, Cincinnati, O., for proper blanks for certificate.—W. B. SHATTUC, President.

KENNEL NOTES are crowded out this week by our news from High Point.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

W. E. B., Philadelphia.—I have a valuable setter dog that has lost his scent. He hunted well enough last season, but this season is worthless as regards his nose. Do you know of any cure for him? Ans. In all probability there is some constitutional trouble to account for the loss of sense of smell. If you notice nothing wrong with the nasal passages you had better consult a vet. regarding general condition of your dog.

CONSTANT READER.—An Irish setter pup, about 7mos. old, is very thin, hind part is almost paralyzed; when he walks he has to drag his hindlegs. Appetite good; matter runs occasionally from eyes. Ans. Probably result of distemper, possibly worms. Satisfy yourself as to which. If the former, give 10 drops of tincture of nux vomica three times daily and have electricity administered if possible. If you suspect worms, give purge of castor oil, tablespoonful, followed in 6 hours by 30grs. of powdered areca nut, made into bolus or large pill with lard.

THE MEMPHIS AND AVENT KENNEL will offer a number of broken dogs for sale during the Eastern and American trials. Among those offered for sale will be their entire Derby, All-Aged and Champion entries. This kennel will not send dogs to purchasers on approbation, preferring for purchasers (or their deputized agents) to see the dogs at work during the trials and privately. This will be a rare opportunity to secure some first-class dogs from combined field-trial and bench-show winning strains, broken by Mr. J. M. Avent.—*Adv.*

MR. C. W. BUDD writes from Davenport, Ia., to the U. S. Cartridge Co., Lowell, Mass., under date of Nov. 13, 1887, as follows: "I have fired over 200 Climax shells with your regular primer and wood-powder, and have not had a single hang fire."—*Adv.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

FIRST BRIGADE N. G. P.—Philadelphia, Nov. 17.—The sharpshooters of the First Brigade N. G. P. met at Stockton Rifle Range, Camden, N. J., on the 5th inst., to contest for the First Brigade championship gold badge, to become the property of the winner. The day was rather unfavorable, being cold and chilly, besides which the marksmen had to contend with a strong fish-tail wind, blowing first from 1 o'clock, then clean around to 10 and 11. The match was open for all officers and men in the First Brigade N. G. P. who had qualified with a sharpshooters' score this season, entrance $1, to be divided as follows: 20 per cent. to go to the one making the highest score, along with the championship gold badge; second highest score, 15 per cent. of the remaining money; third highest score, 10 per cent of the remaining money, the next nine highest men to have the balance of money equally divided; distance, 200 and 500yds.; no sighting or warming shots; 10 shots at each distance:

1.	Lieut Geo W Coulston, I R P 1st Regt N G P	200yds....	4444455555—45
		500yds.....	4555455454—46—91

OWENSVILLE, Ind., Nov. 15.—Nine of the Owensville Ballard Rifle Team met on their range to-day for the fourth shoot and made better average scores than in their previous shoots. Distance 200yds., standard target, light wind from 5 o'clock quarter:

McGrade Daugherty	7	6	7	9	6	6	8	7	6	7—69
R Speck	4	7	7	5	9	6	8	6	10	5—67
H Mauck	10	8	5	6	5	10	6	5	4	5—64
W Roberts	8	8	4	8	6	9	5	6	6	4—64
W Gentry	4	6	6	8	8	9	6	4	5	6—62
G Wetter	5	7	6	5	6	5	5	4	4	10—57
J Montgomery	1	4	7	8	5	5	5	4	5	8—52
J Daugherty	10	10	5	4	5	6	3	4	1	4—52
J Stone	7	4	4	7	4	3	4	6	3	10—52—539

Average 59⅞. McGrade Daugherty won the gold medal. In the tie shoot-off for leather medal J. Daugherty won.

BOSTON, Nov. 19.—The rifle matches were shot to-day at Walnut Hill with a fair attendance. The light was very poor, and the scores for the most part correspondingly small. The record of to-day is as follows:

Decimal Off-Hand Match.—200yds.

A C Gordon	8	10	10	10	6	8	7	5	5	9—77
W Bennett	8	8	7	8	7	4	10	8	3	8—69

J B Fellows	8	8	10	8	8	7	6	6	6	6—75

REVOLVER SCORES.—A score or more of gentlemen assembled at the new range of the Lynn Rifle Association on the afternoon of Nov. 16, for the purpose of being revolver practice by Messrs. W. W. and F. E. Bennett, two brothers, who have quite recently broken all previous records of shooting with the weapon named at 50yds. distance. They both used the "Russian model" Smith & Wesson army revolver, .44-cal. The conditions under which they shot were not of the most favorable nature. A strong and uneven wind blew across the line of fire all the afternoon. It was a miniature hurricane at one moment, and the next a gentle zephyr. How embarrassing such a wind is to all sportsmen who have ever faced the butts with either rifle or pistol well know. Another unfavorable condition was a varying light, caused by clouds crossing the sun's disc at uncertain intervals—a glare at one instant and a shadow at the next. For the reasons named the gentlemen mentioned shot only 5 strings of 10 shots, a total of 50 shots each, while they had intended to shoot 100 shots apiece. Considering the annoyances they made respectively the appended scores, which may be considered remarkable. They shot on the American standard rifle target. The bullseye is 8in. in diameter. Within it are two rings. A shot in the inner ring counts 10, just outside 9, and just outside that 8. The best possible score would be, for 10 shots, 100. A perusal of the annexed tables, the reader understanding that 8, or any figure larger than 8, means a bullseye, will show that the shooting was fine. Each marksman made 34 bullseyes out of 50 shots:

F E Bennett	6	9	10	6	8	10	8	8	7	8—77	
	8	8	8	8	10	10	5	9	9	10—85	
	5	9	7	6	5	10	10	10	6	6—74	
	9	9	8	8	10	6	8	7	7	10—82	
	8	8	10	8	9	8	8	7	10	10—86	—404
W W Bennett	8	8	10	6	9	9	10	7	7	10—84	
	7	9	9	8	10	8	9	10	10	10—90	
	10	7	8	10	10	9	9	7	8	6—84	
	8	7	10	7	9	9	8	5	9	10—82	
	7	9	7	8	7	7	10	5	10	6—76	—416

ST. LOUIS, Nov. 12.—At the weekly shoot of the pistol club for the Hanlon and other prizes, the following scores were made out of a possible 120:

O Neuhaus	9	12	11	12	11	12	11	11	12	11—112
L V D Perret	9	12	11	11	12	12	11	11	10	12—111
W Bauer	12	12	10	10	11	12	12	10	11	11—111
G W Alexander	12	12	11	12	11	12	9	11	10	10—110
M C Billmeyer	10	12	11	11	12	11	11	11	9	12—110
E C Mohrstadt	11	11	11	12	12	11	9	11	11	11—110
W J Lard	11	10	11	11	12	11	9	10	11	11—107
M Summerfield	11	12	11	9	9	11	12	11	9	11—106
G T Dunn	12	10	11	11	8	11	9	11	11	12—106
W T Larned	11	11	7	11	12	11	10	12	11	11—105
A E Bengel	12	12	12	7	10	12	9	12	10	9—105

W H Hettel	11	0	9	7	10	11	9	12	11	11— 91
W C Mackwitz	5	11	6	7	9	9	9	10	10	12— 88
J G Schaaf	7	5	8	10	11	10	8	11	6	10— 86

KEENE, N. H., Nov. 10.—The marksmen of the Keene Light Guard Rifle Club indulged in target practice at the range this afternoon, when the following scores were made:

200yds., Military Rifles.

Col Metcalf	34444—19	Saunderson	04232—11
Lieut Shaw	53424—18	Ruffle	35043—12
Sergt-Maj Keyes	33243—15	Quilty	22242—13
Sergt Keyes	24444—18	Flanagan	02032— 7
Sergt Joslin	32432—14	Kelly	43423—16
Sergt Upham	32333—14	Kellogg	32420—11
Sergt Nims	32420—11	Eastman	34340—14

300yds., Military Rifles.

E M Keyes	55333—19	C E Joslin	53433—18
H W Keyes	53333—17	Ruffle	03353—14
Col Metcalf	44433—18		

The members of the Keene Rifle Club also had a competitive trial of their skill with the following results, an allowance of 2 being given to all but H. W. Keyes:

Col Metcalf	3444444—27	6	7	8	10	10	8	9—60
H W Keyes	3333333—22	6	6	3	7	7	4	6—38
C E Joslin	3022333—16	5	0	2	2	4	4	4—23
E M Keyes	4344344—26	9	3	9	8	4	9	7—51

PHILADELPHIA, Nov. 17.—In the shoot for a gold medal at Stockton Range yesterday by the State Fencibles, the following was the result—military rifle:

	200yds.	500yds.
H L Roberts	31415—20	31415—20—40
J T Patterson	33335—19	34444—19—38
J L Duffy	14434—18	44431—18—36
W H Harris	33444—17	33444—18—35
J P Corcoran	34505—17	50454—18—35
Wm Porter	21435—16	44343—18—34

TOPEKA, Nov. 12.—To-day at a practice shoot, Prof. F. G. Minkler, the crack shot of the Topeka Rifle Club, made the brilliant record of fifteen consecutive bullseyes, at a distance of 200yds., off-hand, and the last nine shots were a clean score of tens. The club is very proud of this record. At the regular shoot of the club, the following scores were made, 10 shots, 200yds.:

F G Minkler	89	86	87	G E Morrison	82	80	81
J L Payne	83	87	78	C R Payne	76	79	79

GALLERY SCORES.—The members of the Cosmopolitan Rifle Club held their usual weekly meeting Nov. 8, at 613 South Third street, Philadelphia. Owing to its being Election evening the attendance was rather slim. The following scores were made at 40yds. range, possible 120, open sights, off-hand, a specified trial to count. The official score:

Peter Woods	12	12	12	11	11	12	12	12	12	12	12	—118
*R Koch	12	9	12	12	10	12	11	11	11	11	11	—116
W Denny	12	12	10	12	11	11	12	12	12	12	11	—115

*Five points handicap.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

GUELPH, Nov. 11.—A decidedly interesting pigeon shooting match took pace here to-day between teams of ten, representing the Owl Gun Club, of Toronto, and the Guelph Gun Club. The Owls put a good team in the field, but by no means their best, several of the leading shots of the club being unable to leave town and others being away on shooting expeditions in the forests. Consequently Guelph won by 63 to 52; and the Owls accepted their defeat gracefully; 10 birds each, 30yds. rise:

Shattuck	1010111101—7	Carruthers	1111000101—6
Walker	1110111011—8	McDowall	1110101000—5
Sleeman	1111011110—8	Lush	0010100000—2
Edwards	0011111100—6	Kemp	1001001110—5
Johnson	1100111111—8	Carruthers	1111111100—8
Holliday	0110011110—6	Rogers	1000110010—4
Singular	0010001001—3	Beatty	0111110010—7
Ellis	0100000100—2	Rice	1011011111—8
Turnbull	1011111110—8	Robertson	0010000110—3
Wayper	0010111111—7—63	Unwin	1100010001—4—52

Sweepstakes No. 1 at 5 birds each: G. Carruthers 4, J. Rice 4, W. Shattuck 3, J. Curruthers 3, G. Sleeman 3, J. C. Unwin 2, W. McDowall 2, J. Wayper 2, L. Singular 2, J. Johnson 2, A. Cull 2. C. Rogers, L. Walker and W. Lush killed 1 each, and A. Robertson and C. Kemp missing their first three retired.

NEWARK, Nov. 19.—There were two pigeon matches at Erb's. The birds were a very superior lot, not one dwelling after the traps were sprung. The first match was between veteran pigeon shooter Sam Castle and Chris Reinhardt, for $100 a side, 20 birds each, 30yds. rise, 5 traps, 2 barrels. Reinhardt won by the following score:

S Castle	02110220021122221012—15
C Reinhardt	10121221221111001121—17

Following this shoot Frank Class, of Pine Brook, and C. Reinhardt shot a 10-bird race for $100 a side. Class won, making a clean score as follows:

F Class	1121211211—10	C Reinhardt	0001111111— 7

Referee, J. Maher, of New York.

NEW DORP, Staten Island, Nov. 17.—Emerald Gun Club's match at live pigeons, ground traps, 21, 25 and 30yds. rise, 80yds. bound; club rules; four prizes:

P Butz (21)	1111110110—8	L C Gehering (25)	1111111000—7
M Cherry (21)	1110101101—7	J Howard (21)	0010011001—4
Dr Hudson (25)	1010111111—8	T P Mackenna (21)	1101001100—5
G Remsen (25)	1101110000—5	H Rubino (21)	1001010000—4
R Regan (21)	0011001111—6	A McHale (21)	1001010010—4
J H Voss (25)	1001011011—6	P J Keenan (21)	0011101110—6
J Maesel (21)	1110111001—7	S McMahon (21)	1011000110—5
N Maesel (21)	1011010111—7	F Schrader (25)	1111101010—7
T Codey (21)	0111011001—6		

Ties on miss and out for first, Dr. Hudson, 30yds., 1001101; P. Butz, 25yds., 1001100. Ties for second, 25yds., M. Cherry 1½, J. Maesel ½, N. Maesel 1½, L. H. Gehering 2. Ties for third, 21 and 25yds., R. Reagan ½, J. H. Voss ½, T. Codey 0, P. J. Keenan 1; won by Keenan. Ties for fourth or Osickie Trophy, at live birds, 21yds., S. McMahon 1, Thos. P. Mackenna 0; won by McMahon.—THOS. CODEY, Sec'y.

PHILADELPHIA, Nov. 15.—Weekly shoot of the Southwark Gun Club, 15 birds:

First Shoot.

Lafferty	1011100111110111—11	Stillwell	0101111111010110—11
Robertson	0111111100011111—11	Haldt	0111100111110111—11
Marker	1010110011011000— 7	Bouvier	0000011101111001— 7
Weaver	0000111101101110— 8	Beyerlein	1101101101111111—12

Second Shoot.

Chew	0100010101000000— 3	Robertson	1010100011101111— 9
Murphy	1101100110001000— 7	Beyerlein	0111010001111117—10
Weaver, Jr.	1011001111010111—11	Haldt	0010111111101101—10
Marker	1011111011111000—11	Milby	1101001010101101— 9

Weekly shoots of this club will hereafter take place on Mondays.

BOSTON, Nov. 16.—There was a large attendance of trap-shooters to-day at Walnut Hill to witness the contest between teams of the Massachusetts Rifle Association and Wellington Gun Club for the gold badge of the Massachusetts State Glass Ball Association. The trophy was won by the Wellington team. In addition to the team shoot the regular matches were open. Appended are the results:

Macomber Badge Match, 10 singles, 5 pairs—Smith, 8, 7—total 15; Wilde, 9, 6—15; Wilson, 9, 5—14; Eager, 8, 5—13; Mudd, 8, 2—10.

Silverware Match, 10 singles, 5 pairs—Snow, 10, 6—total 16; Smith, 6, 6—12; Law, 10, 6—16; Knowles, 6, 6—12; Mudd, 4, 6—10.

Visitors' Match—Eager, 6, 4—total 10; Wilson, 5, 6—11; Crown, 4, 6—10; Wilde, 5, 3—8.

Team Match—Wellington Gun Club Team.

Gerry	1011111111111111110—18
Swift	1111010111011110011—15
Wilde	1101010011011110111—14
Law	1010100011100111101—12

Smith	1010110001010110011—11—67

GENESEO, Ill., Nov. 15.—The shooting tournament here brought out a large number of sportsmen.

The first shoot was at 6 birds, 25yds., one barrel. N. Doxey, of Geneseo, won first money. A. Berg, of Davenport, Iowa, and I. Laughlin, of Rock Island, divided second. O. A. Howard, of Davenport, and William Stohl, of Cleveland, divided third. A. Booth, of Springfield, fourth.

No. 2—Seven birds, 30yds., both barrels. A. Berg, of Davenport, Iowa; H. Stohl, of Geneseo; Otto Mitchael, of Atkinson, and A. Booth, of Springfield, divided first money. T. Laughlin, of Rock Island; E. Jaques, of Geneseo; W. Stohl, of Cleveland; N. Doxey, of Geneseo, and Geo. Shadow, of Davenport, divided second. S. A. Tucker, of Meriden, Conn., and O. A. Howard, of Davenport, Iowa, divided third. J. Stohl, of Cleveland, and A. Sands, of Geneseo, divided fourth.

No. 3—Ten blue rocks, 18yds. George Shadow, of Davenport, Iowa, and H. Stohl, of Geneseo, divided first money. M. Henecker, of Morristown; E. Jaques, of Genesco, and A. Sands, of Geneseo, divided second. A. Berg and A. Howard, of Davenport, Iowa, divided third. T. O. Davis, of Davenport, Iowa, fourth.

NEWARK, Nov. 17.—The $500 silver cup of the Essex Gun Association was won for the ninth time by the South Side Gun Club, on the grounds of the Woodside Gun Club. The shoots are held monthly, and the cup is to become the property of the club winning the oftenest during the year. The Mountain Side Gun Club and Woodside Gun Club have each won one shoot. The National rules governed the shoot, 20 clay-pigeons being shot at by each man. The score of the South Side Club was 59 broke, 41 missed; Woodside Gun Club, 54 broke, 46 missed. Four sweepstakes at 5 birds each were also shot. In the first, C. Von Leugerke and Hill divided first money, Riker second, Firth third and Geoffry fourth. In the second ties were made by Firth, Hill, Hunt and Von Lengerke. Third, ties divided by Riker, Geoffrey and Von Lengerke for first money, Hunt second. In the fourth Hunt and White divided on clean scores.

MONTREAL, Nov. 17.—The most successful shooting meeting ever held in the province took place to-day, under the auspices of the Montreal Gun Club, on the occasion of their annual Thanksgiving shoot. The threatening appearance of the weather in the morning caused a smaller attendance than there would otherwise have been, but still there were representatives present from nearly all the clubs, and the shooting was throughout closely contested. The officers of the club were on hand early in the morning and had the traps working like clockwork, so that there were no delays whatever and but very few trap-broken birds. The first event was the final match for a handsome silver cup presented by Ald. A. W. Morris, president of the club, to be shot for at 20 birds, each on Good Friday, Queen's Birthday, Dominion Day and Thanksgiving Day. There were 9 entries, and it was won by C. H. Wallace, with a score of 14 for the day, and a total of 54 in the four matches out of a possible 80. J. Allen took second place with 14, and John Fly was third. The next event was an open match, 18yds. rise, 20 Peoria blackbirds, for which the following 18 shots entered: M. Fielding, M. B. Leach, R. Lucas, Dr. Barnes, A. Omon, A. Cox, L. P. Trotter, C. W. McCan, G. W. Westcott, A. C. Johnson, H. Fly, A. Penniston, W. Emo, A. H. C. Walpole, C. H. Wallace, J. Allen, J. B. Bedard, A. Ramsay, H. Lajeunesse. The shooting was very close, A. C. Johnson and C. H. Johnson tieing for first place with 17 birds, and the former winning in the shoot-off. J. B. Bedard took third prize with 13, and W. E. Emo and A. Penniston and L. P. Trotter tied for fourth place. The shoot-off resulted in the order above named. There was another match shot afterward, in which 10 entered. It was won by W. McCan, who broke 8 birds, W. Emo being second with 5 birds, and A. Penniston third.

TORONTO, Nov. 17.—Three sweepstake shooting contests took place to-day at Charles Ayres's place, Eastern avenue. The results were as follows: At 12 Canada blackbirds, 18yds. rise, 3 screened traps. Aine 7, Sandys 7, W. Bugg 6, Unwin 6, J. Townson 5, McDowall 5, McClure 4, H. George 3, Kemp 3, Wilkinson 3. At 12 Canada blackbirds, 18yds. rise, 3 screened traps: Hine 9, Sandys 8, Kemp 7, McDowall 6, Wilkinson 6, H. George 5, Unwin 5, Riggs 5, Stewart 4, Bugg 4. At 6 Canada blackbirds, 18yds. rise, 3 screened traps: H. George 5, Bugg 5, Hine 5, Sandys 5, McDowall 4, Wilkinson 3, Kemp 3, Riggs 3.

PHILADELPHIA, Nov. 12.—An exhibition of shooting skill was witnessed last evening at the skating rink, Twenty-third and Christian streets, in the final contest in the five days' match between Brewer, the champion wing-shot of America, and Graham, the champion wing-shot of England. Fifty glass balls were thrown successively in the air, Brewer firing off his first round of shots, and winning universal admiration by breaking every ball. Graham then took his stand and did havoc among the balls, breaking 45 and missing 5. In the second round the contestants each broke 49, and each missed 1. Brewer then shot at 100 clay-birds, breaking 97 and missing 3. Graham did not enter the lists this time, and Brewer remained clearly the winner. The following is the summary of the match:

Brewer.	Broke.	Miss'd	Graham.	Broke.	Miss'd
Monday	471	29	Monday	464	36
Tuesday	494	6	Tuesday	481	19
Wednesday	494	6	Wednesday	467	33
Friday	242	8	Friday	239	11
Saturday	99	1	Saturday	94	6
	1800	50		1745	105

Brewer was declared the winner of the championship of the world and the $2,000.

PHILADELPHIA, Nov. 18.—There were three fine shoots at live birds at Point Breeze Park, which resulted as follows. $50 match, at 3 birds each, 5 men a side:

Swartz	111—3	Griffin	111—3
Breeding	000—0	Helmbold	101—2
Goff	011—2—5	Pawling	011—2—7

$50 match at 5 birds, 3 men a side:

Graham	11111—5	Pawling	11011—4
Breeding	00000—0	Kleinz	11111—5
Goff	11000—2—7	Swartz	11001—3—12

Graham, at 26yds. rise, killed 5 birds straight, only using one hand to the gun.

NEW BRUNSWICK, Nov. 12.—Garret Roach, son of the late John Roach, and Mr. Van Waggener, of New Brunswick, shot a match at 20 birds each here to-day for $500 a side. Roach won, killing 18 to Van Waggener's 14.

TORONTO, Nov. 16.—The shooting match at the Humber to-day between Mr. Joseph Lucas, of this city, and Mr. Hine, of Winnipeg, at 25 Peoria blackbirds each for $100 a side, 18yds. rise, was won by Mr. Hine by a score of 19 to 12. Mr. Dan Blea was referee and Mr. John Thomson scorer.

Yachting.

THE SEAWANHAKA C. Y. C. LECTURES.

THE first of the series of lectures to yachtsmen, given by the Seawanhaka Corinthian Y. C. at its club house, was delivered on Nov. 19, the subject being "The History, Theory and Methods of Chart-making, and Practical Use of Charts." The library and meeting room of the club were well filled with members of the Seawanhaka and other clubs, and the lecturer, Lieut.-Commander Leonard Chenery, U. S. N., was heard with every evidence of interest. Beside a large globe and various explanatory diagrams, the lecture was illustrated by charts furnished by the Navy Department and U. S. Coast Survey to Lieut.-Commander Chenery, and donated by him to the club. After being introduced by Com. Canfield, the lecturer spoke as follows, prefacing his remarks by a short apology for the work, owing to it being called for a month sooner than was intended, in consequence of a change of programme:

As each man stands in the center of his horizon and the portion of the earth's surface which lies within the range of his vision has the appearance of a disk, the whole world was in ancient times considered a disk surrounded by the sea. It was, consequently, not unusual for a people to imagine—as was the case with the Chinese, the Chaldeans, the Arabs, the Jews, and even the ancient Peruvians—that it occupied the middle of the world. The wider a people's range of vision, the wider was the disk of the world represented. A circular surface is thus the simplest form for a map of the world, and it is met with in antiquity and the Middle Ages. The extent of the circle of vision depends among uncivilized people on their modes of life. Wandering tribes have seen more of the world than settled tribes; hunters, fishers and seamen have made the widest excursions, consequently among them we find the beginnings of map making. Esquimeaux, Indians and Polynesians, for example, show in this matter quickness of apprehension, while among the settled tribes of negroes in Africa there are no maps.

A map drawn by an Esquimeau woman enabled Sir Edward Parry to discover Fury and Hecla Strait; McClintock, during his endeavor to clear up the fate of the Franklin expedition, repeatedly got the Esquimeaux to draw coast maps of the Arctic lands.

It is among the Egyptians that we find the earliest recorded examples of cartographic representation. The Egyptians of the colony of Colchis, dating from the time of Rameses II., had preserved as heirlooms certain wooden tablets on which were indicated land and sea, roads and highways. Sesostris and other kings caused route maps to be prepared, as we know by the actual discovery of such maps and plans on papyrus rolls; maps that are a thousand years older than that of Anaximander, considered by the Greeks as the father of cartography.

The ancient Babylonians have the high distinction of having divided space and time in a way that allowed scientific measurements to be made. They originated the division of the ecliptic into twelve signs, and later into 360deg., and the division of the circle into 360deg., the degree into 60m., the minute into 60s., and the corresponding division of the hour. This was the outcome of their sexagesimal system, and while we may deplore, in the interest of rapidity and ease of mathematical computation, that they were not conversant with the decimal system instead, its great merit has been proved by the infallible test of time. This method of division was introduced among the Greeks by Hipparchus (150 B. C.) and obtained general currency through the geographer Ptolemy (150 A. D.) and provided the elements necessary for the astronomical determination of geographical positions.

The time cannot be spared to-night to follow closely the history of the growth of chart making, nor would it prove of much interest as a lecture. I will therefore briefly touch upon the important steps and episodes in the matter. Anaximander (about 560 B. C.) sketched the first maps known among the Greeks. About 300 years later Democritus ventured to draw a map based upon his own observations in extensive wanderings, and in opposition to the circular form believed in up to that date, gave the world an oblong shape, and taught that it was once and a half as long from E. to W. as from N. to S. We still use the terms longitude and latitude, which originated in those days to express length and breadth.

About the time of Aristotle the tabular or flat surface theory of the earth gave way to the spherical or globe theory, although later, in the Middle Ages, this doctrine of sphericity was placed under the ban of the church and people went back to the Homeric idea of a disk surrounded by ocean. Pytheus, about 320 B. C. made the first application of astronomy to geography, and made an observation for latitude near the present city of Marseilles. The Romans contributed nothing to the development of the scientific method of map making. As a military country they made route maps from which they could learn the roads, stations and distances, sketches which, apart from their distortion, may be compared with our railroad maps issued for advertising purposes.

In the Middle Ages map-making declined and cartography fell back into its second childhood. The nautical maps which made their appearance in Italy in the Thirteenth century, show the first improvement in cartography after a long period of stagnation. These maps were constructed with the use of a compass and are called compass-maps, because covered with figures of compasses from which radiate numerous straight lines in all directions all over the sheet. That the magnet turns toward the north is first mentioned in 1187, and Flavio Gioja was perhaps the first to construct a mariner's compass and teach seamen its use. The Italians divided the compass into eight parts of 45deg. each, assigning four quarters of 11¼deg. each to each division, and it is from these quarters we obtain our 32 points of the compass to-day; still further refining matters by dividing each of those quarters into eighths.

In the fifteenth and sixteenth centuries Portugeese, Greek and French cartographers appear as competitors of the Italians. About the middle of the sixteenth century appeared the maps of Gerhard Kramer, commonly known as Mercator. His place as a reformer in cartography is an honorable one, and his system of projection is more generally used to-day, three centuries after his death, than any other.

In the earlier part of the seventeenth century a series of important discoveries and inventions in mathematics, physics and astronomy provided the means of making much more accurate observations and calculations, and accordingly a substantial improvement in chart making followed; the invention of the telescope (1603), Galileo's discovery of Jupiter's moons (1610), Cassini's calculation of their periods of rotation, so important in the determination of longitude (1666), the first application of trigenometry to land surveying (1615), Picard's measurement of a degree and the French measurement of another (1669-1718), the mirror sextant of Hadley (1731), the improvement in lunar tables (1755), and John Harrison's great improvement of the chronometer (1761). In this way, set in a period of transition; up to this time the whole art of chart-making had been treated as a matter of private speculation. France was the pioneer in 1750 in carrying out the cartographic surveys of the country at the cost of the State, for a double object, one military, to provide the army with satisfactory maps, and the other administrative, to furnish a basis for taxing land. Other countries soon followed suit in making government surveys, and prolonged effort has produced rich results.

Passing now to the theory of chart-making, the object of a chart is to present to the eye the bearings of objects on the surface to each other and their relative distances apart, as nearly correct as may be. But this can be done with accuracy only upon a globe, the surface of which is similar to that of the earth itself. Various plans have been devised by which in the more convenient form of plane sheets true delineations of the surface are presented, reference being had to the principle upon which these charts or maps are constructed.

The construction of a map or chart virtually resolves itself into the drawing of two sets of lines, one set to represent the meridians of longitude and the other the parallels of latitude. These being done the outlines of countries and the peculiarities of configuration are filled in. The lines representing meridians and parallels on the sphere are constructed either on the principles of true perspective or by artificial systems of development. It is impossible in any one system or plan to fill all the requirements of the case; we fulfill some by the very sacrifice of others; we represent exact similarity to all very small portions of the original at the expense of misrepresented areas; or we retain equality of areas by giving up the idea of similarity; and in the end we adopt a compromise possibly in one plan or the other to best suit the necessities of the case.

By the method called projection the rules of perspective are applied to the delineation of objects upon the surface according to several principal modes. I shall not mention or describe all the modes of projection, but only the more important ones of practical utility, which may be divided as follows:

Orthographic projection, Stereographic projection, Gnomonic, Gnomic or Central projection,	Natural projections—perspective delineations on the primitive plane. Known to the ancients.
Globular projection, Mercator's projection, Conic projection, Polyconic projection,	Artificial projections, not a perspective representation but a development from a cylinder or cone. Of modern design.

In orthographic projection the eye is supposed to be at an infinite distance from the sphere, so that the rays of light coming from every point of the hemisphere opposite to it may be considered as parallel to one another. The sphere is intersected through its center by a plane perpendicular to these rays, and it is upon this plane that the objects are projected. Objects near the center of the plane are by this method delineated in nearly correct proportions; but in receding from this, as the rays strike more obliquely upon the surface of the sphere, their proportions become more distorted, and the parallels of latitude or meridians of longitude (according as the eye is opposite the pole or equator) are drawn more and more closely together.

In stereographic projection the eye is supposed to be placed at the surface of the sphere, and the surface to be delineated is the opposite hemisphere, or some portions of it of which the inner or concave side of it is presented to the eye. The plane upon which the objects are projected is supposed to be transparent and placed so as to pass through the center of the earth, its surface perpendicular to the line passing from the eye to the center. In this method the meridian and parallels intersect each other, as they do upon the globe, and though there is distortion increasing from the center, yet it is less than by some of the other methods. The stereographic projection is much used for the maps of the world drawn in two hemispheres, and the meridian of 20° W. from Greenwich is usually taken as the plane of the projection since that brings the two great continental divisions of the earth into their respective hemispheres.

Since the orthographic distorts by contraction at the outer parts and stereographic by distention, it would seem that there should be some happy medium, some point from which the objects would be seen as less distorted. Hence the globular projection was devised, the eye supposed to be at a distance from the sphere equal to the sine of 45deg., or, the diameter being 100, the distance is 35.3. In order that the meridians may intersect the equator at equal distances, the distance for the eye is generally placed at 29.7, the diameter being 100.

Maps are also made in which the meridians are represented by arcs of circles cutting the equatorial diameter at equal distances and the parallels of latitude by arcs of circles cutting the polar diameter at equal distances; these maps are not projections and are founded upon no geometrical principle which can be of service in their use, still they give very good ideas of forms and areas and are simple in construction.

In the gnomonic, or gnomic, or central projection the eye is supposed to be at the center of the earth and the objects upon the earth are projected upon a plane tangent to its surface at the principal point. Obviously this method can be applied to maps of limited extent only, and as a matter of fact until recently have only been used for maps of the polar circle, where parallels of latitude are concentric circles and meridians are straight lines. At present, though, many of the maps of ordinary atlasses are drawn upon this projection.

Since the plane of every great circle passes through the eye it is evident that every great circle will be represented on the primitive plane of projection by a straight line, and reciprocally every straight line on the plane of projection is an arc of a great circle. This renders charts on this projection very valuable for great circle sailing, as I shall soon explain. The U. S. Government through the Hydrographic Office of the Navy Department is now preparing gnomonic charts of the North and South Atlantic and North and South Pacific oceans—four in number. I think that of the North Atlantic is the only one completed.

I spoke a little while ago of two styles of projection—the natural, where the objects were perspective delineations on the primitive plane, and the artificial, where a development is made from a cylinder or cone. Of this class are the Mercator's and the Conic (and variations of the latter), really the important methods in use today. In this country all charts under the Navy Department are made upon the Mercator's, and all under the Coast Survey upon the Polyconic projection.

In Mercator's system of projection a cylinder is supposed to envelop the earth, but only to touch it (generally) around the equator. The points on the earth's surface being projected on the inner surface of the cylinder by lines drawn through them from the earth's center, the cylinder is then supposed to be unrolled or developed, and thus to present the various objects upon a plane

surface. Those situated on or not very far from the equator (or where the cylinder touches the earth) will be the most correctly presented. The meridians and parallels will be straight lines. This principle is, at all events, in part the foundation of the projection known as Mercator's, and applied by him to charts for navigators in which the correct bearing of points upon the surface are of more importance than the true figures of countries.

If, in place of this cylinder we envelop the earth in a cone which shall touch the earth only at the middle latitude or be tangent to it at that point, whose apex is at the prolongation of the earth's axis, and project the points on the earth's surface on the inner side of this cone and then unroll or develop this cone to a plane surface, we shall have the Conic system of projection. The meridians will be converging straight lines, and the parallels curves. Those objects situated near the middle latitude (or where the cone touches the earth) will be the most correctly presented. The Polyconic projection supposes each parallel of latitude to be developed upon its own cone, the vertex of which is on the axis at its intersection with the tangent to the meridian at the parallel. As the name Polyconic implies, it is a system of many cones. The effect of this projection on cones of different altitude is upon development to make the parallels of latitude curves; but the curves in a chart of the Gulf of Mexico, for instance, on a scale of 1-1,200,000 (20 miles to the inch), will hardly be perceptible in short distances. As a matter of fact in the Polyconic system the meridians become curves, but they are of such limited latitudinal extent that they appear as straight lines. The Mercator's projection for the construction of charts is the one in general use; in fact, it may be said almost universal use. The only notable exception is the Polyconic, by our own Coast Survey. It possesses an advantage which is deemed by most seafaring men an essential to a chart; that any straight line drawn makes the same angle with all meridians. It has, on the other hand, no two consecutive miles of the same length except on the parallels. It is claimed by the Coast Survey people that for a chart of the world it is proably better to use Mercator's projection, but for small extents of surface, say 10deg., or at most 20deg. of longitude, the polyconic is far preferable for the following reasons: First, it distorts to a less degree the configuration of the land or bottom. Second, it has a scale which may by taken from any point on any meridian (preferably the middle one) and which may be used on any part of the chart. Third, on the polyconic projection a straight line is almost a great circle of the earth, and by traveling on it we travel on nearly the shortest possible line between two points.

If you start from some point on the equator and steer N.E. or E.N.E., it would appear by a Mercator's chart that you could never reach the pole, yet, granting that there was no ice or land in the way you would describe a spiral, and eventually bring up at that much sought-for point. This is not the case, in fact, but is as a matter of fact all straight lines on the Mercator's chart (except on the meridian's and equator) are really spirals or else small circles, and by no means the shortest distances between any two points.

In giving a brief outline of the method of making charts, which combines the question of surveys, topographical and hydrographical, and the mechanical work of plate engraving, printing, etc., I shall quote quite extensively from a pamphlet on chart making, by Lieut. Pillsbury, U. S. Navy.

The carefully executed maps and charts of to-day are the final results of careful surveys by governments. As an illustration of the work, step by step, we will take the case of a survey of some portion of our own Atlantic coast. By a system of triangulation the country to be surveyed is laid off into convenient triangles, prominent peaks or objects of any kind being chosen as stations at the angles thereof. But the preliminary step even in this triangulation is the careful measurement of a base, in some level plain, from the extremities of which are to be taken the base angles to surrounding objects, chosen as trigonometrical stations. The measurement of this base line, generally from 5 to 8 miles in length, is conducted with all the nicety and accuracy that can be attained with instruments of the most delicate refinement of adjustment. A mere description of the instruments used, and the great care taken in measuring this base line would make in itself a lecture of reasonable length and great interest. It is important that it should be carefully done, for the base line becomes an important factor in the computing sides of large triangles, and a mistake of a few inches in the first would make an error of much importance in the latter. In our survey of the Atlantic coast, in making the primary triangulation, a base line of about 5 miles was measured at Kent Island, and another one at Atlanta of about 6 miles; these two base lines were 602 miles apart, and yet the triangulation met at about a midway point on the side of a triangle about 29 miles long and agreed to within a few inches.

In making the ordnance survey of Great Britain and Ireland a base line of six miles was measured at Salisbury Plain, and when the survey reached Lough Foyle in Ireland, a distance of about 800 miles, a base of verification was measured and the difference between the computed and measured was less than five inches.

In primary triangulation the triangles are from 30 to 150 miles long, though sometimes, of course, the necessities compel shorter or longer ones. In secondary triangulation the sides are from 10 to 15 miles in length, and in tertiary (where it is necessary) the sides are from 1 to 3 miles.

In a triangle, spherical or plane, if two angles and the enclosed side are known, the other sides and angles can be computed. So with the length of base line known, angles from its extremities are measured to some convenient objects, and the primary triangulation has commenced. These angles and distances, when they are measured and calculated, are laid down on paper, forming so many other stations from which new angles are observed, until the entire area of the country to be surveyed is covered by a network of triangles. Within the principal or primary triangulation, minor triangles, called secondary and tertiary, are observed, and afterward the interior of each is filled up by measurements with theodolite and chain, and by plane-table work, and if contour lines are to appear on the map, showing the difference of level, then the spirit level and compass are called into use. Some astronomical station or stations have been established, and the exact latitude and longitude of such places determined. The hydrographic inspector, in consultation with the superintendent, receives directions as to the localities of the proposed hydrographic work, and then lays out the projections for each of his parties, according to the nature of the work. The draughtsmen in the office prepare the projection sheets, and the chiefs of the hydrographic parties eventually receive them together with the description of the triangulation points, bench marks and detailed instructions. The hydrographic work of our coast survey is at present entirely done (or practically so) by officers of the U. S. Navy.

Upon the conclusion of the survey the projections are returned to the office, showing the fixed positions on all the lines of soundings, appropriately lettered and numbered, together with the sounding books, showing the soundings and times and the angles taken with them; angle books showing the angles used to cut in hydrographic signals from the triangulation points; tide books showing the reading of the tide during the progress of the survey, and lastly sailing directions, or a description of points of interest developed during the work. Draughtsmen attached to the office of the Hydrographic Inspector then verify the positions, plot the soundings, and after the finished sheet is registered draughtsmen of the drawing division make a reduction of it for the engraver on the exact scale that is to be used in the finished chart, which is verified by comparison with the original. In the meantime a project has been decided upon showing the limits of the proposed chart; the topography has been reduced and a plate prepared for the engraver. As the plate approaches completion in hydrography and topography, the magnetic variation is ascertained for the probable time of issue, the lighthouse table prepared, and the aids to navigation are obtained from the Lighthouse Board, and the title and notes decided upon.

When the plate is finished it goes to the electrotype department to be duplicated. One plate will stand only about 1,200 to 1,500 impressions, and in order to save the cost of reproduction by engraving, the original is duplicated for a printing plate and they stowed away. The electrotyper first cleans the plate with potash, and then coats it with the thinnest possible coat of silver to prevent the original from adhering to the "alto." It is then placed in a frame in a vertical vat holding a solution of sulphate of copper, and is connected with a battery; copper is slowly deposited upon its face for a day or two. The deposit in a vertical vat is the result of very slow action, and presents a smooth and even surface all over the face of the plate. The plate is then placed in a horizontal vat, and the process of deposition is more rapid. It is daily removed and weighed, and the protuberances which form on the back are filed down to make a smooth surface. In a few days, after it has received a sufficiently thick coating, it is removed, and it then appears like a single thick plate, as the deposit and original plate are joined at the edges. The edges are filed and the plates separated, the deposit being in alto relievo, and termed the "alto." The same operation is repeated, using the "alto" on which to deposit, and the result is an exact duplicate of the original, and is termed the "basso." About 30lbs. of copper are required for a good sized "alto," and 50lbs. for a "basso." When the life of this "basso" is gone the "alto" first obtained is used to produce another, and so on for perhaps five or six times, or until the "alto" is used up, when another strong one must be obtained from the original plate.

The question of fine printing is almost, if not quite, as important as that of fine engraving, but without taking time for a detailed description of the processes of the printer in order to obtain his best work, I will say that dry printing is impossible with an engraved plate and wetting the paper is a serious objection because of the shrinkage in drying. French paper shrinks the least, 1 per cent. with the grain and 1½ per cent. across; but it is of short fibre and breaks and tears even with the greatest of care and is very expensive. American paper shrinks unevenly, about 1 per cent. with and 2½ per cent. across the fibre, but is better by far than French paper for use at sea.

I have said nothing about the cost of these charts. I have no data to tell me how much the original surveys cost, but each of these charts before you represents thousands and some of them tens of thousands of dollars in that way alone. The plates cost from $300 to $3,000 each, and some plates in the Coast Survey have cost as much as $10,000. Were the selling prices of a chart put at anything like a proportional part of the expense in producing it, it would be far beyond the means of ordinary ship owners—worthy to be framed as a work of high art, or at least of high priced art. As a matter of fact charts are sold at a price which barely covers the cost of the paper and the wages of the printer in order to encourage their general use.

The scales of geographical maps range from 800 miles to an inch to 10 miles to an inch, and topographical maps from 1in. to 25in. to the mile. The Ordnance Survey of Great Britain is on the scale of 1-63,360, or 1in. of paper to one mile of surface. The U. S. Coast Survey uses in its harbor charts the scale of 1-5,000 to 1-40,000, and in the coast charts 1-80,000, 1-400,000, 1-1,200,000. The Hydrographic Office scales 1 am not at present prepared to give, though in the examples of their publication that I have with me here to-night the general route charts of North America are on a scale of 1in. to 1° or 1-4,000,000, or 1in. in 60 miles. The general coast charts, 5in. to 1°, or 1in. to 12 miles. The special coast charts, 1in. to 1 mile, ½in. to 1 mile, ¼in. to 1 mile. Harbor charts or plans, 2in. to 1 mile, 5in. to 1 mile.

On each chart or plan of a harbor generally appears in print the following legend: The title and number of the chart; the date of survey, topographical and hydrographical; whom the surveys were conducted by; the date of the latest corrections; the latitude and longitude of some prominent point or place or places; rise and fall of tide; H. W. F. and C.; variation of compass and annual change in same; abbreviations; aids to navigation; a scale of statute and nautical miles, and sometimes kilometers.

While it is outside of my province in treating of the subject of charts to enter into any lengthy dissertation on the subject of tides, yet a reference to the latter subject must be made in order to explain one of the references on the charts (H. W. F. & C.) for the calculation of the time of high water—an important point in these days of large vessels of deep draft in entering and leaving port, as all soundings published on the charts are given for mean low water. The height at high water and the depression at low water are not always the same. On the days following the new moon and the full moon, high water is higher and low water is lower than at any other time; these are called spring tides. On the day following the first and the third quarters of the moon high water is less high and low water is less low than at other times; these are neap tides. Thus at New York the rise and fall at spring tides is about 5½ft., while at neap tides it is only about 3½ft.

As a rule—almost, if not quite, general—the times of spring tides do not occur on the exact dates of the syzygies (when the sun and moon are in conjunction or in opposition), but one day to two days and sometimes three later. In the North Atlantic the highest tides are observed a day and a half and sometimes two days after the syzygies. In New York the highest tide occurs about 8 o'clock in the evening or the day following, 32 hours after; at Boston this retardation, known as the age of the tide, is about 36 hours. The time of high water on the days of "full and change" (when the moon passes the meridian at 12 noon nearly) is known as the Establishment of the Port, or more correctly as the Vulgar Establishment of the Port; also it is the lunitidal interval of that day. The mean of all the lunitidal intervals for half a month at a port is called the Corrected Establishment of the Port to distinguish it from the Vulgar Establishment. It is this Corrected Establishment that is given on all charts and plans of harbors after the letters H. W. F. and C. to assist in finding the time of high water on any day. Tables are constructed from observations at the principal ports for finding the correction for semi-monthly inequality due to the moon's age. Thus at New York the Corrected Establishment, or mean of the lunitidal intervals, is about 8h. 13m.; its least and greatest values are 7h. 52m. and 8h. 35m.

The time and height of the tides for each day of the year for all principal ports on this coast are predicted and published annually as "Tide Tables for the Atlantic Coast," and can generally be obtained a year in advance.

It would be interesting to study more closely the beautiful details of the charts displayed this evening, the various lines of soundings and the curves for 10 fathoms, 100 fathoms, etc., together with the many minor references which render these aids to the navigator so indispensable; and also to review the auxiliary charts, the wind charts, the magnetic, current, weather and pilot charts, each with its own special use, but the late hour will not allow of this. Perhaps enough has been said to show that the ordinary chart is far more than a homely though useful aid to the mariner, and to induce and direct a more extended study of the subject, in which case the end of the speaker will have been accomplished.

After the lecture a vote of thanks to Lieut.-Commander Chenery was moved and carried unanimously, after which a luncheon was served, the meeting breaking up at midnight. The next lecture, on Navigation, by Lieut. T. C. McLean, U. S. N., will be given on Dec. 10.

PLAIN TALK FROM A BRITISH YACHTSMAN.

WE have alluded lately to the many absurd excuses and suggestions that have appeared abroad after Thistle's defeat, excuses that can only do harm by hiding and distorting the true facts and giving prominence to conclusions which are entirely misleading. The following comments on the same subject are written by one who is fully competent both as an old and experienced yachtsman and a close observer of yachting in America for the past three years, to deal with the subject, Mr. J. Beavor Webb. Mr. Webb's accounts of the late races were by far the most correct and impartial that have appeared abroad, and if he deals out some hard facts he is rendering an important service to his fellow countrymen in disabusing their minds of some totally erroneous notions. The conditions of the problem before British yachtsmen may be stated thus: Given two yachts as fairly matched in allowance as the three on each side in the late races have been, to take the keel boat faster to windward in light to strong topsail breezes than her centerboard rival. All talk about results under a measurement that puts fictitious values on both boats; about the beauties of four-sided courses and all abuse of the new American boats as skimming dishes can operate in but one way—to keep the Cup on this side of the Atlantic. Mr. Webb writes as follows to the editor of the *Field*:

Your issue of Oct. 8 contains several letters from correspondents on the subject of the America's cup races, and as these letters are full of errors and mistaken ideas on the American centerboard type of the present day, I trust you will allow me, in common fairness to American yachtsmen—than whom no better or more honorable sportsmen exist—to correct these errors and mistaken ideas.

Mr. Gainsford says that American yachts are not, under fair conditions, as fast as English yachts. This, after the Thistle races, appears to me to be a strange statement, as, even under Y. R. A. rules, Volunteer would have won. The same gentleman says that in three out of the six races the English yacht would have won. No, sir, she would not. Genesta would have won in one case only, Galatea and Thistle in none; thus the Americans, under English rules, would have scored five out of six races.

As to centerboards going outside the Solent, this is nonsense. Volunteer could keep the sea as long as Thistle. He says English yachts are ships, etc. So are the American centerboards of the present day. He asks why Americans do not send a centerboard over. In reply, let me tell Mr. Gainsford that they will send heaps of them over when we take the Cup from them; until we do this, they cannot be expected to do so. Also, I would ask Mr. Gainsford if he does not remember that Mayflower offered to go over and take up the Arrow's challenge, and if he has read the Y. R. A. rule as to centerboards.

Sir Edward Sullivan is wrong if he thinks that Thistle sailed on her side. She is some three degrees stiffer than Volunteer, and neither sailed on her side. Two of your correspondents snarl as to the Americans being 'cute. Why should they not be so? Are not we 'cute also; and, if not, why? What is the harm of it? The only 'cute thing I can see they can be said to have done is to increase the depth of their boats; but "'cute" does not appear to me to be the word for such an improvement.

Mr. Bayley says that "Thistle ran her antagonist," etc. How can he make this out? I saw the race, and yet I did not see that. The first day on the run she brought up the wind, and was not hampered by the steamers as Volunteer was; and on the second day she gained in time from the same cause, but not in distance.

* * * * * * * * *

In conclusion, sir, I would ask you if it is judicious that so many complaints, excuses, etc., should be made about the Thistle races; it cannot promote that good feeling between the yachtsmen of both countries cemented by the conduct of such men as Sir Richard Sutton and Lieut. Henn, neither of whom made any excuse whatever, but acknowledged at once "that they did not win because the American boat was too fast." I think all yachting men should repudiate such talk as there has been of a "square course," when the world knows that every Englishman, from the time that the old York Club was established, has clamored for 20 miles to windward and return. Yes sir, that is the only "square course" an Englishman wants; if he cannot win on such a course, let him lose is all I can say. General Paine's words, when asked what he thought of a "square course," namely, "that 20 miles to windward and back were good enough for him," are, I think, most happy, and thoroughly show the sportsmanlike feeling of that justly famous yachtsman. J. BEAVOR WEBB.

45 BROADWAY, New York, Oct. 21,

The following letter, commenting on the above, appeared in the *Field* of Nov. 12:

SIR—I read in last Saturday's *Field* a very sensible letter from Mr. J. B. Webb. The great bulk of the statements therein I cordially indorse; but to the final paragraph I venture to take some exception. Mr. Webb there conveys the impression that, while Sir Richard Sutton and Lieut. Henn acknowledged at once "they did not win because the American boat was too fast," those connected with the Thistle were not equally candid, but seem to think they should be held responsible for those "complaints, excuses, etc.," which have been made about the Thistle races. Now, whatever "complaints and excuses" have been made—and there have certainly been more than enough—no one of these has emanated from any one connected with the Thistle. Speaking at the New York Y. C., at the American Y. C., and to the representatives of the press in America, Mr. Bell, in the most distinct manner, stated that the reason we did not win was because we did not sail fast enough. Further, when asked if he would challenge Volunteer on an all-round course, he refused, saying that "Gen. Paine well deserved to wear his laurels undisturbed," as he most certainly did. When, however, the race at Larchmont was spoken of, and Volunteer named as one of the entrants, Mr. Bell was willing to enter Thistle, and he, in common surely with every yachtsman on both sides of the Atlantic, regretted the race fell through—not, I take it, from any hope of reversing the verdict of the Cup races, but because it would have been exceeding interesting to see how the boats would perform on an ordinary regatta course.

For myself, let me say here once and for all that I am perfectly satisfied Volunteer is the faster boat on *the* crucial point of sailing—viz., turning to windward; running and reaching I can say nothing about, and I do not think any one else can, as the two boats, when on these points of sailing, were much too far apart for any correct estimate of the speed to be made. The races were conducted with perfect fairness, and though the steamers bothered us very much the first day, I feel certain had the American boat been in the same position they would, in their eagerness to keep the leader in sight, have done just the same to her. I indorse what Mr. Webb says of the sportsmanlike feelings of American yachtsmen, and would add further that they form the kindest and most hospitable brotherhood in a nation which is proverbial for hospitality.

In conclusion, I would express my very great regret that, from the prohibitive terms of the new deed of gift, the Volunteer-Thistle races seem likely to be the last of a series of most interesting contests—contests which, while encouraging the sport of yachting, have done even more to cement the friendship between the two nations. G. L. WATSON.

GLASGOW, Nov. 9.

THE DEED OF GIFT.

THE cable brings the news that at a meeting of the Royal Clyde Y. C. in Glasgow, on Nov. 16, it was resolved to withdraw the challenge for a race next year, on the ground that the new conditions were unfair and unsportsmanlike. The notice of challenge alluded to was lately received by the New York Y. C., and reads as follows:

Mr. John H. Bird, Secretary New York Y. C., New York:

DEAR SIR—On behalf of Mr. Charles Sweet, a member of this club, and in confirmation of his cable of the 26th inst., hereto annexed, I beg to give notice of a challenge by Mr. Sweet, under the flag of this club, to sail a match for the America's Cup next season with a cutter 69 to 70ft. on the waterline.

Mr. Sweet, as you are aware, is at present residing in New York, and will attend personally to further formalities of the challenge.

I remain, dear sir, yours truly, WILLIAM YORKE,
Secretary Royal Clyde Y. C.

No. 150 HOPE STREET, Glasgow, Oct. 29, 1887.

As far as Mr. Sweet and the R. C. Y. C. are concerned the racing is at an end, but there is now a prospect of a challenge from a narrow cutter of 90ft. As the report of such a challenge preceded the publication of the new deed in England, it is not improbable that a careful reading of the latter may lead to a reconsideration of the rash scheme when all the conditions are understood. The last issue of the *Field*, just to hand, contains the following forcible criticism of the deed, the text of which is also given:

"In January, 1882, the club by resolution declared that 'the conditions made so many years ago were, under existing circumstances, inadequate to meet the intentions of the donors, and too onerous upon the club in possession, which has to defend it against all challengers.' The Cup was thereupon reassigned to one of the original donors (the others being dead), and new conditions drawn, which enjoined that the challenging yacht must proceed on her own bottom to the port at which the match is to be sailed. It was also declared that the challenged party need not name their yacht until the hour appointed for the start. We have not the least doubt that it was wholly illegal to change the conditions; and if the New York Y. C. does not revert to the original deed, it will be competent for any club which may in future hold the Cup to do so. However, it is very unlikely that any club who may hereafter hold the Cup would do so, as the new programme is much in favor of the challenged party. To demand all the particulars now enumerated in the conditions is pretty much like sitting down to play écarté with a man and asking him to show his hand every deal before leading. It really sounds like a farce to request a man ten months beforehand to give the length and breadth on the waterline, and draft of water of his yacht, and bind him down not to exceed them. Why, his yacht might have become an obsolete construction in ten months, and, at any rate, the challenged party would have found out enough about her to be able to construct a vessel which would cause her defeat to become a matter of absolute certainty.

"There is no doubt that a great deal too much was made of the fact that Thistle's waterline length exceeded what it was originally intended to be, and the new conditions will only bring such unavoidable discrepancies into greater prominence; and, moreover, be fruitful sources of law suits now that the conditions have got into the hands of the lawyers to manipulate. How is it possible for a man to give exact information as to the beam on the waterline and the draft of water of his vessel ten months before she is in the water, unless, indeed, he does not challenge until his vessel has been launched and tried; and then, as said before, by the time the match is sailed his yacht might have become quite an obsolete structure?

"We think it is much to be regretted that the New York Y. C. have been led to recast the conditions in a sort of panic, especially as the new terms show such a regrettable absence of sportsmanlike instinct, and fix the destiny of the Cup, if it is ever competed for again, on legal quibbles. However, we think it extremely unlikely that any one will challenge for it under the present conditions, and it will probably relapse into its original obscurity."

Mr. Watson's opinion, given in his letter elsewhere, is just as decided in condemnation of the "prohibitive terms" laid down by the committee.

As the new deed becomes more thoroughly read and discussed in this country, and its many salient points are brought out, the stronger are the expressions of disapproval among yachtsmen. Even imputing none but the best intentions and the fairest of motives to the few men who have taken upon themselves to act for a club of five hundred in the matter of the most vital importance, and to lay down fixed conditions that shall govern yacht designing and racing for all time, it must be said that the result of their ambitious attempt is the most stupendous piece of blundering yet known to yacht racing.

To take but two instances; it now seems that the committee were innocent enough to believe that in abolishing time allowance and laying down a length limit they were cutting the Gordian knot and really doing away with all rules and complications, instead of laying down a rule in direct opposition to that now on the club's books. The idea really was, absurd as it may seem, that by inserting the words "without time allowance" the whole difficult matter was readily disposed of, while the fact that they were putting a premium on racing machines never dawned on these

WHICH WILL YOU HAVE?

Editor Forest and Stream:

It would seem of but trifling weight, in view of recent events, whether Volunteer and Thistle are called cutters or sloops. Their rig is practically identical, each type having borrowed something from the other, until, so far as their rig goes, it appears that perfection is nearly reached.

The vital question is why does Volunteer show such a very decided superiority in windward work and staunchness over Thistle?

Regarded from a purely artistic point of view, Thistle is perhaps the most beautiful and fairest piece of naval designing ever seen in our waters, and the man who could produce such a work deserves something other than bitter disappointment. Yet, she has been very badly beaten, and not only this, but everything indicates that in heavy weather her defeat would have been far more thorough, for on last Friday it must have been evident to even the most prejudiced adherent to heavy displacement that Thistle was sailing in the weather that best suited her, while Volunteer just rollicked along, making mere play of what to Thistle was a tough struggle for that which was way beyond her power of reaching.

Here we have two boats of same length and rig. For the purpose of argument we will call one a cutter, the other a sloop.

The first has lines as beautiful as the eye or brain can imagine. She draws about 14ft. of water, and her ballast is, say, 13ft. below her waterline. Her beam is 20ft., and the admirers of her type have, fortunately, in advance indorsed her as a perfect sample of what a cutter ought to be, when the designer is untrammeled by any restrictions whatever.

On the other hand is a sloop, 8ft. wider, of 4ft. less draft, and with her ballast 4ft. nearer the level of her waterline. But the radical difference between the two is, that the sloop has a centerboard and immense buoyancy, lifting power, in a bilge close to the water's surface. And, my deluded cutter friends, it was simply exhilarating to see the way in which that high bilge and that big centerboard were lifting her out to windward on every surge, while the cutter was hopelessly sagging a-lee, and not going through the water so fast as the sloop either.

I hear that the thorough little yachtswoman, Mrs. Bell, honestly admitted that "the centerboard did it."

Gentlemen, will you be as candid as this lady?

Thistle has done all that is in her to do. Volunteer has not. Give the latter her large mainsail, and in the weather of last Friday she will beat Thistle three-quarters of an hour over the same course. THOMAS CLAPHAM.

ROSLYN, L. I., Oct. 2.

[Volunteer did carry her largest mainsail, but the old boom, in both races. Our correspondent is probably in error as to the difference in draft of the two, the figures being approximately 13 and 10½ft., instead of 14 and 10.]

FRAME IT BROADLY.

Editor Forest and Stream:

Allow me to indorse the sentiments expressed in your last issue relative to the proposed revision of the deed of gift. The writer is one of the many who have been hoping that the N. Y. Y. C. would take some action in the adoption of amendments such as you suggest. I trust the near future will see them in force and that the new rules will be broadly framed with a view to the best interests of yachting.

An open course for a seagoing vessel should be one of the conditions. The experience of the past three years is almost a guarantee that one of the changes made will be in this particular, and for such let us be thankful. An annual parade may be a good thing in its way, but the occasion of an important match should place it in the background.

The third count you offer might be amended to state that the sailing rules under which the Cup is now sailed for shall at all times govern contests for it. They are fair enough for any one and should another club win the Cup why not hold it subject to the same sailing rules as those under which it was won. Should time and experience make it advisable for the N. Y. Y. C. to alter these rules while the Cup was in custody of another club, allow a proviso that the revised rules may be accepted subject to the consent of the club holding it.

The fourth count I cannot accept as it now reads. In making the waterline length an essential an injustice may be done a challenger. No one will deny that had Volunteer not turned out as good as she was when first tried, alterations in her sail and trim would have been made without regard to measurements, and every expedient would have been resorted to in order to improve her. To compel a challenger to sail on a fixed waterline is to debar him from this privilege, and his vessel might not appear at her best. The idea you offered two weeks ago is a vast improvement, namely that classification is a better guarantee of fair play. Let the deed of gift name various classes and rigs, as 1st, 2d, 3d, etc., of given waterline lengths, within which the possessor of the Cup may be tested, the challenger to elect in which class he will race, the challenged guaranteeing to meet him with a vessel of the same class, and I think the difficulty would be done away with. Each party could experiment at will within the class limits, no hindrance to any chances of victory would intervene, equal privileges would be given to both, a fair field afforded and no favor asked. SPERA.

THE SIZE OF CUP CHALLENGERS.

Editor Forest and Stream:

In a late issue, speaking of the beating of centerboards, you say, "Given unlimited draft and the thing can be done." Soon after the races Mr. Burgess was reported as saying that he did not see how keel boats, unless given greater draft than they had been given so far, could compete with centerboards to windward, or words to that effect. If enough draft cannot be had in the first class, why risk another defeat there, but why not try the second or third classes, where enough draft can be had? The FOREST AND STREAM has given many reasons for having the Cup races in the second class, which seem to apply with more force to the third. In this class a boat of the Pappoose type might be built, with plenty of beam, draft, ballast and sail on a moderate weight. What such craft can do has been shown by the wonderful beatings which the Pappoose, sailed by an amateur, has given the fastest centerboards in Eastern waters, sailed by an expert. A boat of this type, of about 50ft. waterline, would probably be just over 30 Y. R. A. tons and might draw 11ft.

Cannot the challenger build to any class they wish over 30 tons and would not the defender probably be of the same waterline as the challenger? STERNPOST.

BOSTON, Oct. 11.

[It has never been decided that a challenging yacht will be matched only by a defender of her own length, and it is at least possible that if a second class yacht were sent out she would be met with Volunteer, in spite of her size. The third class yacht proposed above would be too small, the limit being 30 tons, Custom House measurement, not Y. R. A. It is probable that in view of the success of the Puritan, Mayflower and Volunteer in the large class, the holders of the Cup will prefer to retain the competition in this class, and that a challenger building a smaller yacht will have to take the risk of being matched against a large one.]

SPEEDWELL.—Mr. Henry Bryant has selected this name for his new schooner yacht, now building by Smith at South Boston, from the owner's designs. It will be remembered that the Speedwell was the first vessel from England after the Mayflower. The new yacht will be 107ft. over all, 90ft. l.w.l., 23ft. 6in. beam, 13ft. draft. The freeboard at bow will be 9ft. 6in., and least freeboard 3ft. 11in. The ballast will be 55 tons, of which 35 will be on her keel. The mainmast will be 63ft. deck to hounds, topmast 31ft. above cap, mastheads 9ft., main boom 65ft., gaff 37ft., bowsprit, outboard, 36ft. The frames will be of oak, double spaced 22in., and the planking of 3in. yellow pine, with garboards and two strakes above of oak. The yacht is intended solely for cruising.

DEATH OF LADY BRASSEY.—This lady, the wife of Sir Thomas Brassey, so well known to yachtsmen through her interesting books, the "Cruise of the Sunbeam," "Sunshine and Storm in the East," and other yachting cruises, died on board the Sunbeam on Sept. 14, and was buried at sea. The yacht was then on a voyage from Australia to England. Lady Brassey was a most enthusiastic sailor and had visited nearly all parts of the world in the Sunbeam.

THE "BURGESS" FISHERMAN.—This new craft, which will be set afloat in a few weeks, will differ in many respects from the old fishing schooners. She will have steel wire shrouds in place of iron, a single round stick for a bowsprit, with one jib, spreaders to the bowsprit shrouds, quarterlifts on the main boom, and a double mainsheet. The keel is also double the depth of the old boats.

CHALLENGES FOR THE CUP.—In addition to Mr. Sweet's notice of a challenge it is reported that Mr. John Jameson, of Dublin, owner of Irex and formerly of Samoena, has sent to the New York Y. C. a notice of a challenge. Nothing further is reported in relation to a challenge from Nova Scotia.

THE LEWIS TENT VENTILATOR.

THE "LITERARY WORLD" says of Kunhardt's "Steam Yachts": "Now that the yacht races are over and the yachting season is drawing to a close, the practical yachtsman, whether he owns a sailing vessel or belongs to the already large and rapidly growing class of steam yachtsmen, is beginning to make his plans for next season. The latter class particularly will be interested in this new book just published by the Forest and Stream Publishing Company. It is, to the best of our knowledge, the only practical work on steam yachts that will be comprehended by the beginner, and at the same time hold the attention and teach something new to the oldest veteran in the art of constructing and managing a marine engine, and of building a hull for it to propel."

TUCKUPS.—In answer to the inquiries as to these boats a correspondent sends the address of James Wignall, opposite Cramp's dry dock, Philadelphia, as a reliable builder. In sailing free the peak is dropped 2 or 3in., and one man is stationed to tend topping lift, which is double. He sets up as the boat rolls so as to keep the boom out of the water, at the same time being careful not to raise the boom too high or it is apt to lift and allow the sail to wrap around the mast, making what tuckup sailors term a "gafftopsail."

JULIA.—This steel schooner building for Mr. C. W. Chapin, will be launched at Harlan & Hollingsworth's yard, Wilmington, at 5 P. M. on Saturday. About 45 tons of her lead has been cast in the trough keel while on the stocks.

A NEW STEAM YACHT.—Mr. Henry Piepgrass has lately completed a design for a large seagoing steam yacht for Messrs. Woodward and Stillman, who will sell their present yacht, Wanda.

GRAYLING.—The new railway at Lawley's will be completed shortly and Grayling will be the first vessel hauled on it. Her tanks and ballast have been removed and she now lies at Lawley's.

SHAMROCK.—Mr. Maxwell's yacht was out on Mumm's ways last week for more lead, 5 tons, on keel, increasing her draft about 6in.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. J. B., Saratoga, Cal.—See our advertising columns.

F. L. R.—Do not use shot in the rifle. The Lyman sight is the best.

C. D., Freeland, Pa.—There are hotels at Milford, and you can find guides there.

B. F. M.—Use a cast net or dip net. Write to any one of the fishing tackle dealers, and they will furnish what you need.

M. O., Carrollton, O.—Go to some of the stations on the Detroit, Mackinac & Marquette Railroad, in vicinity of Munising or Ishpenning.

P. D.—How much does a bullet rise, with the usual charge of powder and lead, at Creedmoor at a 1,000yds. distance? Ans. About 35ft.

O. H.—There is a wide diversity of tastes, as shown by extended discussions in our gun columns. Something about .40cal. will give satisfaction; and you may decide for yourself whether to have a repeater or a single shot arm.

G. W. R., Yale University.—1. Stalking and still-hunting are synonymous. 2. The English and the European partridge and the American quail are distinct. 3. Elk and wapiti are different names applied to the same animal, *Cervus canadensis*.

F. W. G., New York.—Will you kindly give me the names of some of our swiftest swimming fish, such as trout, black bass, etc.? Ans. We know of no data to base any estimate of the speed of fishes on. The lobster can move about as rapidly as anything in the water.

C. R. V., Penn Yan.—The dimensions of the Creedmoor (National Rifle Association) targets: First Class, up to and including 300yds.—Bullseye, circular, 8in. diam.; center, circular, 20in.; inner, circular, 46in.; outer, remainder of target. 2. Second Class, to be used at all distances over 300 to and including 600yds.; target 6×6ft.—Bullseye, circular, 22in. diam.; center, circular, 38in.; inner, circular, 54in.; outer, remainder of target. 3. First Class, to be used at all distances over 600yds.; target 6×12ft.—Bullseye, circular, 36in. diam.; center, circular, 54in.; inner, square, 6×6ft.; outer, remainder of target. The count and circles of the Massachusetts decimal and the standard targets are:

Count	Mass. Decimal. diam. of circles.	Standard.
10	3 in.	3.36in.
9	5¾in.	5.54in.

Persons residing in the Central Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

THE LEWIS TENT VENTILATOR.

THIS new device, invented by Patrick Lewis, of Quebec, Canada, has been brought to our notice by J. U. Gregory, Esq., of that city, well known to our readers as a sportsman; and he sends us the accompanying printed description of the new device, as seen by a reporter at the Provincial Exhibition: "Those who from necessity or pleasure have used tents have had a realizing sense of the trouble, discomfort and often worse which this inexpensive invention is designed to obviate. There is nothing more disagreeable and frequently more dangerous to the health in tent life than for the inmates to have to turn out in stormy weather or in the dead of a cold rainy night to slacken the halliards of their canvas abode. This job, as every camper-out knows, is anything but a pleasant one; but it cannot be shirked. At least such has hitherto been the general experience. All the tightening, slacking or readjusting have had to be done from the outside and, as already said, only too often under conditions as to weather which make the duty a pain, if not a danger. By means of Mr. Lewis's simple contrivance, however, all this may be done away with in the future without moving out of the tent, without touching a single rope, the inmates can at any moment tighten or slacken the canvas from the interior. This desideratum is effected by the tent pole, which is made in two sections, telescoping into each other and carrying a screw and nut, by means of which the pole can be raised or lowered and the canvas tightened or loosened as required. It is needless to point out to *connoisseurs* the immense advantages of this improvement, and we therefore say no more on the subject except to invite personal inspection of it in actual operation. By this admirable invention Mr. Lewis also realizes another great desideratum of tent life, namely, thorough ventilation without exposing the inmates to discomforts attending the present unsatisfactory modes of ventilation. By means of his simple contrivance, which consists of two movable hoods that can be wholly or partially opened or closed from the interior of the tents, the most complete circulation of fresh air is secured, the exterior hood also acting as an awning to exclude sun or rain, and as windows to shoot from or to supply a view of the surroundings. Both these important inventions are adjustable to any form of tent, and certainly deserve the widest adoption.

"If the halliards of a tent slacken or if the canvas becomes loose, the tightening and readjusting have hitherto been done from the outside. In stormy weather or on a cold rainy night, it is far from pleasant to have to turn out and expose yourself to the weather while slacking the halliards of the tent. The tent pole shown in cut furnishes the means of tightening or slacking the tent from the interior. The upper section of the pole telescopes into the lower, carries a screw and by means of a nut bearing on the top of the lower section of the pole it can be raised or lowered as required. A jointed handle is pivoted to the nut and is held by a spring in a position at right angles to the pole or parallel with it. This keeps it stationary in either the working position or out of the way as desired.

"The ventilator consists of two movable hoods that can be opened or closed from the interior of the tent. The inner one by an endless cord can be opened or shut or kept partially opened as desired, while the exterior hood acts as an awning to exclude the sun or rain. With this ventilator occupants of the tent may smoke without giving offense, as there is always a current of fresh air. When cold the ventilator can be entirely closed.

THE SHOT BARRELS ARE FINE DAMASCUS.

Charles Daly Hammerless.

As an evidence of the worth and increasing popularity of this "Best of the Hammerless," the sales this spring have been nearly double those of any former spring season. Alongside of any other make, costing 50 per cent. more, they excel in every respect. Especially in the remarkable close hitting and consequent solidity and lasting quality, and long-distance shooting. Here is a letter from one of the best shots in the South, who, like hundreds of others, believes the Daly is the ONLY gun:

WASHINGTON, D. C., June 13, 1887.

MR. WM. WAGNER, Agent Daly Shotgun.—DEAR SIR: I have been constantly using the Daly Breechloading Shotgun that I bought of you nine years ago—to my great satisfaction and pleasure—and I now desire to add my testimony to the hundreds who are already on record as being partial to this deservedly popular make of gun. Its construction, make-up and finish is of the highest order of workmanship and good form. It is a strong and reliable shooter, carries long distance charges without strain or recoil, targets beautifully, and may be implicitly depended upon under all circumstances and conditions, and I am free to say that thirty years' experience with the shotgun confirms me in the belief that it is the best gun in the market to-day, and I so recommend it to my friends.—Yours truly, W. H. HOCKE.

Manhattan Hammerless.

12-Gauge, $75.00. 10-Gauge, $75.00.

Thoroughly well made, fine quality, Damascus barrels, shooting unsurpassed. The best hammerless for the money. It is not a cheap made gun, but elegantly made and beautifully finished at a low price.

A NOTABLE ART ENTERPRISE

The Sportsman's Reverie.

A SERIES OF PICTURES FOR SPORTSMEN.

READERS of the FOREST AND STREAM cannot fail to recollect Mr. Thomas F. Watson's poem entitled, "The Sportsman's Reverie," printed in this journal about two years ago. Later on a few stanzas were added to cover other scenes of typical American sport with the gun. The author depicted vividly the varied visions which come before the view of the veteran sportsman as he sits in easy chair before the fire. Of the author and his poem the *Detroit Free Press* said in an appreciative notice: "The author is evidently a man of the most acute sportsmanly enthusiasm, as well as of nice literary taste. His poem is built upon a very simple plan. Before a cheerful fire—like Ike Marvel's hero—sits a veteran of rod and gun; he grows half drowsy over pipe and fire and the poet has caught—with a nice and sensitive appreciation—the reminiscences of a hundred hunts which flit through his brain. One experience after another is described with graceful pen touches; the quail, the woodcock, the snipe, the deer, fall before the crack of the gun; a long day's sport—a glorious day such as no man ever compassed between sun and sun—is described, even the trout, from the clear rapid, paying tribute to the prowess of a dreamland sportsman, until at last, with the fall of the quiet night shadows, the sportsman draws his boat to the shore, his tired retriever crouches at his feet, and, with his ducks, the final trophies of his sport, at his side, he looks back over the darkening water; and then, once again at his fireside, the end of the vision comes naturally and gracefully."

And now these "word pictures" of the poet have been complemented with the actual canvas pictures of the painter. Artist-poet and poet-artist have united to give us the poem in a magnificent setting. Mr. Robert Hopkin, the celebrated artist of Detroit, has painted a series of twelve pictures, each telling in color what the poem tells in words. From these paintings have been made superb heliotype engravings, each having beneath it the particular verse of the poem illustrated. The series is remarkable for strict adherence to nature fidelity in portraying action, and artistic merit.

THE TWELVE PICTURES:

No. 1 shows the hunter seated in an easy attitude in an arm chair, gazing reflectively into the fire on the hearth. Above the fireplace are the head and antlers of a deer. The sportsman's right arm is around the neck of his dog, which is resting on his haunches beside the chair. His left hand holds his pipe. The firelight flickers on the floor and around the legs of the chair.

No. 2 represents dawn breaking over a small lake. The night shades are fleeing. A mist is rising from the eastern end of the lake, of which trees fringe the edge. A plover is circling in the air, and in the foreground is a mallard lazily flying out over the glassy water.

No. 3 represents snipe shooting. In the foreground is the sportsman, his body twisted around to the left in the attitude of making a double on snipe. Standing beside him is the setter, waiting for the word to retrieve. To his right is the border of a wood, the branches bending to the strong wind. In the distance are the sails of craft on the lake.

No. 4—woodcock shooting—shows an opening in the copse around whose border a brook is winding. In the foreground, standing deep in the ferns and rank vegetation, is a setter on a point. Behind the dog is the sportsman in the attitude of shooting at a bird flying directly over him.

No. 5 shows a quail hunter in the foreground, walking along ready for the shot, which will follow the rise of the birds, on which the dog is drawing to a point. A haze is over all, and the sky is that of a day in Indian summer.

No. 6 depicts grouse or partridge shooting in the beech woods. The hunter is walking down a slope. The dog has come to a point ahead of him. The bird has flushed and the hunter is shown aiming. The pointer has stiffened into an attitude of strained attention, as he watches the bird fly away. Th upper part of the sportsman's body is in the shadow, the lower part in the strong light of the sun rays.

No. 7 shows an angler reeling in a trout. A brook is tumbling down through the woods and over the rocks into the pool. The sky is cloudy and the sunlight is struggling through.

No. 8—deer shooting—is a forest scene. In the foreground a buck, just shot, is falling on the edge of a lake. Tearing down the slope behind him are two hounds. To the left, behind the roots of an upturned tree, are seen the head and shoulders of the hunter, whose rifle is still bearing on the deer.

No. 9 represents shooting over decoys. A gale is blowing and the water of the channel outside is lashed into whitecaps. In the bay the decoys are tossing in the chopping waves. In the foreground is a point of rushes, in which the skiff of the hunter is partially concealed. The flock of ducks, which has just swung in outside the decoys, is broken by the discharge of the first barrel. One section is wheeling out over the river. The other has broken off to the side and is wheeling out again to meet the first section. Some scattered birds are dashing above the head of the hunter, and he is twisted around in his skiff aiming at a bird flying above and behind him.

No. 10 shows flight duck shooting. The scene is a marsh, on whose broken surface the sun is setting behind the clouds. In the foreground, on a grassy point, are the hunter and his spaniel. The hunter is in a kneeling attitude and in the act of firing his first barrel. The spaniel is plunging into the water to retrieve the bird which has fallen to the first barrel. In the distance are flying ducks.

Nos. 11 and 12 represent the hunter retiring from the marsh and at home, and these two are among the strongest of the set.

The pictures are printed on the best 150lb. plate paper; size of paper 24×30in.; size of print 14½×17½in. The pictures have the tint and tint border, and the artist's remarque and signature, and form artist's proofs, an édition de luxe.

PRICE, $30 FOR THE SET; SINGLE PICTURES, $3.

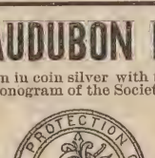
"SHOOTING."

The only English journal devoted exclusively to sport with gun and rifle is *Shooting*, edited by Sir Ralph P. Gallwey, Bart., author of the Badminton Library, and G. T. Teasdale-Buckell, Esq., who exported all the Llewellin setters to America and won the National Brace Stake and the Field Trial Derby four times each.



The most practical correspondence and the best selection of advertisements appear in *Shooting* weekly.

Few Americans ever heard the names of our best English gunmakers.

Price of *Shooting*, postpaid, $3.25 per annum. Send post office order to the Publisher, 182, Strand, London, England.

THE AUDUBON BADGE

Is a brooch pin in coin silver with the motto and monogram of the Society.

Chaste in design and tasteful in execution, it presents an attractive appearance, and is protected from tarnishing by a beautiful satin finish on its surface.

We are now in a position to execute orders for these badges to any extent. Wherever they have been sent they have met general approval, and every member of the Audubon Society should wear one as a reminder of the pledge and an open declaration of principles.

PRICE 50 CENTS, POSTAGE FREE.

Berkshire Prince (A.K.R. 5368).

BERKSHIRE KENNELS, Hinsdale, Mass.

Silver Shoe.

Imported pug dog; a grand sire. Weight 13lbs. **Stud Fee, $15.** (A.K.R. 3758). Pups for sale. CAPITOL CITY KENNELS, sep1,tf Lansing, Mich.

STUD MASTIFFS. SEASON OF 1887-88. Send for terms and pedigrees. C. C. RICHARDSON, Westfield, Mass. nov17,3mo

In the Stud.

BLEMTON KENNELS,

HEMPSTEAD, L. I.

Fox-Terriers at Stud

Champ. LUCIFER
(as in present)—Fee $30
From Oct. 1 to Dec. 31.
To a few approved bitches.
Sire, champion Splinter; dam, Kohinoor, winner of many cups and prizes in England.

BACCHANAL—Fee $20.
Winner of many prizes in America and England. Sire, ch. The Belgravian; dam, ch. Bedlamite.

RESOLUTE—Fee $15.
To a few approved bitches.
Sire, champ. Result; dam, champ. Diadem.

SENTINEL—Fee $15.
To a few approved bitches after Nov. 1. Sire, Bacchanal; dam, champion Safety. Winner of 1st, puppy class, Newport.

REGENT VOX—Fee $10.
Prize winner.
Sire, Tackler; dam, Sandy Vic.
Address GERMAN HOPKINS, tf Hempstead, L. I.

IN STUD.

Gath's Joy.

Having purchased Joy of Dr. J. N. Maclin, Keeling, Tenn., I offer his services to a few approved bitches. Fee $20. Joy is evenly marked black, white and tan Llewellin setter, is by champion Gath ex Gem, is litter brother to celebrated field trial winners Gath's Mark and Hope. He is a fine field animal, was broken by the well-known trainer D. E. Rose. To the owner of every bitch that is served I will present an elegant crayon of Gath's Joy. Address D. A. GOODWIN, JR., Newburyport, Mass.

PUGS FOR SALE. SEND FOR descriptive price list.
IN THE STUD.
Champion Bradford Ruby (E. 13,834)
CITY VIEW KENNELS, Box 1369, New Haven, Conn.

CRICKET.

Smallest prize pug stud dog in this country; weight 9½lbs. (A.K.R. 3230), in the stud. Pedigree and full particulars. HENRY C. BURDICK, 150 Bridge st., Springfield, Mass.

STUD.

WHITE ENGLISH BULL-TERRIER
YOUNG ROYAL PRINCE.....(A.K.R. 2102)
Weight 45lbs. Fee $15.
BARONET.....(A.K.R. 4480)
Weight 27lbs. Fee $15.
ROYAL DIAMOND.....(A.K.R. 4311)
White English terrier, weight 18lbs. Fee $15.
Pups by above dogs for sale. Address J. W. NEWMAN, 87 Hanover st., Boston, Mass.

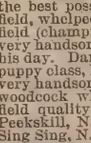
CASTLE ROCK SCOTCH COLLIE KENNELS

IN THE STUD.
BEN WYVIS (A. K. R. 3623), by Ben Nevis, ex Meg Merrilies. Fee, $15. Young dogs and puppies constantly on hand. Can be seen or address W. E. MUNSON, Branford, Conn.

The Kennel.

Choice Pups.

A few fine young



St. Bernards & Pugs

Now on sale. Also bitches in pup.
DUKE OF LANCASTER, YOUNG TOBY and **THUNDER at stud.** Catalogue on receipt of stamp.
CHEQUASSET KENNELS, Lancaster, Mass.

ST. BERNARDS.—ROUGH AND SMOOTHcoated of the best strains; ninety-two awards this spring. Orders booked for puppies sired by our champions Otho, (rough), Hector (smooth), out of prize winning bitches, imported and champion-bred. Grown dogs and bitches on sale, imported from Switzerland, winners of many prizes in America. THE HOSPICE KENNELS, K. E. HOPF, Proprietor, Arlington, N. J.

CLIFTON KENNEL.

The pointer kennel of America for field and bench stock, offer for sale pointers, thoroughly broken; pups by champion Graphic ex champion Clover, and some by Mainspring ex Lulu. Address with stamp CLIFTON KENNEL, 203 Summit avenue, Jersey City, N. J. sep15,tf

DOGS FOR SALE.

Newfoundlands, St. Bernards, Mastiffs, Setters, Pointers, Spaniels, Pugs, Yorkshire Skye, Scotch, Fox, Bull and Black and Tan Terriers, Bloodhounds, Beagles and Fox Hounds. Dogs and Pups at low prices.

B. MAUREE, 464 N. 9th, PHILAD'A., PA.

COHANNET KENNEL.—FOR SALE, A beautiful litter of blue blood puppies, by Phil Warwick (A.K.S.B.5,676) ex Kaydid (A.K.S.B. 5,746). Also broken and unbroken dogs, with full and guaranteed pedigree. W. E. JONES, oct13,tf Easton, Mass.

Very Choice Irish Puppies.

For Sale—Several Irish red setter puppies of the best possible breeding for either bench or field, whelped Sept. 30, 1887. Sire imported Sarsfield (champion Garryowen ex Currer Belle II.), very handsome and one of the best field dogs of his day. Dam, Red Belle (Glencho ex Tara), 2d, puppy class, New York, 1887. Belle has matured very handsome, and did some elegant work on woodcock when in whelp. As to beauty and field quality of Belle, I refer to W. H. Pierce, Peekskill, N. Y. Address J. H. HITCHCOCK, Sing Sing, N. Y. nov17,2t

YOUR CHOICE OF HANDSOME LOT OF Llewellin setter puppies, dog or bitch, while I am rebuilding kennel, for $10. Field trial and bench show stock. Address with stamp CHAS. YORK, 9 & 11 Granite Block, Bangor, Me.

CHAMPHON BLACK PETE COCKERS, AGE 4 mos.; Newfoundland and Great Danes. Inclose stamp. H. D. BROWN, Waterbury, Vt. nov17,10t

FOREST AND STREAM

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, DECEMBER 1, 1887.

VOL. XXIX.—No. 19. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

THE AMERICA'S CUP.

THE present time is always the dead period of the year in yachting. The excitement of the fall races is over, the fleet is laid up, and a reaction sets in as men return to the business and social duties of the winter, which were suspended during the sailing season. It is too soon for even a careful survey of the season just closed, and there has not yet been time for the consideration of plans for the following year. As all builders and designers know, the present is the season of least activity, and it is not until the holidays are past that new work is begun in earnest. However, it is precisely this period of rest and deliberation after a season's racing which the members of the New York Yacht Club, who hold in their hands the destinies of the America's Cup, have selected as the time when a challenger must do all the serious work of designing, and must determine exactly the yacht he will build. The challenge must leave the other side within a week, or it will be too late to insure a race within the season laid down, that is, prior to Nov. 1. If it were only a challenge that was required, the requirement would be partial and unfair enough; but further, the owner and designer must decide every important element of the proposed yacht, beyond a possibility of subsequent changes, and must place information of the principal ones in the hands of their opponents.

Just why the New York Yacht Club omitted to place the amount of ballast and length of spars with the other requirements in the deed of gift is not clear. Certainly it was from no false notions of modesty or fair dealing; but it was probably an oversight, due to the extreme haste with which the whole matter was hurried through. The three great factors in design at present are dimensions of hull, weight of ballast, and area of sail, each being approximately equal in value; and as a matter of principle, if the club has any right to demand one, it has the same right to demand the others as well. Bad as it is to demand that the other side shall show its hand to the defenders while they work in the dark, the case is still worse when it compels the former to crowd all the work of designing into the short time between the close of the eason and the early part of December, a period of one month. Of old the matter would not have been so serious; a design might then have been prepared some time in advance; but in these times it would take a very wise man to say in midsummer what style of boat he would design in the following winter.

The practical operation of the deed is about what its framers evidently desired, the peaceful, if inglorious possession of the America's Cup. If no challenge be received within a very short time the lists are closed for the following season, and for a period of a year at least the New York Yacht Club can hold the Cup, undisturbed by visions of foreign challengers. Ten months before Oct. 15 would be Dec. 15; let that date pass and no race is possible before the season of 1889.

Of course the club has the power to waive the limit, and in view of the widespread disfavor with which the new deed has been received by the body of the club, as well as by other American yachtsmen; and the fact that even the men who drew the new deed realize that they have gone too far and placed the club in a very serious position; it is not unlikely that a challenge later on would receive attention. Before relying on this, however, it will be well for intending challengers to remember the treatment others have had in the past, and that while they may receive a courteous acceptance of the challenge, they need not be surprised to receive a printed copy of the new deed of gift, and a curt intimation that their challenge is not in due form.

THE FUTURE OF THE PARK.

IN THE forthcoming report of the Secretary of the Interior it is probable that, while commending the zeal and energy shown by Capt. Harris in enforcing the Yellowstone Park regulations, the Secretary will strongly renew the recommendation made in a former report that the Park be placed in charge of a specially appointed superintendent and assistants. The ground taken by the Secretary will naturally be that it is inconsistent with the purposes of Congress, as expressed in existing law, for the Department to be obliged to resort to military assistance in the care of this reservation, save in cases of emergency.

The Secretary will urge the adoption of the bill (S. 2436) which passed the Senate by a large majority at the last session of Congress providing for a civil government of the Park; the number of assistant superintendents to be increased from ten to fifteen. If, however, Congress should direct that the present arrangement shall continue, it is recommended that in addition to the military force, there should be employed fifteen experienced mountaineers to serve as special police, with power of deputy marshals, having the power of arrest, and to be selected and controlled by the military commander. These men should be chosen because of their familiarity with the Park, and should serve in the capacity of scouts.

Special stress will be laid upon the urgent necessity of speedily amending the present inadequate law providing for the punishment of offenses committed in the Park. As things are now the only penalty for infraction of Park regulations is expulsion and confiscation of hunting equipment. Clearly, as travel to the reservation increases, and as game in the adjacent country is thinned out, more stringent measures must be provided, both for the protection of visitors and for conserving the game. If adequate remedial legislation is not adopted at an early day there will be nothing left in the reservation which a law and its machinery would care for. In other words, it will be an exhibition on a national scale of locking the stable door after the horse has been stolen.

It is probable, also, that the Secretary will direct attention to the necessity of a survey to accurately determine and mark the boundary lines of the Park, in order that settlers may not unwittingly encroach upon the reservation, and that game hunters should have no advantage of a disputed territory. In defining anew the boundaries, additions should be made on the east and the south, more fully to carry out one of the main purposes of the Park as a preserve for the large game of the country. The proposed enlargement would take in an area of high mountains, unfit for agriculture, and having no mineral deposits.

IF the law against importation of contract labor applies to musicians and clergymen, why will it not prevent the importation of game-keepers, whippers-in, kennelmen, and all the other employees who are coming over from England to fill engagements in this country?

NOTES AND COMMENTS.

A VERY important decision has just been rendered by the Full Bench of the Supreme Court of Massachusetts, in answer to an appeal from certain parties in Rockland who have been complained of under the Cruelty to Animals act, for letting loose a fox that had been reared in confinement, and then attempting to "ride to hounds" after him. The Society for the Prevention of Cruelty to Animals was at the bottom of the prosecution, aided by prominent citizens of the town where the alleged act of cruelty was committed. The would-be hunters were easily convicted in the lower courts, but they appealed; their appeal setting forth that the fox is a "noxious vermin," and hence falls under another form of the law, permitting his destruction, without defining the means. Judge Devins, in rendering the decision, rules that the fox is an animal, and hence must fall under the protection of the statute preventing acts of cruelty. This decision has been received with a good deal of displeasure by a number of young gentlemen of prominence, either English or affecting to be English, who have been to a great deal of expense in trying to render the sport of fox hunting with hounds and horses popular in Massachusetts. They have imported some remarkably fine packs of hounds, with whippers-in and all the paraphernalia of regular English fox hunts. Now the Supreme Court has decided that the hunters are punishable under the act for the prevention of cruelty to animals.

The West is advancing toward an appreciation of the economic value of wild game and the necessity of caring for the supply. The latest indication of this increased interest is shown in a very substantial way. The United States Express Co. and the American Express Co. have issued a general order to their agents forbidding them to handle game unlawfully offered for shipment out of Indiana, Michigan, Wisconsin, Minnesota, Iowa and Dakota. The companies recognize the spirit and intent of the law forbidding exportation, and they say to their agents plainly that the statutes must be respected to the letter. This is a great step. It cuts off the markets. If all express companies would follow this example the problem of game preservation would not be so difficult as it is now. Our reports from Michigan show that the wardens in that State are keeping a watchful eye on illicit game shipment, as several hunters from abroad have found to their cost.

Brevet Brig.-Gen. Randolph B. Marcy, who died at Orange, N. J., last week, had lived long enough to see a text book prepared by himself at the special instance of the War Department almost entirely superseded by the advance of the times. This was the "Prairie Traveler," a handbook for overland expeditions, written in 1858. It was famous in its day, and was consulted by pioneers setting out for the far West; but not one individual of the hundreds of thousands who go West now have any need of the book or knowledge of its existence; they study only the time-table of lightning express trains and hotel cars.

Township 35, in Washington county, Maine, must be a cheerful region to live in. It appears that hunters in the vicinity of Nicatous Lake have been hounding deer into that body of water and killing them there after the mode forbidden by law and reason. The still-hunters took things into their own hands and undertook to kill off the dogs. The hounders have registered a vow and duly proclaimed it, "If another hound is killed we will clean out every horse and ox in the township." It is quite clear that unless the hatchet is buried it will go hard with the wild and domestic brute population of Township 35.

A Paterson, New Jersey, ordinance requires all dogs to be registered, and exacts a fee of $2 per dog for the registry. The revenue derived from this source is $6,000 per year. Owners have recently endeavored to do away with this fee, urging that it amounts to a tax in disguise and is not therefore authorized by law. Judge Dixon, of the Supreme Court, last Tuesday decided that the ordinance is proper and the fee not excessive.

The meeting of the Massachusetts Association, in Boston, last week, was a good beginning in the new direction of effort planned by the members. The clause of the Massachusetts law permitting grouse snaring is iniquitous, and the clubs of the State should combine their forces this winter and take it from the statute books.

HUNTING IN FLORIDA IN 1874.—III.

MY return to Fred's camp was devoid of interest, except that my Cracker companion got out of tobacco from sharing with Tommy (who, in his turn, shared with all his picaninnies except the pappoose in the hammock), and soon became very cross, often putting his horse into a gallop and getting far ahead of me, it being almost impossible for me, with stick and spur, to urge my mule out of a slow trot. The second day he became insolent, and insisted finally upon breaking camp at 10 o'clock at night, to reach home at midnight, saying his horse would know the way home in the darkest night. Knowing what he might be if the lion within him was aroused I carefully avoided irritating him and let him have his own way. When about two miles from home he wanted me to let him have my pistol to fire off as a signal to his family that he was coming, pretending that he always did so when he returned home. Asking him why he did not use his own he said "mine spoke loudest." As I handed it to him with my left hand I cocked my double-barreled gun with my right and fell back a little into the darkness. He fired two shots in quick succession and said he would fire two more half a mile further on, and did so, and then returned me the pistol and somewhat relieved my anxiety. Just upon that, a year-old colt belonging to him galloped up, and though doing nothing out of the way, he commenced venting his spite upon it by filling the air with his curses. At length, determined to hurt something, he dismounted and commenced belaboring the colt with a large club, but in the darkness gave his own horse a thwack that sent him flying and landed his saddle-bags in the bushes. The faithful beast, however, returned at his call, and after a long search the saddle-bags were replaced, and we arrived at his cabin to find Fred all right in his tent, but greatly rejoiced at my return. I have no reason to think Mr. J. designed harm, but to this day his conduct is utterly unaccountable to me.

During my absence Fred tented alone, employing the first day in household matters, cleaning his gun, sharpening his hatchet and skinning-knives, shooting a couple of birds in the vicinity of the camp, trying his hand at baking bread in a borrowed Dutch owen, and retiring at sundown; but the wandering hogs so disturbed him he rose soon after midnight and built a rousing fire. This brought from the cabin a Mr. N., the eccentric character of the settlement, a squatter and bachelor, whose homestead, three miles distant in the woods, consisted of a mule cart, beneath which he slept in his blanket on the bare ground, and whose personal property comprised the one suit of clothes he wore and the mule I rode to the lake, with dilapidated saddle, bridle and saddle-bags. Lending a hand to the squatters occasionally, he earned a precarious subsistence, spending what little money he could get hold of for whiskey. Obeying the caution I had impressed upon me by Judge P., at my introduction to "Cracker" life, I carefully avoided inquiring into the antecedents of any one, but Mr. N. must have seen better days at some period of his life, for he would entertain us with Methodist songs from memory (as he could not read or write) by the hour together—the only recognition of christianity I found in all this benighted region. Though at least three-score-and-ten, he assured me he intended to marry ere long; and, when I interposed the objection of his want of a suitable lodging place, he quickly replied, "Any woman who didn't love him enough to sleep with him under his cart, wasn't worthy of him." My more extended acquaintance with "Crackers" of the feminine gender convinced me he would not find much trouble in pairing himself if he should seriously pop the question.

While I was absent a "Cracker" boy stimulated Fred's gastronomic propensities by the offer of some eggs, which luxury called to mind the sugar syrup in the bottom of Five-Mile Creek. The temptation to try for it was too strong to resist; so, putting all his provisions inside of Mr. J.'s for fear of the hogs, leaving both ends of the tent open for them to walk through, rolling up all the clothing with the carpet-bag knapsack containing our arsenic into a bundle and putting it on the table I had extemporized for skinning purposes, he took his gun and trudged to the creek, and was delighted to see the jug sitting bolt upright on the bottom, but too deep down to reach with arm or stick. Though the water was very cold, in a trice, stripping and diving for it, he was overjoyed to find the water had not leaked in to dilute it. And so the luxury we hadn't, we had. Securing a couple of herons, and this time firmly retaining hold of the coveted jug, he retraced his steps to the camp with beatific visions, which were destined to be dashed to the ground when he came in sight of it. The table lay flat and everything was scattered around, with the hogs making merry with all the women in the cabin 300ft. distant had not saved, as they heard the table fall. Fortunately, both for ourselves and the hogs directly, and indirectly for our continuance on good terms with the Crackers in the settlement—for the hogs were common property—the women saved the arsenic before the creatures had penetrated to it. Having righted things and carefully potted two bones of a deer for soup the next morning, securing the cover beyond the possibility of a hog's snout reaching the meat, he lay down to sleep. By 4 o'clock in the morning the hogs routed him out, but the pot containing the soup meat was seemingly untouched. All preparations being made, the pot was opened, when, lo, one of the two bones was missing! Though every necessary caution had been taken against the insertion of a hog's snout, none had been taken against a coon's snout or a 'possum's paw. Spending his third day alone in skinning birds and contriving better arrangements for protection against the hogs and "varmint," he lay down to sleep at dark, only to be aroused by my return at midnight. Little sleep, however, had either of us, so annoying were the hogs, and we decided to quit that locality as speedily as possible.

Having accomplished the desideratum of the trip, in seeing the lake and disabusing naturalists of its pretensions as an elysium for them, we were all at sea as to future plans, for the second object of our trip was still in abeyance—the securing of specimens of rare birds and their eggs, and a study of them in their haunts. Our wily "Cracker," ever on the alert to make money out of us, honestly or dishonestly, suggested our camping for a few days at a "heronry" a day's tramp into the heart of Alpatiokee Swamp, known only to himself and the Indians, but impenetrable, except by a boat, on account of the deep water and the cypress-knees. He also informed us that three miles down the creek near which we were encamped there was a flat-bottomed boat, just adapted to our need, which the owner would sell at a reasonable price. So Tom was dispatched with the oxen to bring it. Toward night he returned, saying it had lain upon the bank so long, drying in the sun, that he could thrust his hand between every plank. Suggesting to him that we would take it to pieces and re-nail and re-caulk it, I went back with him, and bringing it to the camp we set about the operation. As there were neither sawn boards nor nails in all the settlement, we worked very carefully to save what we had. For calking we used the lace fibre of the palmetto leaf besmeared with tar, which we tried out of the pine knots by smothering them in an oven made in the ground. When finished we had a scow twelve feet in length, four feet wide, turned up two feet at each end, with a gunwale of eight inches—the frail bark that subsequent experience proved was to save us many times from the jaws of alligators and a watery grave.

Having bargained with Mr. J. to take us with his ox-team to the heronry and return for us in ten days at so much a day, we had our luggage all ready for him to load into the scow soon after daylight, and requested him to drive about 100yds. to our camp for it. As the heronry was beyond his house from the camp he refused to come or even to lend us the least assistance in getting our heavy packs to the team, saying "he bargained to start from his house." As before suggested we knew it was well not to arouse the tiger in him, and so we toted them ourselves to the scow, he grumbling all the time that we were delaying him. About 9 o'clock we got off, but were ourselves got off by our teamster's insisting upon a long tarry at each Cracker's hut we passed within the first five miles. By careful balancing of our load we managed to ford almost to swimming Ten Mile Creek and keep our powder dry, and soon after entered the Flats, showing only a water horizon with an occasional island a few feet in diameter, on which from one to half a dozen tall pines were growing with a thick growth of underbrush—excellent rendezvous for panthers, wildcats, possums and land snakes, wild turkeys roosting in the trees. To wade knee-deep was the work of the day, carefully avoiding the dreaded moccasins, which, lurking in the tussocks of grass, "strike their envenomed fangs deep into the leg ere the traveler is aware of their presence." Plodding on wearily after the cart, as the safer position through the fright to the snakes occasioned by the paddling of the oxen, we came to a grassy plain a mile in width, from which the drying-up waters had receded, but revealing midway across it a creek nearly waist-deep with perpendicular sides. But my spade soon changed their steepness to a slope, and the faithful oxen, accustomed to rushing through a stream, landed all safe on the other side.

Two or three such, but with sloping banks, we met in the course of the day, and one altogether too deep to wade conveniently; but to my request that we ride over, our teamster on the cart only replied by pouring out a volley of oaths, and urging the cattle across before we could come up with him. Thus alternating between strips of marsh and wide wastes of water, we at length discerned on the horizon a cypress clump towering up like a "blue mountain." "That is the heronry," exclaimed our guide, "but there is no camping place nearer than this island clump of palmettos near by." "But how far is the heronry from here?" "Perhaps four miles." "And do you expect us to wade this long distance twice a day for ten days and carry our game?" "Certainly." "Then take us right back to your house." After much persuasion he was induced to go on and run the risk of finding a nearer camping island. At length we found one less than fifty feet across, with considerable dead wood upon it, which our teamster said was not over a mile distant from the heronry, and was absolutely the nearest spot of dry land to it. Careful observation afterward proved it to be not less than two miles. Cutting a path through the dense palmetto scrub bordering the island, we unloaded our traps from the scow, and left Fred to put things to rights for a ten-days' camp-keeping, with the caution to be careful about setting the dry leaves afire, while the teamster and myself hastened on to launch the scow near the heronry. This effected, we noticed a fine camping island not more than a quarter of a mile distant; but it was too late, as all our luggage was two miles back. Nearing the camp on our return, Fred was seen repeatedly hurrying out into the water and back again, as though in trouble. It seems, notwithstanding our precaution, the fire had got the upper hand of him and was spreading, and he was lugging the powder and provisions out of the way of danger to an extemporized platform of sticks he had constructed in the water. Further examination proved the soil to be peaty, and suggested the danger of subterranean combustion, and such a possible thinning of the crust as to refuse to bear our weight some night, with the result of tumbling us, powder and all, into a mass of smouldering embers. To avoid this, we encircled our hearth with a trench and daily supplied it plentifully with water.

To obtain filtered water for culinary purposes, we dug a shallow well a few feet within the margin of the island on the opposite side of our entrance, which soon filled with water percolating through the peaty soil. This, strained from the insects and small lizards continually tumbling into the well, served our purpose satisfactorily. Having thoroughly beaten the ground within and around our tent, to frighten away any ground rattlesnakes, scorpions and such like vermin as may have been lurking beneath the leaves, we commended ourselves to the care of Him who never slumbers nor sleeps, and lay down to rest at dusk. Excessive fatigue quickly invited sleep, but, the nights being moonless, for how long time we were unconscious I cannot say, when we were awakened by such deep bellowings within a few feet as made me think at first some bulls of the cattle herds ranging all over the country had come into camp near us. It was our first experience of the full-toned bellowing of alligators so near us, and it was a question whether the savory viands of our evening repast might not be attracting them to our limited quarters. The thought was not pleasant, nor made less so by the sudden chiming in of the most horrible throttling sounds that ever grated upon human ear. I have not been unaccustomed from my youth to the death rattle of the dying bedside, or the gasping groans of the earlier slaughter houses; but in this medley of sounds that filled our ears, there was a perfect nondescript anomaly to me. Later experience leads me to suppose it was the dragging under of a large bird, perhaps the water ibis, by an alligator, as there was much splashing of water commingled with the shrieks and gurglings. But tired nature would assert herself, though only to be disturbed again by the distinct, but stealthy, tread of some animal close to our canvas. Is it a panther? is it a wildcat? is it a coon? is it a possum? we whispered to each other. At length it approached my head and tapped the canvas within 6in. of my face with its paw. I tapped back, when it bounded away, but with so light a bound that I was convinced it was not larger than a wildcat or a coon, and felt no further alarm. Waking at daylight, we found abundant tracks of a wildcat in the soft mud on the margin of our island, and a flock of turkey buzzards roosting directly over our heads, both indications of marauders warning us to put our things in order for safety before starting for the heronry.

Strapping on my tin knapsack containing our lunch, with gun in left hand and a palmetto stick 7ft. long in right, with which to slap the water to frighten away the moccasins, and in our high-topped boots, we started. Fred carrying his gun, two tin pans and a tin cup, and a board for the purpose of making a seat across the top of our scow. We had hardly left the camp when the water poured into our knee-top boots, adding greatly to the weight we had to carry. Frequently my slapping the water would scare up a moccasin, which, "striking an attitude" for striking, would await our nearer approach with threatening fangs. Disabling it by a blow of the stick, I was on the alert for another. Carefully taking our bearings that we might not get lost on our return, we came in sight of the gunwale of our scow just peeping above the water, it having sunk during the night. Cautiously approaching it, lest it might shelter underneath the dreaded reptile, I aided Fred into it to bail it out, while I proceeded to cut away the marginal underbrush and make a path for pushing the scow into deep water. On starting, I had forgotten to take my stick, in my enthusiasm at the sight of the flocks of spoonbills and herons flying over the swamp; but ere I had taken ten steps, pausing in the water half knee-deep to watch their movements, I looked down and saw just beneath the surface the largest moccasin I had hitherto seen, crawling between my legs. Instantly becoming motionless and telling Fred to keep quiet, I watched it "drag its slow length along," till its tail was a foot to the rear of me, and then showed it to Fred, whose blanched countenance would hardly permit him to exclaim, "Are you bitten?" I think I could sketch the markings on that snake's back with accuracy to-day, ten years after the occurrence, for I am sure I seemed to have ample time to examine them before the end of that tail showed itself.

Anticipating some trouble with the scow, for some of the boards I used in repairing it were not straight-edged, I had prepared myself with palmetto lace, and with my hatchet and knife recalked it, so that, should we bail it every few minutes we deemed it might be safe, and so pushed it through my path into deep water.

Now for the results of all our toil, expense and danger, and, thanks to a kind providence, they are speedily realized. Hardly afloat and a roseate spoonbill rose from its nest and perched beside it. Fred shot her while I poled the scow in all haste, as, the moment it struck the water, watchful alligators made for it on every side. We triumphed and secured it, and then Fred climbed to the nest amid the filthy branches while I kept the scow immediately under him, lest, falling from a dead limb into the water, he should himself be gobbled up by the alligators, who were watching the operation to the number of at least half a dozen. Three eggs were secured and identified. Bailing out our frail scow, I pushed it among the cypress knees, both excited to the highest pitch, as the birds kept rising from their nests, and, circling in the gleaming sunlight displayed their roseate hues to the best advantage. Soon another falls a victim to Fred's unerring aim, but alas, drops right into an alligator's mouth, who goes to the bottom with it in a trice. "Fred, lay low and I'll have that bird yet." "Nonsense, it's down the alligator's maw by this time." "We'll see," I replied, and pushing the scow over the spot of engulfment, I could plainly see about six feet deep the pink hues of the spoonbill as it was held down by the alligator. Two or three thrusts of my pole so astonished the brute that he let go the bird, and it now graces the Museum of Brown University. Besides the spoonbills, there were by the hundreds, the different species of egrets, herons and ibises. Having identified the eggs of the different nests by carefully noting what birds flew from them, and secured about fifty in all, besides as many birds as we thought we could skin before dark, we left our scow in the marsh outside and returned to camp carrying our load of about fifty pounds each, wading every step of the two miles with our boots full of water. J. W. P. Jenks.

Brown University, Providence, R. I.

The Domestic Dog.—What stuff people do write about dogs. Hear what Colonel Thomas Wentworth Higginson writes in *Harper's Bazar*: "How many of us hold to our friends with a love as inexhaustible and as inextinguishable as that which our dog gives to us?" What rubbish is this? It seems to me that when people become addicted to dog worship they lose their minds. The dog loves the man who feeds him. You may keep a good well-bred dog for five years, and then sell him, and in two months his "inexhaustible" love will be so far exhausted, and his "inextinguishable" love so nearly put out, that the faithful creature will chase you out of his new master's orchard. A man who confesses that his love for his friends is weaker, and more selfish, and less faithful, than a dog's, puts a shamefully low estimate upon his friendship. I love to read the two greatest books in the world, the Bible and Shakespeare; neither of them say anything good about a dog. It isn't that I dislike dogs, because I don't; I like them; but there is such a tendency to dog worship in these weak, poodling times of pug and mastiff that a man needs a great deal of wholesome corrective. What's that? You once had a dog that—"Out, damned Spot!" Do you suppose I am going to accept the statements of men who once had, or who now have dogs, as evidence? You'll want to tell me about a bass you caught the next thing. I knew your dog; a long-haired, beautiful, active, faithful, creature he was, as ever made glad the heart of a boy. He used to trample all over other people's gardens, and carried his unwelcome fleas into your neighbors' homes; he tore down climbing vines and dug for moles and rats under the rose bushes, and when it rained on him he smelled like the picking room of a tannery. I knew your dog.—*Burdette in Brooklyn Eagle.*

INSTINCT.

IN the FOREST AND STREAM of Nov. 10, "Potomac" answers the question "What is instinct?" by saying that "it is merely an inheritance born of and embodying the experience of ancestors." Instinct is unquestionably an inheritance, and to a certain extent is born of and embodies the experience of ancestors; but why "merely"? If we still hold to the theory that species were created as they are, with power of variation and change within certain limits, can we imagine that the first individuals of species were without instincts and did not have to live by the exercise of instincts as well as those which came after them! Did not the first pair of robins probably proceed to build a nest at a particular season and of particular form in a suitable place, under the promptings of an implanted instinct; and the first swarm of bees proceed to gather wax from flowers and make cells in which to store their honey in hexagons, and so arranged as to require the smallest space, from the same reason? Or, if we adopt the later theory, that the Creator of the world has performed and is still performing his work by a process of development, having put in operation certain forces which work by fixed laws and which developed the present high types of species, including man, from the lowest forms as germs, is it not the fact that instinct disappears in direct proportion to development? Man lives much less by instinct than the animals next below him, and in his own species gives us the exhibition of the lower and less developed peoples living less by and depending less on their instincts.

Also, on the principle that instinct is not originally implanted, but "merely an inheritance born of and embodying the experience of ancestors," how shall we account for the case of the solitary-bee, which makes its cell, deposits its egg, provides food for its young when hatched, and then dies, as did its parent before it? In such a case it is simply impossible that the offspring should be benefited by any experience gained from the parent. And even in the case of hive-bees, which build their cells so wonderfully, and birds which make their nests so differently, as the eaves swallow, the kingfisher, the oriole and the chip sparrow, it is impossible, to my mind, to conceive of powers like these as "merely born of and embodying the experience of ancestors. Dr. Carpenter says ("Mental Physiology," p. 56), "This designation (instinctive) is now properly restricted to actions which, being performed without any guidance from experience and executed in precisely the same manner (when the circumstances are suitable) by all the individuals of a species, must be regarded as proceeding from an innate or constitutional tendency," and I suppose Dr. Carpenter's view is that of all the later authorities.

I am glad "Potomac" has brought up this subject, not for the sake of discussion, but that contributions of fact may be obtained from the personal observation of the readers of FOREST AND STREAM. MONATIQUOT.

GROUSE IN CAPTIVITY.

Editor Forest and Stream:

Will you permit me to say that I think I deserve no little credit for keeping so quiet about grouse since my experiences of last summer? But the subject will come up afresh whenever an opportunity to write presents itself. One of my hen grouse died in September from some strange wasting disease, the result of which manifested itself in a non-assimilation of food, and the bird slowly starved to death. When picked up she had wasted away to mere skin and bone, showing how large a fund of vitality the grouse evidently has to draw from. This hen sat some four weeks and when she came from the nest in the extremely hot summer did not seem to rally from the exhaustive drain that nature makes on avian life at such times. I think the difficulty was somewhat increased from the fact that she had a broken leg which prevented her exercising as birds in confinment ought to do. A very similar case was that of one of my hen quails a summer or two ago. This last named bird (then two years old) had been hatched and reared in confinement, and during the summer laid thirty-two eggs, replenishing her nest three different times as the eggs were taken away from her. She was ailing for two or three weeks, becoming so feeble toward the last that she could not walk, and dying only when there was no longer any flesh to feed upon. A FOREST AND STREAM expert gave it as his opinion that the quail died of chronic inflammation of the bowels, after making an examination of the bird, but said he was in doubt as to the cause of the disease.

It will be remembered that some three or four weeks ago Mr. Edward A. Swift, an enthusiastic hunter and naturalist of Elmira, N. Y., wrote a note to FOREST AND STREAM mentioning the capture of a male grouse which had flown into a house near that city, whereupon I wrote to Mr. Swift. The letter was not a begging one, but I straightway received a reply in which he kindly offered to send the bird to me. There must have been something between the lines that I did not perceive. The bird has been in my hands now a little more than two weeks, and although only very recently captured, he now comes up to be fed when called, and seems quite disposed to adjust himself to his new situation. He is a very fine specimen, perfectly sound and uninjured, and still retains enough of his native pride to impel him to erect his ruff and spread his beautiful tail when any stranger comes near the coops. My remaining hen moulted nicely, and the two make as handsome a pair as one could wish to see. I cannot see but that her plumage is as fine and regular as that of the wild bird, except that his tail is fuller and longer than hers.

Speaking of distinguishing the sex of the grouse by the plumage and other markings, I am inclined to believe that perhaps the surest test for the male bird is the metallic lustre which seems to be always present on the ruff of the adult. Next to that perhaps is the orange color which appears in the superciliary membrane of the eye in the male bird—a faint shade in the fall, but much more intenes in the spring as the breeding season approaches. In the bird while still alive the feathers grow down so closely to the eye in many cases as to hide the trace of color from ordinary observation. My friend, Mr. J. L. Davison, of Lockport, N. Y., has held that in the female grouse the two central tail feathers have the black band near the end broken and irregular instead of a pure black sharply defined as in the case of the others. But in the Elmira bird the two central feathers have the broken irregularly marked band, although the specimen is undoubtedly a male. The courage and temper shown by the male birds form, I think, a good test, and the sex will almost always betray itself in this way to a careful observer.

The coops are outdoors as usual, with parts of them covered, while the remainder is open to the sun, the rains and snows. I do not anticipate any difficulty in wintering my grouse if no accident happens to them, and if things go right shall have a vigorous healthy pair of breeding birds in the spring. In this respect I shall be more fortunate than last spring, when the male bird, which only came to me that same month, had been seriously abused by a pair of English pheasants, with which he had been closely confined for some time, and was in no sort of condition to become the father of a family. It is altogether possible that this condition of the sire may have had something to do with the failure of the chicks to break a way out of the shell, although this is merely a surmise. JAY BEEBE.

TOLEDO, O., Nov. 19.

WHY TROUT CULTURE FAILS.

AT a meeting of the Biological Society in Washington, on Nov. 19, Col. Marshall Macdonald, of the U. S. Fishery Commission, referred to the notably successful propagation of *Salmonidæ* in European waters, which he compared with the almost total failure in American waters, and attributed the want of success in this country to causes which have become patent only after many years of persistent experiment and close observation.

In England, France, Holland, Australia and New Zealand all varieties of *Salmonidæ*, whether indigenous or transplanted, thrive under artificial culture. Introduced American species—*quinnat, salar, irideus, fontinalis*, or what not—do well there; but in our own streams, where small fry of *Salmonidæ* have been planted by the hundred thousand, all disappear inevitably and systematically, and only individuals are ever seen or heard of afterward. There are two or three marked exceptions where success has triumphed through absence of destructive causes. Mr. Macdonald tells us what those causes are. Let us hear. They are no other than the predacious little cottoids and darters with which most streams abound, and whose presence has hitherto generally been presumed favorable to propagation of *Salmonidæ*. Indeed, some fish breeders have introduced large quantities of these diminutive fishes into clear streams to serve as food for their salmon and trout when the latter shall become grown. Fatal misapprehension! The observant Mr. Macdonald told in what a brief period one single dar er, which had been placed in an aquarium, got away with and swallowed no less than twelve fine trout fry of the size and age usually employed for stocking streams; and inferentially a hundred thousand fry would serve a thousand of these rapacious cottoids and darters hardly a day under favorable opportunity for capture. Sometimes, by some extraordinary chance, a few trout have escaped the massacre and grown to full size and maturity, but such survivors are so few as to prove of no practical service in replenishing depleted streams. It is obvious now that such a method is only a waste of time and effort.

What then can be substituted with better assurance of ultimate success?

Mr. Macdonald says we must plant 4in. trout, and turn the tables on the rapscallions. *Salmonidæ* of the size mentioned will eat up the cottoids and darters (every mother's son of them, as well as darters) and grow fat and fulsome on them!

It has been charged against grown trout as one of the incidents of failure to replenish streams hitherto, that they eat up their own fry, but this is disproved. Nature has provided for their sure protection, else there could be no reproduction from year to year. It has ordained that the troutlets shall stick to the bottom, and so long as they do so the big fish seem to pay no attention to them. They do not seem to see them. Their attention is skyward, toward the surface. But, if ever any adventurous mite of a trout attempts to explore the upper waters and skirmishes about in the same aquatic plane as his elder and bigger relations, aimless and inadvertent, lo! he is incontinently snapped up and devoured. Just so it is with men and "kids," the waifs and tenderfeet. They put themselves in the way of greedy and rapacious men, and have only their own temerity to blame.

With respect to the notable failure to propagate California salmon in Eastern waters, Mr. Macdonald assigns an altogether different reason. These fish spawn in July, August and September; and when they seek the upper waters of their native streams, on the Pacific slopes, for the purpose of depositing their ova, they find a progressive colder temperature as they approach the spring heads and snow-fed sources; but during the corresponding months in Atlantic waters, whenever they would leave the ocean to ascend the stream, lo! they find a constantly rising temperature, which sometimes reaches as high as 80 degrees. The ocean is actually cooler than the rivers, so that they decline to leave it and go up stream. They never seem to have re-entered their native streams where they were hatched and reared until the time of their first departure for the brine, and the question arises as to what becomes of them. Mr. Macdonald thinks they wander about the ocean, leading a purely nomadic existence, though he can hardly guarantee them a long life and a happy one, for it must be but a question of time when they will fall a prey to the innumerable predacious creatures which inhabit the deep, and be eaten up by them.

Certainly the testimony of Mr. Macdonald is of great importance, supported as it is by observation and experiment, and fishculturists will be likely to profit thereby hereafter. Perhaps the assertion that one acre of water may be made as valuable as two acres of land will yet be borne out by appreciable results. CHARLES HALLOCK.

WASHINGTON, D. C., Nov. 22.

MELANERPES CAROLINUS (LINN.) IN NEW JERSEY.—I have added to my cabinet of bird skins that of a male red-bellied woodpecker, taken at Keyport, N. J., Nov. 23, 1887.—L. S. FOSTER (New York, Nov. 29.)

HOW THE DRUMFISH CROAKS.

DR. W. R. HAMILTON, of Pittsburgh, Pa., in writing for the bulletin of the U. S. Fish Commission, says: "My observations with regard to the croaking or grunting noise made by the drumfish family have been confined to the fish known here as the 'perch' (*Haploidonotus grunniens*). This fish, as is well known, is furnished with a masticatory apparatus in the gullet, and the lower division of this has its upper surface flat and triangular in outline, and studded all over with spheroidal 'teeth,' if they may be called genuine teeth. The upper division is composed of two parts united by a ligament; their lower surfaces are also supplied with similar teeth. The divisions of this apparatus have powerful muscles attached to them by which they can be pressed together and moved laterally on each other. By this process the fish masticates the crustaceans on which it feeds. When this action takes place, the teeth coming in contact and gliding over each other produces the croaking of the perch.

"About twenty years ago, for the purpose of endeavoring to ascertain by what means the croaking of the perch was produced, I procured from an Ohio River fisherman a perch weighing 18½lbs., which he declared was the largest perch he had ever caught. I divided the head on one side, and thus exposed its masticatory apparatus; and while moving its grinders as I supposed the fish had done during life when crushing a crawfish, an exact imitation of the croaking of the perch was produced. I produced the sounds in a similar manner within the hearing of several Allegheny River raftsmen and Ohio River fishermen at intervals during the day on which I experimented, without allowing them to know how the noises were made, or that a perch was used for the purpose, and they all declared that it was an exact imitation of the croaking of the perch. This noise is made, I believe, only at the season of the year when the perch 'bites' or feeds. The above experiment and others of a similar kind lead me to believe firmly that the croaking of the perch is produced in the manner referred to. I cannot conceive of any way by which the sound could be produced by the air bladder of the fish, as its physiological functions and anatomical structure do not indicate its use as a vocal organ."

Prof. John A. Ryder, in a letter commenting on the above, May 21, 1887, said: "It is now known that certain sound-producing fishes give out noises by grating certain bones together in a peculiar way. An extensive memoir by a Danish author has appeared within two years, the Danish title of which has escaped me, but which deals with this question at great length, with fine illustrations. The usual view, that the air is forced from one part of the air bladder to another in the Sciænoids, seems to me inadequate in the absence of clearly worked-out demonstrations. This group is physoclystous, or has the air bladder entirely closed."

MINKS GNAW IRON WIRE.—Cold Spring Harbor, N. Y., Nov. 20.—When we saw the remains of a wood duck hanging in the picket fence, the deed was charged to a mink, who would no doubt return to the inclosure where some twenty pairs were kept. Six steel traps yielded two minks next morning, both alive and sound of limb. They were put into a box with a partition between them, and the top was covered with wire netting, 1in. mesh, No. 19 galvanized wire, such as is used for poultry fences. No one supposed that they could get out, as they cannot gnaw wood very well, and they remained quiet the first night. On the second morning the male was found dead with his head through a broken mesh, while the female was loose in the room, both having gnawed the wire cloth. The animals had been promised to Prof. Goode for the National Museum, and the living one was more securely boxed and sent there. The teeth of the dead male were broken.—FRED MATHER.

Game Bag and Gun.

GAME NEAR TOWN.

WESTCHESTER, Nov. 11. — Along the romantic swales and cliffs of Tibbitt's Creek, bordering this valley, on the opening day of November, we hunted just out of the city lines and during the morning encountered the first snow storm of the late year. Yet nothing daunted, we hunted the vales from the creek's source to its outlet, and to the two guns and dogs engaged fell the following game: Seven woodcock, thirty-five quail and three wild ducks.

During the warm days of Friday, Saturday and Monday before election, we sought a covert deeply secluded in the hills of our loved Orange county. There in the deep solitude, bordering in river and lake, years ago we fell upon a game preserve known to few. Here we had royal sport, bagging in short forenoon hunts fifty quail, nine woodcock, thirteen ducks and seven ruffed grouse, all in excellent condition. We could have added several foxes and any number of meadow larks, and robins and rabbits without number; a few of the latter we put to bag. This paradise was first known to the writer when at West Point under the care and advice of his cousin, the late Gen. Henry Brewerton, superintendent of the Post, 1845 to 1852, when he was by rule transferred to Fort McHenry, Baltimore, and the late Gen. Robert E. Lee, of war renown, superseded to the Post at West Point. Strange to say this preserve still holds the renown of old (for it is in its wild virgin state even unto this day) when the late Dick Arden, of Ardeaner was its ardent hunter, with a strain of orange and white setters and Irish reds much heavier than now met with. But we much fear this is the last season, as a syndicate will soon possess our court and make another preserve like Tuxedo Park, under the name of Arden, after the wife of T. T. Parrot, who is the sister of my old companion, the redoutable Richard Arden, Esq., a descendant of the Ardens of Arden Forest, Yorkshire, England, well-known to many army officers, now on the plains in the service of our Government, and correspondent of your most interesting paper. CANONICUS.

A TRUNCATED QUAIL HUNT.

TO obtain a successful day's quail shooting in southern New Jersey is very difficult. Not from scarcity of the birds, but because of the jealous care over them exercised by the land owners. The birds are abundant in localities, especially where the small farms border on the salt marshes, and the half-reaped buckwheat patches and thick tangle of weeds and blue-bent heavy with seed furnish their favorite food in profusion. There these vigorous little epitomes of vitality thrive, and grow larger, plumper and stronger of wing than their relatives of the West or South. But to get access to the birds is no easy task. The farms, with hardly an exception, are decorated at every prominent point with tiny notices in varied specimens of cacography, whereby the adventurer is informed that if he trespass with dog or gun he will be visited with the penalties of the law. The land owner will oftentimes throw open his premises to those whom he knows and likes, but let the stranger sportsman, with his brand new suit, his hammerless and his cavorting samples of canine worthlessness, appear upon the scene, and the uprising of the populace eclipses that of Clan Alpine at the whistle of Rhoderick Dhu. The resident, however, who shoots occasionally, and simply for recreation, can find shooting enough over the farms of his friends among the farmers to occupy all the time he can afford for that amusement. For many years I have in the fall passed over a certain round of quail covers, having a different locality for each day's tramp, so arranging as never to visit the same cover twice in one season.

My favorite shooting ground lies near a village which I will call Legal Fence, in the county which I will name Claverhouse. I have made much larger single bags elsewhere, but for abundance of quail, and certainty of finding them, Legal Fence is unrivalled. My friend Erskine and I, for a dozen years, have kept that cover for our *bonne bouche*, and have never been disappointed, until the exasperating experience of the present season about to be related.

Our shooting ground is a peninsula of about fifty acres, which projects its bastate shape into the salt marsh. The upland is fringed all around, partly with small brier bunches and scattered oaks, and everywhere with Indian grass, or blue-bent, from ankle to waist high. Tongues of blue-bent run far into the upland, which is partly cornfield, partly wheat stubble, partly buckwheat, and mainly peach orchard. An old vacant dwelling and a stable are the only buildings. The farm supports five coveys of quail, each covey having its own well-defined feeding ground and shelter. The farm affords capital shooting from 8 o'clock until 2, and a series of hedgerows running all the way to the village give, on the return thither, equally good shooting until night.

On the morning of the present month (November) Erskine and I with our dogs, Frank and Mac, traversed the long causeway which leads across the marsh to the farm and reached our shooting ground at 8 o'clock. The dogs were fresh—too rank—and tore about at a pace which argued ill for success. As we crossed the causeway a hawk darted from mid air to the marsh and started a snipe, which after many circlings dropped in what was to be our homeward path; we made a mental note to pick him up later.

Last year we found the birds along the first fence and this we hunted carefully. Our dogs at once showed game, but a ripple through the blue-bent, at which I risked an ineffectual shot, showed that a rabbit's early morning ramble was the cause. Avoiding a clump of briers we reach the field next the house and find the dogs carefully trailing along the fence, soon coming to a point at a small thicket, Erskine being in the field and I in the bushes and blue-bent. Instantly a noble covey of big birds burst out. I single out the nearest, miss him with the first barrel, cover him with the second, and then, without ascertaing his fate, I turn and mark the birds which scatter about in the tall blue-bent. Erskine is badly placed and does not shoot. Before I have marked down my last bird my dog appears with my quail.

After a covey is scattered my plan is to not hunt them closely at once, but to try first to find another lot of birds. Taking a straight course through the scattered birds, killing three and missing four, we passed on through the timber and carefully hunted a field on the other side, without success. Then, back through the blue-bent, where we closed our score on this covey at ten birds.

The day had been threatening, and just then a gentle shower struck us, which, however, soon passed off.

Passing the house, we entered the peach orchard, and, turning at right angles with our former course, crossed the farm toward the opposite marsh. Just before reaching the marsh there is a low hedgerow running parallel with the marsh, and we turned back along this to hunt a cover near the house. Frank was soon missing, and after a search I found him pointing in a field of weeds down the hedge. When I reached him he took a few steps along the hedge, and then wheeling, drew out in the field a few steps and pointed again. A covey of a dozen birds arose at long range, and out of it I dropped a pair. Frank immediately returned to the hedge where he first pointed and drew slowly with uplifted nostrils along it, at last establishing his point near the marsh, and being prettily backed by Mac. This was evidently a division of the same covey, for about a dozen more birds arose, and I again made a double, Erskine being too far off to shoot. These birds scattered out in the marsh, where the grass was not more than 6in. high, and there, too, we found the first bunch, which I had been unable to mark. There we had magnificent shooting for a few minutes, not losing a bird shot at. A few escaped to the bushes while we were putting in cartridges, and of these we picked up three by snap shots in the thicket.

The next cover was a blank, the birds probably being out in the marsh somewhere. The rain now began to fall pretty briskly.

At the extreme point or spear-tip of the farm, where is the only really bad cover, we started another large covey in the thicket, and drove some of them into the marsh, where we bagged six, both dogs distinguishing themselves by roading, pointing and backing, with a skill which could not be excelled.

Thence we started on our return, and when the peach orchard was reached the dogs again made game, trailing out into the orchard, which was fringed next the marsh with blue-bends, through which were sparsely scattered large oaks. The trail took us out into the orchard, nearly intersecting our course earlier in the day, and then back again to the blue-bend. Suddenly I heard a roar, such as quail make when their wings are wet, and two birds dropped at the report of Erskine's gun, I securing a single bird which came my way. Another noble covey, dropping temptingly in a narrow, open strip of tall timber.

The rain was by this time coming down in sheets, and we were drenched to the skin, and sought shelter in the empty house, intending to leave our birds there, and return as soon as the rain would permit, to the twenty or more living ones that awaited us. Taking account of stock, we found that we had 36 quail and that the hour was 11 o'clock.

The rain, however, gave us no option, so when our team appeared at noon we returned to the village, dried our garments as best we might, and started homeward, with our appetite for slaughter well whetted, but by no means satistied.

F. S. J. C.

WHERE GAME ABOUNDS.

BELVIDERE, N. C., Nov. 15.—My outings thus far this fall have been varied, and for the most part quite successful. About the first of October I paid a visit of a week to a relative in Sussex county, Virginia, and in accordance with his instructions took my shotgun along. "Squirrels and turkeys are thick as hops," so ran the invitation. To say that I had a good time would faintly express it, for though I was told that the little grays were usually scarce owing to failure of the mast crop (*i. e.*, beech and hickory nuts), still I found them in abundance: and any one who would not have been satisfied under like circumstances is more of a game hog that I care to be.

To give some faint notion of the variety of game I relate the experience of our little party during one morning's hunt. Having shot squirrels until it became monotonous, we concluded to try for turkeys. So we drove over to the beautiful farm of Mrs. Pretlow, which by the way is duly posted to keep the colored brother from exterminating the game with his "Zulu." Obtaining permission from the owner of the premises to hunt anywhere we wished on the farm and adjoining woodland, we sallied forth, with a youth as guide, in quest of the numerous turkeys said to use in the peanut fields and the woods bordering them. We had been in the woods but a few moments when the pointer, taken along to hunt the turkeys, treed a pair of nice fat looking squirrels; but this was game unworthy of our steel, so we let them go, and hied the dog on to look for something better. Pretty soon the gentle breeze wafts to our eager ears the music of a pack of hounds in full cry, and seemingly bearing in our direction. We stop, listen silently a moment, then ascertaining that they are passing around us, we move on, with the remark from our leader, "That is a deer, but he has gone to the Blackwater and we will not see him to-day." We soon reach a small field of corn and look for sign. The ground is tracked up as though it were a barnyard. There are deer and turkey tracks by thousands; and as the dog began moving around pretty lively, indicating that the scent is warm, our hearts beat more rapidly, for just beyond is a thicket where we feel sure we will find our game. But, hark! What is that? The hounds are coming back! A moment's hesitation and we divide, one going to the woods in the direction of the dogs, the others each take the opposite sides of the field. The hounds are coming directly to where I am standing, all blown from my exertion to reach the stand in time; but I see no deer and the dogs pass within 20yds. of me, evidently the deer passed before I reached the stand. While I am thus cogitating, bang! goes a gun on the opposite side of the field, and bang goes another almost immediately after. I turn in that direction and see the boy (our guide) and one of the party running in the direction of some struggling object; and crossing to them I find they have killed a fine deer and are busily looking for shot marks, to see which made the lucky shot. Both claimed a hit, and while the dogs have run up and are scenting the deer and licking the warm blood, a yell and a call from the woods where one of the party stood, starts the whole pack in that direction, and in a moment they are again in full cry and soon out of hearing. We go to ascertain what the game was, and are told that when the guns were fired at the deer a fine flock of turkeys flew up and scattered through the woods, and while creeping carefully through the thicket trying to get a snap shot our companion walked up a big buck which so startled him that he forgot to fire until the bushes had hidden him from view.

We sent the boy back to the farmhouse for a "nigger and a mule," and sent the deer to the house with orders to dress and hang it up, and if the owners of the dog called for it to deliver it to them; if not why then "keep until called for."

We went on after the turkeys and built our blinds and producing our caller waited patiently for some time, then began calling. But the hounds had frightened them out of their wits and out of our reach, so we got no turkey, but returned to the house, finding a most excellent dinner awaiting us and our deer nicely dressed and ready for distribution. As no owner of the dogs appeared and not knowing to whom they belonged we presented the fair owner of the premises with a choice quarter, and placing the remainder in our buggies started for home, after having paid our respects to the good things set before us, and thanking our hostess for her hospitality.

We never found the owner of the dogs, and do not yet know whose they were, but they were a fine lot surely, and ran like the wind. I merely relate this incident to show the extent and variety of the game in certain parts of Virginia, where the lands are protected from the pot hunter. We found on not more than ten acres of inclosed land that morning two deer, a large flock of wild turkeys, several squirrels and a large covey of quail. Who can beat it?

I find quail more abundant here in North Carolina this season than for some time. I have a friend in Washington, D. C., who proposes visiting me soon to spend some time in pursuit of Bob White, and in order that I might notify him of the prospect, I took my dog and walked out in the field a few days since and found some beautiful coveys; but not wishing to deplete them much before the arrival of my friend, I "let them off easy," all except two coveys which scattered beautifully in some stubble; and as they were nice full grown birds, I "waded into them" and killed sixteen; after which, having all I wanted for immediate use, I wended my way homeward, fully satisfied that I could give my friend a few weeks' healthy sport, and then we will probably start for the "goose honk" country of Currituck. I have walked over some of the quail grounds in this vicinity several times recently and find the birds generally very well grown, and in fine condition, though in some instances I find small birds too young to shoot, but they are the second crop, for I invariably find larger ones near by. I think I found not less than 150 birds in one-half day.

The boys recently had quite an experience with bruin. A cow was killed not far from the shore in the Great Swamp, and some of the boys went in and set a spring gun close by the carcass. During the night the gun went off, and on going in to look after the result the next morning the hunters found blood, and putting the dogs on the scent they followed the wounded bear nearly all day, finally giving up in disgust and returning minus bruin. The swamp was so miserably muddy, and the reeds and briers so thick they could make no headway.

A. F. R.

A Week Later.—I sent you some rambling hunting notes last week, since which time the boys have given the bears "fits." They finished opening up a new drive through the main body of the Old Dismal, and, taking the dogs in, they had lots of fun, killing four large bears, crippling another, and slightly wounding one of the hunters with a buckshot which was fired at a fleeing bear, but glancing, struck a young man in the hand, taking from him some blood and much of his ardor. I wish I had time to give full particulars, but merely give the summary: Four bears killed, one crippled, and a young man slightly hurt and badly scared—not bad for two days in such thick woods and brakes. If the weather keeps good and the swamp dry, you will probably hear from us again, as the crowd is now enthusiastic and bruin may beware.

A. F. R.

CLUBS AND PRESERVES.

Editor Forest and Stream:

In your issue of Nov. 17 two items met my eye, and as they are upon a subject of vital interest to the average sportsman, they caused me at least to stop and think. "Clubs and Preserves," by "Pippsissewa," is one and your short editorial under "Snap Shots" the other.

We are fast approaching a period in the progress of game preservation in America when, in the writer's opinion, it will be well to stop and consider where the next step will lead us.

From the time, only a few short years ago, when game was plenty and the average man looked upon all attempts to keep it so as mere child's play and unworthy the thought of a serious Legislature, we have passed almost at a jump to an era when the wide-spread interest in all measures tending to preserve the remainder of our fish and game commands attention and thought from all who look to the well being of the many as opposed to the pleasures of the few.

In what the writer has to say let him not be understood to say anything against the wealthy, and to a certain extent public-spirited gentlemen, who at a large expense have acquired large tracts of land, upon which they are endeavoring to raise (by hand) birds and animals, imported at a great cost, and in which endeavor, if successful, they are sure to benefit sportsmen at large by the overflow of their preserves. What I have to say is about the system of acquiring privileges by lease over grounds owned by farmers, and at our native birds, over which (the ruffed grouse and woodcock at least) the farmer has no more control than the wind that blows. About the legality of such a thing the writer, not being a lawyer, has nothing to say. He has, however, his opinions, one of which is that the ownership of land should in no way convey a title to the birds of the air, which happen to feed or nest upon it.

It is from a different point of view, however, that I wish to present the subject, namely in its bearing upon the vast majority of sportsmen who have not the means nor the inclination to enter upon the system of leasing. Let us take for example the present surroundings of the writer. He lives in a city of about 18,000 inhabitants, among them are a few of as true sportsmen as can be found in any community. They are all hard working men—either with head or hands. They come from the factory, the store, and the office, and a day or two of outing (even in our scant supply of game), means renewed health and vitality.

Is it fair to this large majority to allow a favored few, who by accident of birth or circumstances, or, if you will have it, by superior business ability, have acquired more of this world's goods than their neighbors—to allow a few sportsmen (good sportsmen and liberal though they be), to come to our neighborhood and for a small consideration utterly debar a large and worthy body of men from reasonable enjoyment within such distance of home as their time and means will permit? I hear some one say, "Why not lease the land yourselves?" Only one thing lacking—funds—and a belief that the wild things of the woods and fields were given for the enjoyment of all, rich and poor alike.

In our high school here are a number of bright, intelligent boys, most of them members of that widely-known circle, the Agassiz Association. Their Saturdays and holidays are spent in roaming the woods and fields. Many of them now have a true sportsman's love of nature, which their freedom from restraint, in the shape of signs "No shooting allowed," does much to foster. Is not this as harmless, and at the same time as manly, a sport as a boy can grow up in? Is it right to cut it off?

Let us try to look at this subject from a farmer's standpoint. I cannot agree with "Wise Acre," in his letter of two weeks since, as to the character of the American farmer? My experience has been smaller than "Wise Acre's," but in the past ten years and more I have hunted and fished in various parts of the country from Maine to California, and though I have once or twice been so unfortunate as to trespass upon a trout brook (not knowing it to be reserved), the treatment I have met with from the farmer has been uniformly courteous and obliging. Does not the farmer want for his sons and their friends the privileges he is asked to lease to the club? I hear some one say, "Let him reserve that privilege in the lease." Very well. But let me ask, as a business man talking with business men, isn't that rather a large loophole to leave in a contract (from a business point of view)? Would a man, as a manufacturer, allow any such "string" to be attached to a contract for supplies? I know of one who would not

I say grant all possible protection to the farmer in the

enjoyment of his land and improvements he may make upon it. Allow him to recover damage by trespass to the amount of the actual damage done, but leave the game for the benefit of all humanity.

In the State of Maine, or in my own State, New Hampshire, what a mine of wealth is our game and fish; our people are beginning to realize it too. It should always remain so, and in my opinion this can be done by continuing as we are now, *i. e.*, making our game and fish free to all who come among us—treating rich and poor alike. With restrictions as to amount of trout taken and non-transportation to points outside the State for game, our game and fish are rapidly increasing, and the revenue to be derived by all parties in any way interested in the transportation and keeping of sportsmen is sure to be rapidly increased in the near future.

In speaking of "free" shooting let no one think a "free game law" is meant. No one can look with more respect upon a stringent code of game laws than the writer. In his opinion only one thing more is needed for our New Hampshire game laws—more money to enforce them. Thanks to our present able commissioners and the existence of our non-transportation law, birds have been plentier in this section at least than for years previous. With a little larger appropriation from the State still better results are sure.

But let me ask—supposing the larger appropriation is made—who is to benefit from it? The people at large, or a favored few, who, under a lease system, would be enabled to enjoy the benefit from a sum taken from the taxes of the many. Would not this be class legislation?

Nashua, N. H., Nov. 19.

MICHIGAN DEER.

EAST SAGINAW, Mich., Nov. 23.—*Editor Forest and Stream:* I inclose you two clippings from Grand Rapids papers, showing what our warden system is doing to prevent the shipment of deer out of the State, and, it seemed to me, they speak well for our State game warden's zeal and grit. He certainly has not neglected an opportunity to bring suit against violators of our game law. The first, from the Grand Rapids *Telegram-Herald*, is as follows:

The zeal and enthusiasm with which Game Warden William Alden Smith and some of his deputies are enforcing the Michigan game laws may yet lead to a war between the Badgers and the Wolverines. The deer hunting season, now ended, has stirred the wardens of the Upper Peninsula of this happy hunting ground to unusual activity with reference to the shipping of venison out of the State. By consulting the map of Michigan it will be seen that the Chicago & Northwestern Railway, starting in Wisconsin, crosses the line of the Badger State, and runs into Michigan through the whole length of Menominee county, and then down Green Bay, and so on to Milwaukee and Chicago. This road has been a picnic for hunters who slaughter deer in Michigan, take the carcasses across the line to Florence, Wis., and ship them back through Menominee county and thence down to Ohio and Indiana. Game Warden Smith instructed S. E. Baker and Edward Kramer, deputies for Menominee county, to see that the law was strictly enforced, and the result is that thousands of pounds of venison have been stopped at Powers, Mich., and the shippers arrested. Deputy Baker writes that he does not "propose to let the Buckwheats and Hoosiers get away with any of our meat," and that he has stopped over fifty deer and has "twenty-five more piled up at Iron Mountain with eight men in charge of officers."

This deputy warden's zeal has been made the subject of editorial correspondence between Governor Rusk, of Wisconsin, and Luce, of Michigan. Henry C. Campbell, editor of the Florence, Wis., *Mining News*, had a deer stopped while in transit over the Chicago & Northwestern Railway, and immediately wrote Gov. Rusk, demanding that an investigation be made of the acts of the Michigan game wardens. He characterized the matter as "an outrage on a citizen of Wisconsin." Gov. Rusk forwarded the letter to Gov. Luce, who in turn referred the matter to Game Warden Smith.

Mr. Smith is not apprehensive that an inter-State war will result, and stands strongly by his deputies, particularly Deputy Baker, who has convicted every man so far arrested, among others Mr. Nicolls, the wealthy Battle Creek manufacturer, who was fined $50 for killing deer out of season.

The *Telegram-Herald* would advise that Wisconsin editor to come over to Grand Rapids, and if he is at all like Michigan editors he can find all the "dears" he wants—and if he will go over to Muskegon he can find some that may be shipped out of the State without anybody making a complaint.

The other I take from the Grand Rapids *Eagle:*

Two Indiana sportsmen were taught a deer lesson last night by the powerful teacher of the State game laws. The men, George Marsh and Wallace Hannah, had been up among the northern pines hunting wild game and succeeded so well they concluded to ship a portion of their venison to Hoosierdom. They packed the hides and carcasses in a box trunk and at Luther checked the same to Decatur, Ind. Deputy Warden Spofford, of Cadillac, believing they were evading the law, telegraphed State Game Warden Smith to intercept the party while in transit. The dispatch was given to Deputy L. A. Towne, who hastened to the Union Depot, and on the arrival of the train bearing the violators he soon gained possession of the venison and the hunters. It required some clever work, and a determination to enforce the law, but the deputy came off victorious. The men at first stoutly denied having deer meat in their boxes, but on opening them their deception was discovered and the men were taken to the jail for violating Act 151, Session Laws of 1881, which strictly prohibits the exporting of game from the State. The father of Geo. Marsh was one of the number, but no venison being found in his possession, and being a very old man, he was allowed to go his way. To facilitate matters the men were taken before Justice Walsh and there they pleaded guilty and were fined $50 and costs amounting to $5.10. They had $40 in ready cash and were placed in custody of the officers to secure the balance.

On leaving they expressed themselves as having learned a lesson never to be forgotten, and went home this morning wearing long faces, sadder, poorer, and wiser men.

In making the arrest the deputy discovered other pieces of baggage which he believed contained venison, and detained one box directed to Warren, Ind. On opening it later in the evening it was found to contain some 75lbs. of venison, and this fact being admitted, Game Warden Smith will begin proceedings against the company, with the understanding that the case will be carried to the Supreme Court, with a view of obtaining a decision as to the validity of the law. The capture, the hearing, and the payment of the fine all took place within four hours' time. Swift justice, indeed; a word to the wise is sufficient.

A good deal of deer hounding is being done on the quiet, but the majority of parties that have usually flocked into the Michigan woods with their hounds have this year either given it up altogether or gone in as still-hunters. I have held to the opinion that Michigan deer would be made to last longer by rigidly enforcing the law we had previous to the one that prohibited the use of dogs, and on these grounds: In the first place our State is surrounded by lakes, and it is impossible to drive the deer out of the State with hounds; they would merely move from one part to another; in the next place, a well, healthy deer is not run down and mercilessly chewed up by any deer dog I ever knew of; it is only the wounded animals that are caught and pulled down, and these, of course, it is a mercy to put out of their misery. But the strongest argument in favor of deer hounding is the fact that it was the still-hunters themselves and the market-hunters who were always crying out against the hounds; not that they wanted to save the deer, but that they wanted to kill more. They used to say that if the hounds were taken out of the woods they could kill four times the number of deer they could with the hounds keeping the deer on the alert. A party of nine or ten hunters with their hounds would go into the woods and stay say two weeks, and if they killed five or six deer they considered they had had excellent sport, which you can see was not an average of more than a deer to a man for two weeks; but let one or two good still-hunters go into a section, where the deer have not been disturbed by the dogs, and there is good tracking snow, and they used to boast that they could average from two to three per day to a man, and they did it for the almighty dollar every time. But now that we have been beaten in this matter, and the State Legislature has seen fit to pass a law preventing the use of dogs, I say, live up to the law no matter where it pinches, and if it is no sport for me to hunt deer without dogs, why I can give it up.

Our hunting parties were not made up for the amount of meat we could get, but with five or six jovial companions, a two weeks' outing beside one of the many inland lakes or running streams in northern Michigan, with the music of the hounds for a short time each day, to break the monotony, was not to be despised. I do not want to be understood as being in favor at any time of running deer into the water, and shooting them while swimming, and our law especially prohibited this. But a man that could stand on some old woods road and with a rifle nip off a deer going at full speed before the dogs, had reason to be proud of his marksmanship and satisfied, if successful even once, for an entire year.

W. B. Mershon.

THE MASSACHUSETTS ASSOCIATION.

THE meeting at the Tremont House, Boston, of the Massachusetts Fish and Game Protective Association, on Tuesday evening of last week, began what it is hoped will prove an important combination for the protection of the interests of Massachusetts sportsmen and the game interests of the State.

Fifty gentlemen from many parts of the State, met for mutual acquaintance and also for interchange of thought and idea.

The following are some of those present from out of town: Prest. L. G. White and Mr. Knowles, of the Worcester Sportsman's Club; Prest. Hunting and Sec'y R. L. Eaton, of the Natick Club; Prest. Baker and Sec'y Geo. A. Phillips, of the Dedham Club; Sec'y S. A. Derby, of the Lowell Rod and Gun Club; Dr. J. H. Wright, of the Medfield Sportsman's Club, and many others.

The meeting of the different associations was in response to invitations sent to 24 sporting clubs throughout the State, with the following explanatory circular inclosed:

"The time has come when sportsmen and anglers throughout the State should co-operate to obtain proper legislation for protecting our game and fish, and for enforcing the laws at present upon our statute books, now practically null and void from non-enforcement. All persons at all conversant with the subject are aware what practical laws, and practical enforcement of the same, have done for the fish and game interests of the State of Maine; and there is nothing visionary in the thought that, with the same methods like results may come in Massachusetts also. Our Association, for the last fifteen years, has spent its money, its time and influence, for the purpose of furthering the interests of every sportsman and fisherman throughout the commonwealth. We have accomplished something; we have done all we could, and now, when the time seems propitious for doing practical, successful work for accomplishing our aims, we ask your aid and your co-operation—not for ourselves, but for every lover of rod and gun or bird and fish. For the Massachusetts Fish and Game Protective Association, Henry J. Thayer, Secretary."

Resolutions were presented and and adopted in memory of the late Spencer F. Baird, recognizing the manifold labors and remarkable powers of observation, the great learning and admirable methods he brought to promote the objects of the Commission and the industrial prosperity of the country.

In presenting for discussion the principal object of the meeting President Samuels reviewed briefly the history of attempts of the Association to further the game interests, referring specially to the iniquitous law upon our statute book permitting the snaring of ruffed grouse, practically without let or hindrance; and then he called upon Maj. L. G. White, of Worcester, who spoke of the game, particularly ruffed grouse, which in his opinion could easily hold their own against the gun, but not the snare. Mr. L. A. Derby, of Lowell, gave his experience in confirmation of the statements of Maj. White, but also thought that open seasons should be the same for partridge and for woodcock, say from Sept. 1 to Dec. 1, or Sept. 1 to Jan. 1. Mr. Knowles, of Worcester, thought that Aug. 1 for woodcock and Oct. 1 for partridge meant chicken partridge in market in August, that, and nothing more nor less. Some persons say, "Open the season Sept. 1," some "Oct. 1," but as for him either, if they both open at the same time.

Mr. Hunting, of Natick, thought that if snaring were abolished, as it should be done, sportsmen could have shooting in Massachusetts instead of going to Connecticut or New Hampshire and Maine for sport, and then be able to bring home their game instead of leaving it behind as now one must if shooting in either of these States. He knew of one person who ran a line of 300 snares, from which in three days only 41 partridges were taken. Snares meant murder and extermination, nothing else.

Dr. Wright, of Medfield, thought woodcock in August meant partridge murdered under the name of "short-billed cock;" that the opening day should be alike, either Sept. 1, Sept. 15 or Oct. 1.

Many others spoke upon the same subjects, but all concurred in the belief that snares should go, and that energetic work ought to be done to bring forth something practical for a game law instead of the present inefficient makeshift, and the following was

Resolved, That it is the sense of this meeting that the present law upon the statute book of Massachusetts permitting snaring should be abrogated, and that the open time for ruffed grouse and for woodcock should commence the same, either on Sept. 1 or 15.

Hub.

Wild Geese.—Brooklyn, Nov. 27.—The largest flock of wild geese that ever came under my observation crossed my house on Sunday a few minutes to 12. I keep a flock of homing pigeons on my roof, and while watching them I saw the geese cross. I went down for my field-glass and counted 103, nine of them in a triangle in front, the rest in single file. Three of my friends made the same count, so it must be correct. The flock was nearly three blocks in length.—F. A. S.

EXPRESS COMPANIES AND THE GAME.

CHICAGO, Nov. 26.—*Editor Forest and Stream:* Will you please publish the inclosed circular recently issued by the United States and American Express to their agents, notifying them that they must refuse to receive for shipment any game out of the States of Indiana, Michigan, Wisconsin, Minnesota, Iowa and Dakota Territory? This is a move in the right direction. Now, if the lovers of game will assist in putting a stop to the work of market-hunters and game dealers in these different States and Territories, there will be an immense amount saved every year and we shall soon have plenty of sport for the amateur sportsman. M. R. Bortree.

Chicago, Ill., Nov. 7, 1887.—*To Agents United States and American Express Companies:* Your attention is again called to the game laws of the different States in the Northwest, a synopsis of which is given below. It is our desire and intention to comply with the laws, and you are again cautioned against receiving for shipment any game contrary to the laws of your State. Parties offering you packages, boxes or barrels for shipment, which you have good reason to believe contain game, which it is unlawful to ship, must be required to show you the contents thereof before receipting for same, and if found to contain such game, you will refuse the shipment. These game laws are enacted to benefit the people at large, and should be respected by all law-abiding citizens. We will not knowingly be a party to any violation of these laws. You will govern yourselves accordingly.

Dakota.—It is unlawful to ship the carcass of any buffalo, elk, deer, antelope or mountain sheep to points outside the Territory, at any time or for any purpose. The killing of game birds for traffic is also unlawful, except that any of such birds, not to exceed one dozen in one day, may be sold to any person for his own use, to be consumed within the Territory during the authorized killing season.

Iowa.—It is unlawful to kill for traffic at any time pinnated grouse, prairie chicken, snipe, woodcock, quail, ruffed grouse or pheasant. The exportation of game birds is prohibited, but it is lawful for any person to ship to any other person within the State game birds not exceeding one dozen in number in one day during the season that killing is authorized.

Michigan.—On the Upper Peninsula the prohibitory season for deer is from Aug. 15 until Nov. 15.

Wisconsin.—Deer may be killed during the authorized season for food for consumption within the State only. The transportation from the State is prohibited of any game bird or animal mentioned above (wild pigeons and beaver, mink, muskrat, or other fur-bearing animal excepted) caught or killed in the State.

Indiana.—It is a criminal offense, punishable by fine, to receive for transportation any quail, grouse, deer, pheasant, wild duck or prairie chickens.

Minnesota.—The law provides that none of the following-named animals or birds shall be transported beyond the limits of the State of Minnesota at any time; but this law does not apply to shipments of game from other States into or through the State of Minnesota: Woodcock, quail, pinnated grouse, prairie chicken, ruffed grouse, partridge, pheasant, wild goose, duck, brant or other waterfowl, and teal.

United States Express Co.
(By C. H. Crosby, Vice-Pres. and Gen. Manager.)
American Express Co.
(By A. Antisdel, Ass't Gen. Manager.)

NOTES FROM ONTARIO.

BRANTFORD, Ont., Nov. 18.—Game of all kinds has been unusually scarce this season here and in adjoining towns. The cause of this is the oft repeated old, old story, insufficient protection during the breeding and close season.

There is no lack of good covers in this vicinity, which if properly protected would give good ruffed grouse, woodcock and quail shooting during the autumn months. A small number of gentlemen, Mr. Geo. Henwood and a few others, are trying to work up an interest among the gun bearers of this county in fish and game protection, but so far they have received little or no encouragement, and every possible obstacle has been placed in their way to prevent them from having the game laws enforced.

No man is deserving the title of sportsman whose life is such as will carry his name down to posterity as one whose desire was to destroy instead of protect and propagate. Good, healthy, legitimate sport with the gun and rod makes a man's life brighter, happier and prolonged, while the cruel, selfish greed of the pot-hunter gives him no happiness beyond gratifying the lust of destroying, not pleasure but a devilish, insane sort of frenzy which is unsatisfying in its effect, a direct contrast to the true sportsman's pleasure, which leaves nothing but pleasant recollections behind.

It is to be hoped that the readers of the Forest and Stream in this vicinity will without delay form a fish and game protection society; if so, good results will be sure to follow such a movement. Stanstead.

Pacific Wild Fowl.—The *Breeder and Sportsman* comments thus on the recent letter from a San Francisco sportsman in our columns respecting the edible qualities of ducks in that vicinity: "It seems singular that any one can be so silly as the querist quoted. If he is about San Francisco, a statement which we cannot but doubt, he must know that the merest moiety of the birds marketed is brought from the salt marshes near Alvarado, Alameda, or anywhere else where marshes are salt. The San Francisco markets are supplied from the great fresh-water swamps along the Sacramento and San Joaquin rivers, and from Tulare Lake. Thousands of birds are killed on the plains about Merced, where grasses and grains are the only food. It has been our privilege to offer birds killed within seventy miles of San Francisco to many a visiting sportsman. Mallards, canvasbacks, sprig, teal, gadwall, and all the rest have been placed before guests who were perfectly competent to sit in judgment, and as a rule the opinion has been that they were as good as birds of like varieties killed either along the great inland flights of the mid-continent or among the sand dunes and sedge of the Eastern seaboard. Rich food in the greatest plenty is found where pretty much all ducks sent to San Francisco are killed. Celery and several other bulbous water weeds abound, the ducks are in sweet water, and there is no reason why they should be rank. Such birds as feed on the salt marsh do acquire a peculiar flavor from the grass seed which they consume, but it is only after some days of such feeding. A flight bird, just in at Alviso or Alvarado, is as sweet and well flavored as need be. The Forest and Stream's querist is to be pitied if his sportsman's instinct is not strong enough to guide him to good shooting grounds about this city."

Cimarron, Kan., Nov. 20.—Ducks are scarce in southwest Kansas this season, cause, not much feed and they pass at once. They are reported as plenty on the Canadian River, Texas, 150 miles south of here. Four prominent citizens of Warfield were arrested in Indiana Territory last week for hunting without a permit, arrested by Amos Chapman. It is out of the question to get in there and get out unmolested without a permit.—W. J. D.

An All-Around Gun.—New York, Nov. 25.—*Editor Forest and Stream:* The writer who has used almost every gun now before the shooting public in 10, 12 and 16-gauges, from all the celebrated makers, including Scott, Clabrough, Parker, Colt, Ellis and others, both with hammers and hammerless, has not yet struck on the style that just suited him. He has had two or three of different weights and gauges in order to be prepared for anything from a quail upward, namely in 10, 12 and 16, light, medium and heavy weights, but has found that two or three guns are too much for an ordinary mortal to look after. In traveling one is handicapped by the extra weight and amount of ammunition to be carried for one or more guns of different calibers. My shooting is mostly in thick cover for partridge and woodcock, occasionally quail, where a chokebore is of no use and a short cylinder bore necessary. I also occasionally take a day with the ducks, where a chokebore is essential. The gun I have in my mind is a 10-bore of some good maker, with two sets of barrels to fit the same stock, one set short cylinder bored. 26 to 28in., the other set 30in. in length and chokebored. Do you not think such a gun from the hands of a good maker would about meet the requirements of a Subscriber?

Auxiliary Rifle Barrels.—Appleton, Wis.—*Editor Forest and Stream:* In your issue of Nov. 24 "J. S. W." asks for experiences with auxiliary rifle barrels in shot guns. I have used one for seven years, chambered for .44-75grs. straight shell. My gun is an old-fashioned Remington and the rifle barrel is one of their "cast steel," or at least is so branded. It was put in by a local gunsmith and fits the bore of shot barrel from breech to muzzle so tight that I have sometimes not removed it for a year at a time, and I have found the inside of shot barrel bright as silver. I have an extra extractor so arranged as to extract rifle shells the same as shot. Barrel can be inserted or removed in about two minutes. It would not be practicable to carry it in the hand to insert at short notice, as is advertised for the "auxiliary barrel," but once in place, with the cartridge I use, it is as accurate as any rifle I have ever used. My gun is 12-gauge, 28in. barrels, and the rifle barrel adds just 2lbs. to the weight. For a handy gun in this country it is a "daisy" and is not for sale. With a set of Lyman sights fore and aft, it is ready for any game about here. Any further information would be cheerfully given.—F. U. R.

Erie, Pa., Nov. 28.—Ruffed grouse being reported as plentiful this season, it was decided by a friend and myself to spend Thanksgiving day in pursuit of them. We according went twenty miles south of here, but as it rained steadily all day our time, was in our opinion, better occupied under the sheltering roof of a farmhouse, than tramping through the woods in a soaked and uncomfortable condition. Naturally we shot no birds, but we did not return "empty-handed." We bought some of a man who had shot them the day before, and strange as it may appear we did not afterward claim to have killed them, although, judging from what we heard, the practice is by no means uncommon with some of the "sportsmen" in this vicinity.—Chetko.

Cache Creek, B. C., Nov. 9.—I have had very little time this fall, so far, to engage in my favorite sport, deer stalking, although I did kill two last month, October, for the pot; one was a fine buck and excellent eating; the other one I gave to a friend, who needed it more than I did. I think there could now be had here excellent sport if a party of two or three had time to camp for three or four days on the mountains.—I. L.

Dover, Del.—The shooting season opened here Nov. 15. Partridges are plentiful, but in most sections rabbits are scarce. Woodcock are numerous. Along the extensive marshes bordering the Delaware Bay wild ducks abound in great numbers. Many Philadelphians are here enjoying the sport.—Del. A. Ware.

UNCLE LISHA'S SHOP.

[From the New York Times, Nov. 20.]

Everybody is supposed to know something about this Yankeeland and its representatives, such topics having been worn to death in books and on the stage. And yet if you read what Mr. Robinson writes, whether you be born in Maine or Louisiana, you must be charmed with the book, which is different from anything we have yet produced. It is as local, as peculiar, as faithful, as if Mr. Cable were writing about his creoles, Miss Murfree of her Tennesseeans, or Mr. Harris of his negroes. In our pride we supposed that the verbal phrasing of the Down Easter was familiar to us. But our glossary was scant, narrow, and the gamut of the New England voice wanting in a note or two. We may not be so much to blame for this, for Mr. Robinson does not give us exactly the talk of to-day, but presents us with the Vermonter of, say, 1830; and this method of talk of half a century or more old, if not a storehouse of fossil words, is at least of the highest interest. It is an art to be cleverly phonetic and still understandable, and this happy knack Mr. Robinson possesses.

The mere imitative quality, however, would not alone give this book its peculiar cachet if it were not for the true humor and tenderness the author possesses. "Uncle Lisha's Shop" is but a sketch of New England life in some little settlement cut off from the rest of Vermont, retaining through isolation "the primitive manners, speech and customs" of the early settlers. Uncle Lisha is a shoemaker, and in his shop the neighbors hold "high 'change." Here they come to tell their stories. Some of them love sport, and there is a gallant young fox hunter and turkey-shooting man, and a Canadian, and old Gran'ther Hill, a veteran of the Revolution, who tells most astounding yarns about "Ethin Allin, Hubbar't'n an' Bennin't'n." Ann Twine, the Canuck, as he is called, is a sharp, shrewd man, who talks in French lingo and cuts his English something like Daddy Jack in "Uncle Remus." In their dry, queer way the company in Uncle Lisha's shop are already trying to crack their jokes at Ann Twine's (Antoine's) expense, but he invariably replies with spirit. At first the word "jalluck" was difficult to assimilate, but it was a way they had of clipping and condensing "just like."

A Yankee courting scene has always its peculiar humor, and has been written over and over again, but never so gracefully and prettily as when sweet Huldah and Sam Lovell, the great fox hunter, meet. It is the old story. Just as the words are faltering on Sam's lips, and the blushing buxom Huldah, who loves Sam with all her heart, is to be made happy, then the hound Drive, who is outside the house, begins his music. Drive has found the whereabouts of the fox, and Sam Lovell must, with a true fox hunter's instinct, follow Drive; and so poor Huldah never hears the last final word of a half declaration. Then Huldah steels her heart and tries to forget Sam. Sam does kill his fox after a long chase, and says as he bags him: "You've cost [me more'n any fox ever cost a man afore, or sen the' was foxes an' men an' women folks in this world." But little Sis, Huldah's sister, was lost in the wilderness, and the whole settlement was in the woods looking for her, and Huldah was wild with grief, and her mother in fits, then it happened that Sam was bee hunting. He ought to have been mowing, but the roaming "shoolin'" instinct had fast hold of him. Sam was after honey. He finds little Sis wandering aimlessly in the thickets and very kindly and gently does he care for the affrighted child, and he brings her back to her home. Will Huldah resist him now? Sam, when little Sis is in her mother's arms, discreetly retires. "Who did fetch her?" some one asks. "Sam Lovell, an' the good-for-nothin' cleared right out an' never said a word." He could not have gone far. "Samwell! Samwell Lovell!" she called softly, running out toward the road. "Was you a callin' me, Huldy?" a low voice answered out of the dusk. * * * The tall form of her lover came out of the gloom, and the big sister was in the strong arms that had just brought home the little sister. * * * "Sam," said Huldah half an hour later, "you haven't never tol' me whether or no you got that 'ere fox?" "I hain't never had no chance," he answered.

Mr. Robinson's conclusion is touching. Uncle Lisha makes up his mind to leave Vermont to join his son who is out West, and so announces his intention. There is gloom at Danvis. All his cronies are in despair. There is Gran'ther Hill who fights the notion tooth and nail. "Wal, Lisha," he says, "haint you 'shamed o' yersel' a desertin' of yer country at your time o' life? I never'd ha' thought it of a man 'at had fout tu Plattsburg. But that was in York State. You wouldn't ketch a man 'at hed fout tu Hubbar't'n an' Bennin't'n leavin' Vermaount, 'at he'd fout for. Durn yer 'Hios and Westconstants! West damnations they be, the hull on 'em, full o' fever 'n' aag' an' snakes an' Injins an' all God's cusses." And Antoine says: "You was be so lonesick you come dead raght off, bose of it, an' Jerushy, you see 'f he a'n't." But Uncle Lisha and his Jerusha have made up their minds. It is their only son they are seeking. They sell their houschould goods at a "wendue," visit the graves of their first born, and then Lisha says to his dear old wife: "We've said good-bye to them 'at's nighest to us. Aour rhuts is pretty nigh pulled up." Later on Sam Lovell is after bees. Once more he has his box full of the bees, and one by one they make a line for an old house. There is a swarm of bees who have stored their honey in the clapboard of Uncle Lisha's old house. "Wall they o'n stay there for all o' me," and Sam goes quietly in and looks around. There is a poppy growing in a crack of the sill and a partridge springs from the floor, whizzes through a window of the deserted house and sails into the woods. "The fog o' the ol' stories hangs 'raound here yet," Sam soliloquized, "an' wild creatures takes as nat'ral as tu the woods tu Uncle Lisher's shop. Come, dog."

We seek realism and believe that only the greatest of the Russian authors has it. But here it is near home, alongside of us, for Mr. Robinson has traits of originality, humor, tenderness and poetic feeling, which render "Uncle Lisha's Shop" a truly delightful book.

Sea and River Fishing.

ON THE GASCONADE.—IV.

Another day dawns upon us bright and fair. What beautiful weather we have in autumn! It is of the four seasons the only one of which we may boast. Our winters are too cold; our springs—we have none; we leap from winter into summer, and our summers are too hot; but our autumns! they are glorious. They last so long, the temperature is so equable, and all nature puts on such a lovely garb. The grasses from green to brown and red, the woods in all the luxuriance of an hundred shades from somber to gay, give us a wealth of colors.

> "The corn is cut, the manor full of game;
> The pointer ranges, and sportsman beats
> In rustic jacket—lynx-like in his aim;
> Full grows his bag and wonderful his feats."

He fishes, too, and dabbles in the water, and if he is a poet, sees in nature, next to woman, the greatest of all beauty.

Breakfast over, we made a run of some five miles, and the cook was landed on a pleasant, shaded, wooded spot, to get up a grand noonday feast. There was fish galore, and the ducks and squirrels killed the day before were turned into a burgoo, which, when it had received its final dash of cayenne pepper, sent to the olfactories a most appetizing odor. The boys were out on the river fishing, and the cook had leisure to enjoy the preparations for the meal. When, with the aid of the stores on hand and the game and fish he had prepared, he had ready a royal feast, he raised his voice in a Swiss warble that soon brought the stragglers home. This was *par excellence* the meal of the trip, and the party took time to enjoy it. I would not dare to state how much was eaten for that dinner. But all things have an end, and at last even the boy could hold no more, the dishes were washed and packed away, and we resumed our journey down the river.

One of the most amusing incidents of our cruise took place in the afternoon. The big boat had been stopped in a beautiful place, in order that its occupants might fish, and Frank had been meeting with some success. On the left a mountain arose somewhat steeply. All at once a noise was heard in the leaves some twenty yards from the water's edge. Billy had the gun, and, remembering Mr. Riddle's story of the deer, was all alert. The others were peering, too, to see what they could see, but nothing could they discover only the rustling of the leaves. "It's a deer," whispered the boy.

"Or a bear," said Frank. Still the movement in the leaves. At last Billy could stand it no longer. He raised the gun, deliberately aimed at the spot whence emanated the noise and fired, when such a squeal issued from the mouth of a pig which had been rooting there as has seldom been heard before. Billy's face grew longer and longer, while the laughter of the others grew stronger and stronger. From that time on to say deer, or bear, or pig, to grunt or to squeal, would bring a lowering cloud to our Billy's brow. He was very tender about it, until at last he got fighting mad, and to keep peace in the mess we had to desist from all allusions to illusions. The cook had better luck, for he caught, among others, what he thought, when he was playing him in the water, was the biggest fish, but which proved to be, though a grand bass indeed, a half inch shorter than the one caught by Will and already described. Will and Frank also had fair creels to report. In addition, all three of us had caught by this time, with minnows, specimens 15in. long of the blue cat, and found them to be good fighters.

We went into camp, named after the cook, no matter what, on an island; a delightful place. Gravelly banks. Plenty of wood. Pretty view up the river. Light supper—too much dinner. Went to bed early.

The next morning found us determined to run down so near to Arlington that we could reach that place easily the following day. We had no well defined idea of where we were, though we had figured out "by dead reckoning" that we should be about twelve miles from our destination. After paddling away for a mile or two we saw a man upon the bank and inquired how far it was by river to Arlington. He replied that it was thirty miles, and when we expressed surprise, insisted that he knew. We haven't made up our minds "till yit," as old Buck Tilden used to say, whether that fellow was a born idiot or a Herculean prevaricator. We didn't believe a word he said, and yet our faces grew wondrous long, for we had timed ourselves and we were not the men to fail. Will and I had the fish box in tow, and though it was modeled like a boat, and floated very nicely for a short pull, it began to assume the proportions of a sea anchor. We proposed to the boys to leave it. This involved the slaughter of our fish, but the sacrifice was soon made, and we left our lath ship, a very fair rival to an American man-o'-war, standing on its broadest end, to fall a prey to any *locum tenens* who might discover it. Released from the load we fairly put our backbones into the paddles and away we went as merrily bobbing along as one would care to do. Presently we passed another na-tive (accent on both syllables and the *i* pronounced long). He had a kind of wild expression about the eyes as we approached him, but evidently thought better of disappearing in the underbrush, and upon inquiry told us that he had run a raft from the identical spot upon which he stood to Jerome from daylight to 2 o'clock P. M., and returned home on foot the same evening. He evidently thought that this statement gave us the exact miles, furlongs, rods, yards, feet and inches of the distance, and, if not exact, it did answer the purpose sufficiently well. We concluded, at least, that we were sufficiently near to our destination to justify us in seeking camp and taking things easy, as we were not due at Arlington until the next day.

As we floated along more leisurely quite an event occurred—we saw a woman; yes, a woman, a veritable woman; a young and very pretty woman. Most Missouri politicians are familiar with Major Diegel's story, to the effect that the first time he left home for an extended stay at the capital, Mrs. Diegel very earnestly told him that when he remained away from home until a calico dress looked to him like silk he could be sure it was time for him to return to the protecting care of his wife. Well, we had been away from home, and even from the sight of dimity, so long, that calico looked to us like silk and a white sun bonnet more radiant than a *chef d'œuvre* of the Paris boulevards, and as this sweet piece of femininity, mounted like a goddess of mythology upon a fiery and beautiful steed, flashed through the fringe of trees that bordered the stream and took the water of the ford in advance of us, with a big black mountain just beyond to throw her form into bold relief, each plunge of her horse sending a myriad of diamonds flashing into the air before her, two old benedicts who should have known better, dropped their paddles on the gunwales, and with eyes wide open drank in the beauties of the picture with palpitating hearts. For as fresh and as rosy, as supple and as graceful as love's young dream, was this dear little maiden of the Gasconade. Her "jewlarky" came along a few paces after, spurring to catch up. Bah! There was nothing romantic about him. His long legs tucked in his rather overgrown boots, his sun-browned coat cut for high water, and his tow locks dragging from under the brim of a broad slouch hat, presented anything but a graceful appearance. But absolutely this must have been suggested by our William out of sheer jealousy of the fellow, who maybe the very minute it was said had overtaken the angelic form a short distance down the road, and was, with her, laughing and cracking jokes about "them gawks in that there boat at the ford."

Just below this ford was a succession of rapids, and as the road skirted the river, we could, as we danced over the bubbling water, every now and then catch a glimpse of our swains as they went riding lovingly on together, and somehow the sight had a tendency to reconcile us to the approaching close of our vacation. The only drawback to these outings of ours is that they are made to exclude the women. Why should they be? Is there any experience in them that they would not relish? Are there any beauties of the mountains and the valleys, the springs, the brooks or the rivers that they would not enjoy with a keener appreciation even than do we? Then the flowers and the foliage! How very much more they know of them! Then think of their dainty hands about the table and tent—what cosy pictures they would themselves make, and what delightful camps they would create. Oh, yes, by all means take the ladies. They will enjoy it ever so much. They are not such tender exotics that they cannot bear a breath of fresh air upon their faces, or a drop of rain upon their heads. And if they are, all the more need have they for the health and strength that come from an out-of-door life. Read Genio C. Scott. See how the ladies have enjoyed the backwoods of Canada, even despite the black gnats. See how Lady Brassey has followed her husband into every sea. Our word for it, American women would be the better for more of the woods and the streams, and less of the hotels and the routes. The writer thanks the Giver of all Good that the woman he has carried in his heart this many a year, the mother of his children, the partner of his sorrows and his joys, would rather spend a day upon the Gasconade, laving her little feet in its waters, paddling about on the clean gravel, or taking from it as dexterously as need be its princeliest bass, than to pass an evening in the most brilliant ball room, even though there is still spring in her step and gayety in her eye.

Well, well, this is a long digression, and all caused by one little woman.

We had not gone far below the ford alluded to above before we had an unique race with the big boat. First

we tried to pass her in a square pull in open water and failed. The oars gave too great a leverage, and we found that the paddles were no match for them, so making a virtue of necessity we left the three gentlemen and their canine companion forge to the front. In a little while the river seemed to separate into two streams and the big boat took the right. Standing up and taking a good view I said to Will, "Now is the time for our revenge. They have taken the wrong way and the true course is to the left." No sooner said than the paddles were hard at it. Away we flew, the rapids becoming stronger and stronger. After going about a half mile we espy our comrades in the other stream and we yell with delight at having passed them in the swifter water of our side, with no idea, however, that they are in a *cul de sac*, but just then we perceive that their chute ends abruptly in a gravel bar, and that to get into the stream proper they will have to make a considerable carry, which, with their heavy boat and still heavier load is no light matter. Then we fairly roll over and howl and halloo for joy, and the other fellows, who do not realize their situation, think we are a pair of maniacs. Pretty soon they see it and the circumambient air in their vicinity becomes blue and red, and streaked and striped, from the sulphurousness of the epithets which are hurled at that bar, and indirectly at the lunatics in the other boat, whose sides have become sore from laughing. They cease cus—firing, and contemplate the situation, and finally conclude to unload and carry, which they proceed laboriously to do. The mess chest is taken out high and dry, the bed clothes, tent, gun, rod, live nets, etc., etc., are piled upon it, and then with many a grunt and groan the boat is pulled and hauled over the bar and into the water. The duffle is replaced and then the gentlemen vividly realize the philosophy which underlies the superiority of water over land for the transportation of freights.

Near the scene of the above incident we passed a sawmill on the left and the biggest spring, welling right up out of the bottom of the river, near the right bank, that any of us had ever seen. It is a perfect wonder. Coming from a depth unfathomable by any device we have at hand, it rises to the surface in three streams that come with such force that if one of the boats is rowed upon it it immediately recedes in some direction. After gazing at the phenomenon for some time in astonishment and awe we came to the conclusion that there is water enough poured from the cavernous throat of that wonderful fountain, if it could be properly utilized, to furnish motive power to turn all of the machinery in the State of Missouri. It is said to be a great place in which to murder fish in winter. The spring and the river some distance from it never freeze, and the locality is therefore sought by thousands of fish which fall as prey to the jiggers and other pot-fishers.

We went into camp on the left bank of the river early, about 3 o'clock. Will and Frank took one of the boats and hied them away after bass. Billy, the boy and I, amused ourselves for a time shooting at a mark with the rifle, when Billy concluded he would go out and find a few squirrels. When left to ourselves the boy and I concluded to take a bath in the glorious river shining before us in the sun, and though it was October so balmy was the weather and genial the water, that it proved a real luxury. As we were arraying ourselves after our plunge in the river a long raft of railroad ties passed us, floating on down to the railroad at Arlington, engineered by five or six long, lank-looking specimens of the *genus homo*, ostensibly clad, but whose combined wardrobe would not have sold at an old junk shop for thirty-five cents in cash. They observed Will and Frank in the boat and the boy and me as they passed, and Billy, who was hid behind a tree some distance down the river, heard them talking together about "them damned dudes" they had just passed. Dudes! Great Jehosophat, I wish you could have seen us! What an eye for dudes those fellows must have had. Frank had on an old gray coat that looked as if it might have been a veteran of two wars, a flannel shirt, a pair of ancient though warm and comfortable pantaloons, and an old slouch hat that once was black but now was gray. Will and I were similarly clad, with our pantaloons stuck in our boots, and the lad's mother had seen to it that he wore nothing on the trip that could be worsted by it. The men of us had not shaven for over a week, and were generally pretty rough-looking diamonds, we should have said; but these poor "raft bodies," as a Scotchman would say, took us to be dudes! In thinking over this grievous wrong done to us the only justification I could see for it was in Frank's spectacles. The creature can't see 40ft. without them, and no doubt the raftsmen concluded therefrom that he was a dude, and, as birds of a feather flock together, that the rest of us were also dudes. My youthful readers will see from this how careful they should always be in selecting their company.

At an early hour we had a splendid bass supper, with all the etceteras that our larder afforded, as the jaunt being nearly over economy was no longer partiuclarly necessary. Our camp was a very pleasant and cosy one, and when everything was "to rights" for the night we naturally fell into a talk about our experiences of the past few days. As usual in such cases we found that our "hindsight" was more accurate than our "foresight," and, despite our familiarity with bass fishing in other waters, that we had learned by experience something about bass fishing in the Gasconade. All streams have their peculiarities and this one is no exception. Now with us the orthodox way to fish for bass is with a float, and a live minnow at a depth of 18in. to 2ft., even where the water is much deeper. Occasionally a fancy angler will try a fly, or skittering with a spoon, but the regular, steady thing is what we have described. This don't seem to work in the Gasconade late in the autumn. At that time the bass, which we asserted at the beginning to be the most capricious of fish, has followed the catfish to the bottom, where he is feeding not on minnows, but upon crawfish. This we very soon discovered by dissection of the fish we caught. Not one of them had a minnow in its stomach and nearly every one had more or less crawfish. The fish are to be found in what in local parlance is called the "holes," that is, the long reaches of deep water between the rapids, and generally toward the upper end of these, and upon rocky or sandy bottoms. These "holes" are from 10 to 12ft. deep, sometimes more, not often less, and in fishing them a float is of no particular benefit. What is needed is 150 or 200ft. of fine sea grass or linen line on a good, plain, simple reel, and a handy, light rod. The hook, a number 2 or 3 O'Shaughnessy or Limerick, should be tied to a single gut, and the rig would better be a little too light than too heavy. It is quite remarkable how big a fish you can handle with a light line, especially when you use a landing net, and do not have to lift your fish out of the water. The delicate line does better work and catches the most fish, as the small-mouthed black bass is as skittish as a red deer or a wild turkey. Insert your hook from below through the tail of your crawfish, getting a good hold, and carefully and without noise make your cast as far from the boat as possible. Let it settle to the bottom, and move your line gently every minute or two until it is brought close enough to necessitate another cast, which make in another direction. But whatever else you do be quiet. Don't stand up, don't strike the boat with the oars, as that kind of concussion scares the fish away very quickly, and if you have a talking partner put him ashore and go it alone. If it is convenient it is better when you hook a big fellow and see that you have a stiff fight before you to row away and tow him out of your fishing water for the final battle, but singularly enough the fish seem to be less alarmed by their struggling brother than by a much smaller racket in another way. A dark or partially cloudy day, with a breeze from the south or west, is the best, and those who ought to know say it is almost useless to fish for small-mouth black bass on a perfectly still, bright sunshiny day. The bait should be allowed to rest on the bottom, as it is there that the fish naturally looks for it. Some bass may be taken, even in the fall months, with minnows, and even with the red worm, or with small frogs, but after the water becomes a little cold and the bass seeks the deeper places, the most killing bait is unquestionably the crawfish. If we had known all this earlier in our trip we should have caught more fish, probably, but we got a plenty as it was, and we could not have had a better time; and the late autumn is certainly the grandest season of all the year for an outing.

So we talked over what we had learned and what we had enjoyed until somewhat later than usual, and at last went reluctantly to bed in our last camp upon the Gasconade, after an experience with it unmarked by one untoward accident or an hour's disagreeable weather.

The next morning we reached Arlington at 10 o'clock, our train being due a little after noon. We returned the boats to their owner at Jerome, on the opposite side of the river, with a present of a number of catfish, which he seemed to appreciate very highly. At Arlington we found the general merchandise store of Mr. Pillman, and a very well supplied one, to contain the post office, which was presided over by a very pretty and intelligent young lady. Our trunk—Frank's and mine—with our civilized clothes in it, was there, and Mr. Rogers, the clerk, politely permitted us to use the warehouse as a toilet room. Arriving in top boots, slouch hats, rough clothes, unshaven faces and with a decided cowboy appearance, when we emerged with smooth chins, "biled" shirts, fairly cut clothes, derby hats and polished boots, the transformation drew an exclamation of surprise—not from the young lady; no, we are not quite so soft as that on this occasion, but from the old gentleman, Mr. Rogers. And, after all, it felt good once more to get into civilized togs. Clothes do not make the man, by no manner of means, but they add most decidedly to his comfort and satisfaction.

We had several little experiences on the way home that might do to relate, but this yarn has been spun out long enough. In due time our train came along, and our bachelors tore themselves away from the contemplation of the sweet young lady at the store, and we hurriedly got aboard. Just after we did so we became aware that Scraps had also come aboard, and it became necessary to have him ejected from the car. We had previously made arrangements for his adoption by a very decent and humane-looking man whom we met in the village. Poor fellow! Faithful friend! He had known us only a few days, but he loved and did not want to leave us. If we had had but another minute to reflect after this touching scene, we should never have left him, but the train was off and so we were separated from him. Good-bye, Scraps, old fellow! May your lines have fallen in pleasant places. And so, with the hope that my readers may think none the worse of us at the end by reason of the love of this poor brute, I wish them all adieu until I have another story to tell them of the mountain and the valley, the river and the wood. Farewell. A. A. L.

IZAAK WALTON'S BUSINESS.—In these days, when so many cherished traditions are questioned, from the existence of William Tell to the authorship of Shakespeare, we are not surprised to find a writer in the London *Field* trying to overthrow the long accepted belief that Izaak Walton was a hosier and linendraper. He says: "Mr. J. M. Cowper's interesting contribution, a copy of the license of Walton's first marriage, published in the *Field* of the 29th ult., has drawn attention to the business or trade followed by the 'father of anglers,' the particulars of which have never, to my mind, been quite satisfactory. So far as I can make out, prior to 1844, and even up to the present time in most quarters, Walton was, or is understood to have been, a hosier or linendraper, but any direct proof of such being absolutely the fact has not yet been forthcoming. He had occupied a shop in connection with one John Mason, who was a hosier or linendraper, near Chancery lane; but because Mason was engaged in such a business is no reason why Walton should be so. The portion of the shop occupied by the latter might have been used for any purpose whatever, and I am aware of no other reason than this joint occupancy why common report has made Walton a hosier or linendraper. Now, in Major's edition, 1844, a note appears for the first time that during 1617-18 Izaak Walton was made a member of the Ironmongers' Company. Of course it is possible that any tradesman of repute, be he butcher, baker, draper or anything else, might be elected a member of this guild. Here is this note, perfectly authentic in every way, and now Mr. Cowper gives us the marriage license, discovered by him in the archives of Canterbury Cathedral, which states that 'Isaack Walton was an Ironmonger of the Cittie of London.' Am I not correct, in the face of this direct evidence, in supposing that Walton was an ironmonger pure and simple, and that stories of the haberdasher, linendraper, hosier, sempster, either wholesale or retail, were but suppositions handed down from generation to generation, in that peculiar manner so dangerous to the correctness of historical data? If there be any stronger proof of the business followed by this fine old soul, it may perhaps now be forthcoming. At present I believe Izaak Walton was an ironmonger."

CAMP ADAMS.—I.

IS everything ready? Every one on board? Yes. Well, then, let her go. A few moments later early risers might have seen a party of four gentlemen, William Crawford, one of the members of the firm of Simpson, Crawford & Simpson, New York; William Reddick, of Wilmington, N. C.; John Ferguson and Robert Armstrong, the latter two from Newcastle, turning the corner of Street's Hill, and bowling along the Chaplin Island road in a double-seated express wagon, bound for John Way's, the first stopping place on the way to Camp Adams, whither they were going for a week or ten days of salmon fishing.

On they go, up hill here, down dale there, past farm and farm house, wood and pasture, crossing now a brook and now a culvert, over which the wagon bumps and bounces in a way suggestive of what is to follow over the twenty miles of a portage road ahead.

At last they reach the old schoolhouse, in the back settlement, where they turn to the right and continue on their way up river until the upper bridge comes in sight. Over they go with another clatter and bang, and another quick turn to the right, a few moments more and they have drawn their horses up before John Way's door, and in a twinkling they are all on the ground stamping and tramping the kinks, caused by the long, rapid ride, out of their limbs.

In a few minutes John puts in an appearance. Less than medium height with a slight halt in his step, trousers fastened with a belt at the waist and having an appearance of just staying where they were, not because they wanted to but because they had to, a checkered flannel shirt, no coat nor vest, a battered felt hat, from under which appeared a pair of sharp bright eyes that betoken no end of fun, the rest of the face, well, that is covered with a forest growth of brownish beard, now beginning to be tinged with gray in places, while a straggling circle of hair wanders out from beneath the hat rim, more than generally escapes the hands of three wives, with which John has been blessed.

He suddenly blurts out in a voice that would make a steam caliope green with envy, "Halloo, boys; what kind of jig dancing do you call that? When I heered you fellers comin' I thought Sam Kingston had another bear down in the medder trap. Are you going up to the camp?" "Easy John," replied Reddick, "one question at a time. What kind of a dance is this? This is a Carolina gallop." "Carolina devil," retorted John, "it looks more like mad Nuel Julien's Injun war dance."

With a shout that causes all the party to jump he calls, "Bob, Bob, put Duke and Liz in the wagon, quick, there's a copple of Yanks here in such a darned hurry to go fishing that they ain't got no time for nothin' else, 'n' if you don't hurry up some on 'em will have a French fit sure."

In a short time the portage wagon and Duke and Liz are ready for the road, as is also a buckboard with another horse. Two of the party take their places in the portage wagon, stretching full length on a soft bed of hay. The rest seat themselves in the buckboard and then everything is ready, but there is no driver as yet moving. "Say, John, are you not going to go with us," comes from out the hay in the bottom of the wagon. "Not this time," replies the man of the belt and the three wives. "Guess I'll send Bob, it don't matter much if you kill him or not."

And now they are off with a "git up ahead Duke, get up Liz" from Bob, who slings a bag of oats on the front of the wagon and himself on the bag, and as Reddick has it, he immediately became a fixture, a part of the wagon itself as it were. Swaying first to one side as one wheel goes away up on the top of a big rock and then to the other as the wheel comes down off the rock with a bump that would dislodge any one unless they had a thumb screw in the seat of their pants to hold them on, as friend Reddick would have us believe that Bob has. And it seems almost impossible to convince the former that his theory is not correct. As they are disappearing around a turn in the road they hear John's voice calling after them, "Good luck, boys. Don't take 'em all. Hope the flies won't eat you."

Any person who has ever been over a portage road will know what our friends have ahead of them, while those who have not have missed something in the driving line well worth a long trip to experience. First one wheel mounts a rock while the opposite one sinks into a mud hole hub deep, the next moment *vice versa*, then for variety both wheels plunge into a mire hole at once, which causes Bob to use some little profanity, who, with a "git up ahead there, what are you doin'," and an extra jerk at the reins, succeeds in getting the "chabang" pulled through; then more rocks, etc. They continue in this manner, rolling from side to side, more like a ship in a tempest than a wagon, until Bob falls into a deep sleep, but as he retains the perpendicular on the bag of oats, Reddick is certain that his suspicions about the thumb screw are correct.

Six miles from Way's they stop at Cruickshank's for dinner. Horses are turned loose and allowed to graze over the small clearing. A fire is soon burning and the tea is boiled (they boil it in the woods, never draw it) and all sit down to dinner. How that grub went out of sight only hungry fishermen after a long drive can understand. After dinner no dish washing or wiping is done, but greazy birch bark plates are thrown away; and they are off for Stony Brook, the next stopping place, distant from Cruickshank's four miles.

As they proceed on their journey, soothed by the undulations of the moving wagon, before they can realize it they have succumbed to the drowsy god, and with pipe in mouth have dropped off into a sound sleep, only to be aroused by Bob who, strange to say, has either kept awake or just waked up. "Say, fellers, look at the old partridge and her chicks." As he holds up his horses they see strutting along the middle of the road an old ruffed grouse and her brood a little ahead of them, not a bit alarmed at their near presence. As they come up, she and her family, pretty well grown, turn off into the woods, and with a rustling among last year's dead leaves disappear.

Along this road almost anywhere between John Way's and the camp one can, on the opening of the season Sept. 20, shoot all the ruffed grouse he desires. A stray bear, moose, or caribou can frequently be taken; in fact, the former are more than plentiful, doing much damage at times to sheep and cattle.

Nothing more disturbs their dreams until the top of the hill leading to Stony Brook is reached, and here the stillness becomes so oppressive as to cause them to awaken with a start and sit up and rub their eyes and look around them in wonderment. Everything is so quiet, not even the hum of an insect is heard; all animal life seems to have forsaken the woods, until one of the horses, striking a stone, loosens it and away it goes down the hill ahead of the wagon with a clatter. This seems to break the spell, for one of the party says in a kind of half whisper and with a long drawn sigh, "Did you ever run across anything like this in your life? Why you can just hear the still."

As they go slowly down the hill, here winding around the side of the mountain for half a mile or more, they see spread out below them a beautiful panorama, a perfect sea of treetops on all sides. The dark green of the tall pine and spruce, broken here and there with the brighter green of the white birch, with the tall rampikes protruding their long necks and gaunt arms far above the surrounding trees like sentinels watching over the sleeping valley below, fitting companions for the death-like stillness.

Rounding a turn in the road a sudden gurgling, rippling sound strikes upon their ears as if a mountain brook were rushing along over its stony bed, and such is the case. In an instant everything is changed. Death-like solitude gives place to life and animation, causing faces to brighten and voices long silent to suddenly give tongue. Here is Stony Brook at last, bubbling and boiling where it crosses the road, music to the fishermen's ears, such as only a mountain brook can make to men free for a time from the cares of the money-making machines of the great cities, and bent upon having all the enjoyment they can.

Fording the brook the horses stop, and bending their necks take long draughts of the clear cold water as it rushes by their feet. But what is that darting away up stream? Is it a minnow? Probably a young salmon. After many years fighting with the fishery wardens, Mr. Adams has at last overcome, with the sanction of the Minister of Marine and Fisheries, their fancied objection that the distance was too great to transport the fry, and has succeeded, with the help of Mr. Sheasgreen, the present overseer of the Miramichi Salmon Hatching Establishment, a very excellent one, situated a few miles from Newcastle on the North West, in planting some 90,000 salmon fry in this brook this season many miles higher than heretofore. This brook was recommended by Mr. Adams for planting the young fish, as it is almost entirely free from trout, the great enemies of young salmon.

This gentleman devotes a great deal of his time to salmon fishing and propagation, and has lately rendered very effective the fishery warden service upon this river. Poaching has been almost, if not entirely, done away with this summer, thus allowing many more fish to ascend the river to be taken with the fly. Being an ardent sportsman, and knowing as much about fly-fishing on this river, if not more, than any man in the Province, he hopes to show the practical results of his efforts in having fry planted at this point by an increase in the catch the year after next. All anglers will wish him hearty success.

Of these fry 30,000 were Restigouche salmon, much larger fish than Miramichi salmon. They were shipped from the Restigouche Hatchery by rail to Newcastle Station, thence carried by Mr. Sheasgreen to the Miramichi Hatchery, where they were allowed to rest for a few days before being transferred to Stony Brook. The other 60,000 were fry from Miramichi fish, and were deposited at various times during the summer.

After crossing the brook the horses have a long climb up to Stony Brook hill for perhaps a mile or more. You can hardly imagine you are ascending the opposite slope of the same valley into which you descended a few minutes previous. It is so entirely different. The dark green of the spruce foliage and the somber hue of the bark have here given place to the white bark of the birch, the lighter green leaves and supple branches of which sway to and fro in the gentle summer zephyr, causing a rustling that seems music compared with the dead stillness of the other side.

When about half way up the hill Duke comes to a dead stop and will not budge an inch. It takes some time to discover that this unusual conduct is caused by him having cast one of his shoes, and he seems to know, as well as his driver, that he cannot breast that rocky hill without them. Here's "a pretty go now." Miles from a blacksmith and nine miles from camp and no shoe on the horse. What's to be done now? Just watch Bob for a minute or two and find out. First go back and pick up the shoe, then from some place underneath the bag of oats comes a few bent horse-shoe nails, and then from some other place a shingle hatchet, and Bob does a litttle blacksmithing on the road, and while I am describing the operation the shoe is on, and the wagon is on the move again.

From the top of Stony Brook hill to the camp there is a splendid piece of road and such good speed is made that in a short time Sinclair's camp is reached. An old dilapidated lumber camp, once the scene of a busy lumber operation, now long since silent and rapidly falling to ruins, here Reddick and Armstrong, becoming somewhat cramped with the long drive, jumped out of the wagon to unlimber themselves, and walk from there to the camp, reaching it some time in advance of the wagon.

A sharp turn to the left and I imagine now that I can see the heads of the many shaking a silent "impossible" with respect to what suddenly appears before us. First a small clearing, in the center of which—dare I mention it—a white tent? No; nor yet a bark shanty! Not even a lean-to of boughs! But a comfortable looking cottage away up here in the wilderness, miles from other habitations.

In a few minutes the balance of the party are safely landed on the veranda, which surrounds the house on three sides. As we enter the door—a greater wonder—we find the walls plastered. Just think of plastered walls and salmon fishing in front of the very door. But we have not as yet reached the limit of our surprises, for as the door of the cupboard is opened by one of the party we see neatly arranged on the shelves china dishes, knives, forks, table clothes, cups and saucers, and to cap the whole a cruet stand, while through the open door leading into the sleeping apartment we catch a glimpse of comfortable looking beds, covered with mosquito canopies, under which one may, after returning from a hard day's work, turn in and enjoy our well earned rest, secure from the attacks of the terrible pests of the woods, and to rise again refreshed and ready for business, instead of fighting flies all night, dropping into the troubled sleep of the weary, only to dream that you are being tortured by red hot needles driven into your skin and to suddenly awake and find that it is only those cussed punkies getting in their fireworks.

It being but 5 o'clock when the whole of the party have their traps unloaded, some one proposes that they go up to the falls and try for a salmon before supper. No sooner said than done. Rods are put together hurriedly and fly-books overhauled. Crawford and Ferguson, who are to participate in this little bye affair, determine upon a Jock-Scott and a Durham-ranger.

The falls, some quarter of a mile, perhaps less, from the camp, are soon reached, and as they approach the pool at the top of the falls the question comes, "Do you see any fish in the pool, Jack?" "No." But as his eyes grow more accustomed to the seething water the answer quickly changes, as he sees first one, two, three, four, five, six, and then he makes a big jump to twenty in the same breath, followed in a moment by "the pool is full of them."

Standing on the shore above the pool, and looking diagonally across it, they can see the fish, lying head up stream and motionless, except for perhaps a slight movement of the tail.

Ferguson is the first to open the ball, and when he casts his Durham across the pool two or three fish make a rush for it, but the gaudy lure is only an attraction at a distance, for on a near view they skulk quietly to the bottom. He tries it again and again with the same result. By this time Crawford has got his rod in trim, and as the Jock-Scott strikes the water there is a sudden swirl, a strike, a dark streak rushing up stream, a yell from Crawford, "I got him, 15lbs. sure." (Fisherman's opinion when the fish is on one end of the line and the man on the other.) As the strain on the line increases there is a flash in the air, and a glittering form sparkles for a moment in the rays of the evening sun. Again and again he vaults, showing his bright sides and white belly like burnished silver.

Away he goes, taking off yard after yaad of line, making the reel whiz, until it seemed to the anxious sportsman as though he was going to lose his fish, line and all. Something must be done to turn him in his mad course. The heavy 18ft. rod bends gracefully in checking him. Still he rushes onward. When all hopes of saving him is at length about gone, he begins to give way little by little, and as he feels the extra strain on the line being slowly reeled in, he again leaps from the water and shakes his head to rid himself of the terrible double hook. But he is not to succeed. Once let a double hook be struck home and there it stays. Crawford realizes this; and now it is but a question how long the fight is to continue before he is landed. As he is led slowly back to the deep water he sinks to the bottom and remains sulking and at rest. That will never do, he must be kept on the move. Inch by inch the line is taken up until the rod is an almost perfect arch, then it is carefully moved from side to side, causing the fish to start again from his sulking ground. Away he goes; first up, then down and back and forth across the pool, taking off line and turning so quickly that the fisherman has all he can do to look after the slack. Is he never going to tire? It seems not. Suddenly he ceases the fight, is caught by the current, and borne toward the falls, making a feeble effort to regain his position. But over he goes, down the pitch and into the basin, where most of the fish are killed. Unless some unforeseen accident happens each one going down there is doomed.

And now he is being slowly led into the shallow water; but the sight of the landing net ready to slip under him and of the man holding it starts him off again. It is, however, his last effort. A few moments and he turns side up, and is slowly reeled ashore, the net slipped under him and the first fish has been taken. Though not quite up to Crawford's estimate, it will tip the scale at 10lbs.; not a bad fish.

Crawford is a very unselfish gentleman, so he remarks, "Guess I will take a rest and let you fish, Jack," and laying down his rod, seated himself on a rock. In a few minutes Ferguson has hooked one and goes through the same performance.

They continue in this manner until a feeling of goneness in the vicinity of the lower button of their vests causes them to think of supper, and the motion to adjourn for the evening being put and carried, they count up and find that six have been killed and two or three more hooked but lost; not bad work for the first evening.

By the time supper is over it is nearly dark, and a big log fire having been started in front of the door, all hands go outside for a smoke. Soon the smudge pots are started in the house to drive out the flies and mosquitoes. Although when safely housed under the canopies our friends will be safe from the attacks of these pests, yet they are not free from the music of the mosquito band, which to me, for one, is about as bad as their bite. If the fiery pests would only go to work quietly in place of tuning up first and keeping you on the ragged edge of not knowing from what quarter to expect the next attack, it would not be so bad. It is for the purpose of getting rid of this band that the smudge is pressed into service.

Darkness steals silently upon us, and every now and then a tongue of flame leaps up from the fire, illuminating the trees in the great shadow beyond the circle of fire light. At the sight of camp-fire and surroundings, old recollections are stirred up, and from out the shadowy corners of memory anecdotes of former trips to "Camp Adams" and other sporting resorts as well, are rolled up in succession, until the fire slowly dying causes Reddick to look at his watch, and say with a yawn, "Come, boys, ten o'clock, time we were off to bed long ago." All hands being pretty tired there is no dissenting voice, and before long the camp is wrapt in slumber, and so ends the first day.

Next morning, after a good rest, all are up bright and early, Reddick proposes that he and Armstrong try "Ned's Pool," the upper one of four pools, all within sound of breakfast. The other three are Call's Pool, Reddick's Pool and the Camp Pool, the latter almost directly opposite the camp, so that a person sitting on the veranda has a full view of the pool and any fun going on.

Something wrong with the fish this morning, only one taken before breakfast; but this causes no uneasiness in camp, as that sort of thing is often met with in salmon fishing. At times all efforts to make fish rise will result in nothing, when suddenly and for no apparent cause, their mood changes, and they spring as lively as can be wished for.

After breakfast, which they make but a matter of hasty business, a start is made for lower Glory Hole, about two and one-half miles below, leaving the pools at the falls and near the camp for the evening.

Wading down stream they take some fine trout. At the Chain of Rocks Pool, the first on the way, some excellent sport is had and a few beautiful fish captured, when Tom's Pool, Upper Glory Hole and Lower Glory Hole, Sam's, Little Mick's, Big Mick's and Black Head Rock pools are visited in succession, and at all more or less sport was had.

Tired and hungry the party reached Camp Adams at dinner time, after having waded about four miles against the current of a rapid river, where every mile seems to stretch out until it doubles its length. SALMO.

LAKE HERRINGS AND GULLS.

CENTRAL LAKE, Mich., Nov. 18.—*Editor Forest and Stream:* I send you to-day by express, prepaid, a glass jar containing five specimens of the so-called "herrings" of Central Lake. I shall feel obliged if you will identify them, and if by a remote possibility they should prove to be of a new species or variety, divide with the Smithsonian.

I was unable personally to attend to the selection of these specimens, but they appear to be in good order, and to represent both sexes. They are placed in a mixture of about one-quarter water and three-quarters wood alcohol—the only spirit at hand.

As I had anticipated from the movements of the birds, the herrings came into our river earlier than usual by about a week. I was told that they were first seen on the third of November, and it may be remarked that our crops this year ripened for the most part several days earlier than usual.

There certainly seems something peculiar about the movements of these fishes, for I cannot learn that they are to be observed in any of the waters into which those of Central Lake find their way; and I doubt if any of them could ascend from Grass Lake into the upper Intermediate, on account of the imperfect fish ladder at the Bellaire dam.

Supposing this to be the case, in what way do the gulls inform themselves of the fact that the herrings are gathering in order to ascend the rivers and deposit their spawn? Certainly, I do not, as I recently stated in your columns, remember to have seen a gull on Central Lake except when the herrings were on their annual expedition.

It is my intention to take measures next fall to ascertain definitely how far the movements of these fishes extend in the waters of this region. KELPIE.

[The specimens are of the so-called "lake herring," "cisco," or "Michigan herring," *Coregonus artedi*, of which there is a modified variety, according to Jordan, and named by him *Argyrosomus sisco*, in the small lakes of Indiana and Wisconsin. We will be glad to have further observations made on the movements of the gulls and this fish.]

They tell me they've been "snatching"
In the well-known Willow Pool;
But to prevent that artifice
There is a tip-top rule.
Some very famous anglers
Have been up before the "beak"
For clutching at yon salmon
With a new invented "cleek."

THE CHEMICAL CHANGES IN OYSTERS BY FLOATING.

BY PROF. W. O. ATWATER.

[Read before the American Fisheries Society.]

IT is a common practice of oyster dealers, instead of selling the oysters in the condition in which they are taken from the beds in salt water, to first place them for a time, forty-eight hours, more or less, in fresh or brackish water, in order, as the oystermen say, to "fatten" them, the operation being called "floating" or "laying out." By this process the body of the oyster acquires such a plumpness and rotundity, and its bulk and weight are so increased as to materially increase its selling value.

The belief is common among oystermen that this "fattening" is due to an actual gain of flesh and fat, and that the nutritive value of the oyster is increased.

A moment's consideration of the chemistry and physiology of the subject will make it clear, not only that such an increase of tissue-substance in so short a time and with such scanty food-supply is out of the question, but that the increase of volume and weight of the bodies of the oysters is just what would be expected from the osmose or dialysis which would naturally take place between the contents of the bodies of the oysters as taken from salt water, and the fresh or brackish water in which they are floated.

If we fill a bladder with salt water and then put it into fresh water, the salt water will gradually work its way out through the pores of the bladder, and, at the same time, the fresher water will enter the bladder; and further, the fresh water will go in much more rapidly than the salt water goes out. The result will be that the amount of water in the bladder will be increased. It will swell by taking up more water than it loses, while at the same time it loses a portion of the salt.

It does this in obedience to a physical law, to which the terms osmose and dialysis are applied. In accordance with this law, if a membraneous sac holding salts in solution is immersed in a more dilute solution or impure water, the more concentrated solution will pass out and at the same time the water or more dilute solution will pass in and more rapidly. The escape of the concentrated and entrance of the dilute solution will be, in general, the more rapid the greater the difference in concentration and the higher the temperature of the two solutions. After the osmose has proceeded for a time, the two solutions will become equally diluted. When this equilibrium between the two is reached the osmose will stop. If the sac which has become distended is elastic, it will, after osmose has ceased, tend to come back to its normal size, the extra quantity of solution which it has received being driven out again.

We should expect these principles to apply to the oyster. Roughly speaking, the body of the animal may be regarded as a collection of membraneous sacs. It seems entirely reasonable to suppose that the intercellular spaces, and probably the cells of the body would be impregnated with the salts of the sea water in which the animal lives, and this supposition is confirmed by the large quantity of mineral salts which the body is found by analysis to contain, and which amounts, in some cases, to over 14 per cent. of the water-free substance of the body.

It seems equally reasonable to assume that osmose would take place through both the outer coating of the body and the cell walls. In the salt water the solution of salts within the body may be assumed to be in equilibrium with the surrounding medium. When the animal is brought into fresh or brackish water, *i. e.*, into a more dilute solution, the salts in the more concentrated solution within the body would tend to pass in and produce just such a distension as actually takes place in the floating. If this assumption is correct, we should expect that the osmose would be the more rapid the less the amount of salts in the surrounding water; that it would proceed more rapidly in warm and more slowly in cold water; that it would take place whether the body of the animal is left in the shell or is previously removed from it; that the quantity of salts would be greatly reduced in floating; and that if it were left in the water after the maximum distension had been reached, the imbibed water would pass out again and the oyster would be reduced to its original size. Just such is actually the case. Oystermen find that the oysters "fatten" much more quickly in fresh than in brackish water; warmth is so favorable to the process that it is said to be sometimes found profitable to warm artificially the water in which the oysters are floated; although oysters are generally floated in the shell, the same effect is very commonly obtained by adding fresh water to the oysters after they have been taken out of the shell, indeed, I am told that this is a by no means unusual practice of retail dealers; oysters lose much of their salty flavor in floating; and it is a common experience of oystermen that if the "fattened" oysters are left too long on the floats they become "lean" again.

This exact agreement of theory and fact might seem to warrant the conclusion that the actual changes in the so-called fattening of oysters in floating are essentially gain of water and loss of salts. The absolute proof, however, is to be sought in chemical analysis. In the course of an investigation conducted under the auspices of the United States Fish Commission, and which included examinations of a number of oysters and other shellfish, I have improved the opportunity to test this matter by some analysis of oysters before and after floating. The results of the investigation are to be given in one of the publications of the Commission. From this the following statements are selected as perhaps not without interest to the Fisheries Association.* It is not improper that I should add here, that a portion of the expenses of the investigation was borne by one of the prominent officers of the association, Mr. E. G. Blackford.

The account just mentioned of the experiments is preceded by some citations regarding the practice of floating oysters which I insert here, adding that I should be greatly obliged for any further information upon the subject.

The following very opposite statements† are by Prof. Persifor Frazer, Jr., who attributes the changes mentioned to dialytic action.

"The oysters brought to our large markets on the Atlantic seaboard are generally first subjected to a process of 'laying out,' which consists in placing them for a short time in fresher water than that from which they have been taken.

"Persons who are fond of this animal as an article of food, know how much the 'fresh' exceed the 'salts' in size and consistency. The 'Morris Coves' of this city (Philadelphia), while very insipid, are the plumpest bivalves brought to market. On the other hand, the 'Absecoms' and 'Brigantines,' while of a better flavor (to those who prefer salt oysters), are invariably lean, compared to their transplanted rivals, as also are the 'Cape Mays,' though from some reason, not to the same extent.

"The most experienced oyster dealers inform me that the time for allowing the salt oysters taken from the sea-coast to lie out, varies, but is seldom over two or three days. At the end of this time the maximum plumpness is attained, and beyond this the oyster becomes lean again, besides having lost in flavor."

The subjoined statements by Prof. J. A. Ryder are interesting in this connection. They are taken from a letter to Prof. Baird, U. S. Commissioner of Fish and Fisheries on "Floats for the so-called fattening of oysters."‡

"The simplest and most practical structures of the kind which I have seen are the storage and fattening floats used by Mr. Conger, of Franklin City, Md., and now in use by all the shippers and planters in the vicinity of Chincoteague Bay. I have been informed that similar structures, or rather structurs serving similar purposes, are in use on the oyster beds along the shore of Staten Island, New York.

"It is probably a fact that in all these contrivances they take advantage of the effect produced by fresher water upon oysters which have been taken from slightly salt water. The planters of Chincoteague call this 'plumping the oysters for market.' It does not mean that the oysters are augmented in volume by the addition of substantial matter, such as occurs during the actual appropriation of food, but only that the vascular spaces and vessels in the animals are filled with a larger amount of water due to endosmose. It is a dealer's trick to give his produce a better appearance in the market, and as such I do not think deserves encouragement, but rather exposure.

"Mr. Conger has actually resorted to warming fresh water to 60 F. in winter by steam pipes running underneath the wooden inclosure surrounding the 'fattening' or 'plumping' float. One good 'drink,' as he expressed himself to me, renders the animal fit for sale and of better appearance.

"Conger's floats are simply a pair of windlasses, supported by two pairs of piles driven into the bottom. Chains or ropes which wind upon the windlasses pass down to a pair of cross pieces, upon which the float rests, which has a perforated or strong slat bottom and a rim 18in. to 2ft. high. These floats I should think are about 8ft. wide and 16ft. long, perhaps 20. These structures are usually built alongside the wharves of the packing and shipping houses, and are really a great convenience in conducting the work. * * *"

Elsewhere Prof. Ryder speaks of the floats thus:

"The diaphragm itself was constructed on boards perforated with auger holes and lined on the inside with gunny-cloth or sacking, and the space between the perforated boards was filled with sharp clean sand. The space between the boards was about 2in.: through this the tide ebbed and flowed, giving a rise and fall of from 4 to 6in. during the interval between successive tides."

Mr. F. T. Lane, of New Haven, Conn., writes as follows about the method of floating practiced by himself and, as I understand, by other New Haven growers.

"We do not always leave them two days in the floats—as a rule only one day. We put them into brackish water and take them out at low water or in the last of the falling tide, as then the water is the freshest and the oysters are at their best. As it is not convenient for us to put them into the floats and take them out the same day we do not want the water too fresh. On one occasion, wishing to know what the result would be of putting the oysters into water that was quite fresh, I had one of my floats taken up the river half a mile further than where we commonly use them and 100 bushels of oysters put into it at high water and taken out at low water. They were in the water from six to seven hours and came out very nice, fully as good as those floated twenty-four hours in the brackish water. It was a warm day and the water was warm. Under these conditions they will drink very quickly. I have seen them open their shells in ten minutes after they were put into the water."

For the following valuable information I am indebted to Mr. R. G. Pike, Chairman of the Board of Shellfish Commissioners of Connecticut:

"Connecticut oysters, when brought from their beds in the salt waters of Long Island Sound, are seldom sent to market before they have been subjected to more or less manipulation. As soon as possible after being gathered, they are deposited in shallow tide rivers where the water is more or less brackish; and are left there from one to four days; the time varying according to the temperature of the season, the saltness of the oyster, and the freshening quality of the water. Generally two tides are sufficient for the two 'good drinks' which the oystermen say they should always have.

"This 'floating,' as it is called, results in cleaning out and freshening the oysters, and increasing their bulk; or, as many oystermen confidently assert, 'fattening' them. If the weather is warm, they will take a 'drink' immediately if not disturbed; but if the weather is cold they will wait sometimes ten or twelve hours before opening their valves. Good fat oysters generally yield five quarts of solid meat to the bushel; but after floating two tides or more they will measure six quarts to the bushel. After they have been properly floated they are taken from the shell—and as soon as the liquor is all strained off, they are washed in cold water—and are then packed for market. In warm weather they are put into the water with ice, and are also packed with ice for shipping. Water increases their bulk by absorption and by mixing with the liquor on the surface of the oysters. The salter the oyster the more water it absorbs. In twelve hours one gallon of oysters, with their juices strained out, will take in a pint of water; but when very salt and dry they have been known to absorb a pint in three hours.

"Water always thickens the natural juices that adhere to the surface of the oyster, and makes them slimy. If too much water is added the oyster loses its plumpness and firmness and becomes watery and flabby.

"Oysters that have been floated bear transportation in the shell much better than when shipped directly from their beds. Oysters, too, that are taken from their shells and packed in all their native juices spoil much sooner than when their juices are strained out and the meats are washed in fresh cold water.

"Long clams are not floated—but round clams are. But both, when shucked, are washed in fresh water. This cleanses them of mud, sand and excess of salt, increases their bulk and improves their flavor. After washing they will keep much longer without risk of spoiling. If the salt is left in them, as they come from their native beds, their liquor will ferment and they will quickly spoil.

"The above facts are gathered from the most intelligent men in the shellfish business in Connecticut, men who have had many years experience in gathering oysters and clams and preparing them for home and foreign consumption. They are all agreed that by judicious floating in the shell, and by washing and soaking when out of the shell, the oyster and the clam increase in bulk and improve in quality and flavor. We will not presume to say that this increased bulk is anything more than a mechanical distension of the organs and the cellular tissues of the oyster by water; or that its improved flavor is not due simply to a loss of bitter sea salt dissolved out by the water. Many intelligent cultivators are confident that the increase in bulk is a growth of fat; while just as many, of equal intelligence, declare that it is mere 'bloat' or distension, akin to that of a dry sponge when plunged into the water. The exact nature of the change the chemist alone can determine."

[TO BE CONTINUED.]

LOBSTERS IN CANADA.—The Commissioners appointed by the Dominion Government in May last to investigate into and report on the condition of the lobster fisheries in the Maritime Provinces have made a report to the Fisheries Department at Ottawa. They recommend that all lobster fishing in the gulf be shut down for three years, except for six weeks next season, to enable packers to use off all their surplus stock of cans.

DELAWARE.—Although Delaware is in a level country, several streams in Kent county have been stocked with brook trout.—DEL. A. WARE.

FIXTURES.

DOG SHOWS.

Dec. 6 to 8.—Third Annual Dog Show of the Central Berkshire Poultry, Pigeon and Pet Stock Association. W. T. Webster, Secretary, Lee, Mass.

Dec. 6 to 10.—Second Annual Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill. W. J. Hamley, Superintendent.

Dec. 14 to 16.—Third Annual Dog Show of the Winsted Kennel Club. Frank D. Hallett, Superintendent, Winsted, Conn. Entries close Dec. 3.

Jan. 10, 11, 12 and 13, 1888.—Bench Show of the Ohio Poultry, Pigeon, Kennel and Pet Stock Association, Columbus, O. H. O. Bridge, Secretary, Columbus, O.

Jan. 23 to 27, 1888.—First Dog Show of the Agusta Pet Stock and Poultry Association, at Agusta, Ga.

Feb. 21 to 24, 1888.—Twelfth Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

April 3 to 6.—Fourth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Dec. 12.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

Jan. 10, 1888.—Second Annual Field Trials of the Texas Field Trials Club, at Marshall, Tex. W. L. Thomas, Secretary, Marshall, Tex.

Jan. 16.—Fifth Annual Field Trials of the Pacific Coast Field Trial Club, near Kingsburgh, Cal. N. P. Shelden, Secretary, 320 Sansome street, San Francisco, Cal.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5582.**

HEATHER BELL.—New York, Nov. 17.—*Editor Forest and Stream:* We are requested by Mr. A. R. Kyle, of South Norwalk, to inform you that his collie bitch Heather Bell won a cup at the late show at Barns Elms, which is the first trophy won in England by a collie from America.—SPRATTS PATENT (AMERICA) LIMITED.

THE EASTERN FIELD TRIALS.

THE DERBY.

THE seventh annual Derby of the Eastern Field Trials Club began at High Point, N. C., on Wednesday of last week. There were ninety-two nominations, thirty-five of which filled. This is six more than last year, and if the increase continues it will be found necessary to limit the number of starters, or the stake will become so unwieldy that it will be impossible to run it satisfactorily. In fact there were too many starters this year for convenience, and if some means can be devised whereby a less number shall run, we have no doubt that it will prove more satisfactory to all. The judges were Messrs. D. C. Bergundthal, of Indianapolis, Ind.; C. Fred Crawford, of Pawtucket, R. I., and W. A. Coster, the secretary of the club. So far as we could learn their decisions, except the selection of Waterford for third place, were well received by all. As retrieving is not required the handlers were instructed to shoot but not to kill. A list of the starters was published last week. We have not given full details of the work in many of the heats, not deeming it necessary, as a description of the dogs and their comparative merits is all that the reader will require. In some of the more important heats, however, a full description is given.

JOEY B. AND PEARL MANDAN.

The weather on Monday was clear and cold, the ground being frozen quite hard. There was a light breeze from the northwest, and the prospect was favorable for a good day's sport. Leaving the hotel at 8:15 we drove to the Glass House, and at 8:32 the first brace in the Derby were put down. Joey B., handled by Avent, is a nicely-made little dog, a stylish and rapid mover, running light and easy with his head well up. He is full of dash and goes boldly to his birds. He was a trifle nervous and unsteady at times, but on the whole he acquitted himself very well. In speed and range he had the best of it, and was the equal of his competitor in style. In finding and pointing he had decidedly the advantage, and won well. Pearl Mandan, handled by Dick Morgan, is a very handsome blue belton bitch of medium size, an easy and stylish mover, with a fair amount of speed. She is not so quick in her motions as Joey, and had not much chance to point. She appeared to be steady to wing and gun, having the advantage in this respect. They were down 46m. During the heat Pearl pointed a woodcock, Joey also pointing the same bird a second later. The bird was flushed and worked down a short distance away. Col. Leach borrowed a gun, and making a present of the bird to a friend flushed it and blazed away, but stirred never a feather. This disgusted him, and he refused to have anything more to do with it. Just then the heat closed, and Avent very generously offered to get the bird for him, and walking it up cut loose, but the bird kept calmly on its course, amid the cheers of an admiring crowd.

NOBLE DIDO AND J. O. DONNER.

This brace was nearly evenly matched in slowness—speed, we had nearly written, but slowness is the better word. Both lacked experience, and after a moderate heat of 40m. they were ordered up, Donner winning with three points to his credit to Noble's none. The latter backed nicely and both were fairly steady to wing and gun. There was not much to choose between them in speed, range and style. Noble was handled by Tucker and Donner by Seager.

DASHING JOE AND FOXCHASE.

This brace was cast off a few minutes past 10 o'clock. In speed and range Joe had a trifle the best of it, both going fairly well. They were not very fast or wide rangers, but hunted their ground very well, and with more experience will make killing dogs. In style they were different, but very nearly equal in merit. Joe moves a bit heavy and carries his head a trifle low. Foxchase moves easy and carries his head well up. Both showed up well when on game, pointing and backing in good style, except that Foxchase refused to back the last point, went ahead and stole the point. Joe also had the best of it in points and in roading out a running bevy. Each flushed a bird that should have been pointed, and Joe at one time was a trifle over-cautious and inclined to potter, but upon the whole he had the best of it, and at the end of 50m. was declared the winner. Joe was handled by Tucker and Foxchase by Buckel. We were surprised to note during this heat that Mr. Coster showed up "bird shy." A quail flushed under his feet and he most decidedly flinched.

CLAUDE AND COUNTESS POPPET.

This brace was put down a few minutes past 11 o'clock. Claude, handled by Avent, is a very stylish moving dog and has quite a turn of speed, going with his head well up and ranging wide, he also shows up very well when on game, having the best of it in these respects. Countess also moves nicely and has considerable speed. She was handled by Tucker. She showed well on game and did her work very well. Both pointed and backed in good style and were fairly steady to wing and gun. Countess had one or two points the most to her credit and the flushes were about equal, except one by Claude that the judges did not see. They ran a capital heat with the balance a little in favor of Claude, and after 1h. and 40m. he was declared the winner.

CINCINNATUS AND GO-BANG.

This was a lively brace, both being fairly fast and easy movers, with not much to choose between them in these respects. Cincinnatus ranged the widest and Go-Bang had the best of it in style. He is a fine slashing going dog and puts on lots of style when on game. He roaded out a bevy nicely but going down wind he got too close and they flushed. He also made a gamy point, the only one made in the heat. Cincinnatus backed nicely, Bang having no opportunity. Bang was roading a bevy in good style when Cincinnatus ended the heat by running into and flushing them. Bang was steady to wing and gun, while his competitor was a bit unsteady. The heat was a short one of 20m., and was won by Go-Bang. Cincinnatus was handled by Tucker and Bang by Buckel.

DAVE R. AND COUNT NOBLE, JR.

This brace was put down on a knoll covered with sedge at 1:24. Dave is a son of Gath's Hope and the well-known Daisy F., and they may well be proud of him. He is a nicely-made dog of medium size, an easy mover, and has lots of speed, range and style, being far ahead of his competitor in these respects. He goes boldly to his birds and points them in good style, and in a positive manner. He appears to be under good control, is steady to wing and gun, and shows considerable hunting sense. Count is also a nicely-made dog, with quite a turn of speed; he is fairly good in style when on game. He is not so well trained as Dave, and was somewhat unsteady to wing once or twice. Both backed nicely. Dave got all the points, three in number, one of them an exceptionally fine one, whirling quite round while going down wind at speed and nailing a single a long distance away. The dogs were taken up for lunch after being down 15m., and put down at 12:18, and taken up 23m. later, Dave winning the heat with considerable to spare. No flushes were made during the heat. Dave ran up a woodcock but this did not count. Dave was handled by Rose and Count by Whaite.

MERRY GIRL AND GUYMARD.

This was not a remarkably good brace. Girl moves fairly well and had the best of it in speed, range and style. Guymard moves heavily and carries his head a trifle too low. Neither are fast, and both showed lack of experience, being unsteady at times. Both pointed and backed, Girl having the best of it in these respects, making four or five points to

her opponent's one. Guy became jealous and flushed the bird to two of Girl's points, one of which he started to chase but came back to whistle. After running 45m. the heat was decided in favor of Merry Girl. At the finish of the heat a bird was flushed and it flew back over the spectators, one of whom made a pass at it and knocked it out the first blow and one of the colored contingent gathered it in. Girl was handled by Tucker and Guymard by Whaite.

ROMEO AND MARS.

This was pointer against pointer, and they made a very pretty heat of it, both doing good work. They were fairly fast and ranged nicely, Romeo having a trifle the best of it in these respects. In style there was not much to choose between them, both showing well when going and when on game. Romeo goes level and carries his head well. Mars is a merry worker, but was off in nose and could not locate his birds so well as his opponent. Both pointed and backed nicely and were steady to wing and gun, and appeared to be under good control. Romeo had the best of it in pointing. One of his points close under the horses' feet and one where a bevy had just been flushed were pronounced by Rose to be at old scent, but he had a bird in each instance. Each made a flush during the heat, but, as a whole, the work was very creditable. After running 22m. Romeo was declared the winner. Romeo was handled by Rose and Mars by John White. During the heat White killed a bird and Mars pointed it. Some one told White that a point on a dead bird did not count. He then brought the bird to the judges, naïvely remarking that there was some life in it yet.

TOLEDO BLADE AND LIZZIE LEE.

It was nearly 4 o'clock when this brace was put down. Blade, handled by Tucker, is a big dog, with a fair rate of speed, an easy mover and with some pretensions to style, having the best of it in these respects. He lacks experience, and did not have so good a nose as his competitor, as she picked up the trail once or twice after he had lost it, and roaded up to the birds. She is a very easy mover, but is not fast and not a wide ranger. She sticks to her birds, however, and points in gamy style. She ran through the heat without making a mistake, and was declared the winner after 48m. She was handled by Hart Haight. Both pointed and backed in good style, and both were steady to wing and gun, except that Blade was a trifle unsteady to a bird that he flushed.

LATONIA AND CHIEF.

This brace was put down in a field of sedge and briers at 4:52. Both started off slow, probably on account of the briers, which were of the worst description for a speedy dog. Latonia, handled by Tucker, is a nice easy-moving animal, with a fair turn of speed. She pointed and backed in good style, but showed lack of experience in working out her birds, and was unsteady, making a chase. Chief, handled by Whaite, is a large good-looking pointer, fairly fast, ranges well and shows lots of style when on game. He moves fairly well, but his shoulder action is not quite free enough. He is under good control, and if properly handled will make a capital dog. After a run of 15 minutes, during which Chief got in a nice point to a single bird, and a glorious chase after a hare, in which he showed up quite speedy and with a good voice, and Latonia scored a flush, they were taken up for the night. Good progress was made for the first day, nine heats being decided. Birds were abundant, and the prospect was good for an early finish. Tuesday morning was all that a sportsman could ask. The weather was delightful; there was a slight haze and a gentle breeze from the northwest, and a better day could not be asked for. The dogs were put down to finish their heat at 8:30. Both went much better than on the evening previous; Chief was badly handled but won in spite of this after a run of a little more than an hour, winding up with an elegant point to a bevy in the open. He was steady to wing and gun. Latonia got one point and made several flushes. Chief was handicapped when put down Monday evening, as his handler was not in his normal condition; being plumb sober, and he did not appear to recognize him. The next morning, however, Jess was up to concert pitch, and the dog went better.

SIRIUS AND JACK MODOC.

This brace was put down at 9:50 in the stubble field where the last brace was taken up. Sirius, handled by Tucker, is a large, very good-looking dog, not so fast as his competitor and not so stylish when in motion, but is his equal in style when on game. He moves heavily but looks gamy when going. This was a long, tiresome heat, with a little good work by both and a great deal of very bad that was nearly equally divided. Jack was declared the winner after running 1h. 34m., with two points to one for Sirius. We noted the flushes and false points, but have not time to count them up.

LADY ZEAL AND OSSIAN.

This was again pointer against pointer, and brother and sister also. Lady, handled by Tucker, is a nice looking bitch, small in size, fast and a wide ranger, but she lacks experience, would not back and was not under good control. Ossian is a very good-looking dog, of medium size, fast and stylish when moving and very gamy on birds. He was handled by Rose. In pace and range they were about equal. In style both in motion and when on game Ossian had much the best of it. After being down 16m. Ossian was declared the winner, with three points to his credit and none for Lady. Both were steady to wing and gun.

DEXTER AND LADY SMOKE.

These dogs were also both pointers. Dexter, handled by Haight, is of medium size, not fast, but an easy mover with considerable hunting sense. He is under good control and was steady to gun and wing except that when Lady drew ahead of his point and flushed he was a bit unsteady. He roaded out a bevy in tall grass and briers in a workmanlike manner. He had the best of it in pace and range and style, and decidedly outworked his competitor and at the end of 23m. he was awarded the heat. During the heat we crossed a creek and had lots of fun. Judge Crawford started the racket by performing some exceedingly acrobatic feats while his horse was floundering in the mud. Finally he got tired and laid down in a soft place and let his horse finish the performance. Eager to display their horsemanship nearly all of the party came boldly on, and in justice to them we must say that several of them afforded us as much amusement as did Mr. Crawford, and two or three of them got even more mud on their clothes than he did. At the finish of this heat we went to lunch at the barn of the Model Farm.

ROGER WILLIAMS AND MISS DUDLEY.

This brace was put down in the open field south of the Model farmhouse. Roger, handled by Luke White, is a well-made, good-looking dog, a little above medium in size, fairly fast, with good range and is quite stylish when on game; he moves nicely and is under good control. Miss Dudley, handled by Rose, is of medium size, a very easy mover and at times showed up quite speedy, having the best of it in this respect, Roger beating her in range and style on point. Both pointed and backed perfectly and both were steady to wing and gun. At the end of 35m. each had scored two points, when Roger got another one and the heat was decided in his favor. Considering the quality of the work done and the very nearly equal merit shown a little more time might have been given them.

ROSE MANDAN AND HECTOR.

This brace was put down in some woods a few minutes past 2 o'clock. Rose is a heavily marked black and white bitch above medium in size and a fairly good mover; she is not fast and does not range very wide. She was handled by Morgan. Hector is a nearly white dog also above medium in size. He had the best of it in pace, range and style. He is very positive on point and backs nicely. He lacks experience, but appeared to be under good control and was steady to wing and gun. He was handled by Tucker. The work was not of a high order, Hector having the best of it, Rose was a trifle unsteady once and refused to back. They were down nearly an hour.

MERRY LEGS AND TEMPEST.

This brace was put down at 3:10 in a stubble field. Merry is rather a good looking pointer bitch of medium size, she moves well and is a merry worker but has not much pretensions to speed, she was handled by Buckel. Tempest, handled by Tucker, is a gamy looking bitch with quite a turn of speed and considerable style, having much the best of it in these respects as well as in style. A little fair work was done, neither having much the advantage. There was also a lot of bad performance in which Tempest had the worst of it and after 45m. the heat was decided in favor of Merry Legs. During the heat the monotony of the proceedings was somewhat relieved and there was a heap of fun had in watching the ground and lofty tumbling of a large majority of the party as they crossed the creek at a particularly bad place; many were unhorsed in floundering over but no damage was done except that several of the more expert horsemen had their pride wounded, but this was more than counterbalanced by the fun that the others enjoyed.

DAISY FAIROAKS AND CINCH.

This was the last brace of the first series. They were put down at 3:58 in a cornfield. Daisy, handled by Seager, is rather a good looking large bitch, with no pretensions to speed or style. She moves rather heavy and carries her head low, and seemed inclined to potter and false point. She pointed and backed in fair style and was steady to wing and gun. Cinch, handled by Avent, is a heavily-marked black and white dog, above the medium in size, quite fast, a wide ranger, and he shows considerable style. He is a trifle high on his legs, is quick in his motion and makes a nice point. He was decidedly the best at all points, cutting out the work and winning with something to spare, after a run of 50m. Both were steady to wing and gun. This ended the first series, Waterford having the bye. Following is the result:

First Series.

Joey B. beat Pearl Mandan.
J. O. Donner beat Noble Dido.
Dashing Joe beat Foxchase.
Claude beat Countess Poppet.
Go Bang beat Cincinnatus.
Dave R. beat Count Noble, Jr.
Merry Girl beat Guymard.
Romeo beat Mars.
Lizzie Lee beat Toledo Blade.
Chief beat Latonia.
Jack Modoc beat Sirius.
Ossian beat Lady Zeal.
Dexter beat Lady Smoke.
Roger Williams beat Miss Dudley.
Hector beat Rose Mandan.
Merry Legs beat Tempest.
Cinch beat Daisy Fairoaks.
Waterford, a bye.

Second Series.

WATERFORD AND JOEY B.

It was nearly night when this brace was put down. Waterford, handled by Seager, is a large dog, with a fair turn of speed, good range and moderate style. He was steady to wing and gun and under good control. In everything except steadiness, and perhaps range, Joey had decidedly the best of it, doing some marvelous work on a running bevy and picking up the singles in good style. One bird that he pointed at the edge of a brier patch just under his nose ran away as Avent came up, and Joey saw it and was unsteady. When sent on he ran over a bird and started to chase, but stopped fairly well to order. Waterford also made some good points, and both scored a flush or two. They were ordered up to go down again in the morning, when Joey made short work of it, getting in two good points to his opponent's none. Both went better this time and Joey appeared to have his self-possession. On Wednesday the weather was delightful. It was rather warm for comfort, but every one was in good spirits and a most enjoyable day was had, although not so good progress was made as on the previous days.

J. O. DONNER AND DASHING JOE.

This brace was put down in a stubble field at 8:30. Donnor had the advantage in pace and range, while Joe, notwithstanding a delightful chase, had the best of it in the work. They were ordered up after a very tiresome and unsatisfactory run of two hours and fifty minutes. The judges compared notes at lunch and the heat was awarded to Dashing Joe.

During the heat the monotony of the proceedings was most agreeably enlivened by the brilliant corruscations of wit that flashed from the mouths of a portion of the reportorial staff. The exhibition of brain power was something tremendous and its effect upon the one man who "saw the point" was most disastrous, for he went down in a heap and barked his shin, and it was unanimously decided that he had tumbled to the joke. The others, including the reporters, we are pleased to note, survived and suffered no apparent damage. Another incident also served to relieve the tedium of the heat. As we were grouped together on a knoll in some woods a woodcock was flushed and it settled among the horses. We suggested that the bird be captured, and three or four started for it pell mell, and the foremost one would probably have caught it had he been ten feet nearer when it started.

CLAUDE AND GO BANG

were cast off at 11:30 in an open field. Both started off at a lively rate, Claude having a trifle the advantage in pace and much the best of it in style and way of going. Bang was the more stylish on points and had the best of it in the work. After a half hour's run they were taken up for lunch, which was awaiting us at the Holton schoolhouse. Upon taking an inventory we found that we, as well as our horse, had suffered from contact with the saddle, and we returned to town, leaving our pencil in the hands of Mr. Hitchcock, to whom we are indebted for notes of the work for the remainder of the day. After lunch they were again put down, Bang finding a bevy that Claude also came round and pointed. Bang also got to the scattered birds first and pointed one, Claude backing. This ended the heat with Go Bang the winner. Down altogether 1h. 5m.

DAVE R. AND MERRY GIRL.

This brace was put down at 1:40. Dave was not up to the form in which he ran his previous heat, being off in nose, which he showed by failing to locate his birds, and flushing one that he should have pointed. He also worked the back trail of a bevy while Girl roaded them out and located them nicely. She also made three other good points, and at the end of an hour was declared the winner. Dave had the best of it in speed and range, and was fully her equal in style, but she outworked him.

ROMEO AND LIZZIE LEE.

This brace was put down at 2:40. Lizzie went better than in her previous heat, and was not much behind Romeo in speed and range. In style they were nearly equal. Both showed excellent training and each did some nice roading on a bevy. Romeo got them first and also found more birds than Lizzie and he was awarded the heat.

CHIEF AND JACK MODOC

were put down at 4:20 and after a run of 50m. they were taken up to go down again in the morning. Chief had the advantage in pace and range and style on point. Jack moves the best, but was over-cautious and puppyish among scattered birds and made a flush or two. He was also a trifle unsteady in backing. Chief did not do so well as in his former heat as he was uncertain among the scattered birds. On Thursday morning they were put down at 8 o'clock, when both went much better, Jack doing some good work and winning the heat in 25m., and making two points to Chief's none, except that he pointed a woodcock, Chief ending the heat with a flush.

OSSIAN AND DEXTER.

No time was lost and one minute later this brace was put down. Ossian had the advantage in pace, range and style, he also outworked his opponent, and was awarded the heat after a run of 34m. Dexter did some very good work on a bevy, and went better than in his previous heat. Both dogs pointed and backed perfectly and showed good training, being steady to wing and gun and minding the whistle promptly.

ROGER WILLIAMS AND HECTOR.

This brace was put down in some woods at 9:10. They were about equal in speed, Hector having a little the best of it in range and style. Roger has had more experience than Hector and was under better control. There was not much difference in the work, Roger having slightly the best of it. During the heat, as the dogs were passing from opposite directions, they simultaneously stopped on point to a single bird, head and tail, and almost touching each other, a very odd position and a very pretty one. They were taken up at the end of 54m. and the heat was awarded to Roger.

CINCH AND MERRY LEGS

were put down in a large cornfield at 10:12. Cinch had considerably the best of it in pace, range and style; he also outworked her, getting two points to none for her, although she had two opportunities, but after getting scent she drew on and flushed her birds. Down 24m.

At 10:37½ Messrs. Breese and Coster were cast off in the woods where the last brace was taken up to run a heat on woodcock, two of which had been flushed and marked down near by. Coster had the legs of his competitor, but in range and style there was not much to choose between them. Beating out the cover in grand style Coster nearly stepped on a quail, and before it was fairly off the ground he cut loose and dropped a limb from a tree some 20ft. above the bird. He explained this by saying that he shot where the bird would have been had it been a woodcock. This was perfectly satisfactory and they were ordered on. Working on beyond the bird they were ordered to return and make a wider cast. Both were under perfect control and at once turned at command. Coster struck out into the woods, while Breese displayed more hunting sense by making a cast along the edge and going straight to the bird, flushed it to order, and glancing along his trusty weapon brought it down wing-broken. Sent to retrieve he failed to find and Mr. Boyden took up the running and caught it and retrieved it handsomely, scarcely ruffling a feather. Meantime Coster, forgetting that when a dog is retrieving his opponent can obtain no credit for work done, secured the services of Miles Johnson and proceeded to go for the other bird. Miles handled him in first-class style, taking him toward the bird in a cautious manner that would have surely got him there, but the spectators were noisy and crowded too close and Coster went to pieces. This rattled Miles and he failed to cast him in the proper direction and the bird flushed wild before he got near enough to locate it and Breese was awarded the heat. Down 6⅔m.

This ended the second series with the following result:
Joey B. beat Waterford.
Dashing Joe beat J. O. Donner.
Go Bang beat Claude.
Merry Girl beat Dave R.
Romeo beat Lizzie Lee.
Jack Modoc beat Chief.
Ossian beat Dexter.
Roger Williams beat Hector.
Cinch beat Merry Lass.

Third Series.

JOEY B. AND DASHING JOE.

This was the first brace of the third series. They were put down at 10:46 in the large open field on the Snow farm. Joey had much the best of it at all points, and got in another fine piece of work on a bevy. The heat was a very short one, and at the end of 14m. Joey was declared the winner, with considerable to spare.

GO BANG AND MERRY GIRL

were put down a few minutes after 11 o'clock. They were about equal in speed, Bang ranging the widest and Girl moving the easiest. Bang clearly outworked her, and ended the heat in 26m. with a sensational point on the edge of a gully that we have rarely seen equaled.

ROMEO AND JACK MODOC.

This brace was put down at 11:43 and at once taken into a dense thicket after a scattered bevy. It was in the middle of the day, dry and hot, and the work was unsatisfactory. Romeo made two points, but, as a rule, flushes were the order of the day, and they were ordered out in the open. Jack showed up the more speedy and with the best range, Romeo having a trifle the best of it in style. Jack scored a flush and Romeo a point, and the heat was ended, with Romeo the winner, after a run of 32m. We then went to lunch at the barn of the Model farm.

OSSIAN AND ROGER WILLIAMS.

This brace was put down at 1:12. They were nearly equal in pace, Ossian having a little the best of it in range and style of going. Although Roger appeared to be a little off the heat was a close one and the winner had not much to spare. Both went well and but few mistakes were made, running a long and good heat and doing very good work, considering the time of day. At the end of 2h. 25m. Ossian was declared the winner. This ended the third series, Cinch having a bye. Following is the result:
Joey B. beat Dashing Joe.
Go Bang beat Merry Girl.
Romeo beat Jack Modoc.
Ossian beat Roger Williams.
Cinch, a bye.

Fourth Series.

CINCH AND GO BANG.

This brace was put down at 3:45. There was not much opportunity to compare their relative merits as to speed and range, the heat lasting but 19m., and the dogs being worked at close quarters most of the time. Bang had the best of it in the work and being steady, while Cinch was a little flighty as a bird flushed near him. The heat ended with Go Bang the winner, at nearly the same place where he won his previous heat. Near the finish Bang dropped on point with his head up wind, and as his handler went in to flush Bang very cautiously changed ends and made a very positive and gamy point in the opposite direction, and a bevy was flushed just beyond him. This was a very creditable piece of work.

JOEY B. AND ROMEO

were put down at 4:14 in the large open sedge field on the Snow Farm. Joey had a trifle the best of it in speed. Both ranged well and were nearly equal in style and both did good work, Joey having the best of it and winning at the end of 23m. This ended the fourth series, Ossian having a bye.

Following is the result:
Go Bang beat Cinch.
Joey B. beat Romeo.
Ossian a bye.

Fifth Series.

OSSIAN AND GO BANG

were put down at 4:50, but after a run of five minutes with no work done, they were taken up for the night. Friday morning was balmy and beautiful as one could wish, but it was too warm for the dogs to show at their best. Three dogs only were left in for first money, two of them pointers. Of the 35 starters 22 were setters, and although in six instances pointer ran against pointer, they much more than held their own in each series, and the pointer men were not a little elated. The dogs were put down on Friday morning at 8:15 in the open fields near the Glass house. Both went well, Ossian having the best of it in way of going. He appeared to be off in nose, however, and although he ran a good heat, Bang outworked him from the start. Bang got in the first point to a bevy that Ossian had been near enough to but did not find. Ossian backed the point and both were steady to wing and gun when Buckle put up the birds. Just then the spectators flushed a bevy that flew over still another bevy that rose and all went into the dense scrub thicket near the house. When the dogs were sent in Ossian made an elegant point in a strip of sedge and Bang backed him in elegant style. The point was probably to old scent as nothing was found. We then turned into the thicket, and Ossian was soon on point to foot scent of running birds, as he roaded it out very nicely to where the spectators had just flushed them. Meantime Bang crossed behind him and also struck the scent of a single running bird, and roading it out located it in good style. Buckle flushed it to order. Bang soon had another one fast that Buckle put up, and Bang was steady to wing and gun. The birds were getting uneasy at the noise and several more soon went. A little further on Ossian pinned one, and was steady to wing and gun when Rose put it up and shot. Soon after one flushed near Bang, but the thicket was so dense that we could not see how it was done. Turning toward the edge Ossian made point, but soon went on and again pointed and began roading in capital style, but he got too close and the bird went. Meantime Bang also roaded one and located it nicely, Buckle flushing it to order, and the heat was ended with Go Bang the winner. Down altogether 31m.

This ended the fifth series with the following result:
Go Bang beat Ossian.
Joey B. a bye.

Final Tie for First Place.

JOEY B. AND GO BANG.

These two were the last brace left in for first money. They were put down in an open field at 8:59. Both had run through their dogs in good style and had fairly earned their position. Joey had the benefit of a bye in the fifth series and had run but four heats, while Bang had run five and had also contended with a better class of dogs than Joey had met. The latter had stolen a hearty breakfast and was not in good condition for long continued work; in fact he let down in speed considerable toward the finish, but his nose appeared to be all right and he did good work to the end. Bang was not quite so speedy as in his other heats, but he went at a good rate and held it well throughout the heat. Joey had the advantage in speed and range and way of going, while Bang was the more stylish on game. When they were cast off we turned down to a ravine, where Bang ran upon one and dropped to wing, and as he went on two more got up near him. Soon after Joey made a point that Bang did not back, but went ahead and roaded a short distance and gave it up. Joey then made a cast and again pointed, but soon went on. We then went to the Field farm, where birds were reported to be abundant. Joey made a cast over a knoll, and, striking scent, was working it back toward us, when Buckel flushed a single, and calling Bang there, he dropped on point just as two or three more went and then the others flushed and went to some woods, taking another bevy with them. Going in the direction of the last bevy, Joey challenged at the fence, but gave it up. Bang, a little beyond, also challenged and commenced roading, but was called off, and shortly after the spectators flushed a large bevy some 50yds. below. Then in the woods each scored a flush and each a point to singles that their handlers put up. We then turned back after the last bevy in the open, and were informed that still another bevy had been flushed and gone to the woods. Following them to the top of a bank at the edge of the woods, Joey flushed one and soon after Buckle put up one that flew close to Bang, and he dropped as if shot. Soon after Joey put up another one, and the dogs were ordered on away from the birds, as it proved, for we found no more of them. Working through some pine woods to an open field, Joey made a nice point, and a second later Bang also pointed some 25yds. below him. Avent said that Bang was backing but just then Buckel flushed a bevy directly in front of his dog and Mr. Bergundthal said to Avent, "What do you think now?" This rather took Avent aback, but as another bevy then got up in front of his dog he replied, "What do you think?" Following them Bang made a point to a bird that flushed a second or two later and Bang partly dropped to wing. Joey came up and backed as the judges supposed, but when Bang went on Joey remained rigid and held his position for some time until Avent went to him, when a brace flushed nearly under his nose. The judges then consulted and they were ordered up and the heat was awarded to Joey B., and he was declared winner of first prize. Down 1h. and 7m.

Tie for Second Place.

ROMEO AND WATERFORD.

The judges selected these two as the best of those beaten by the winner, and they were put down at 10:44 to decide which should run with Go Bang for second money. They were about equal in pace and range, Romeo having the best of it in style; he was off in nose, however, and although he made some good points he scored several flushes. Waterford as in his previous heat ran fairly well and made few mistakes and after a run of 56m. he was awarded the heat.

GO BANG AND WATERFORD.

This was the last heat and not much interest was manifest as it was a foregone conclusion that the pointer would win if in anything near his form in previous heats. After the heat between Romeo and Waterford, four heats of the All-Aged Setter Stakes were run and the brace was then put down at 3:35 to decide second money. Bang was not going so well as he had been, appeared to be a little stale and off in nose. He had a little the best of it however, and at the end of 31 minutes they were ordered up with Go Bang the winner of the heat and second prize. Waterford ran fairly well although he slowed down somewhat in speed near the finish. Under the rules the judges can select any dogs in the stake for the two third prizes and they decided that Ossian and Waterford were entitled to the places. Although there were several dogs that had run brilliant heats and done good work, their subsequent performances had not been nearly so good, while Waterford had run all of his heats fairly well and uniform, and the decision upon the whole was perhaps as fair to all concerned as could have been made. Had Waterford met any one of these dogs in the heats in which they did good work, there is no question that he would have been beaten; but on the other hand, had they met him when they were off, he would undoubtedly have beaten them as he did Romeo, who is unquestionably the better dog when he is all right. Luke White and Mr. Tucker protested the decision upon the ground that the rules had been misapprehended, but the Board of Governors very properly refused to sustain the protest. There could be no question that Ossian was clearly entitled to the position awarded him. He did his work well in all of his heats, running close up in his heat with the winner of second. Indeed, we much prefer him to Go Bang, believing that with both at their best, Ossian can both outwork and outlast him.

Taken altogether, the Derby of 1887 was an improvement upon its predecessors. Although the average quality of the work done was not up to what we expected to see, yet there were quite a number of very promising youngsters brought out that showed natural abilities of a high order. The unusually dry season in the South prevented the proper amount of preparation in many cases, which will account for the lack of experience apparent. Following is the

SUMMARY.

Eastern Field Trials Derby for 1887, for all setter or pointer puppies whelped on or after Jan. 1, 1886. Four purses: First prize, $400; second, $200; and two equal thirds of $100 each, and Breeder's Cup, value $100, to breeder of winner of Derby. Forfeit $10, and $20 additional to fill.

First Series.

Joey B. beat Pearl Mandan.
J. O. Donner beat Noble Dido.
Dashing Joe beat Foxchase.
Claude beat Countess Poppet.
Go Bang beat Cincinnatus.
Dave R. beat Count Noble, Jr.
Merry Girl beat Guymard.
Romeo beat Mars.
Lizzie Lee beat Toledo Blade.
Chief beat Latonia.
Jack Modoc beat Sirius.
Ossian beat Lady Zeal.
Dexter beat Lady Smoke.
Roger Williams beat Miss Dudley.
Hector beat Rose Mandan.
Merry Legs beat Tempest.
Cinch beat Daisy Fairoaks.
Waterford, a bye.

Second Series.

Joey beat Waterford.
Dashing Joe beat J. O. Donner.
Go Bang beat Claude.
Merry Girl beat Dave R.
Romeo beat Lizzia Lee.
Jack Modoc beat Chief.
Ossian beat Dexter.
Roger Williams beat Hector.
Cinch beat Merry Legs.

Third Series.

Joey B. beat Dashing Joe.
Go Bang beat Merry Girl.
Romeo beat Jack Modoc.
Ossian beat Roger Williams.
Cinch a bye.

Fourth Series.

Go Bang beat Cinch.
Joey B. beat Romeo.
Ossian a bye.

Fifth Series.

Go Bang beat Ossian.
Joey B. a bye.

Final for First Place.

Joey B. beat Go Bang and won first prize.

Ties for Second Place.

Waterford beat Romeo.

Final for Second Place.

Go Bang beat Waterford and won second prize.
Waterford and Ossian equal third.

ALL-AGED SETTER STAKE.

HIGH POINT, Nov. 26.—The drawing for the All-Aged Setter Stake took place on Thursday evening. Of the 54 nominations 23 made their entries good. They were drawn to run in the following order:

O. H. Boyden's Joey B. against C. F. Crawford's Nellie II.
Dudley & Fisher's Daisy F. against Memphis & Avent Kennels' Jean Valjean.
J. L. Breese's Gloster against E. E. Pray's Galatea.
Memphis & Avent Kennels' Nat Goodwin against T. W. Stoutenburgh's Ruby Buckellew.
F. Leonard's Royal Prince II. against E. Dexter's Belle of Piedmont.
Memphis & Avent Kennels' Allie James against Dr. R. I. Hampton's Can Can.
C. C. Gray's Roy Monarch against C. F. Crawford's Foreman's Lass.
L. Gardner's Roger against Pittsburgh Kennel Club's Dashing Noble.
W. A. Buckingham's Breeze Gladstone against Memphis & Avent's Cassio.
E. F. Thomas's King Leo against Pittsburgh Kennel Club's Royal Victor.
Memphis & Avent Kennels' Chance against Pittsburgh Kennel Club's Dan Noble.
Washington Kennels' Keystone a bye.

The stake was begun on Friday at 11:41 after first money in the Derby was decided. Five heats were run and to-day eight more were run, finishing the first series and two in the second series. Yesterday the weather was warm and scent was not very good and some of the heats were poor in consequence. Some good work was done, however, the heat between Jean Valjean being very good and close. To-day it has been hot and sultry with scarcely a breath of air and the work, as a rule, has been poor and unsatisfactory. Following is the result of the

First Series.

Joey B. beat Nellie II.
Jean Valjean beat Daisy F.
Gloster beat Galatea.
Nat Goodwin beat Ruby Buckellew.
Belle of Piedmont beat Royal Prince II.
Allie James beat Can Can.
Roy Monarch beat Foreman's Lass.
Dashing Noble beat Roger.
Breese Gladstone beat Cassio.
King Leo beat Royal Victor.
Chance beat Dan Noble.
Keystone a bye.

In the second series Joey B. beat Keystone, Gloster beat Jean Valjean, and Nat Goodwin and Belle of Piedmont ran a few minutes with no work done, and were taken up at night to go down again on Monday morning.

HIGH POINT, Nov. 28.—The weather was threatening and a little light rain had fallen at daybreak, a start was made, however, and Nat Goodwin and Belle of Piedmont were put down at 8:15 to finish their heat. Capt. McMurdo had sustained a serious injury to his right eye from a bush that flew back and he had gone home, Mr. Buckle taking his place in handling Belle. There were several light showers and considerable fog and mist during the forenoon, but at noon the sun came out and the afternoon was fine. Capital progress was made and the stake was finished. Following is the

SUMMARY.

ALL-AGED SETTER STAKE.—Open to all setters that have never won a first prize in an All-Aged Stake at any recognized field trial in America. First prize, $300; second, $150, and two equal thirds of $50 each. Forfeit $10 and $20 additional to fill.

First Series.

Joey B. beat Nellie II.
Jean Valjean beat Daisy F.
Gloster beat Galatea.
Nat Goodwin beat Ruby Buckellew.
Belle of Piedmont beat Royal Prince II.
Allie James beat Can Can.
Roy Monarch beat Foreman's Lass.
Dashing Noble beat Roger.
Breeze Gladstone beat Cassio.
King Leo beat Royal Victor.
Chance beat Dan Noble.
Keystone a bye.

Second Series.

Joey B. beat Keystone.
Gloster beat Jean Valjean.
Nat Goodwin beat Belle of Piedmont.
Roy Monarch beat Allie James.
Breeze Gladstone beat Dashing Noble.
Chance beat King Leo.

Third Series.

Gloster beat Joey B.
Nat Goodwin beat Roy Monarch.
Chance beat Breeze Gladstone.

Fourth Series.

Gloster beat Nat Goodwin.
Chance a bye.

Final for First Place.

Gloster beat Chance and won first prize.

Final for Second Place.

Chance beat Nat Goodwin and won second prize.
Nat Goodwin and Jean Valjean equal third.

The judges selected Nat Goodwin as the best dog beaten by the winner of first and ordered him to run with Chance for second place. Both were owned by the Memphis and Avent Kennels, and the owners requested the judges to select the winner without running, and they awarded the prize to Chance and the stake was finished.

THE ALL-AGED POINTER STAKE.

HIGH POINT, Nov. 28.—The drawing for the All-Aged Pointer Stake took place this evening. Of the 29 nominations 13 filled. They were drawn to run as follows:

Neversink Lodge Kennels' Neversink against F. R. Hitchcock's Springbok.
F. R. Hitchcock's Duke of Hessen against C. J. Peshall's Nick of Naso.
A. A. Whipple's Cornerstone against F. R. Hitchcock's Tammany.
E. Dexter's King of Kent against J. Shevlin's Ben.
J. E. Gill's Don's Dot against Dr. H. G. Preston's Match II.
Piitsburgh Kennel Club's Jetsam against Col. C. H. Odell's Lalla Rookh.
G. J. Gray's Dana a bye.

[*Special to Forest and Stream.*]

HIGH POINT, Nov. 29.—The pointer stake began this morning. Weather cool and pleasant; birds plenty. Springbok beat Neversink, doing good work. Nick of Naso beat Duke of Hessen in a fine heat. King of Kent beat Ben in a moderate heat. Don's Dot beat Match II. in an ordinary heat. Lalla Rookh beat Jetsam, doing some excellent work. This ended the first series, Dana having a bye. In the second series Springbok beat Dana and Tammany beat Nick of Naso in a good heat. The stake will finish to-morrow and the Champion Stake will be run on Thursday.

[*Special to Forest and Stream.*]

HIGH POINT, Nov. 30.—King of Kent beat Don's Dot, Rookh, a bye. In the third series Springbok beat Lalla Rookh. Tammany beat King of Kent. Tammany wins first prize. Springbok and Nick of Naso are now running for second place.

FOX-TERRIER CLUB STAKES.

Editor Forest and Stream:

The following stakes have been reopened by the American Fox-Terrier Club and we will be very much indebted to you if you will publish them in your paper. Any information desired by intending exhibitors I will gladly give. Blanks will be sent upon application. In all cases must the entry fee accompany the entries:

The Tomboy Stakes of 1888.—For a silver cup, presented by the president of the A. F. T. C., added to a sweepstake of $5 each, play or pay, for fox-terrier bitches whelped after Jan. 1, 1887, to be competed for at the spring show of the New Jersey Kennel Club in 1888. Entries to close with the undersigned on Jan. 1, 1888.

The Apollo Stakes of 1888.—For a silver cup, presented by the secretary of the A. F. T. C., added to a sweepstake of $5 each, play or pay, for fox-terrier dogs whelped after Jan. 1, 1887, and to be competed for at one of the spring shows in 1888. Entries to close with the undersigned on Jan. 1, 1888.

Renewal of the Homebred Puppy Stakes.—For a silver cup, presented by John E. Thayer, Esq., added to a sweepstake of $5 each for fox-terrier puppies (dogs or bitches) whelped after Jan. 1, 1887, to be competed for at the spring show of the New England Kennel Club in Boston. Entries to close with the undersigned on Jan 1, 1888.

FRED HOEY, Sec.-Treas. A. F. T. C.
LONG BRANCH, N. J.

THE AMERICAN FIELD TRIALS.

CINCINNATI, Nov. 22.—There will be a meeting of the Board of Control of the American Field Trials Club, at the president's headquarters at Florence, Ala., Monday, Dec. 12, at 7:30 A. M.

The drawing for the Derby in the American Field Trials Club's trials will be made Monday, Dec. 12, precisely at 8:30 A. M., at the secretary's office at Florence, Ala.

C. W. PARIS, Secretary and Treasurer.

COLLIE SWEEPSTAKES.—Third collie sweepstakes, for collies born in the United States or Canada on or after Jan. 1, 1887. Entrance $5 each, to be paid to the secretary of the Collie Club at time of entry. The sweepstake to be decided at the show of the Westminster Kennel Club, to be held at Madison Square Garden, New York, Feb. 21, 22, 23 and 24, 1888. The winner to receive fifty per cent. of the sweepstakes, twenty-five per cent to go to the second, fifteen per cent. to the third, and ten per cent. to the fourth. In entering dogs for the show it will be necessary to enter them according to the regulations of that show, paying the entry fee, and placing them in such classes as the exhibitors may choose and also specifying on the entry blank that they are "to compete for the collie sweepstakes." Entries close Jan. 1, 1888. A special cash prize of $25 is offered by the president for the best puppy entered in the sweepstake, born on or after Aug. 1, 1887.—J. D. SHOTWELL, Sect. (Rahway, N. J.).

IMPERIAL CHANCELLOR, the well-known mastiff, whose portrait is given in the last number of the *American Kennel Register*, has been imported by Mr. C. C. Marshall, of this city. Imperial Chancellor is by Crown Prince (E.K. C.S.B. 10,544) out of Ilford Claudia (12,838). Mr. Marshall writes: "So far as I am able to ascertain, Chancellor is by far the largest and most powerful of the Crown Prince family. He has the most robust body I ever saw on a dog. In a letter to me, Mr. Wade writes as follows: 'He (Chancellor) is very much larger than any other dog or bitch Crown Prince ever got, and * * * better in hocks than any other Crown Prince dog that ever came over here.'"

MRS. LANGTRY AND HER YORKSHIRE TERRIER.

FEW there are who know how much the well-known Jersey beauty has had to do with the popularity of the Yorkshire terrier. Now, if ever there was a run on Yorkshire terriers, it was during the time Mrs. Langtry was playing in the drama called "Enemies," in London. Every lady who thought anything about fashion at all, had a Yorkshire terrier to accompany her, whether walking or driving; in fact, no turnout was considered complete without one of these little fellows *en evidence*.

One had not to look far for the reason, and, as has before been said, Mrs. Langtry was responsible for all this stir in the Yorkshire terrier line, and it is to be hoped another such revival will often take place.

When the Jersey Lily was rehearsing "Enemies" it occurred to her that if she had a little terrier on the stage to spring and bark on the approach of the obnoxious one in the piece, it would go down well with the audience. So, suiting the action to the thought, she sent for Mr. Charles Kemp, who is well known in the kennel world as the owner of the black poodle, Champion Lyris. To him she confided the idea, and asked if such an animal could be had. The dog was soon found; and then, of course, came the training—to jump and bark only at one person; and as the slightest whimper at the wrong time would be fatal to the carrying out of the piece, the trick had to be taught well and perfectly.

At last the dog was taken in hand—or rather in arm—and was taught to bark only when touched by the forefinger under the off shoulder, and everything seemed perfect—in fact, the manner the dog went through its part at the last rehearsals was so remarkable that it was thought it would have no small share in the success of the piece.

The dog, however, did not follow so quickly as could be wished, for when Mrs. Langtry would suddenly get up from her seat and walk across the stage, the terrier was put down from her lap, and of course was supposed to toddle by the side of its mistress. This the little animal did not take kindly to; so that things should work smoothly, a silken cord was used of the same color as the actress's dress. Therefore, as a matter of fact, the dog was led by this cord that was fastened to Mrs. Langtry's wrist, and in this manner everything worked admirably.

As may be imagined the Yorkshire terrier became a great favorite and, as a natural consequence, was treated with much mistaken kindness. The afternoon before the production of "Enemies," Mrs. Langtry and the Yorkshire terrier were enemies and no mistake about it.

The dog had been brought down to the theatre in the morning, and had returned with its fair owner, who was more pleased than ever with it, and the servants, male and female, were ordered to attend to the comforts of the dog. This they did to their heart's content, with the result that the terrier felt everything but well. Mrs. Langtry was beautifully dressed that afternoon, and probably somewhat nervous and even fidgety, and she rang for the dog to be sent up stairs, so that she might amuse herself with him, and thus relieve her thoughts of the coming evening's trial.

The dog arrived, blown out like a balloon, and as bilious as it was possible for him to be. The mistress caressed her little pet, when, lo! the good things of the larder proved too much for the Yorkshireman, so that he became "as sick as a dog," and thereby spoiled a dress worth eighty guineas. There were ructions in that house, and some people were freightened nearly out of their lives, while Mr. Kemp was wired for to "take the beast away."

The man of poodles came and assured the fair one that it was not the dog's fault, but the servants', and everything was soon made right so far as the dog was concerned.

The evening arrived, and the Yorkshire terrier, which was then very much better, accompanied Mrs. Langtry to the theatre, and when it came to the dog's part, the little fellow sprang from his mistress's lap and tore and barked at the intruder, and then trotted off alongside of her.

As was expected, this took wonderfully with the audience, and the "upset" of the afternoon was soon forgotten, and hundreds of guineas could not then have purchased Mrs. Langtry's Yorkshire terrier.

Before the week was out every terrier of this breed—or, indeed, anything approaching, or having a probable relative in the Yorkshire terrier family, was snapped up by eager purchasers. St. Martin's lane, the Seven Dials and Leadenhall Market were inundated with orders, as so many had caught the Yorkshire terrier fever; indeed, even American cousins were paying dealers' expenses to and fro to Yorkshire to secure them.

Thus, then, the Yorkshire terrier owes much to Mrs. Langtry, and this is the first time the "home scene" that happened before that lady's appearance in "Enemies" has been let out of the bag.—*Stock-Keeper.*

NERO.—As there are degrees of quality in a man, so there are in an animal. There are good, bad and indifferent men, and the same can be said of dogs. One of the noblest dogs we ever met died last night. We owned him five years and we knew him thoroughly. So did the children of the neighborhood, who climbed on and tumbled over his massive form. So did the newsboys who found him almost daily at the office, and they rarely passed him without giving him a patting, if not a hugging. The fact that he was a bloodhound and of remarkable size made some people, strangers to his disposition, timid with him. But there was nothing to justify the fear. He was the essence of gentleness, and children, who are the first to know their friends, instinctively recognized this. He never growled at them. He never even frowned upon them. When they became too demonstrative he immediately withdrew from their society. Nero left the office for home last evening in good spirits. After supper and a drink he manifested a desire to go to bed. As he was getting quite blind a light was used to show him the way. This morning at daylight he was found outside his bed, lying on the floor quietly sleeping to all appearance. But he was dead. They say he died of heart disease. But death came to him as we like to have it come to all of gentle nature—without uproar.—*Danbury (Conn.) News.*

KINO'S PEDIGREE.—*Editor Forest and Stream:* Your correspondent "Malcolm," having based his assertions regarding the beagle Kino's breeding on what I had told him some time ago when he was talking of getting a hound from me, has come to me and asked me to give authority for telling him Kino was not imported. I know nothing of Kino's breeding but what Mr. Satterthwaite, his former owner, wrote me in a letter some two years since, from which I quote: "Dan O'Shea entered Kino as imported last year and I asked him where he was imported from and he told me at the last show in Philadelphia that he was imported from the United States." As I own a pup sired by Kino I personally would be only too glad to have him imported or to know something of his breeding.—HERM. F. SCHELLHASS.

DOG LOST.—Hoboken, N. J., Nov. 28.—A light built, young Irish setter dog, dark red, with slight scar between the eyes, supposed to have been sold by some boys to some one on his way to New York. Answers to the name of Chief. Will give reward for his return.—MAX WENZEL (89 Fourth street, Hoboken, N. J.).

COLUMBUS, O., will have a show, Jan. 10 to 13, given by the Ohio Poultry, Pigeon, Kennel and Pet Stock Association, H. A. Bridge, secretary. The O. P. P. K. P. S. A. has a big name, if there is anything in that.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Topsy W. and Beauty. By Monadnock Kennels, Peterboro, N. H., for black and liver and white cocker spaniel bitches, whelped Oct. 3, 1887, by Brag (Wildair—Little Buttercup) out of Nellie (Brag—Gypsie).

Rose Obo. By E. F. Starkey, Fitchburg, Mass., for black cocker spaniel bitch, whelped Nov. 17, 1887, by Obo II. (A.K.R. 432) out of Phonsie (A.K.R. 1482).

Dandy S. By E. F. Starkey, Fitchburg, Mass., for black cocker spaniel dog, whelped August, 1887, by Dandy W. (A.K.R. 5017) out of Phonsie (A.K.R. 1482).

Doncaster, Jr., Antoinette and Marie. By W. R. Traver, Washington, D. C., for one blue belton setter dog and two lemon belton bitches, whelped June 30, 1887, by Doncaster out of Princess Pearl.

Biff. By John C. Cahoon, Taunton, Mass., for black, white and tan Llewellin setter dog, whelped March 9, 1887, by Gun (A.K.R. 1538) out of Victoria Laverack (A.K.R. 4677).

Trade Dollar. By Richland Kennels, Wapeton, Dak., for light fawn, black points, mastiff bitch, whelped April 12, 1887, by Turk III. (A.K.R. 4048) out of Brunette (A.K.R. 3549).

Tenor. By A. S. Aborn, Wakefield, Mass., for white, black and tan beagle dog, whelped June 28, 1887, by Top (Ringwood—Winnie) out of Dot (Flute M., A.K.R. 1960—Belle, A.K.R. 1982).

Lady Bessie. By J. Rogers Bolton, Poughkeepsie, N. Y., for orange and white English setter bitch, whelped Aug. 31, 1886, by Bruce (Gun—May B. Taylor) out of Bessie T. II. (Don Gladstone—Bessie T.).

Belle of Centreville. By John Hawthorn, Camden, N. J., for black, white and tan English setter bitch, whelped July 2, 1887, by Gus Bondhu (A.K.R. 3439) out of Rodreka (Roderigo—Gem).

Pilot. By Geo. Laick, Tarrytown, N. Y., for black, white and tan beagle dog, whelped Aug. 6, 1887, by Laick's Rattler (Chancellor—Careless) out of Lewis's Dot (Ringwood—Maida).

Frolic. By Geo. Laick, Tarrytown, N. Y., for black, white and tan beagle bitch, whelped Aug. 20, 1887, by Laick's Rattler (Chancellor—Careless) out of Laick's Rye (Ringwood—Roxy).

Guelph. By McEwen & Gibson, Byron, Ont., for tri-color collie dog, whelped Oct. 16, 1887, by Gilderoy (Charlemagne—Hasty) out of Jess (Heather—Madge).

Zephyr W. By Harmony Kennels, Covert, N.Y., for black, white and tan beagle bitch, whelped July 24, 1887, by Ross (Bounce—Pussie) out of Zephyr (Kino—Fly).

Ross W. By Harmony Kennels, Covert, N. Y., for black, white and tan beagle dog, whelped Aug. 4, 1886, by Bounce (Rambler—Honeymoon) out of Pussie (Ringwood—Beauty).

Bonnie View. By McEwen & Gibson, Byron, Ont., for black and tan collie dog, whelped Aug. 4, 1887, by Dublin Scot (The Colonel—Jessie) out of Madge (Highlander—Hasty).

Chevalier Kennels. By Robt. D. Locke, Chicago, Ill.

Oakview Kennels. By Wm. H. Child, Pa., for his kennels of Irish setters.

Capitol City Kennels.—Hartford, Conn., Nov. 26.—*Editor Forest and Stream:* I see that some one in Lansing, Mich., is using the words "Capitol City Kennels" in advertising a stud pup in your columns. I claimed the name Capitol City Kennels in the *American Kennel Register*, issue of February, 1887, and as long as I have claimed it, would it not be a good idea for our friend in the West to use some other name for his kennels?—CHAS. D. CUGLE.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Hillside Belle—Guillermo. T. W. Mills's (Montreal, Can.) bull bitch Hillside Belle (Robinson Crusoe—Juniata) to his Guillermo (A.K.R. 671), Nov. 13.

Bailey, Portland, Me. Belona, lemon and white bitch (Bow—Beulah), and Rosalie, lemon and white bitch (Bang Bang—Rose), to Percy C. Ohl, New York.—JAS. MORTIMER, Supt.

DEATHS.

Flirt II. Clumber spaniel bitch, whelped August, 1886 (Johnny—Jess), owned by W. G. Youngs, Ottawa, Can., from distemper.

Johnny—Jess whelps. Clumber spaniels, whelped October, 1887, owned by W. G. Youngs, Ottawa, Can., from distemper.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

P. A.—Get some zinc oxide ointment and apply to sores. Get the following:

℞ Kali iodid..... ℈ iss
Syr. sarsap. co..... ℥ i
Aq. ad..... ℥ iv
Mix. Give a teaspoonful three times daily.

C. J. G., New Jersey.—My pointer, 4 months old, I think, has the mange; his skin swells in small patches and then comes off like dandruff, mostly on the under part of the body, scratches himself a good deal and seems a little dull. Ans. Wash with castile soap and warm water, and after drying, apply the following:

℞ Ung. zinc oxid..... ℥ iss.
Ung. diachylon..... ℥ ss.
Mix. Sig. Apply night and morning.

Keep the bowels clean by the use of castor oil in teaspoonful doses.

E. B., West Medford, Mass.—My setter has some form of mange which I cannot exactly define. A year ago a red spot came on her foot and the hair came out. I washed with carbolic soap daily, and all went well. Now the same spot has appeared, and moreover she has reddish patches on the inside of thighs and armpits, and on one armpit a sore. There does not appear to be any itching or pain. I am using carbolic acid and water 1 to 20 parts, and also Fowler's solution of arsenic twice daily in food. She is in good condition and is shot over two or three times a week. Ans. Treatment is good. Give a compound cathartic pill every other day, and rub in gently after washing the following:

℞ Ung. zinc oxid..... ℥ iss
Ung. diachylon..... ℥ ss
Mix. Sig. External.

C. T. B., New Bedford, Mass.—Died, Nov. 17, my prize winning Gordon setter bitch Chloe. The disease baffled the most skilled physicians. Symptoms: Mouth inflamed, bad odor, drooled blood and mucus, could not lap water, could not eat, grew poor, sick three days and died. This is the second case I have had. My imported Prince died with the same symptoms, and dogs were looking fine and feeling well up to three or four days before they died. I have been breeding Gordons for eighteen years and have never had a case like these. If you can give me any information as to the disease I would be very much obliged. Ans. It was cancrum ovis. See Ashmont on "Diseases of the Dog."

THE MEMPHIS AND AVENT KENNEL will offer a number of broken dogs for sale during the Eastern and American trials. Among those offered for sale will be their entire Derby, All-Aged and Champion entries. This kennel will not send dogs to purchasers on approbation, preferring for purchasers (or their deputized agents) to see the dogs at work during the trials and privately. This will be a rare opportunity to secure some first-class dogs from combined field-trial and bench-show winning strains, broken by Mr. J. M. Avent.—*Adv.*

THE NEW CURE FOR ANIMALS.—The rapid strides recently made in the more humane, scientific and successful treatment of the diseases of domestic animals, is not only a matter of surprise but is cause for congratulation. Not only are the old, barbarous and inhuman methods largely discarded, but the new ones cure much quicker and more surely. Not only that, but diseases formerly considered incurable are found to yield as snow before the summer sun, to the mild influence of the new system. True, the people learned slowly. The firing, the drenching, the blistering and the bleeding went on in the treatment of animals long after it had disappeared in the treatment of people. But the continued advertising of Dr. Humphreys, and more than all the grand success of his Specifics in curing disease of domestic animals, could not be withstood, until now every stockman who is up with the times uses his Veterinary Specifics. They would just as soon go back to the sewing needle in place of the sewing machine, or to the grain cradle in place of the reaper, or the mail coach for the telegraph, as to return to the old mode of firing, drenching and blistering in the place of Humphreys' Veterinary Specifics. His veterinary book of 400 pages is sent free on application to the Humphreys' Med. Co., 109 Fulton street, New York.—*Adv.*

Rifle and Trap Shooting.

SAN FRANCISCO, Nov. 20.—Shell Mound Park, Berkeley, was thronged all day with people, who gathered to contest for the prizes offered. Apart from the contest for turkeys, etc., before the butts, the German Fusileer Guard and the Swiss-American Rifle Club, of Oakland, held their monthly medal shoots, and sandwiched in between these a little special shoot took place between two prominent members of the First Regiment. The following is the summary of the day's shooting. German Fusileer Guard, monthly medal shoot, ten rounds each man, at Creeemoor target, 200yds:

H Tiedgen	3444453544—40	E Janson	5435344344—39
D Stein	3023435024—24	S Bohrmann	2433432430—28
C Rettig	3435534405—34	F Kling	2240340433—25
A Scharfenberg	3403534344—33	A Circo hm	3330332044—21
J Peterson	3443434534—35	E Schwaner	4444444444—40
T Dabeo	4432044342—30	C Schafer	3433443334—34
E Zachan	4303324802—24	H Lots	5343304333—31
W Eicher	3403343232—27	E Breig	4454423440—33
R Volkmann	4454333343—36	E Meyer	5004343243—28
F Seifers	2440244433—30	W Shurr	4334354543—38
H Stettin	3443444445—39		

In the first class the first medal was won by Swaner, H. Tiedgen won the second medal and H. Stettin the third medal. Second class, C. Schafer first medal, E. Breig second medal, H. Lots third medal. Third class, only one medal awarded, won by C. Rettig. The Swiss-American Rifle Club, of Oakland, held its monthly shoot; 200yds.; five rounds each man. Score:

N Martignoni	42433—17	C Camozzi	03333—12
P Bertola	01444—16	L Bottini	23322—12
V Pagina	55333—15		

Messrs. Burdick and Townsend had a practice shoot. Each man shot 35 rounds at the 200yd. target. Score:

Burdick	4444445445344543244434443445345 4—138
Townsend	4243553543345443433345444445544344—135

WORCESTER, Mass., Nov. 24.—Broad Meadow Range, Creedmoor target, 200yds., for 4 turkeys, one each to the 4 best men:

Military Rifle.

Shumway	4444545544—43	4354544453—41	—126	+15—141
Early	4544444444—41	4444444454—41	4445445434—41	—123	+15—138
White	4544455554—45	4455445544—44	4455544444—43	—132	+5—137
Taylor	4445443534—40	4354434444—39	4443443343—39	—117	+15—132
Pepper	5344544445—39	4443444342—36	4542355232—33	—108	+23—132

There was also shooting with a sporting rifle, the conditions being the same and with the following results:

Thomas	5555545544—47	5435455555—46	5454555454—46	—139
Berton	4454555554—46	5444445545—44	5545485444—43	—133	+6—139
Bernard	4444454545—41	4445434444—40	4534444444—40	—121	+12—133

OWENSVILLE, Ind., Nov. 23.—The Owensville Ballard Rifle Team met on their range to-day, conditions very unfavorable for good scores, atmosphere full of smoke with a strong gusty 2 o'clock wind. Standard target, 200yds.:

G Wetter	10	7	7	7	8	8	4	6	6	5—68
J Stone	5	3	7	8	4	3	5	6	6	9—56
J Montgomery	8	5	10	4	5	7	4	6	7	3—59
McG Daugherty	4	5	6	6	5	8	5	7	4	8—58
R Speck	8	5	5	6	5	0	6	4	10	5—49
W Gentry	5	0	3	3	4	1	9	8	6	8—47
H Mauck	3	0	8	3	6	4	5	8	7	6—44
W Roberts	5	4	4	4	6	4	10	2	0	4—43
J Daugherty	3	5	7	4	2	0	9	6	4	4—41—465

Average 51⅞. G. Wetter gold medal, J. Daugherty leather medal.

SPRINGFIELD, O., Nov. 18.—Some pretty fair shooting was done this afternoon by the members of the Springfield rifle team at the club range on Perrin's farm south of the city. Mr. Henry Croft, Sr., made two great scores and the shooting of the others was fine. The shooting was at a Hinman target, 200yds., off-hand. Following were the scores:

J E Perrin	7	8	6	6	5	9	10	10	5	10—76
J E Trimmer	9	6	10	4	7	7	6	8	5	7—69
H Croft, Sr.	10	7	8	10	10	8	9	8	10	10—90
J Lessner	10	5	7	7	10	10	10	9	9	8—85
D Smith	5	4	4	10	5	6	7	8	7	4—60

WORCESTER, Mass., Nov. 24.—Members of the Worcester City Guards, Co. A, 2d Regiment, M. V. M., Peat Meadow Rifle Range, 200yds.:

Lieut M H Tisdell	3454443445—40	4544545545—43
J D McIntosh	2544433455—39	4445444444—41—80

NEWARK, N. J., Nov. 17.—Weekly shoot of the Our Own Rifle Rifle Club:

Snellen	114	Miller	94
A O Kiefer	106	Bertram	94
Ferd Friensehuer	106	Gutman	93
T A Friensehner	99	Hahn	93

J Sieminskie	6	7	11	10	9	11	9	5	9	8— 88	

MAGAZINE MILITARY ARMS.—Gen. Sheridan, in his recent annual report as Lieut.-General of the army, is emphatic on the question of improved small arms and says: "The Springfield rifle still remains the weapon of our service, and it is undoubtedly a very good one. In my opinion, however, the magazine arm must be the arm of the future, and a glance at foreign armies shows that future to be very near at hand. Every leading country abroad has either adopted a magazine gun or been actively engaged in experiments looking to the development of an effective system. With us, progress in this direction appears to be very slow, and, as far as I know, no very decided steps have been taken during the year, nor any definite conclusions yet reached. If it is not possible for us to devise at an early day a good magazine gun embodying the advanced ideas now accepted abroad, it would be better to adopt the best of their weapons rather than adhere longer to our singleloader, effective, even, as its fire can sometimes be made."

PHILADELPHIA.—The Perseverance Rifle Club, of Philadelphia, was organized Oct. 31, and the following officers elected: President, Leon C. Dilg; secretary and treasurer, John A. Vermer, Jr.; committee, Joseph A. Watson, Andrew J. Fogerty.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

CLEVELAND, O., Nov. 24.—The Cleveland Club's Thanksgiving programme at Blue Rock Springs was all its most enthusiastic members anticipated, except the weather. East End and Kirtland shots were on hand to dispute the prize turkeys with their Cleveland brethren, and the Cleveland Club badges were contested for by a larger number of Clevelanders than have been entered at a regular club shoot for many months. Two shoots, both turkey contests, took place in the forenoon and the regular badge shoot and turkey matches occupied the afternoon. The entrance charged to the turkey shoot was fifty cents. Three sets of traps were in constant operation, the badge shoot being from five traps and the other shoots from three. The most successful marksmen of the occasion were W. R. "Roberts" and D. Auld, the former a Cleveland member and the latter an East End crack shot. Besides winning the first badge of his club handicapped at 26yds., Roberts struggled with four big turkeys when the day's sport was over. All of them were first prizes except one.

There were 16 entries to the badge shoot, which resulted in ties on both badges. "Roberts" and J. White tied for the first badge, each killing 16 birds, and "Roberts" won the shoot off. Heine and Sherman tied for second, each making a score of 15, and Heine won the badge on the shoot off.

J E Jones (18yds)	0101100101010100110— 9

Heine (18)	1111101111111101001—15

Nine blackbirds were shot at in the first turkey shoot at 18yds' rise. Paul North's 9 straight took first prize; Auld, Powers, Byrnes and Sherman tied for the second bird on 8, Auld winning the shoot-off; Keys, Silsby, Haycock, A. Jones and P. Baker tied on 7 for the third turkey, Silsby winning the shoot-off. The score:

P North	9	Wherry	5
D C Powers	8	Silsby	7
Haycock	7	Sweetman	5
D Auld	8	Sherman	8
White	6	Dennis	3
Byrnes	8	L O Jones	5
Bender	6	Cogswell	5
Keys	7	Calhoun	6
Elford	6	A Jones	7
Benson	5	P Baken	7

The same conditions governed the second shoot, in which D. Auld took first prize on the shoot-off, Haycox second and Dan Powers third. The score:

D Auld	9	Powers	7
Haycox	8	Byrnes	7
Calhoun	9	Silsby	6
L O Jones	5	Sayles	9
Keys	5	Hogen	6
Benson	4	White	8
Wherry	6	W R "Roberts"	6
Roof	8		

Third Shoot.—Conditions, 6 birds, 18yds. rise; "Roberts" won first turkey in the shoot-off, Auld second, and Bender third. The score:

Auld	5	Dennis	4
Wherry	5	Bender	4
Benson	3	Roof	5
Calhoun	5	Haycox	5
Hogen	3	Keys	3
Silsby	5	White	6
Sherman	5	W R "Roberts"	6

Six birds were also shot at in the fourth shoot, "Roberts" again winning first prize in the shoot-off, Calhoun second, and Wherry third. The score:

Auld	5	Haycox	5
Wherry	4	Forrester	5
Martin	6	Powers	6
Bender	3	Calhoun	5
Kilby	5	Sayles	6
"Roberts"	6	Roof	5
Elford	3	A D Jones	5

Fifth Shoot.—Conditions, 6 birds, 18yds. rise, Martin won first, "Roberts" second and Powers third in the shoot-off. The score:

Roberts	5	Forrester	4
Kilby	4	Elford	4
Martin	6	Auld	6
Upson	6	Wherry	3
Powers	4	Calhoun	5
Sherman	4	Wallace	4
A B Jones	5	Sayles	5

Sixth Shoot.—Roberts won his fourth turkey in this match at 6 birds, Calhoun took the second prize in the shoot-off, and W. A. Bassett won the third prize. The score:

Powers	6	F Tamblyn	3
Martin	6	W Tamblyn	2
Haycox	3	Keys	4
Auld	6	J O Jones	3
Wherry	4	Bender	3
A Jones	6	Upon	4
Calhoun	5	Sherman	5
W A Bassett	4	Wallace	2
Elford	5		

MONTREAL, Nov. 17.—Thanksgiving Day was kept by the members of the Montreal Gun Club, for, besides shooting off the final match for the handsome cup presented for competition by Alderman Morris, there was an optional sweepstakes for six useful and somewhat costly prizes. There was a large attendance both of shots and of the public. The shooting during the cup match was very close, as will be seen below, but, owing partly to the variably wind and partly to the bad light, the birds had decidedly the best of it. Mr. Wallace was declared the winner of the cup, his total being, together with his previous scores at the other matches, 54 out of a possible 80. The cup score stood, 20 birds at 18yds. Referee, Mr. Leach, Dominion Cartridge Co.:

A C "Johnson"	0111111111101101111—17
C H Wallace	1111111101111011110—17
G B Bedard	1011010111101001101—13
W Emond	1010101010011111101—13
A Penniston	1101110010111001010—12
L Trotter	1110101100010011011—12
W McCaw	0101101111000101101—11
N P Leach	1111100000101100001—10
G C Wescott	1110011100100010110—10
A Ramsay	1111001000010010101— 9
J Allan	1101100011001000110— 9
H Lajeunesse	0010011011010100000— 8
J Sly	1100110000101000001— 8

Johnson won on shoot-off by 4 to Wallace's 3.

NEWARK, Nov. 24.—The Elizabeth Gun Club started to kill 150 sparrows in a series of lively sweeps. The day was dark and the little fellows were too nearly the color of the ground to be easily seen. The Union Gun Club had an interesting shoot at artificial birds on the grounds at Springfield. The attendance was large and the shooting was good. The chief event of the day was the fourth match, a prize shoot at 25 bats, with 18 entries. The winners and three scores were as follows: First prize, Hunt broke 21; second prize, Jobs and Cadwell, 20; third prize, Morrison, 19; fourth prize, Miller and Soper, 18; fifth prize, Johnson, 17; sixth prize, Roll, 16.

TORONTO, Nov. 20.—Mr. Wm. McDowell will give prizes valued at $400, to be competed for at a grand shooting tournament on Ayres' grounds, commencing Thursday, December 1st. First of all there will be a shoot at ten live pigeons for seven prizes, ranging in value from $30 down to $6 each. Then six prizes, valued at from $50 to $3, will be offered for a contest at fifteen blackbirds, to be followed by a competition at ten live pigeons, with seven prizes in cash, ranging from $60 to $6, and a team shoot, five men, at 15 blackbirds each, for five gold medals, valued at $60, and five valued at $30.

DUNELLEN, N. J., Nov. 28.—The regular shoot of the Middlesex Gun Club, falling on the 23d, was postponed until Thanksgiving Day. The attendance was large, a great many coming to witness the match between Wm. Cannon, of Newark, and Geo. Davis, of Greenville, N. J., at 50 live birds each, Hurlingham rules, $250 a side, Davis giving Cannon 2yds. handicap. W. F. Quimby was the referree, and Al Heritage furnished the birds for both parties. Davis was the favorite in the betting, but for some unknown reason seemed unable to get there. Cannon was in the best form I have ever seen him. The spectators were disgusted with the easy shots missed, and many of them expressed themselves very fully that they thought it a very funny shoot. Following are the scores of the match:

Davis	1000122022011002011022201100101112100012010102l0w.—27
Cannon	2211011012012201121120111000010221111010001102200—33

Sweep No. 1, 4 live birds, handicap rise:

Quinlan	0122—3	Stoddard	1110—3
Day	2110—3	Clark	1111—4
Lever	1110—3		

Second divided. Second sweep:

Quinlan	1111—4	Stoddard	1012—3
Day	0201—2	Clark	1111—4
Lever	1100—2		

Quinlan and Clark first money, Stoddard second, third divided. Sweep No. 3:

Quinlan	1211—4	Dickens	1211—3
Day	2111—4	S G Smith	2111—4
Lever	1101—3	Capt Jones	1121—4
Stoddard	0100—1	Forrest	1021—3
Clark	2011—3		

Ties divided. Sweep No. 4:

Quinlan	0101—2	Dickens	1111—4
Day	000w.	S G Smith	1111—4
Lever	0021—2	Capt Jones	1111—3
Stoddard	1021—3	Forrest	0211—3
Clark	0111—3		

Ties divided. Sweep No. 5:

Quinlan	1111—4	Dickens	1100—2
Day	1101—3	S G Smith	1101—3
Lever	1121—4	Capt Jones	1112—4
Stoddard	0111—3	Forrest	1100—2
Clark	1111—4	Cannon	1001—2

Divided. Sweep No. 6:

Quinlan	0221—3	Lever	0202—2
Lindsley	1111—4	Stoddard	1011—3
Tee Kay	0110—2	Davis	0012—2
Capt Jones	1101—3	J H Force	2011—3
C Smith	1102—3	Cannon	1201—3
S G Smith	0211—3	Terry	2021—3
Forrest	2112—4		

On shoot-off Lindsley and Forrest first, S. G. Smith and J. H. Force second, Davis and Tee Kay third. Sweep No. 7:

Quinlan	1121—4	Cook	2101—3
Lindsley	0110—2	Lever	1112—4
Cannon	0101—2	L B Campbell	2211—4
Tee Kay	1012—3	Davis	2011—3
Stoddard	0101—2	C Smith	0121—3

On shoot-off Quinlan and Campbell first, C. Smith and Davis second, Stoddard third. Sweep No. 8:

Quinlan	1011—3	Cannon	2122—4
Tee Kay	1010—2	C Smith	0100—1
Lindsley	1101—3	D Terry	1121—4
Lever	2121—4		

On shoot-off D. Terry first, Quinlan and Lindsley second, Tee Kay third. Sweep No. 9, miss and out, one barrel, 25yds. rise:

Quinlan	0	Lever	1
Cannon	1	Re-entry Quinlan	2
Lindsley	2	Re-entry Cannon	1
L B Campbell	0	Re-entry Lever	0

Quinlan and Lindsley divided.—TEE KAY.

ST. LOUIS, Nov. 24.—The wild pigeon tournament of the Excelsior Gun Club was commenced at 9 o'clock this morning, at Compton Avenue Park, Fred Tresher being the master of ceremonies. Owing to the very bad weather but a small crowd, including champions Budd and Stice, were in attendance, but they were given excellent sport. The birds were strong flyers as a rule and, when darkness is taken into consideration, the scores made were remarkably good. The tournament opened with three sweepstakes shoots as follows. Five birds, 50yds. rise:

West	11110—4	Budd	11111—5
Stice	11111—5	Jack	01111—4

The purse was divided. Five birds, 30yds. rise:

West	11111—5	Budd	11111—5
Stice	10111—4	Jack	11110—4
Small	11011—4	Green	01101—3

The money was divided. Seven birds, 30yds. rise:

Stice	0110111—5	Jack	1111111—7
Budd	1111111—7	West	1111111—7

The money was divided. The regular programme of the day was then taken up, all money being divided, 50, 30 and 20. Six birds, 30yds. rise:

Stice	101001—3	Budd	111011—5
Schaaf	111111—6	West	111101—5
Weaver	011101—4	Winston	111111—6

Schaaf and Winston divided first, West and Budd second, while Weaver won third. Second shoot, 8 birds, 30yds. rise:

Stice	11111101—7	Winston	11111111—8
Schaaf	11111011—7	Budd	11111111—8
Weaver	11011111—7	West	11111111—8

The money was divided. Third shoot, 10 birds, 30yds. rise:

Greer	0011101111— 7	Budd	1111111111—10
Weaver	1111111101— 9	West	1111111111—10
Winston	1111111111—10	Small	0011111000— 5

Winston, Budd and West divided first, Weaver took second, and Greer third money. Three pair doubles, 18yds. rise:

Weaver	11 10 11—5	Budd	01 11 01—4
Winston	11 11 11—6	West	11 10 11—5

Winston won first, Weaver and West second and Budd third. The concluding event was 5 birds, 30yds. rise:

Weaver	11101—4	Green	10101—3
Moser	11111—5	Small	11110—4
Budd	11111—5	West	11111—5

Moser, West and Budd divided first, Small and Weaver second, while Green took third.

BROOKLYN, Nov. 24.—The regular shoot of the Glenmore Rod and Gun Club for the Midas diamond badge took place at Durller's (Dexter's) Park to-day. A large number of spectators were present. The contest, which began at 1 o'clock, each man shooting at 7 birds, resulted as follows:

W R Sclover (29)	1011101—5	H Kneckman (27)	1010100—3
G U Forhell (29)	1111110—6	J Bass (27)	0011011—4
A McAvoy (28)	1111010—5	R McAvoy (27)	1110111—6
P Sutter (28)	1111111—7	M J Burke (26)	0111111—6
H J Bookman (28)	1111011—6	C Magee (25)	1011110—5
J K Rowell (28)	1110000—3	H H Adams (25)	0101001—3
J Achs (27)	1101110—5	J D Bennett (25)	0101111—5
P H Reid (27)	0001111—4	C H Kraft (25)	0111111—6
P H Von Dreele (27)	0010101—3	J Maguire (24)	0100001—2
H Littlejohn (27)	1111111—7		

In the shoot off between Sutter and Littlejohn, the former killed four birds straight, while the latter missed his last. The diamond was accordingly awarded to Sutter. Referee, W. J. Warner; scorer, W. J. Bennett.

YONKERS, N. Y., Nov. 24.—Yonkers Gun Club. Shoot for a $100 Parker gun, to be won three times to own it. Eighth shoot. Match at five birds, 10 each, 3 traps. Handicap rise, 50yds. bound. Shot under Yonkers club rules, both barrels:

G Langran (30yds.)	1111111111—10	Geo Osborn (28)	1111111110— 9
R W Rowland (21)	1011011101— 7	Wm Rowland (24)	1111111111—10
Wm Koster (24)	1111000010— 5	J Rowland (29)	0010011110— 5
Thos Wigley (21)	1000000111— 4	P Wing (24)	0101100111— 6
R Ellin (28)	0110111111— 8	P Paulson (27)	0001010010— 3
L J Schlesinger (26)	1110010010— 5	J H Feidler (24)	1100111101— 7
E L Thomas (28)	1111001111— 8	B Burnan (24)	0011000111— 9
A L Kolb (30)	1110110101— 7		

Ties on 10 birds, at 5 birds:

Langran (30yds.)	11011—4	Rowland (24yds.)	11000—2

KANSAS CITY, Nov. 18.—The contest of the Independence Gun and Rod Club at their grounds in East Independence this afternoon for the $50 medal was won by Bob McBride, the referee being John Savage, of Kansas City. The following shows the score made by leading contestants for the prize:

T D Bedford	1101110100—6	A S Wright	1100111011—7
B McBride	1111111100—8	R T Proctor	0101111001—6
J M Langsdale	1010110100—5	G Parker	1100111011—7
J J Owens	1101101001—6	J N Lee	0110100110—5
T Hesson	0100010015	J Furnish	1110111001—7
C McBride	0010111011—6	J Bryant, Jr	1111100000—5
C R Thomas	0011100011—5	C G Smart	0101111101—7

TORONTO.—A movement is on foot for establishing regular shooting grounds in this city after the fashion of Hurlingham and Notting Hill. The grounds are undoubtly needed, and there should be more than sufficient enterprise among the members of the five gun clubs in this city to warrant their establishment with a sure and certain hope of success.

TORONTO, Nov. 22.—A pigeon shooting tournament took place at Chas. Ayre's place, corner of Morse street and Eastern avenue, being a farewell meeting in honor of Mr. W. Hine, of Winnipeg, who after a three months' sojourn in this city is about to leave for his home. The weather was all that could be desired and the birds being particularly lively, some excellent sport was enjoyed. Three sweepstake matches were shot off, resulting as follows: First sweepstake, at 5 pigeons, 26yds. rise, Toronto Gun Club rules, single barrel:

Quarrie	4	J K Leslie	2
W Bugg	4	Malvern	2
Carruthers	4	Kemp	1
J Townson	4	Deady	1
G Pearsall	3	George, retd.	

In the shoot-off Quarrie killed 4 straight and took the money. Second sweepstake, at 5 pigeons, 26yds. rise:

Carruthers	5	Staneland	3
N Wright	5	Bugg	3
George	4	Rice	3
Cockburn	4	Malvern	3

In the shoot-off Carruthers won the first prize, an antelope head; Wright second, a pair of buffalo horns. Third sweepstake, at 5 birds, 26yds. rise:

Cockburn	5	Newman	4
Leroy	4	Bugg	4
Hood	4	Thompson	4

George Staneland, Ayre, Kipps, Hawkesworth, Townson and Miller all retired. Cockburn took first prize and Leroy second.

MISS ANNIE OAKLEY.—An interesting ceremony took place on Saturday, the 29th October, in Miss Oakley's tent at the "Wild West Exhibition," when Mr. Withers, on behalf of the Schultze Gunpowder Company, Limited, presented that lady with a gold medal commemorative of her stay in England. Mr. Withers said his visit was one in which pain and pleasure were involved—pain in having to bid Miss Oakley farewell, pleasure in handing her a token of appreciation from the Company he represented, which he hoped she would accept, with best wishes for her happiness and success "in storm or in sunshine, on land or by sea." Miss Oakley, with a grace peculiarly her own, expressed herself as being very proud of the gift, which she would much value, and desired Mr. Withers would thank his Company for her. She added, with much naïveté, that had she not found "Schultze" powder to be the best powder she had ever used it would have found no favor with her. The medal, which is of pure gold, is suspended by a colored ribbon from a clasp and bar, is circular in form with a cable edging and bears, in blue enamel, the company's trade mark, a closed hand grasping lightning, with the motto "Inter fulmina securus." Pendant from the medal is a smaller one of like pattern with the monogram A. O. likewise in enamel, on the obverse of the large is the inscription "Presented by the Schultze Gunpowder Company Limited, to Miss Annie Oakley, as a souvenir of her visit to England, and in appreciation of her skill in the use of Schultze Powder.—October, 1887."—*London Field.*

WELLINGTON, Nov. 26.—There was a fair attendance at the grounds of the Wellington Club to-day, and some good scores were made in the merchandise matches at blue rocks and clay-pigeons. Perry was first in Class A, with 19, Gerry in Class B, with 17, and Snow and Wardwell scored a point in Class C, with 16 each. Following are the winners in the several sweepstake matches: 1. 6 blue rocks—Cobb first. 2. 6 blue rocks—Wardwell first. 3. 3 pairs blue rocks—Wardwell first. 4. 6 clay-pigeons—Perry first. 5. 6 blue rocks, merchandise match—Snow and Perry first, Warren and Gerry second, Wardwell and Melcher third. 6. 10 clay-pigeons, merchandise match—Perry first, Gerry and Wardwell second, Snow third. 7. 3 pairs blackbirds—Swift first. 8. 6 clay-pigeons—Gerry first. 9. 6 blackbirds—Gerry and Bradstreet first. 10. 6 clay-pigeons—Warren first. 11. 6 blackbirds—Perry first. 12. 6 clay-pigeons—Snow and Wardwell first.

FREEPORT, Ill., Nov. 16.—The shooting tournament for the diamond badge which represents the championship of Winnebago, Ogle, Stephenson, DeKalb, Boone, and Rock Counties, took place at Taylor's Park, in this city, to-day, and was an exciting contest. Twelve marksmen participated, and there were many spectators. The shooting was at 50 Peoria blackbirds, 18yds. rise, and in spite of the heavy wind which blew across the range, the scores were excellent. John T. Buker, of Rockford, won the emblem, with a score of 45; Dan Burrell, of this city, was second, taking first money, with a score of 43; Eugene Cahoon, of this city, the present holder of the badge, made 42. Six other events were on the programme, and Cahoon made the biggest winning in the way of purses. The next tournament will be held in Rockford early in December.

Canoeing.

Address all communications to the Forest and Stream Pub. Co.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON..... { Albany, N. Y.
Secretary-Treasurer: F. L. MIX. }

	Vice-Com.	*Rear-Com.*	*Purser.*
Central Div.	Henry Stanton...	R. W. Bailey.....	E.W. Brown, 146 B'way, N.Y.
Eastern Div.	L. Q. Jones.....	Geo. M. Barney...	W. B. Davidson, Hartford.
N'thern Div.	A. D. T. McGachen.	W. G. McKendrick.	S. Britton, Lindsay, Can.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in the Central Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

A NEW DIVISION OF THE A. C. A.

THE necessity for a further division of the main body of the A. C. A. that remained after the Eastern and Northern Division was set off, and that has been known as the Central Division, has long been recognized by the leading men of the Association, and the only question has been as to when the proper time would come. It is now plainly evident that this time has arrived, and that the best interests of the Association demand a further carrying out of the scheme that has already resulted in two strong and firmly founded Divisions. The development of the sport has been most rapid within that section of the country between New York city and Canada for several reasons. First, New York was the original home of canoeing in the modern sense, the first canoes being imported by New York men, the first, and for many years the only American canoe club being formed there, and canoeing was kept alive for the ten years between 1870 and 1880 mainly by the few New York canoeists. Secondly, Canada was the home of the Indian canoe, or rather its modern successor, the open basswood canoe, as well as of the single paddle, and canoes were very widely used there for hunting, fishing and camping long before canoe clubs, associations and sailing races were thought of. The waters between New York and Canada were well suited for canoeing, and were the favorite cruising grounds of the New York canoeists, and besides their many natural advantages the fact that Lake George, the central spot of all, was the home of the man to whom, above all others, the origin of the American Canoe Association is due, Mr. N. H. Bishop, helped to bring it into deserved prominence, and to make it the birthplace of the young Association.

With New York on the one hand and Canada on the other, and with the best of canoeable water between, it was but natural that the growth both of canoeing and of the A. C. A. should be more rapid here than in more distant parts, and such has been the case, while so near the old home of the A. C. A., its influence has been stronger, and there has been a smaller proportion of unattached canoeists. Year by year, however, the number of canoeists has increased throughout the country at large, but the influence of the Association has decreased with the distance from its central point, which has naturally remained where most convenient for the great majority of its members; and to-day there is a very large number of active canoeists outside of the Association, and many not even members of clubs. It was to meet the widening circle of American canoeing and to take in the many new recruits that the scheme of divisions of the A. C. A. was established, and thus far we have seen its successful working in two cases.

Within the last three or four years canoeing has advanced very rapidly within the territory drained by the Passaic and Hackensack, the Delaware, the Susquehanna and the Potomac rivers, and to-day there is a very large body of canoeists on these streams and their branches. The growth has been spontaneous, fostered to a great extent by the impulse given to canoeing by the A. C. A. and its meets, but still not directly due to any organized effort of the Association. Men have taken up canoeing, here one or two, there half a dozen, and in time a number of clubs have been formed.

Of course in New York city, which virtually forms the eastern limit of this territory, the A. C. A. has been well represented; in Pittsburgh, the extreme western point, there has been an active club of A. C. A. members, while Trenton, Philadelphia and Washington have been in intimate connection with the Association through members resident in these places. Altogether about 180 A. C. A. men are scattered over the territory in question, but beside these there are many canoeists who are not members. The small clubs and the many unattached canoeists owe their introduction to canoeing not to the direct efforts of the A. C. A. men, as is the case in some parts, but to the general spread of canoe literature, the accounts of meets and cruises, and the prominence given to the sport since the formation of the Association. Not coming directly within its influence, and being unable on account of the distance to visit the meets, these men have never fully understood the aims and methods of the A. C. A., and have never realized that it would be to their benefit to join it. Gradually, however, as the number of canoeists has multiplied, the ideas of a union and of meets of some kind have taken form, and to-day there are several groups in various places ready to organize in some manner. On the Passaic there are a hundred active canoeists, about Philadelphia there are many more, and local meets of some kind are now being projected for the spring. The following letters voice several opinions on the subject, and the last one puts the matter of organization in a definite shape by a proposal for a preliminary meeting:

Editor Forest and Stream:

Philadelphia, Nov. 17.—I see by the FOREST AND STREAM that at the last meeting of the A. C. A. a discussion arose regarding a new division. Now this may be new to the members of the A. C. A., but it has been talked about for some time in the vicinity. Now, our idea was this: That the Central Division comprised that section lying in the vicinity around New York city and the State, including Newark, Paterson, etc., and it was our intention to form a new division to be known as the Southern Division, A. C. A., and including that section from Trenton south, Harrisburg, Washington, etc. When you get as far as Pittsburgh the majority are members of the W. C. A. The object of forming a separate division is this: If we were included in the Central Division and a division meet were held (which would be in the vicinity of New York city), it would be as inconvenient for Washington canoeists to be present as it is for New Jersey canoeists to be present at Lake George. This has been a matter of discussion in this neighborhood for several seasons, but was not carried out owing to the scarcity of clubs in the South, but this is not now the case; we have in Philadelphia alone five canoe clubs and about fifteen men not club members, but this is not all, the Delaware has in its many corners many more clubs, viz., at Wilmington, Trenton, Bristol, etc., which are never heard from, owing chiefly to the little attention paid to progress in this direction. The matter has come before the clubs at the proper time and action should be taken immediately so as to have it settled one way or another before the next canoeing season opens, which could very easily be accomplished in this way.

Let the canoeists of Philadelphia, Harrisburg, Trenton, and Washington, each hold meetings in their respective cities and elect each an officer for the division, and these officers could agree to meet in some way and select some spot for a local meet next season. At a recent meet of the Keystone C. C., of Philadelphia, (after transacting club business), it was decided to hold a local meet under the auspices of the Keystone Club (and not by individual persons as it was last season), and all persons who wish to attend will please communicate with me and their letters will be read to the club for action. The meet will be held during that week of May 30, 1888, on the Delaware River. It is to be hoped that southern men will take hold of this matter and not be the only district in the United States that is not officially represented in the A. C. A. Messrs. R. Binder, Jr., and Geo. Comly and Capt. Norgrave were appointed a committee to act, and letters should be addressed as follows on both matters, viz., the division and local meet: R. BINDER, JR., Keystone C. C.
635 NORTH ELEVENTH STREET, Philadelphia, Pa.

Editor Forest and Stream:

I notice in your editorial, that you are in favor of an Atlantic Division of the A. C. A., to be formed at once. That opinion is the wish of three members of our club, the fourth is absent from the city, but I think that is his desire also. All the members will probably join the ranks, if the Atlantic Division is formed and a meet held at salt water. A. S. PENNINGTON, Paterson C. C.
PATERSON, N. J., Nov. 24.

Editor Forest and Stream:

As I am too long a distance from your last week's correspondent, "Essex," to meet him personally, I should like to shake hands with him through the medium of your paper. Let me say to "Essex" that he is a man after my own heart. I should like to cruise all summer with him, and I think we could cruise without the quarreling that canoeists are alleged to do, especially when there are only two of them. What a pity it is that we have not more men like him in the Association. I think the officers would like it better and have an easier time than they do. I am willing to wager that if the executive committee should decide to hold the meet at Lake George more than fifty per cent of the canoeists who have never attended any of the meets, or never will, would have preferred to have had it at the Thousand Islands or on salt water. The FOREST AND STREAM covered the ground of a salt water meet perfectly last week, and pointed out the troubles, which were by no means imaginary ones. Now, I have a plan which might work and save a great deal of talk and letter writing.

Let each Division have a meet of their own. It was done by the Northern Division this year and was a success. Then we could have one at Lake George, another at Grindstone, and the Eastern and Southern could have a salt-water, if they want it. That ought to suit everybody. They might be arranged so that one could attend all of them. Now for the races for a perpetual cup. Why not appoint a man for each Division as time keeper for a special race, and make the races against time. Of course it would be considerable trouble making the wind blow alike at each meet, and making the tides and currents alike, but the executive committee wouldn't mind such a thing as that. I merely offer this as a suggestion to put an end to yearly argument as to where the meet shall be held.

I myself never attended a meet, business always interfering, but I should have done if it had been possible, and I am sure I should not have said to the officers "If I cannot have the meet where I want it I will not belong to it at all." Now, one word of advice to the officers of the Association, when you are advised by anybody to do so and so, tell them to—well, give it to them so hard they will never try to give you any more advice. Not to be influenced by anything you see in the papers (the kickers will kick anyway), and to go into the bomb business and keep several on hand to use on those canoeists who pay more dues in good advice and indifferent suggestions than in solid cash.

BINGHAMTON, N. Y., Nov. 22. GRACIE L.

Editor Forest and Stream:

The discussion as to the location of the next general meet of the A. C. A. has developed the fact that in the present Central Division the majority of the members are residents of the section comprising the waters of the Hudson within 60 miles of New York, New York Bay, Newark Bay, the Passaic River, Shrewsbury River, the waters surrounding Long Island, and the New York shore of the Sound up to the Connecticut line—all salt water. The number of A. C. A. members in this section now enrolled in the Central Division mounts up to 181 as against 134 left for the remainder of the State and the whole country not now included in the present Northern and Eastern divisions. Also, in the salt-water section above outlined there is a large number of men who own canoes, some of a larger class than any in the Association, but men thoroughly imbued with the spirit of canoeing. This number has been variously estimated at from 50 to 200. In my judgment, 100 is well within the actual number. Now, under these circumstances, it seems to me very desirable that A. C. A. members of this section take the action provided for by the present constitution, and apply for a new division under the name of the "Seaboard," "Atlantic" or "Salt Water" division.

One of the arguments used at the late executive meeting against considering a salt-water meet was, that the A. C. A. was not a missionary body. From this argument I respectfully wish to dissent. I hold that the general association is most emphatically a missionary association in that it is intended to unite the whole body of canoeists throughout the country. With that object, the clause providing for rotation of the general meet was inserted, with that object the formation of the Eastern and Northern divisions was advocated, and with the same object have advances been made time and again to the men of the present Western Canoe Association.

It would seem as if the separate existence of this latter association should have warned the present governing body against repeating the error of ignoring a section containing a body of men interested in the sport, already large enough to form a working association of their own outside of the A. C. A., and only kept from doing so by the efforts of present A. C. A. members, who have assured them again and again that the A. C. A. would soon have a salt-water meet which they could attend and see for themselves the pleasures and benefits to be derived from being part of so magnificent and united a whole. However, under our admirable constitution we have another remedy, that which I have suggested above, viz., to form a new division of present A. C. A. members and to invite our fellow canoeists and single-hander cruisers to join us. A meeting can be held in New York, organize for the election of officers, apply for admission as the Seaboard (or other) Division, and have the application acted on by mail by the Executive Committee in ample time to start the boating season with a defined plan for a local meet on salt water under the division officers, say two weeks in advance of the general meet next August. The co-operation of the Passaic River clubs has been solicited, and personally I hope this action may seem preferable to them to forming the independent association they have talked of. I am confident that we can have a local meet on salt water next summer, which, in point of attendance, will be far ahead of the general meet on Lake George, which many do not want to revisit, and which will give fairer sailing tests than can possibly be hoped for on the broadest part of any mountain-surrounded lake, no matter how beautiful. From investigation made prior to presenting the matter to the meeting at Albany, I know that the trouble of getting fresh water and of beaching boats on tidal beaches can be oviated, and that being the case, if we have not energy and executive capacity to make such a meet a success, we deserve to be passed over again as we have been heretofore.

I therefore invite A. C. A. members and other canoeists interested to meet at 247 Fifth avenue, New York, on Friday, Dec. 9, at 8 o'clock P. M., to organize and apply for admission as a new division and to take such further action as may seem necessary in the premises. Under the constitution a quorum of any division containing 100 members is twenty members. A full attendance of all interested is, therefore, hoped for.

WM. WHITLOCK, A. C. A. 35.

That action will result in one or more quarters very soon seems certain, and it is not necessary now to go into any argument to prove that the best and most effective step that can be taken will be the simplest one, the organization of a fourth division of the American Canoe Association, according to the method prescribed by the Constitution. Failing in this step, the only other contingency would be the formation of a number of small and isolated bodies, actually but large and badly constituted local clubs, even though under the more ambitious title of association. For instance, the canoeists on the Passaic already number enough to form an organization of their own, independent of the A. C. A., and the canoeists of the Delaware might soon form another, but there could be no harmonious action, and the two would work solely for their own interests, and in the end canoeing would gain but little.

The advantage of such a division would be plain enough as far as the present members of the A. C. A. are concerned, it would at once establish a division meet that would travel in a far narrower circle than the A. C. A. meet, and so come each year more nearly within reach of the members of this section, while it would, as soon as the plan is fairly working, insure the A. C. A. meet within the division at least as often as anywhere else. Naturally it would increase the membership of the entire Association, and at the same time give the division a larger and more powerful representation in the A. C. A. than the members now within the same extent of country enjoy as a part of the Central Division.

It is not enough, however, that it should benefit the present members or those who would naturally join in time, but to fill the required end it must bring the Association directly to every canoeist now within its borders. It has been urged by many that the A. C. A. was so far from them and its benefits so few that there was no use in them joining, and this no doubt has been to a certain extent true. The work of organizing a national association, begun and carried out for some time by a very few earnest canoeists, has been by no means an easy task. That it has yet been fully successful none of its friends claim, but what it has done is easily shown by a comparison of the growth of canoeing in the first ten years, from its introduction in 1870 to the foundation of the A. C. A. in 1880, with the growth during the seven years that have since elapsed. It must be remembered that the first period was coincident with the greatest development of canoeing in England, while here it is marked by an unusual interest in water sports, from which rowing in particular benefitted, and yet canoeing was with difficulty kept alive. The rapid growth of canoeing is so nearly coincident with the origin and growth of the A. C. A., and the leaders in the latter are so intimately connected with all the improvements in canoes that there can be no question as to cause and effect. It was not the increase of canoeing which led to the Association, but the long and untiring efforts of a handful of canoeists in advance of the times who formed the Association and used it as a lever to raise canoeing. It is to the leaders in the A. C. A. that canoeists to-day are indebted for the vastly improved canoes, the many new rigs, the dozens of minor conveniences and for the entire literature of canoeing, in itself an aid that all the old hands were deprived of. Looking at these results who can say that the A. C. A. has been a failure, or that because it does not give to each and every member who pays a dollar, a meet on his own duckpond, that he is under no obligations to aid it. That much remains to be done before it can be brought within the reach of all in the territory which it now attempts to cover, is very certain, but the work is going on faster and faster. The scope of the Association is widening, the details are being further perfected, more able men are being enlisted in the work each year, while the progress within the last two years is particularly encouraging.

Now, we have no sympathy with those who complain that the A. C. A. is of no use to them, that they cannot visit the meets, and that they will not join until they can. Seeing that all is not perfect, they stand aloof and refuse to have anything to do with it; when it just suits the individual ideas of each and gives him a meet at home, he will step forward and pay up—two cents per week through the year. That it has done much and is each year doing more for canoeing counts but little, that nearly every man on the roll is working for its improvement; all this counts for nothing with many. It never seems to occur to them that if all joined and lent their efforts, more could be accomplished. There is no money in working for the A. C. A.; it costs something to hold every office, time and money too, but these are freely given for the Association, for the members individually, and for American canoeing; and when a man declines to aid the work until he can see that he is sure of exactly 100 cents of benefit in return for the dollar invested, we have little sympathy for his complaints as to distance, etc.; but, at the same time, it may be worth while to show to those unwilling ones that the return can be had in a little time.

It is impossible to hold any meet at a point that will accommodate all the men who wish to attend, otherwise it would be but a local meet of all the men in a big city, or on a part of one river. The best that can be done is to rotate the meets throughout the allotted territory, in such a manner as may be fair to the majority of canoeists who belong to the body. This plan is now in practical operation in the Association itself, though some difficulty has at first been experienced which is unlikely to occur again; and it is proposed to apply the same to the division meets. It is not in every central locality that a suitable camp and courses can be found, and the location must be governed by this and by the transportation facilities, but the aim is to hold the meet in different sections of the division in turn, as far as consistent with these requirements. There will still be some who will have to travel a distance, in whose locality the meet can never be held, but in the main it will be within easy reach of the majority. Further than this the division should so promote the interests of canoeing that every waterside town and village should have a canoe club, no matter how small, the members all in the Association, used to working together, and fully capable of holding such small meets as may prove a substitute in the years when the division meet is too far away for a general attendance from the section.

The area of the Eastern Division, excluding the Maine wilderness, where no canoeists are likely to dwell, is about 40,000 square miles; the division we have to propose would contain about 60,000, leaving in the Central Division about 50,000. As to distance, each division would, roughly speaking, be inclosed in a circle of about 150 miles' radius, while the distance from extreme points in any division would be not over 300 miles, or say one night's ride by rail at an expense of about $10 for the return trip. This would represent about the maximum distance which a man would have to travel to reach a meet, while often it would be very much nearer. This is all that any one can ask for a meet of any size; it cannot be held near to him every year without injustice to many others, and when he is at too great a distance he must depend on a still smaller local meet with others situated as he is for the year. This, however, will be less of an evil as the number of canoeists increases, as it will always be possible to get together men enough in any

locality for a small meet. It may be said that this can be done at any time without the aid of the A. C. A.; but thus far it has not been successfully accomplished, and it would seem that some stronger union and some practice in the management of affairs of this kind, both of which the A. C. A. gives, were necessary even to the success of local meets.

To go now further into the plan of the proposed division, the present Central Division is the residue left after the setting off of the Eastern and Northern Divisions, and comprises all the United States outside of the former Division, the Eastern States. The new Division would comprise the States of Pennsylvania, Delaware, New Jersey and Maryland, with that part of New York below the Highlands of the Hudson. Political boundaries are of little consequence in such a Division, but the leading waters form a far better system of grouping. In this case they would be the lower Hudson and New York Bay, the Passaic, Hackensack, Delaware, Susquehanna, Potomac, Monongahela and Allegheny rivers and Chesapeake Bay. The northern limit would be a line drawn across New York and Pennsylvania through the upper corner of New Jersey at Port Jervis; the eastern limit the lower Hudson below Peekskill, the Atlantic coast from Sandy Hook to Cape Charles, the Potomac on the southwest, and the western boundary of the State of Pennsylvania. This would leave in the actual Central Division the State of New York and a part of Pennsylvania. A look at the map will show that it would not be possible to have a meet which would be in each different part in turn, but the great bulk of the canoeists in this section would for the present be east of the Susquehanna River, and the meets would naturally be held up and down the coast between New York and Washington, and inland as far as possible. This, of course, would not be quite fair to the canoeists of Warren and Pittsburgh, but it would be better than at present, and the best that can be done until the number of canoeists in that vicinity has increased. The waters of Long Island, which would be included, the Delaware, Lake Hopatcong, and Chesapeake Bay, would give fine sites for the Division and the A. C. A. meet, and would afford far greater facilities for the men in this section than the A. C. A. has yet been able to give.

The A. C. A. book shows a membership of about 315 in the States of New York, New Jersey, Pennsylvania, Delaware and Maryland, including the District of Columbia, and the proposed division of this area would leave about 135 members in the Central Division, and about 180 men in the new division. How many actual canoeists there are in the same territory is not definitely known, but by the list of canoe clubs in the *American Canoeist* there are 32 clubs within its boundaries, ranging in membership from 60 down to 4 or 5. In only 17 out of 32 clubs on the list is the membership given, and this foots up 351 men, so that the club membership must make a total of at least 500 canoeists. It is safe to add at least another 200 to this for the unattached canoeists, but we will assume that the number of active canoeists within the new division will be but 500. With such a body of men it would be possible in a couple of years to work up a strong and compact organization that would exceed in numbers and power the original A. C. A. as it was for the first five years of its existence. Instead of trying to draw men to its meet from a distance of 500 miles or more, the greatest distance would not be more than 150 or 200 miles, and there should be no difficulty in securing an attendance of 150 to 200 men at a division meet, or as large a number as would be desirable.

The expenses of the A. C. A. meet, as per report of the Secretary-Treasurer, were within $250, and a division meet would cost still less if properly conducted, or not over $200. It is probable that in the future the A. C. A. meet each year will be combined with one of the division meets in turn, the expenses being borne by the division, so that no direct tax for the annual A. C. A. meet will be needed. The full details of the plan are not yet perfected, but all seems to be working in that direction, to establish a circle of meets, each solely under the control of a division, and to make each in turn the official gathering of the A. C. A. for the year, the Commodore being in command, the Trophy being raced for, and consequently the best sailors of the Association being present. The expenses of such a meet will be no greater than an ordinary division meet, so no part of the cost need fall on the A. C. A. as a body unless it be considered advisable to offer special prizes in the name of the Association, instead of those usually provided by the division. With a membership of 500 the expenses of the division should be little greater than for a quarter of the number, the cost of printing the necessary notices and programs is no more, the race program is the same, and there will be a few more prizes for 500 men than for 200, and the cost of wharf, officers quarters, A. C. A. tent, in short all the furniture of the camp will be no greater for a large number than for a meet of 150 men. The expenses per man could be reduced even below the present sum of a dollar, and with very much better returns to each member.

The call for a meeting is made to all canoeists interested in the formation of a new division on the plan roughly outlined above, but the movement for such a division can only come from men at present in the A. C. A. There are many details connected with the work of organizing a new division, but the object of the meeting is to discuss the best method of work with a view to bring in as many canoeists as possible and to make the A. C. A. and the division indispensable to each. With this end in view we would call the attention of canoeists who are not members to the constitution of the Association and to the reports of its meets and business proceedings as reported in the FOREST AND STREAM in order that they may familiarize themselves with its methods and aims and decide whether it is worth their while to join the work.

It is surprising, considering how much has been said and written about the A. C. A. that canoeists should still be in the dark in regard to it, but the correspondence that comes to us from men outside of the Association, often in connection with some hostile criticism, shows an entire ignorance of the essential and prominent features, and we venture to say that those who have been most forward in finding fault have never visited a meet, never read carefully the laws and rules, and are in no way conversant with the practical advantages or defects of the A. C. A.

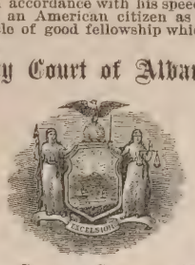
That it is not a failure is already proved, that it has done much both for canoeing in general and for individual canoeists is admitted, and its friends are now trying to do still more. Is it then to the advantage of each canoeist to try and avail himself of the present benefits it offers and to lend his aid toward increasing them, or to stand aloof and criticise all that does not fall in with his individual crotchets? The A. C. A. will go on, with or without the aid of outside canoeists, but it is the wish of its leaders to make it truly a National Association, and as such to enlist every American canoeist in its service and to give him such a return that he will feel well repaid. Such is the object of the present movement in the Middle States, and we trust that canoeists will at least study the subject with the care and attention which it certainly deserves from every friend of canoeing. Before going into the details of the oganization it is desirable to have as full information as possible concerning the number of clubs and canoeists, and we shall be glad to have any expressions of opinion, pro or con, as well as the names both of clubs and canoeists, both club members and unattached, within the proposed territory, in time for the meeting on Dec. 9.

OTTAWA C. C.

Editor Forest and Stream:

I am afraid your readers must have thought the Ottawa C. C. was defunct, but quite the contrary is the fact, we have all been so busy with the paddle that we have forgotten the pen. Now Dame Winter forces us to give up the former, so we naturally resume the latter. I send you as a first instalment a table of our fortnightly paddling races. These races were paddled over a course a measured half mile. All our paddling races, with the exception of a seven mile race in the regatta, were a mile long with a turn, and great care was taken to have the time taken accurately, two taking it independently and one checking the other. There were six races, the time is given in minutes and seconds. The time was not taken for the first race:

	1	2	3	4	5	6
A. O. Wheeler.....	2d	12 13	11 40	9 19	11 35	10 55
W. H. Cronk.....	5th	12 30	11 53	9 17	10 55	10 40
C. G. Rogers.....	1st	.. ..	12 09	9 18	11 25	.. ..
R. W. Baldwin.	Broke paddle.	12 38	12 10	9 15	.. ..	.. ..
F. H. Gisborne.....	...	12 25	11 58	9 25	11 47	.. ..
H. Roy.....	3d	.. ..	.. ..	.. ..	.. ..	.. ..
J. S. Brough	4th	.. ..	.. ..	.. ..	.. ..	.. ..
J. St. C. McQuilkin....	...	12 35	.. ..	.. ..	.. ..	.. ..
L. C. Labelle.....		.. ..	.. ..	9 45	.. ..	.. ..



The result was that Mr. Wheeler carried off the cup. The cup was held once each by Messrs. Rogers and Baldwin, and twice each by Messrs. Cronk and Wheeler, but Mr. Wheeler's place in the other races was slightly the best, his lowest place having been fourth, while Mr. Cronk was in the first race fifth. The fourth race of the series was also one of the regatta races, as the time shows it was very closely contested. It was won by Mr. Baldwin, who was in a 14½ft.x25in.x10in. canoe, which was bought especially for the race, as Mr. Baldwin was previously handicapped with a heavy decked canoe. The other canoes were considerable larger, the one in which I paddled, 15ft.x28in.x11in., being the nearest to it in size. FRANCIS H. GISBORNE, Secretary Ottawa C. C.

OTTAWA, Nov. 16.

CIVIS AMERICANUS SUM.

AT the dinner in Albany on the occasion of the Executive Committee meeting, Vice-Com. Stanton presented to Com. Gibson a large American flag, with the wish that it might wave over the Commodore's tent at the next meet. In accepting it, Com. Gibson said that if anything were needed to persuade him to become an American in name the gift would be sufficient, but that he had long since decided to do so. The following legal document shows that he has acted in accordance with his speech; and we are glad to welcome him as an American citizen as well as an honored member of that circle of good fellowship which knows no political boundaries:

City Court of Albany.

STATE OF NEW YORK, CITY AND COUNTY OF NEW YORK, ss.:

Be it known, That on the 21st day of November, in the year of our Lord one thousand eight hundred and eighty-seven, Robert W. Gibson, formerly of England but now of the city of Albany, appeared in the CITY COURT OF ALBANY (the said Court being a Court of Record, having Common Law Jurisdiction, and a Clerk and Seal) and applied to the said Court to be admitted to become

A CITIZEN OF THE UNITED STATES OF AMERICA,

pursuant to the Acts of Congress of the United States of America in relation to naturalization.

And the said Robert W. Gibson having thereupon produced to the Court such evidence, made such declaration and renunciation, and taken such oaths as are by the said act required,

Thereupon, It is ordered by the said Court that the said Robert W. Gibson be admitted, and he is accordingly admitted by the Court, A CITIZEN OF THE UNITED STATES OF AMERICA.

Witness: T. F. WILKINSON, JOHN W. WALSH and FRANKLIN M. DANAHER, Justices of said Court.

Seal of the City Court of Albany.

In testimony whereof, the seal of the said Court is hereunto affixed, this 21st day of November, 1887, in the 112th year of the Independence of the United States.

By the Court.

JNO. W. WALSH, Clerk.

CRUISING BOATS ON LAKE ERIE.

Editor Forest and Stream:

Seeing in your issue of Nov. 8 the drawings of cruising boats similar to those in use on the west end of Lake Erie for several years, it occurred to me that some particulars of the latter might be of interest to your readers. A boat similar to the smaller was first designed about 1879 for Mr. T. D. Cone, of Toledo, by Messrs. Hepburn Bros. of that place, for use around the Lake Erie islands, and is still in good shape. The dimensions are over all 13ft. 4in., l.w.l. 12ft., beam 4ft., depth amidships 1ft., at bow 2ft., at stern 20in., lapstreak build, ¾in. planking, ribs ⅝×⅞ spaced 8in. The boat is catrigged, but the board was omitted as taking up too much room, and a 5in. keel substituted. She was so successful that she became the favorite boat around the islands, being duplicated many times by the builders. These boats were so seaworthy that they were run between the islands in water that would have swamped an open rowboat. In the fall of 1884, the writer with a friend made a trip to Grand Lake, off Lake Huron, and on our return we were compelled to make the run down the latter lake, 25 miles, to Alpina to catch the steamer, in a blow from which vessels and barges were seeking shelter. We had on board two men, one of 145lbs. and one of 155lbs., two guns with ammunition, one tent with poles, blankets enough for fall cruising, cooking utensils, provisions, axe, two green deer pelts, two sets of antlers, fishing tackle, etc. The wind being fair and the little boat sitting well in the water with her large cargo, though the immense green rollers towering higher than her mast seemed ready to swamp her, she rode them like a bird, and as she lifted from between them up to the crest and down on the other side, she seemed more like a live thing than an inanimate object. We again disembarked from the steamer at Port Huron and cruised home. In crossing Lake Erie we were caught in an easterly breeze that stirred up old Erie to a threatening degree, and though we were compelled to travel in the trough of the sea in keeping our course, yet we did not ship a drop of water.

The larger boat was designed for another gentlemrn of this city about the year '82. Her dimensions were: Over all, 18ft.; l.w.l., 16ft.; beam, 5ft. 6in.; depth, bow, 2ft. 3in.; mid, 1ft. 4in.; stern, 2ft.; fitted with the ordinary centerboard and two sails of common fore and aft style. She was also lapstreak, planking ½in., ribs ½×⅞, spaced 8in. She, too, became a favorite, being equally seaworthy with the smaller boat and having greater carrying capacity, and she was rapidly duplicated, as the other boat had been. These boats would go out with full sail when the yachts had turned in reefs, and though they did not carry a pound of ballast, still they seemed as much at home in a stiff breeze as in light weather. A favorite diversion of the young sailors at Middle Bass was in half a gale, with three or four on the windward rail, to see how much the spars would stand, they having been dismasted several times under such circumstances.

The only difference between the Lake Erie models and those given in the FOREST AND STREAM seem to be a little more sheer, flatter floor, and slightly hollow waterline in the former.

No. 10, W. C. A.

AN AMATEUR'S EXPERIENCE.

Editor Forest and Stream:

I am a canoeist of whom you have probably never heard because I come from Mud Bank, Way Back county (Passaic River), N. J. My object in writing this letter is to give my experience, which I hope will tend to encourage young amateurs to do likewise.

In the summer of '84, when 16 years old, I was seized with a slight attack of canoe fever. One afternoon about 2 o'clock I started to build a canoe, and the next morning I launched it. Its dimensions were 13ft. long by 18in. beam, built of three 12in. pine boards, ¾in. thick, with the sides straight up. As it floated like a feather on the water—it startled one in its resemblance to a coffin, and such it came near proving to me. As I put my foot in it I noticed it was a little "cranky," so I thought it better to disrobe and prepare for a swim. I have heard of getting in one side of a canoe simultaneously with getting out the other, but in my case I could not find either side.

I took it home and drove some crosspieces from the middle toward the ends, thereby flaring the sides, and tried it again, which by repeating several times, proved a complete success. The canoe weighed about 30lbs. and paddled very easily. It was not constructed on scientific principles, however, and by an accident fell apart quicker than it was put together, which was doing remarkably well.

The next spring I espied a large roll of tin that had been originally on a roof, laid up in the top of the barn, so with my big brother's aid, ideas, etc. (he doing most of the work), as far as I can learn, I built the first tin canoe in the world.

We hammered and pounded the best part of a day trying to get the thing into shape, but it did seem as if for every kink we pounded out two and sometimes three would take its place. We at last launched Oina in the duck pond on our place as a paddling canoe 14ft.×30in.

That year I got a taste of sailing in my brother's canoe, the Idlemere, and consequently the following year I had sails on the Oina, which proved a success. The following spring, the present year, I built her entirely over, adding 6in. in length, two plate centerbords with tin trunks, which were very easily put in, and making a new rig with 85sq.ft. and gave her the more appropriate name of Old Ironsides.

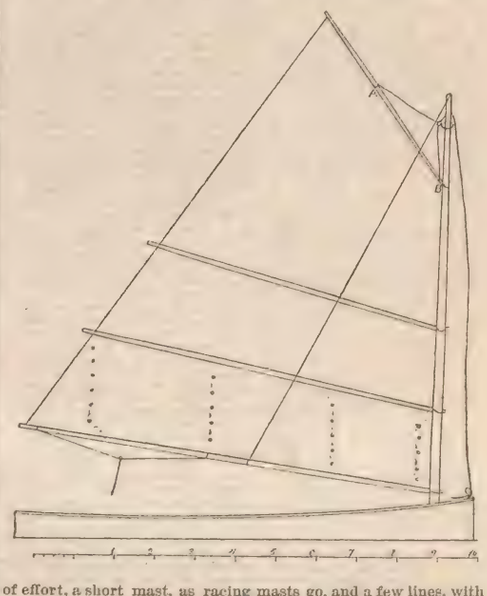
I took her to Dundee Lake on the occasion of the Passaic River canoe meet, and much to my surprise won two races, the amateur built sailing and the standing paddling.

I arrived at camp about 10 P. M. all tired out, after a hard paddle against tide part of the way, so one of the Paterson boys said I might sleep in his canoe, the Wanda. It was a damp night, so I turned my canoe upside down on the bank, which, if possible, gave it a less prepossessing view to a beholder than if in the water. As I lay awake that night because the Radix centerboard handle had made its impression in the small of my back, even through my cork mattress, I heard the following short, but truthful dialogue as the moon shed her rayes on the canoe: "Humph, what a tub!" Then the answer: "Never you mind, she can get there just the same." As a natural consequence of bearing such an historic name I often hear very funny remarks about it while out sailing. I remember a few. "Why I thought she was dead and buried long ago." "Constitution forever." "She's painted to look like iron, isn't she?" "Let her go tinsides, ironsides is dead," etc.

By trusting to luck and good management, I have won a good many races. I do not say this egotistically, but simply to show that perseverance is sure to be rewarded.

I am sorry to say that on our river the racing is mostly left for older heads, who have professional built canoes. The younger canoeists seem to be afraid of going in races, because they say, "What can I do against so and so?" forgetting that to come in anywhere but last is an honor, and not a disgrace. No matter how good a sailor one may be, it is impossible to do as well in your first race as it is in your second, or your second as your third, &c. "Practice makes perfect," therefore I would always go in a sailing race, for practice if nothing else.

I think that everything possible should be done to encourage young canoeists, and not let them think that because some one else is older and has a better canoe, there is no hope for them. I think that Mr. Edgar, of Newburgh, has shown pretty clearly what one can do, and has earned a very enviable reputation; also Mr. Stewart has given the old salts a pretty good lesson on the other side of the Pond.



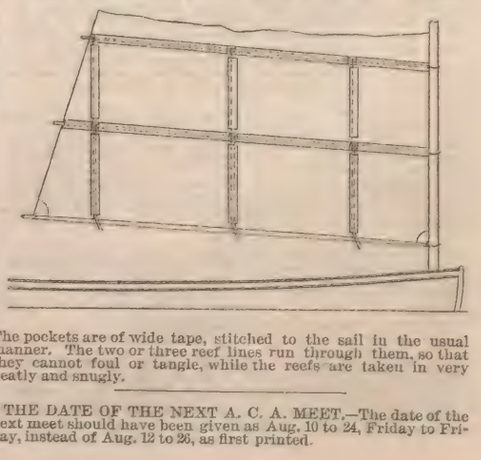
I suppose probably the youngest canoe club is the Amateur, of Passaic, which consists principally of canoeists about ten or twelve years old, who have canoes they built themselves. They turned out in full force at the meet, but did not do any racing, however, they have made a good beginning and are probably doomed to do greater things, possibly in a few years we shall hear of one of them either being President of the United States or Commodore of the A. C. A. OLD IRONSIDES, Ianthe C. C.

[Our correspondent is in error as to the first tin canoe, there were two at Lake George in 1880, built by amateurs, Messrs. Palmer and Frothingham, of Albany.]

THE TORONTO CANOE SAIL.

Editor Forest and Stream:

The sail shown in inclosed sketch has been used in the Toronto C. C. for a season, and has been found to answer very well. The canoes of the Toronto, Galt and Ubique clubs were thus rigged at the Northern Division meet last summer, and were very successful in the races. Mr. Fraser's open canoe Una won the sailing medal from all canoes, open and decked; while the open and decked sailing trophies of the T. C. C. have fallen to canoes similarly rigged. The advantages claimed for the sail are a low center



of effort, a short mast, as racing masts go, and a few lines, with no downhaul. While being a fair to cloudy racing sail, it is at the same time a good all-around cruising sail, that can be reefed and lowered at will. The dimensions are:

Mast, deck to head	10ft.
at deck, 2¾in	at head, 1in.
Boom	10ft. 3in.
Gaff	5ft.
Luff	7ft. 6in.
Leech	12ft. 9in.
Area	69sq.ft.

The sail is hoisted by a single halliard and lowers freely without a downhaul. The line B is made fast to the fore end of gaff, the other end being lashed to a brass ring around the mast, a thimble being also spliced into the end. The halliard A is fast to the gaff, then leads through the thimble to block at mast head, then down and through a block at stem head, serving as a forestay. In practice the sail hoists until the luff is taut, and any extra strain that is put on pulls directly on the leech. If the halliard be of cable-laid line it will not stretch, and the gaff when hoisted will hold in the same plane as the boom. After trying several elaborate methods of attaching the sail to the mast, with but poor success, I was glad to copy Com. Gibson's method, described in the FOREST AND STREAM, which is so simple as to recommend itself at first sight. The reeflines are passed in and out through grommets in the sail, spaced about 4in. apart, which makes a very neat reef. The boom and gaff are of bamboo, the mast of spruce, the battens of flat pine, 1x¼in. with edges beveled. The boom may be made a foot or 18in. shorter by cutting the sail down straight from the end of the first batten, but a 10ft. boom has not proved too much, provided it is well topped up. The total weight of sail, spars and rigging is 11lbs. W. G. MACKENDRICK, Toronto C. C.

A NEW DEVICE FOR REEF LINES.

MR. O. F. COE, of Jersey City, sends the accompaning sketch of a new device of his for reef lines. The rings are replaced by vertical pockets large enough to allow the lines to run freely.

The pockets are of wide tape, stitched to the sail in the usual manner. The two or three reef lines run through them, so that they cannot foul or tangle, while the reefs are taken in very neatly and snugly.

THE DATE OF THE NEXT A. C. A. MEET.—The date of the next meet should have been given as Aug. 10 to 24, Friday to Friday, instead of Aug. 12 to 26, as first printed.

THE A. C. A. AND THE CRUISERS.

Editor Forest and Stream:

The question of a new class of canoes has been raised again by "Evadne," in the last number of the FOREST AND STREAM, and in seconding his proposal I would call attention again to the demands made in the past by the owners of various small boats and cruisers, not canoes, that their craft at least be recognized by the A. C. A. There are now hundreds of these boats, many of them manned by old canoeists, who are still thoroughly in accord with the spirit of canoeing. I am told that in the New York C. C., out of a fleet of thirty-five boats owned by the active members, eight are not canoes, there being one double end open boat, one canoe yawl, one Rushton cruiser, and five sneakboxes. In the Brooklyn C. C. the proportion of such craft is still larger, and there were five or six boxes and boats from this club alone at the last meet. This proportion is perhaps larger than in most other clubs, the sailing grounds being on open water, but there are many clubs on inland waters and rivers which boast from one to five boats outside the A. C. A. rules, and many of these not merely wide canoes, but a different class of boat entirely. It has been urged in the past that the A. C. A. was formed by and for canoe owners, and should be preserved as a purely canoe association, limiting the term to the generally accepted definition of a canoe by the A. C. A. rules. Many old A. C. A. men hold this view, and there is some ground for it, but the present question is not merely one of right, but of expediency. If it were only one of right, the owner of the large boat generally has a very strong argument. He says: "I am a canoeist, I have owned and used a canoe for years, I have supported my club and the A. C. A. I am still as deeply interested in their welfare as before, I still propose to follow the same camping, cruising and perhaps racing which I found so delightful in a small canoe, but I want now to use a larger boat, under different conditions, and I want still to do it under the A. C. A. flag. I do not propose to bring into the Association a sandbag racer or a steam launch, or to interfere with the interests or rights of the small canoe, but I propose still to sail alone a boat that I can handle as efficiently as I could my canoe, and that I can still camp in, cook in, cruise in and race in, and be captain and crew, as of old." There are some men owning these boats who have never been canoeists, but the majority have served their time in the small and ill-fitted canoe of a decade back, they have paddled their way through all the degrees of the craft, and now, when perhaps a visible increase of girth amidships suggests the advisability of a proportionate increase of the beam of their boat, or a touch of rheumatism now and then warns one that a wet jacket is not to be despised as it once was, they ask for a place about the same old camp-fire, albeit their new craft are not to the letter canoes. Of course they may own any boats they please and yet retain a membership in the Association, but is it asking too much that, as long as their boats conform to the spirit of canoeing in being bona fide single-hand craft, they should be officially recognized by the Association? The question of the expediency of the proposed change is a most important one, as, after the long and hard effort to establish the Canoe Association for the benefit and advancement of canoeing in its strict meaning rather than of sport in general, all would be loth to see these interests sacrificed to any other. The point, then, seems to be, "Will canoeing suffer if placed side by side with a larger class of boats?" It it be proved that they will, the matter is finally settled, as no member would vote for a change which would work to the detriment of the old canoe; but this has never been proved; many believe the contrary to be the case. The canoe is capable of a wider range of application than any other style of small craft, and were it a question which of the many varieties—canoes, sneakboxes, duckers, cruisers, small sharpies and similar craft—should be preserved and which wiped out, I should declare at once for the canoe. This, however, is not the existing state of affairs; the various craft live and prosper side by side with all the other boats, and further, I believe it to be fully capable of holding its own, either at racing or cruising, with most boat of much greater size. It is an indisputable fact, however, that for many purposes better boats than a canoe can be easily found; for instance, for a man who sails constantly on New York Bay and who does not need to house his boat in order to protect her, there are larger boats than a canoe that are far safer and more comfortable. They may not be capable of rail transport, and they may not be fitted for a run down the Delaware or the Susquehanna as a change from the monotony of salt water; but for the purpose for which their owners are able to use them they are superior to the canoe. Sneakboxes of all kinds have existed in the New York and Brooklyn clubs, sailing side by side with canoes, and yet they have not decreased the number of canoe owners and sailors by one; while, at the same time, no canoe would give to "Seneca" the same pleasure and advantages for his special work that his Cruiser offers. The experience in all clubs has, I think, been the same, that the admission and recognition of larger boats under suitable restrictions has increased rather than diminished the number of canoes and canoeists. I would not for a moment advise the admission to canoe races by any club of such a boat as a tuckup, or even something less extreme; such races can do no good and will only result disastrously to the smaller and better boat and in favor of the racing machine. Mixed races always to be avoided, as their tendency is to impress undesirable features on each class of boat, and often to produce a mongrel with the worst qualities of each, but the proposed change involves nothing of this kind.

All that is asked is that the A. C. A. shall set a limit of size for such boats as may fly its burgee and be regularly enrolled in its fleet, and whose owners shall be members of the Association. The great aim of the Association is, or should be, to encourage cruising of the kind that was once done almost exclusively in canoes, but now is done in a larger boat as well; and to do this thoroughly it is necessary that some official recognition of these boats should be made, and that their owners, where not members, should be invited to join. The membership is certain to increase, but there is no fear that the number of canoeists will decrease, the experience of the clubs shows to the contrary, and only good results can follow such a change. BIG CANOE.

ELECTRIC MOTORS FOR CANOES AND LAUNCHES.—The great advances of late in all branches of electrical engineering point to the speedy utilization of the electric motor for all cases where engines of moderate power are required, for street cars, small shops, boats and similar purposes. Already the subject of electric launches has received considerable attention, and now the difficulties met with in the earlier experiments have been in a measure removed, and further advances are probable in the near future. Mr. Rushton, who is generally up with the times in all that relates to small craft, has lately been experimenting with electric motors in various small boats of his build, and now has in the fair of the American Institute in New York an electric launch, a square sterned boat 15×36, fitted with an electric motor of ¼ H. P. Mr. Rushton has lately run a Vesper canoe with a ⅛ H. P. motor and four Julien storage cells charged from the local lighting plant at Canton, the weight of load, not including hull, being 463lbs., a large load for the canoe. With a 9in. wheel of poor form the speed over a measured mile was four miles, and a better wheel slowed the motor when connected direct. Geared down 1 to 3, better results were obtained, but the belt was not satisfactory. The results, however, were such as to indicate that with a hull modelled for a screw and not for sailing, a good 9in. wheel geared 1 to 3 or 4, and six Julien cells, a speed of five to six miles is easily possible. Mr. Rushton is now having built a "marine motor" of ½ H. P., and a hull 18×48, smooth built with counter, a regular launch model, and will have it on exhibition in New York shortly. He expects to put in the market a regular line of electric launches from 15×36 to 25×5ft. by spring.

THE LOCATION OF THE A. C. A. MEET.—*Editor Forest and Stream:* Commodore Gardner's letter last week has, I trust, not come too late for the Executive Committee to consider the suggestion he makes. With the Association rapidly establishing its local centers, each with its own meet within the reach of the great mass of members, there is no good reason why the great racing meet should not go West in 1888—and the kindliness of the invitation makes it seem doubly desirable. Besides, we all want a chance at Cook. Lake George is played out.—A. C. A. RACER.

A. C. A. MEMBERSHIP.—Northern Division.—The following gentlemen of Orillia, Canada, are desirous of becoming members of the A. C. A.: S. S. Robertson (was a member in 1883), W. J. Forbes, J. S. McPherson, V. C. Crockett, R. D. Moodie, W. W. Robinson, J. P. Secord, G. T. Tippeny.—S. BRITTON, Purser N. D., A. C. A.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neide. Price $1. Canoe Handling. By O. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Yachting.

"LOYALTY" VISITS BOSTON.

Editor Forest and Stream:

While in Boston last week I took the opportunity to look at the new fisherman, designed by Burgess. She is painted white, has a high bow somewhat like the pilot boat Hesper, No. 5, but a better stern and quarters. Her stern has more overhang than the conventional fisherman and less than the yachts; it is a sort of snubbed Volunteer. She has a plumb stem and no flare to the harpins, a nearly straight bow at the loadline for some distance back from the entrance. Her greatest cross section seems to be a little forward of her main rigging. She has a raking sternpost, and her greatest draft extends from the heel of the sternpost for 60ft. forward and is about 12ft. From there forward it rises into a well-cutaway forefoot. She is rigged like Sachem, with short foremast, long mainmast and long nose pole, with steel wire headstays. Her ballast is all inside and well spread out fore and aft, and on each side of the keelson about 6ft., iron and copper dross. Her standing rigging is of hemp, three parts. I think it is better for service in rough weather than wire. Her masts are of Oregon pine, two fine sticks set well forward. This I think is a mistake in a vessel intended for fishing, especially so in this vessel. Her greatest cross section is too far aft. To my mind her masts should be further aft, her greatest cross section further forward, more flare to the harpins, a clipper stem, and more draft under her forefoot. Most of the fishermen built in late years have sacrificed seaworthiness to speed, and it is not to be wondered at so many are lost. Stand on the wharves in Boston and you will not find one vessel in fifty that is properly sparred. They are sparred too much as yachts for speed with a ponderous main boom, the carrying away of which is no uncommon occurrence.

I also saw the new pilot boat Friend, built by Story at his yard in Chelsea, and designed by Martin (a rising young designer of considerable fame). A vessel somewhat smaller than the fisherman, with handsome sheer, plumb stem and sternpost, some flare to the harpins, about 10ft. draft a little forward of the sternpost, with a gradual rise from there forward to a well rounded forefoot. A light counter with a sort of V stern, somewhat wider than that of the fisherman and about the same overhang. Has her greatest cross section well aft and masts well foreward, the same defect as in the fisherman; and quite a sharp rise to her floor with a clean run and a fine bow. I should have liked her better with a clipper stem, more draft further forward, more flare to harpins and more draft under her forefoot. She has the old style bowsprit and jibboom. I saw Grayling at South Boston being modernized with lead keel and double head rig and English stern. I fail to see what could induce her owner to make these changes. It could not have been from fear of Sachem; in the only contest that has taken place between them Sachem was badly worsted; not only her, but Atlantic and Priscilla were beaten in windward work, a feat unparalleled by any schooner yacht in the world.

About the only defect noticeable in the Grayling is the position of her greatest cross section (I do not think designers pay enough attention to this), and were it not for her light draft it would be a positive detriment to her speed. Her counters were better than her quarters. A lead keel will not help her any, as in a wide, shoal vessel it admits of too rank an angle of heel, and in this vessel is not permissible. The double head rig is an advantage in cruising, but not for speed. I must have my customary rap at these mongrels, though that term hardly applies to the Volunteer, as she is mostly cutter; in fact, a "centerboard cutter." What has the American sloop to do with it? How amusing the expression the sloops Volunteer and Thistle? It does not look now as if there would be a contest for the Cup the coming season, as the deed of gift is so stringent. Why should the coming challenger be required to commit himself any more than his predecessors? What has there been about this year's contest to warrant such action? Was it that the designer chose to keep his movements to himself (which he had a perfect right to do) and that we were given such a fright, or is that the N. Y. Y. C. has got tired of footing the bills for Cup races? I can see no reason for changes in the rules, and that whoever be the coming challengers, they should have the same chance and sail under the same rules as those in the past (no more, no less). LOYALTY.

THE NEW DEED OF GIFT.

Editor Forest and Stream:

After a careful study of the provisions of the new deed of gift, the only rational conclusion that can be arrived at is, that if Mr. Schuyler and the committee of the New York Y. C. had met for the expressed object of devising a method of forever retaining the America's Cup in their possession and of preventing any further contests for it, they couldn't possibly have hit upon a better means of achieving their object. For by the absurd conditions with which they have hedged it round they have clapped a stopper on any future challenges from British yachts; and as far as the promotion of international yacht racing is concerned, the America's Cup may as well have no existence, and that very excellent specimen of silverware may now be consigned to oblivion and relegated to the limbo of departed pots. HENRY E. BAGLY.

EXMOUTH, Eng., Nov. 16.

Editor Forest and Stream:

It seems to me, as it must to every true yachtsman, that the new deed of gift adopted by the New York Y. C. is conceived in the same spirit of selfishness as pervaded the old rules, in which the N. Y. Y. C. persisted in holding to the old course, inside the Narrows, where it depended more on the knowledge of the pilot than on the merits of the yacht. The challenging party must build a new yacht, as the losing yachts are debarred from entering in another race for the Cup. The holders of the Cup have retained every advantage. I would like to hear other yachtsmen give their views on this subject, for if the Cup has to be competed for in that manner I am afraid that it will again go into obscurity until they modify the new rules or go back to the old ones. R. B. M.

DETROIT, Nov. 21.

The following letter has been received by the New York Y. C.:

John H. Bird, Esq., Secretary New York Y. C., 62 Madison avenue:

DEAR SIR—I have to acknowledge receipt of your letter of 3d inst., embodying the resolution of your club at their meeting of the 27th ult., and inclosing a copy of the new deed of gift relating to the America's Cup, for which I have to thank you.

I am instructed to state that Mr. Sweet's notice of a challenge is now, with the concurrence of our committee, formally withdrawn.

With much respect, I remain, yours truly,

WILLIAM YORK, Secretary,

GLASGOW, Scotland, 151 Hope street, Nov. 16, 1887.

No further news of a challenge has been received, and it is unlikely that there will be a race next year as only a couple of weeks remain in which a challenge can be sent. The latest date it would be safe to set for the first race would be Oct. 15, so that the ten months' notice demanded would make it necessary to challenge by Dec. 15 at latest. Confiding challengers can throw themselves upon the chivalry of the New York Y. C. at any time, depending on the spirit of the club to waive a part of the ten months' notice, but it is hardly probably that any one will be innocent and trusting enough to do so. The *Field* of last week deals with the matter in plain language as follows: "To prevent any other club tinkering the conditions in a similar way the club which may win the Cup will have to covenant that the present unsportsmanlike conditions shall not be altered. Copies of the conditions have been sent to British and foreign yacht clubs, with a letter to the secretary very similar to the one issued thirty years ago. The letter, after recommending enthusiasm on the part of the contestants, winds up with the declaration that any races for the Cup will be conducted on strictly fair terms by the New York Yacht Club; but if the club is to be the sole judge of "fair terms" we do not think they will inspire enthusiasm. The New York Y. C. has for the past three years pointed to the races with Genesta, Galatea, and Thistle as evidence that it wished and was always willing to give fair terms to all challengers; but whether this is so or not, it will be very hard, with its latest action placed before foreign yachtsmen in hard and fast legal phrases, to persuade any one that the club has reserved to itself certain rights simply for the purpose of waiving them for each challenger. If it ever was the intention of the club to give fair terms and make an equal match, as it may do by the sixth clause of the deed of gift; why in every other portion of the deed has it reserved the right to act unfairly if it pleases?

A THREE-TONNER FOR AMERICA.—A member of the Corinthian and Larchmont clubs will bring out a 3-ton racer, about 28ft. by 4ft. 6in. for next season.

THE SAILING BOATS OF TORONTO BAY.

WE give this week another example of the class of boats mentioned in our issue of Nov. 17, a boat for rougher and more open water, and used entirely for sailing.

Toronto Bay on Lake Ontario, is the home of a fleet of small boats, and much racing is done there through the season. The Clio, whose sail plan is here given, is the champion for the present year and is a good example of her class. She is of pine, lapsteak, of ⅝in. plank, and is 16ft. long, 3ft. 8in. beam, and decked for 4ft. 6in. forward, 2ft. aft, and with waterways of 4 to 6in., the coaming being 2in. high. The leading dimensions of the rig are:

Mast, deck to head		15ft.
	from stem	3ft.
	diameter, deck	3in., head 1in.
Bowsprit, outboard		5ft. 6in.
Boom		18ft.
Yard		10ft. 6in.
Spinaker boom		15ft.
	hoist	14ft.
Jib, luff		14ft.
	foot	8ft.
	leech	12ft.
	area, square feet	49
Mainsail, foot		12ft. 6in.
	luff	10ft.
	head	10ft.
	leech	19ft. 9in.
	tack to peak	19ft. 6in.
	clew to throat	19ft. 6in.
	area, square feet	190

The sails are of light drill, the roping on leech only extending as high as the reefs. The centerboard is of 3-16in. iron, weighing 85lbs., 4ft. long and 3ft. deep. It is sharpened on the forward edge. The boat is double-ended, so the main sheet works on a high traveler over the tiller. The rules under which the races are sailed are as follows:

1. No shifting ballast. 2. Standing rigging shall be allowed. 3. Time allowance to be two seconds per inch per mile of supposed ten mile course. Boats having decking, if of benefit to boat on the day of the race, to allow open boats two minutes on the course. 4. Start to be made at 3 P. M., and race to be finished by 6:30 or no race. 5. All buoys to be left on the port side on inside course, and on the starboard side on the outside course. 6. In case of a protest the boat protesting must hoist a flag in a conspicuous place on the starboard side, and protest must be entered in writing with the sailing committee within twenty-four hours after the race. Note—The sailing committee have authority to reject any boat they do not consider to be a skiff.

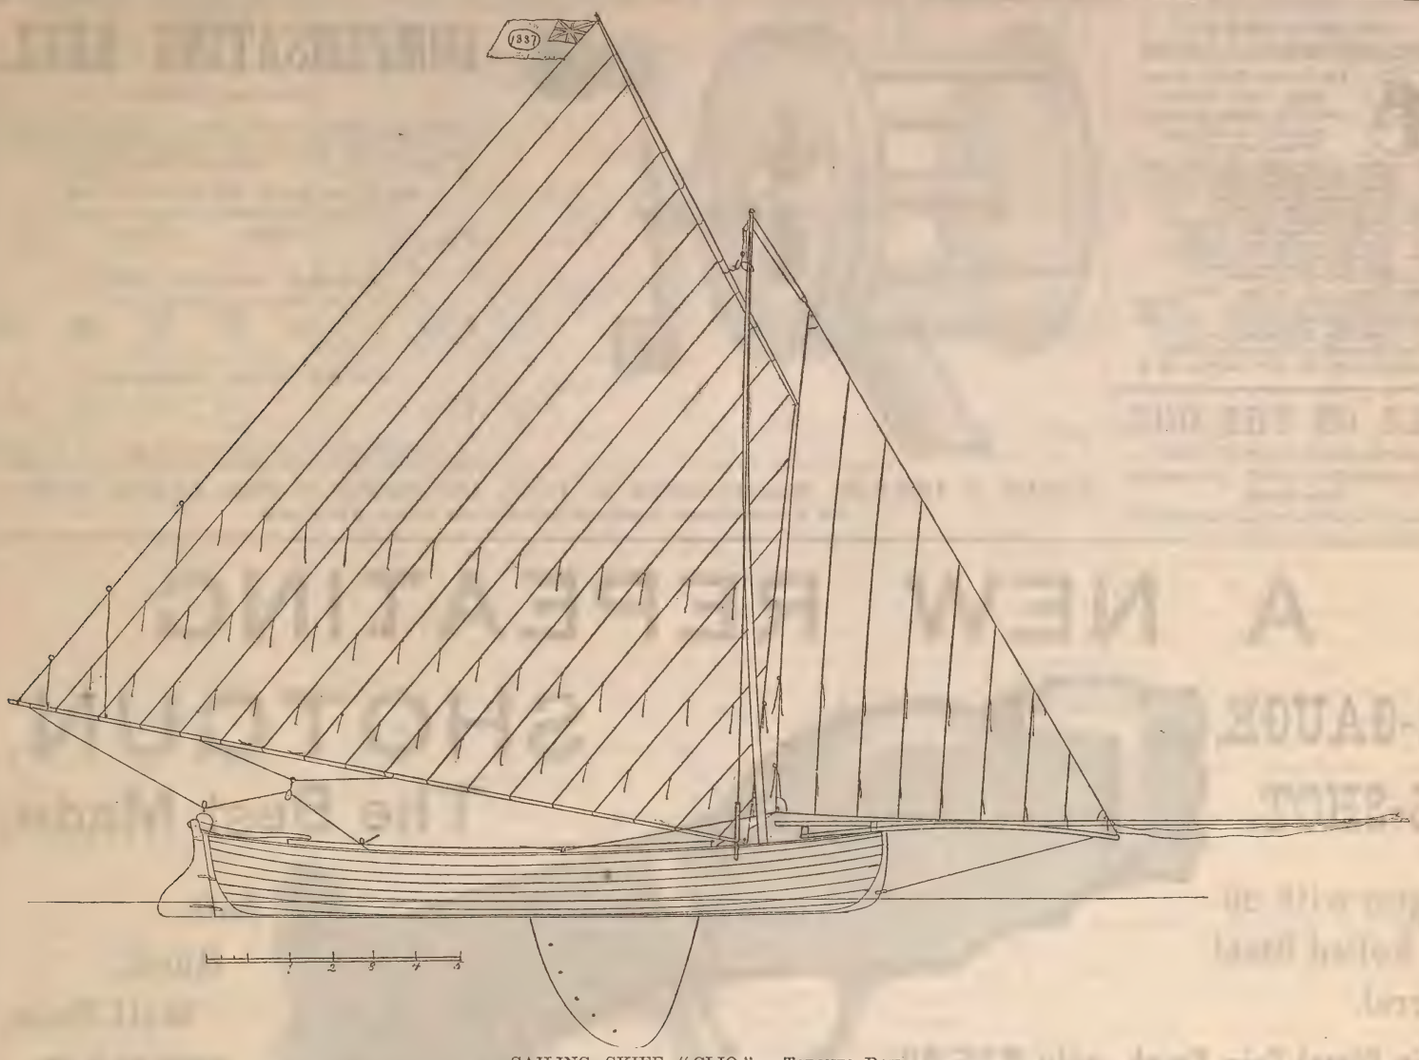
The two courses of the club are each ten miles, one the inner course, two rounds entirely within the bay, the other through the bay and round the island into the open lake.

PACIFIC YACHTING.—Despite every endeavor of the local amateur sailors to maintain the interest in yachting matters, the fleet of pleasure craft becomes smaller every year. The owners of the large yachts belonging to the Pacific and San Francisco clubs, invariably pose as the representatives of the sport on this coast, much to their own satisfaction, no doubt, but when any really active work is done, whenever there is a lively club sail, the Corinthians will be found to be the moving spirits. The large yachts are apparently a damper to the sport, their owners are an incumbrance, and their pretensions are a sham. The cruises of the Pacific and San Francisco clubs have been failures this year. The races, if such they could be called, have amounted to nothing, and the members seem to be utterly discouraged. Since the Aggie has been sold and the Halcyon has gone on a hunting voyage, there is no chance for a race for the big schooners. Only the small fry are left, and the enthusiasts have all centered in the Corinthian Club. Every successful event is due to their enterprise and push, and to them all the credit is due. The other organizations will have to receive new blood and new yachts before they can hope to compete in popular estimation with the younger club. A collection of men who happen to be possessed of a fair share of the world's goods does not constitute a yacht club by any means.—*California Newsletter.*

TRIPLE EXPANSION FOR SMALL YACHTS.—A small steam launch of steel is now being built by Garland & Co., of Boston, to be fitted with triple expansion engine. The hull is 31ft.×4ft. 6in., with 2ft. 8in. draft, the wheel being beneath the rudder. The cylinders are 3¼, 6 and 9½in.×9in.; both they and the bedplate being of steel. The H. P. cylinder has a piston valve, and the I. P. and intermediate are fitted with Frick valves. The piston rod, valve spindles, and crank shaft are of steel, and the standards for the cylinders of steel tubes. The connecting rods are of bronze. In some places ball bearings are used, but the thrust bearing is fitted with an improved device of the builders. The steel boiler will be of the locomotive type, with Howden's system of forced draft and Ferranda's grate bars. Another boat to be built by the same firm will be 57×10ft., with triple expansion engines 7, 11 and 18×12in.

A RACING CLASSIFICATION.—The committee on classification appointed in the spring by the Seawanhaka C. Y. C., has lately been in communication with the New York, Atlantic, Larchmont and Eastern clubs, in regard to a uniform system to be adopted by all for the term of five years. The E. Y. C. has been unable to send representatives, but committees have been appointed by the others, and several conferences have been held, the result being that the system of classification first offered in the FOREST AND STREAM has been recommended. A definition of waterline and a clause agreeing to an adoption for a period of five years, form important additions to the scheme which will soon be submitted to the club for ratification.

BURLINGTON (VT.) Y. C.—Yachting matters are looking up on Lake Champlain. The Burlington Y. C. has just completed handsome new quarters, at a cost of $5,000. The club membership includes 200 names. The fleet is composed chiefly of sharpies and light drafts, not well suited to the puffy winds and choppy waters of the lake. Mr. W. S. Phelps will make a new departure in model and rig for next season with a handsome craft of the cutter type, designed by Mr. C. P. Kunhardt, of New York. This yacht will be 32ft. long on deck, 24ft. waterline, 6ft. beam, and 5ft. draft, with a large portion of outside ballast. The cabins will be spacious with 5ft. 9in. headroom. Lower sail area 625 sq. ft.



"STEAM YACHTS AND LAUNCHES,"—L'auteur passe en revue dans cet ouvrage les different types de machines employés dans les yachts à vapeur d'Amerique, dont le nombre est très considerable et se développe chaque année. Il y a donc la une source d'informations précieuses, car les Américains, avec leur esprit pratique, ont dû certainement rechercher et adopter, pour leurs embarcations à vapeur, les appareils les plus commodes et les plus avantageux. Un grand nombre des planches et de figures, intercalées dans le texte, donnent beaucoup de varieté et ajoutent à la clarté de ce petit volume, imprimé d'ailleurs avec grand luxe, sur très beau papier.—*Le Yacht.*

MORE ABOUT HOLLOW SPARS.—We learn that the spars made by W. K. Pryor & Co., for the Em Ell Eye, mentioned last week, were so much lighter than the old ones that no less than 900lbs. of ballast was dispensed with in her racing this year. The old mast weighed 260lbs., the new one but 90; the old gaff 40lbs. the new one but 15. The wooden shell of the mast was but ⅝in. thick, but owing to the envelope of cloth and paper it was fully strong enough. Messrs. Pryor & Co. now have every facility at the new shop at South Boston, for manufacturing hollow spars of all kinds.

A SAN FRANCISCO CUTTER.—We have received a photograph of a 24ft. cutter, built after lines published in "Small Yachts," by three amateurs of San Francisco, G. W. Harrold, W. P. Harrold and Alpheus Ball, Jr. The yacht is a very creditable production and was built by her Corinthian owners during nighttime and holidays, all the rigging and ironwork being of their own manufacture. The yacht sailed well in the strong winds of San Francisco Bay under yawl rig, but will now be tried as a cutter.

CAVALIER.—A schooner by this name, to be used for pleasure purposes, is now building at Glen Cove, L. I., for Col. George Duryea, late owner of the schooner Republic. The new boat will be a keel vessel 76ft. over all, 65ft. l.w.l., 20ft. beam, and 9ft. 6in. draft. When New York adds such flyers as this and the new Harlequin to her pleasure fleet Boston will have to look to her laurels or she will be left far astern.

NIRVANA.—This schooner, once the sloop Julia, has lately been changed again, her trunk being removed and a keel substituted. She was originally a centerboard boat, but at various times has had a keel, and now goes back to it. She will leave soon for another winter in the West Indies, her owner, Gen. H. W. Perkins, joining her at Nassau by steamer.

SAILING SKIFF "CLIO."—Toronto Bay.

A NEW STEAM YACHT.—Mr. Theodore Durand, builder of the Fedalma, is now at work on a steam yacht at Englis's old yard, Greenpoint. Her dimensions are, length over all, 120ft.; l.w.l., 110ft.; beam, 18ft.; draft, 8ft. The engines will be quadruple compound, four cylinders.

SPERANZA.—Mr. H. W. Collender has sold his schooner to Mr. Geo. H. Ketchum, of Toledo, who will use her on Lake Erie. Mr. Collender will probably build from a Burgess design.

SEAWANHAKA C. Y. C.—An amateur musicale will be given at the club house on Dec. 3, at 8:30 P. M.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

C. A. T.—We hope to have some of the communications.

H. C. N., Leavenworth.—The .22-10-45 is the more accurate.

J. L., Brooklyn.—Write to Mr. Herm. F. Schellhass, of your city

S. S., East Orange.—We know of no American agency for the gun.

H. E. M., Melbourne, Quebec.—The puppy is pretty old but he will probably stand the docking without ill results.

E. Y. C., Dunedin, Fla.—Of 15 races sailed in British waters, Thistle won 13 and Irex and Genesta one each. Write to Keuffel & Esser, 127 Fulton street, N. Y.

J. H., Jersey City.—An old subscriber wants to know the winter fishing resorts on coast of North Carolina, only those where accommodations can be had. Ans. Go to Morehead City or Beaufort.

J. L. B.—The revolvers as loaded with factory ammunition have the recoil you complain of. To remedy the defect load your shells with lighter charges. This is done with advantage by expert gallery shooters.

G. H. B., Watertown, N. Y.—The subject will have attention on return of our kennel editor. The pedigree is Emperor Fred (Blue Prince—Blue Daisy) out of Countess Belle (Young Bob—bitch from Sir Mathew White Ridley's kennel).

J. M.—1. The shrapnel shell is highly recommended by many who have used it for long-distance shots. 2. We do not vouch for the reliability of the firm, but we have never known any charge against them to show any dereliction on their part.

H. E. McC., Philadelphia, Pa.—The cruiser in the Forest and Stream of Jan. 21, 1886, has proved quite successful, but the boat lately illustrated has only been tried in the 18ft. size. The smaller boat would, however, answer well for your purpose.

Cap Lock, Frewsburg, N. Y.—If from the State of New York I go up into Maine in the open season, and kill two or three deer, or a caribou, can I ship any part or all of the same back into New York State by express or otherwise? I am informed by a resident of the State of Maine that no game is allowed to leave the State. Ans. You cannot.

Inquirer, New York.—Can you give me information on the following points in regard to the keeping of quail in captivity during the winter, preparatory to turning them out in the spring; dimensions and plan of coop; temperature and exposure of the same; food and general care. Ans. Keep them in a dry coop, which may have large surface area but should not be high. Be careful to have it dry and thoroughly sheltered from cold rains. The birds will live outdoors if you insure a dry retreat for them. Feed on wheat screenings and buckwheat and give them gravel.

R.W. M.—I send you two rifle bullets found near Alexandria, Va., on ground occupied during the war by the Northern army. I have heard of bullets containing a deadly poison and think that these formerly did. The cavity, I think, contained a poisonous liquid that was forced out around the sides of the plug when the gun was fired, so that coming even slightly in contact with flesh the wound would likely be fatal. The lower part of the cavity has or had a reddish look as though a liquid had dried and left a sediment. Ans. The cavity was not intended for a poison receptacle.

BOOKS RECEIVED.

Lee & Shepard, Boston, send us "A Bunch of Violets," gathered by Irene E. Jerome, whose drawings have made up former Christmas books put forth by this house. The present work consists of a number of flower and landscape drawings, engraved by Geo. T. Andrew, printed on rich paper, folio, and bound in an expanse of gilt, the whole inclosed in a box. From the same publishers comes "The Bridal of Triermain," by Sir Walter Scott, illustrated by Percy Macquaid. The plates are albertypes or heliotypes, fourteen in number, depicting the scenes of the stirring verse. The figures show careful anatomical work, but there is no life in them, they are manikins posed for the occasion. The volume has been specially prepared for a gift book, and is elegantly bound in gilt. Also in gilt covers, nuggets of literature, and rich in illustration and presswork, are the old favorites, each by itself: "Ring Out Wild Bells," "That Glorious Song of Old." "Why Should the Spirit of Mortal be Proud?" "It was the Calm and Silent Night," "The Breaking Waves Dashed High," and "Gray's Elegy." In parchment and gilt is "Faith's Festivals," by Mary Lakeman. It is daintily gotten up and printed with much care and taste (Price $3). "Vocal and Action-Language, Culture and Expression," by E. N. Kirby, of Harvard College, is a comprehensive text book for students of elocution. "Baker's Humorous Speaker" is a series of popular recitations and readings in Yankee and English, Irish, medley and negro dialects. These dialect selections are also issued each separately (price 30 cents); and there is also a "Grand Army Speaker," comprising many of the standard patriotic pieces in prose and verse.

MAN AND OTHER ANIMALS.

Henry Bensen, of Hayden Hill, Lassen County, has in his possession a petrified salmon. The former fleshy part resembles crystalized and variegated quartz, retaining in part the yellowish color of the salmon, and what was formerly the skin of the fish is now a sort of porcelain or white flint. The entire specimen is of the very hardest quartz in texture. It was found on a hillside at about 1,500 ft. altitude from the floor of Big Valley. This would indicate that salmon inhabited the ancient rivers, the beds of which now form strata of the Sierra Nevada Mountains, and in which ancient channels lie the richest deposits of California's gold. These ancient river beds, as is well known, are found at various heights above sea level, and in some places but a few hundred feet below the crest of the range, and perhaps hundreds of feet beneath solid formation of mother earth and running entirely independent of any present surface formation. To determine with certainty that salmon inhabited these ancient rivers would be an interesting fact, as it would fix at a much later date than is now generally supposed the geological period when, by mighty upheaval, these old river courses were changed and obliterated from the face of the earth.—*Sacramento (Cal.) Record-Union.*

For several days past a rather green-looking drummer has been in Greensboro selling fruit trees, and it occurred to some of the young men of the town that it would be fine fun to take him snipe hunting, so they invited him to go with them last Thursday night. The invitation was readily accepted, and a party of seven of the most dignified and prominent young gentlemen of Greensboro at once organized, and all arrangements for a grand hunt were perfected. At 9 o'clock p. m. the party commenced their journey to one of the most dismal swamps in this immediate section, carrying with them their deluded victim. After a tramp of several miles through thick undergrowth, briers, bogs and fens, the party halted. The drummer was stationed on the verge of a marsh that would compare favorably with the "Lake of the Dismal Swamp." The night air was chilly, the wind sighed and moaned through the majestic forest trees, and the waning moon shed a pale, ghastly light over the scene. The deathlike silence was broken only by the dreary croak of the frogs and the occasional cry of a bird that had been disturbed by the hunters. It was just such a time and place as one would suppose that creeping serpents, wild cats and leather-winged bats held high carnival. A bag was given to the stranger, with instructions to hold it open while the rest of the party went up the swamp to scare the snipes down for him. But, alas! alas! the cruel young men wandered off into the woods towards home, leaving the snipe hunter with the bag to hold. After being absent about two hours, waiting to see what the drummer would do, they set out for town, gloating over the trick that they had played him. Some of the party were sorry for the poor young man in the woods, and would fain have returned for him, but this was voted down, so all hurried homeward, anxious to tell the joke. As they came into town they saw a large crowd congregated on the streets, consisting of nearly every young man and boy in the city. The hunters thought at once that the crowd had assembled to discuss and laugh over the manner in which the drummer had been fooled; but they were mistaken, for as they approached and were recognized, a yell was sent up that rent the sky. What did it all mean? Simply this: The trickster had been tricked. The greenhorn knew all about hunting snipe, and as soon as left alone he beat a hasty retreat to town, and told the boys all about the party he had left in the woods. Nothing has created as much amusement in Greensboro since the war, and the seven original snipe hunters have seen no peace since the last eventful hunt. They say they would not go on another if President Cleveland and Daniel Lamont composed part of the party.—*Montgomery (Ala.) Enterprise.*

Otter and Beaver.—Owing to the falling of the lakes of Upper and Lower Klamath the otter is, perhaps, more visibly plentiful now than it has been for several years past, and a curious circumstance connected with the otter is its migration from one lake to another over mountainous country. Lower Klamath Lake, which extends far into California, is yearly losing its water, and it is feared that sooner or later Lower Klamath will run dry. It may be that this apprehension is also shared by the otter, for he is constantly making overland journeys from Lower Klamath Lake to Tule Lake. About two weeks ago a magnificent otter was killed by some cowboys, with their "lasso ropes," fully a mile away from any water. The cowboys declare that the proper way to capture an otter without hurting his skin is for the hunter to put on a huge pair of loose-fitting high boots, stuff the feet and legs with gravel and then wade the stream. The otter is a pugilistic creature, and no sooner does he see a strange pair of legs in the water than he will make a dash for them, seize a leg with his teeth, and will only loosen his hold with death. Though Lost River, in Klamath county, would yield a prolific otter fur harvest to the hunter by this method, I never saw a cowboy daring enough to make the venture, yet I was often present when they were attempting to induce an unwary stranger to make the attempt. The beavers, whose deserted huts and dams can be seen all along Lost River, are yet plentiful, but they do not stand in high repute with the cowboy other than as a target for pistol practice. The prices that the furriers offer for good otter and beaver, however, are ridiculously low, compared to the value that they afterward place upon a dressed hide, large sized otter only fetching $5.50 to $6 and beaver from $6.50 to $8, and the same price is paid for an Alaska beaver as for one from Oregon. The fur of the otter in the winter months is indeed handsome, dark and glossy, with a close, smooth netting, and, when properly dressed and plucked, makes pretty tippets, muffs and cuffs. It is not uncommon to see cowboys in that northern country with chaparejos made from otter and beaver fur. The cowboy, however, is not a good furrier and relegates that task to the Indians. The Indians have however, a good notion of charges, and will not undertake to cure a skin under $2, no matter how small it may be.—*San Francisco Post.*

A NOTABLE ART ENTERPRISE

The Sportsman's Reverie.

A SERIES OF PICTURES FOR SPORTSMEN.

READERS of the FOREST AND STREAM cannot fail to recollect Mr. Thomas F. Watson's poem entitled, "The Sportsman's Reverie," printed in this journal about two years ago. Later on a few stanzas were added to cover other scenes of typical American sport with the gun. The author depicted vividly the varied visions which come before the view of the veteran sportsman as he sits in easy chair before the fire. Of the author and his poem the *Detroit Free Press* said in an appreciative notice: "The author is evidently a man of the most acute sportsmanly enthusiasm, as well as of nice literary taste. His poem is built upon a very simple plan. Before a cheerful fire—like Ike Marvel's hero—sits a veteran of rod and gun; he grows half drowsy over pipe and fire and the poet has caught—with a nice and sensitive appreciation—the reminiscences of a hundred hunts which flit through his brain. One experience after another is described with graceful pen touches; the quail, the woodcock, the snipe, the deer, fall before the crack of the gun; a long day's sport—a glorious day such as no man ever compassed between sun and sun—is described, even the trout, from the clear rapid, paying tribute to the prowess of a dreamland sportsman, until at last, with the fall of the quiet night shadows, the sportsman draws his boat to the shore, his tired retriever crouches at his feet, and, with his ducks, the final trophies of his sport, at his side, he looks back over the darkening water; and then, once again at his fireside, the end of the vision comes naturally and gracefully."

And now these "word pictures" of the poet have been complemented with the actual canvas pictures of the painter. Artist-poet and poet-artist have united to give us the poem in a magnificent setting. Mr. Robert Hopkin, the celebrated artist of Detroit, has painted a series of twelve pictures, each telling in color what the poem tells in words. From these paintings have been made superb heliotype engravings, each having beneath it the particular verse of the poem illustrated. The series is remarkable for strict adherence to nature fidelity in portraying action, and artistic merit.

THE TWELVE PICTURES:

No. 1 shows the hunter seated in an easy attitude in an arm chair, gazing reflectively into the fire on the hearth. Above the fireplace are the head and antlers of a deer. The sportsman's right arm is around the neck of his dog, which is resting on his haunches beside the chair. His left hand holds his pipe. The firelight flickers on the floor and around the legs of the chair.

No. 2 represents dawn breaking over a small lake. The night shades are fleeing. A mist is rising from the eastern end of the lake, of which trees fringe the edge. A plover is circling in the air, and in the foreground is a mallard lazily flying out over the glassy water.

No. 3 represents snipe shooting. In the foreground is the sportsman, his body twisted around to the left in the attitude of making a double on snipe. Standing beside him is the setter, waiting for the word to retrieve. To his right is the border of a wood, the branches bending to the strong wind. In the distance are the sails of craft on the lake.

No. 4—woodcock shooting—shows an opening in the copse around whose border a brook is winding. In the foreground, standing deep in the ferns and rank vegetation, is a setter on a point. Behind the dog is the sportsman in the attitude of shooting at a bird flying directly over him.

No. 5 shows a quail hunter in the foreground, walking along ready for the shot, which will follow the rise of the birds, on which the dog is drawing to a point. A haze is over all, and the sky is that of a day in Indian summer.

No. 6 depicts grouse or partridge shooting in the beech woods. The hunter is walking down a slope. The dog has come to a point ahead of him. The bird has flushed and the hunter is shown aiming. The pointer has stiffened into an attitude of strained attention, as he watches the bird fly away. The upper part of the sportsman's body is in the shadow, the lower part in the strong light of the sun rays.

No. 7 shows an angler reeling in a trout. A brook is tumbling down through the woods and over the rocks into the pool. The sky is cloudy and the sunlight is struggling through.

No. 8—deer shooting—is a forest scene. In the foreground a buck, just shot, is falling on the edge of a lake. Tearing down the slope behind him are two hounds. To the left, behind the roots of an upturned tree, are seen the head and shoulders of the hunter, whose rifle is still bearing on the deer.

No. 9 represents shooting over decoys. A gale is blowing and the water of the channel outside is lashed into whitecaps. In the bay the decoys are tossing in the chopping waves. In the foreground is a point of rushes, in which the skiff of the hunter is partially concealed. The flock of ducks, which has just swung in outside the decoys, is broken by the discharge of the first barrel. One section is wheeling out over the river. The other has broken off to the side and is wheeling out again to meet the first section. Some scattered birds are dashing above the head of the hunter, and he is twisted around in his skiff aiming at a bird flying above and behind him.

No. 10 shows flight duck shooting. The scene is a marsh, on whose broken surface the sun is setting behind the clouds. In the foreground, on a grassy point, are the hunter and his spaniel. The hunter is in a kneeling attitude and in the act of firing his first barrel. The spaniel is plunging into the water to retrieve the bird which has fallen to the first barrel. In the distance are flying ducks.

Nos. 11 and 12 represent the hunter retiring from the marsh and at home, and these two are among the strongest of the set.

The pictures are printed on the best 150lb. plate paper; size of paper 24×30in.; size of print 14½×17½in. The pictures have the tint and tint border, and the artist's remarque and signature, and form artist's proofs, an édition de luxe.

PRICE, $30 FOR THE SET; SINGLE PICTURES, $3.

"SHOOTING."

The only English journal devoted exclusively to sport with gun and rifle is *Shooting*, edited by Sir Ralph P. Gallwey, Bart., author of the Badminton Library, and G. T. Teasdale-Buckell, Esq., who exported all the Llewellin setters to America and won the National Brace Stake and the Field Trial Derby four times each.

The most practical correspondence and the best selection of advertisements appear in *Shooting* weekly.

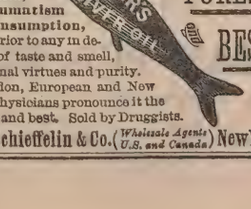
Few Americans ever heard the names of ur best English gunmakers.

Price of *Shooting*, postpaid, $3.25 per annum. Send post office order to the Publisher, 182, Strand, London, England.

THE AUDUBON BADGE

Is a brooch pin in coin silver with the motto and monogram of the Society.

Chaste in design and tasteful in execution, it resents an attractive appearance, and is procted from tarnishing by a beautiful satin finish on its surface.



We are now in a position to execute orders for these badges to any extent. Wherever they have been sent they have met general approval, and every member of the Audubon Society should wear one as a reminder of the pledge and an open declaration of principles.

ANSWERS TO CORRESPONDENTS.

CONGRESS AND THE PARK.

AS was foretold in these columns last week, the Report of the Secretary of the Interior to the Congress now in session, while recognizing the efficiency of Capt. Harris in his charge of the Yellowstone Park, strongly urges that provision be made for a civil superintendent and a force of fifteen assistants. Should Congress deem it best to direct that the present arrangement shall continue, then, the Secretary recommends, "five experienced mountaineers should be employed as Park police. They should be invested with the powers of deputy marshals, including the power of arrest, and should be selected by the military commander, and be under his control. They would be of invaluable service to him in the performance of his duty of preserving the Park from spoliation, and the game from destruction, not only in enforcing obedience to law, but also as scouts, as they would be selected on account of their familiarity with the geography of the Park. The soldiers should not have to prosecute offenses against the rules and regulations, but that duty should be performed by civilians."

Directly in line with this is the bill prepared by Senator Vest, the full text of which is given elsewhere. The provisions of this bill differ in many respects from the one introduced at the last session of Congress and urged by friends of the Park. It omits the important modification of the Park boundaries, and it continues the military control, supplementing this, however, with a force of three civil assistants chosen for their special fitness and experience as scouts and mountaineers.

While these things, which are greatly to be desired, have been omitted, the bill makes full provision to meet the most pressing need of the reservation, which is the punishment of offenders within the borders of the Park. The laws of Wyoming are made to govern the Park with respect to offenses not otherwise provided for; and a commissioner, who shall reside in the Park, is given jurisdiction over its territory, with power to issue warrants for arrest, to summarily hear evidence, and to commit for trial.

By simplifying the bill in this way and removing from it all matters on which there might be room for a difference of opinion, Senator Vest has acted discreetly and Congress can give no excuse for refusing to enact the required law. About the enlargement of the Park boundaries members might conceive it to be their duty to debate, but on this bare proposal to make safe the life and property of the Park visitor and the Park itself, no man who is not a shallow demagogue can refuse the sanction of his vote. Congress should give the new bill immediate and unanimous passage; the sooner it becomes a law the sooner will the outlaws and game butchers who defy the Park guardians be brought to a punishment fitting their crimes.

NOTES AND COMMENTS.

THE case of Bowler vs. Davis, which has just been decided at Hornellsville, N. Y., is instructive. A. E. Bowler, a resident of Boston, was the owner of some beagles, which he sent to Hornellsville for training. The dogs were one day running a fox, on the lands of one Davis, who, when he discovered them, promptly shot and killed one and wounded another. Bowler sued to recover the value of the beagles. When the case came into court Davis contended that the dogs had been shot while in pursuit of his sheep, but witnesses proved that they were chasing a fox. The files of the FOREST AND STREAM were submitted with reports of similar cases where it had been decided by the courts that dogs were to be treated as property; and judgment was given against Davis for the full amount of the value claimed. Much credit is due to Mr. J. Otis Fellows for the active interest taken in the case; to him was mainly due the successful termination of the suit.

At a meeting of the American Society for Psychical Research, held at Boston, last week, Prof. C. S. Minot presented the report of the Committee on Experimental Psychology, which had given attention to the prevalence of superstition in the community. The committee had sent out these questions: "Should you be influenced by any feeling (whether implying belief or not is immaterial) in regard to (1) sitting down thirteen at a table; (2) beginning a voyage on Friday; (3) on seeing the new moon over the left shoulder; (4) choosing, on your own account, between two otherwise equally desirable houses, one of which was reputed to be haunted?" The replies showed, as the report states, "that so far as our statistics go, of the educated portion of our community about one man in ten and two women in ten have a tendency to superstition, and that about four men in ten and six women in ten are inclined to pay some attention to a superstition, actually encountered." The work of the gentlemen interested in this field will not be complete until they have studied the lingering superstitions among fishermen. They would secure some valuable data by sending out a series of questions to get at the prevalence of the belief in the efficacy of spitting on the worm, the phases of the moon, and other notions.

Now that the New Jersey Game and Fish Protective Society has secured a definite decision on the Paterson dog law, why would it not be a wise thing for it to test the New Jersey non-resident shooting law as well? There is a wide diversity of opinion respecting the soundness of that law, and many people think it unconstitutional. If the Society would lay the question before some eminent jurist they would have the thanks of the non-residents who have been mulcted for permission to shoot at game in the State. To settle the fine and so avoid further trouble is the easiest way out, when a non-resident is arrested in New Jersey, and so long as it remains for an individual at his own expense to carry a case of this character up to the higher courts, we may not reasonably expect to look for a decision there.

Some one has complained of the flood of Christmas literature which overwhelms the magazine reader for a month or six weeks before Christmas, and of the resulting satiety which naturally enough forbids enjoyment of Christmas reading when Christmas does come. The FOREST AND STREAM has a store of capital material in readiness for its issue of Dec. 22, which will reach all its nearby readers in time to be read on Christmas day.

Deer hounding in the Adirondacks was one of the points of their forthcoming report discussed by the Fish Commissioners last Monday. Gen. Sherman, who is well posted on the subject, had incorporated in the report unfavorable criticism of the present law which permits hounding. Commissioners Bowman and Roosevelt held to the opinion that a course of mid-summer hounding was salutary and highly beneficial in its physiologic influences, stimulating the deer to breed and toning up their systems. Commissioner Blackford is reported to have held aloof from the discussion on the ground that he had no practical knowledge of the subject, but if he had talked on it all day he could not have said anything quite so fatuous as the breeding argument of the others. It is not of great moment whether or no Gen. Sherman's report shall condemn the hounding law. The men who make and unmake the game statutes of Albany are the last beings in the world to be swayed by intelligent advice on such a topic. They go on the you tickle me and I'll tickle you plan; and dicker and barter their votes without any reference whatever to the merits of the case.

The Secretary of the Interior has done well to call the attention of Congress to the necessity of providing a contingent fund for incidental expenses in the Park. Under the last appropriation the only expenditure allowed was for roads, but for the protection and care of the Government's property no fund was available, nor could anything be used to conserve the objects of interest in which the Park abounds. In addition to the $20,000 for the Superintendent and assistants, should they be appointed in compliance with his recommendation, he names $7,500 for incidental expenses and $5,000 for extinguishment of claims prior to the dedication of the Park, or as much thereof as may be awarded by a duly constituted commission appointed by the Secretary of the Interior; a total of $32,500. The principal claim to be settled is that of "Jack" Barronette, whose toll-bridge over the Yellowstone is an anomaly in the Park that ought to be quickly abolished.

The Government of New South Wales is advertising extensively for a method or process for the extermination of rabbits. The conditions require that "such method or process shall, in the opinion of the said Board, not be injurious and shall not involve the use of any matter, animal, or thing which may be noxious to horses, cattle, sheep, camels, goats, swine or dogs." The prize awaiting the Yankee who invents this rabbit destroyer is £25,000. As hundreds of thousands of pounds have already been expended in fruitless schemes to cope with the vermin, the Government's proffered reward cannot be regarded as extravagant.

In a guide book recently issued by the Megantic Fish and Game Club it is said that on Lake Megantic "wild-fowl can be seen at every trip, affording ample opportunity for testing firearms from the deck of the steamer." They used to do the game to death in that indecent way in the Dark Ages of Florida steamboat travel, but it is somewhat startling to find the practice sanctioned in these times by a club of sportsmen. The man who shoots from a steamboat deck, killing and maiming birds just for the sake of killing, is a type of gunpowder crank that ought to be suppressed.

Beaufort, North Carolina, is to have a novel exhibition in the Carteret County Oyster, Fish and Game Fair, announced for Dec. 14 to 16. The enterprise is under the patronage of the Immigration Bureau. Commissioner John T. Patrick believes in the economic value of fish and game as attractions for residents of other States, and the display of land and water birds prepared for the edification of visiting sportsmen will be extensive, beautiful and enticing.

Another subject upon which there appears to be some doubt in certain quarters is the constitutionality of the laws which forbid the exportation of game killed in the open season. This has been up before the courts, however, and the law has been so fully sustained in repeated instances that it may be accepted as a definitely settled principle.

The Toy Dog Club organized in this city the other day will have its hands full if it sets about the breaking up of the strongholds of dog thieves and go-betweens. It might also profitably devote its energies to reforming those depraved dog-catchers, who are sometimes nothing more nor less than licensed dog-thieves.

The lawless elements are rampant at Otsego Lake, in this State, where trout are jigged on the spawning beds, and both trout and bass unlawfully taken are shipped by the wholesale to market. The fishermen defy constables and game protectors, and all in all it is a disgraceful state of things.

SAM LOVEL'S CAMPS.—II.

JOSEPH HILL was the first to awake next morning, and deliberate in all things he awoke slowly. While yet in the drowsy borders of dreamland he imagined himself at home and began as usual to "tell M'ri" something of yesterday's performances or to-day's plans. Then the odor of the cedar bed beneath him and a glimpse of the canvas roof slanting close above him brought a dim realization of his unaccustomed surroundings, more forcibly impressed upon him when he crept forth through the tent flaps and saw between the tree trunks the channel of Little Otter shining through the film of mist that overspread it like a broad stripe of silver veiled with gauze, and heard a kingfisher clattering along it, and from far out on the lake the crazy laughter of a loon. Then he got out a new pipe, and filling it, began, since Uncle Tyler had taken his well-seasoned cutty, the old smoker's unpleasant task of mellowing the unripe clay of this.

The burning of the match, the fiz of the damp tobacco or a mute demand of the inner Joseph, reminded him of breakfast, and then arose the question of what that repast should be composed? Unlimited fish at all meals had been the alluring promise of this expedition, and now there was not one fish in camp to furnish even lenten fare. A noble ambition seized him to provide fish for breakfast, and with unwonted promptness he took a pole and bait and stole away to the creek where above the Slab Hole the shore and a patch of weedless water met. He looped a great tangle of worms on to the hook and cast it out with a splash that troubled the quiet surface, but did not seem to have frightened the fish beneath it, for presently there came a slow, dogged pull upon the line, which then began to cut the water with a strong, deliberate sweep that needed half of Joe's strength to check. There was a short but lusty struggle, and then the angler thought he must be towing ashore all the bottom of the creek, but in the raft of old and young water weeds that his steadfast pull stranded he discovered the form of a great fish, which he pounced upon and bore well back into the grassy field before he loosened his hold upon it. Then, as it threshed the sward with sullen strokes, he gloated over it. Dull in color, small-eyed and wide-mouthed, rimmed with a long dorsal fin that met the round tail where it was marked with a spot of black, its captor was obliged to admit that it was not handsome, but its size made amends for all lack of beauty. Its weight could not be less than eight pounds, and Joseph, with an angler's generosity, set it at three or four pounds more. What a grand breakfast it would make, all the more to be appreciated for its unexpectedness.

The place offered conveniencies for dressing it, a slab to scale it on and water to wash it, so Joseph at once set about preparing it for breakfast, having no desire to display it with its now useless adornments of head, scales and fins. Possibly he thought there would be no loss of glory in guessing at the undressed weight. So he dressed and cleaned it and bore it to camp.

He wondered a little, perhaps was rather disappointed that none of his companions were astir to be astonished at his luck, but the tent was silent except for the slow regular breathing of the sleepers, which he was sure he heard. It would be an immense triumph to have the fish cooked when they awoke and surprise them with a breakfast already set which they had not dreamed of at all. He collected some dry fallen limbs very silently, and started a fire, listening when it cracked loudest to assure himself that the sleepers were not disturbed. He got a chunk of pork out of the kit and cut some slices off it, which he soon had sizzling in the pan, then took them out when they had yielded fat enough, and filled their place with great cuts of fish. The savor hardly answered his expectations, and when he turned the pieces with a fork, unwashed since the last meal, they crumbled in a way that reminded him of frying frozen hasty pudding, but he was magnanimous enough to blame his culinary skill more than the quality of the fish. How could so great a fish be otherwise than good? Glancing frequently behind him in momentary expectation of seeing some one overlooking the experimental cookery that he was almost sorry for having undertaken, and even wishing that M'ri was in his place for a little while, he urged the fire with frequent jabs of the poker to do its best. "It beats Sam Hill," he whispered to himself as he paused to wipe the sweat from his brow and look at the quiet tent again. "It beats Sam Hill 'at the' don't some on 'em wake up!"

At last the fish was done beyond all doubt, for the fork went through the thickest piece without resistance, which he had heard M'ri say was a sure sign. And now he bethought him that he had forgotten the potatoes! But if there was fish, what did it matter if there were no potatoes, nor bread, nor anything else? But there was bread enough, and so he pulled aside the tent flap and loudly announced breakfast. He was greatly surprised that no response came from it; more so when, with a vague fear that some strange calamity had befallen his companions, he peered into the dim interior and found it empty. Joseph was not a superstitious man, but for a moment he wondered if some judgment of heaven had come upon them for such sacreligious use of Brother Foot's old camp meeting tent, sanctified as it must be by annual service in the religious picnics of the past twenty years. When he backed out on his hands and knees he noticed, as he had not before, that all the fish poles but his own were gone, and knew that his friends were out on the same errand that he had been. His loud shouts, or perhaps the voiceless calls of hunger, soon brought them back, when their admiration of his whole performance gave him all the reward he desired but the final one of gustatory approval, which he hoped would soon be given. The full frying pan was set out, the bread and pickles were brought forth, and while Joseph apologized for the lacking potatoes, as much missed at a Yankee feast as at one of the descendants of Irish kings, they gathered around the festive board, which, be it said, was not a board, but a flat rock. As each took his first mouthful he looked about and saw the others furtively regarding him as they slowly and dubiously tasted their own morsels.

"Wal," said Sam, the first to break the silence, "this is turrible nice fish, but somehaow 'r nother it don't seem tu be ezackly the kind o' fish 'at I like."

"What kan of feesh you'll call dat, Zhozeff?" Antoine demanded with a grimace of disgust. "You'll fan heem dead on de water, or he'll got so hol he'll can' died an' come for you for keel heem, hein?"

"Wal, I guess you'd ha' thought he was live 'nough an' spry 'nough 'f you'd a hed a holt on him! He pulled like a yoke o' tew-ye'r-ol' stags—I d' know but three-ye'r-ol's—an' flew 'raound like a nigger tu a quiltin'. But, I swan! it's a fact he don't taste so good 's I expected f'm his looks, for I called him ri' daown harnsome. Anyways, he was big enough tu 'a' ben turrible harnsome 'f he'd ha' took a notiern tu run tu beauty. But I s'pect the fault 's in the cookin', er aour appetite t' eat, er suthin'—the cookin', I guess, for I never could cook nothin' wuth a snap, anyways. Naow, oncte when M'ri was gone off vis'tin' her folks tew three days, I ondertook tu make a johnny cake, I b'lieve it was—mebby 'twas a short cake; guess the' couldn't nob'dy tol' which 't was meant for—an' when 't was done, I snum the young uns turned up all the' noses at it, an' I'll be dum'd if Liern 'ould tech it? I hove it in t' hawgs, an' they fin'ly wore it aout rhuttin' on it raound. I wish 't I hedn't never ondertook tu cook the dum'd fish! I'd ort tu ben satisfied wi' ketchin' on it. But the' 's 'nough on 't left tu try agin; pitch in, Antwine, 'n' see what you c'n du with it."

"Yes, du, Antwine," Solon urged, "the 's no knowin' but what wi' your cumilary skill you c'ld make it quite palatial."

"Ah b'lieve," said Antwine, closely examining some of the uncooked portion, "Ah'll know what kin' o' feesh dat was be. Where hees head was?"

"Why," Joseph answered, "on the for'a'd end on him, jist the same as any fishes'—an' his tail was on t' other end on him, er most on 't was, 's nigh 's I c'n rec'lect, do' know but some on't was on his back, though, come tu think."

"Ant you'll s'pose Ah'll know dat? Where you'll lef' hees head of it?"

"Oh! Naow I begin tu onderstand ye, Antwine. Over there where I ketched him."

"Bah gosh! Ah guess you'll on'stan' more better as you cook, what Ah'll meant. Where you'll t'row hees tail of it?"

"Oh, I d' know. It's layin' raound here some'er's, I guess," and he joined Antoine in the search for the missing link.

"Dar!" cried Antoine, swooping down upon something and then holding aloft the rounded tail with its authentic black seal, "ant Ah'll guess what Ah'll tol' you? Jes same what Peltiet shoot dat tam he'll tink he do so big! Oh, Zhozeff, don't you shame mek us heat dat? Ant you'll see where de dev' put hees t'umb w'en he'll peek it it an' t'row it 'way cause he so bad he won't have it hese'f?"

Shame-faced with downfall of pride, Joseph said as Pelatiah had on a similar occasion, "Wal, I hed fun a-ketchin' on him—an' some, I d' know but I did, a-cookin' on him—more, anyways, 'n we've hed a eatin' on him. I'm turrible sorry 't he ain't no better eatin', but I du think," he added, loth to relinquish the fish's claims to edible excellence, "'at the fault is mostly in the cookin'?"

"Wal, seh, Zhozeff," cried Antoine, throwing his hands out from his breast and wide apart, as if in final banishment of the subject, "you'll ant wan' be sorry for dat. Bah gosh! Ah tol' you, all de mans and all de hwomans was be de bes' cook in de worl', have it all de bur'r an' peppy an' salt was ever mek, can' mek dat bowfins fit for heat de dev'."

Upon this assurance they attempted no further experiments with the despised fish, but made their breakfast of fried pork and bread.

Then they set about spending the day in accordance with the chief purpose of the expedition. Sam fitted up a trolling rig after the approved pattern of Uncle Tyler's, a bit of his flannel shirt furnishing the red rag unprovided by their kit, and trolled up and down the creek in a bark canoe. Antoine, intent on circumventing the bullpouts that would not bite, made a rude spear of a cedar pole and sharpened nails and prowled along the low shore of the creek in quest of spawning fish, while Solon and Joseph, unwilling to trust themselves in birch and dugout, wandered westward along the safe and stable shore of the bay.

JACOB.

ON my first trip to South Africa, in 1865, I made my headquarters at Port Elizabeth, Algoa Bay, and it was my usual custom to attend the early morning market, for the purpose of picking up odd living specimens, which were frequently brought in by the country wagons. After visiting the market I would stroll along the main street and amuse myself watching the crowd of enormous wool wagons, which were so numerous that the authorities were compelled to detail special policemen to prevent the long ox teams from becoming entangled, and the consequent rows between the relative drivers. One morning while listening to the vituperation, in mixed English, Boer and Kaffir, bandied between two transport riders, whose teams had become thoroughly jumbled, my attention was attracted by the gesticulations and guffaws of two half-bred Tottie women just ahead of me. On looking in the direction in which they were pointing, I was dumbfounded by seeing a large Chacma baboon (*Cynocephalus porcarius*) acting as forelooper to a team of oxen. With the reins, fastened to the horns of the leaders, grasped tightly in one paw, he walked gravely along on three legs, threading his way among the confusion, constantly looking over his shoulder, to catch a wave to the right or left, of the long bamboo whip in the hands of the driver. I was so amazed that the team got almost out of sight before I thought of following, but coming to my senses started after it, and finally saw it draw up in front of a large wool warehouse. At the shout of * "Ah now!" by the driver, the baboon whirled around, facing the team, and coolly sat down, still holding on to the reins, and the grimaces he made when one of the leaders would toss his head, to shake off a biting fly, would have been a fortune to any pantomimic clown.

Here was a new phase in the labor question to me, as it was perfectly evident that man, that inexorable tyrant, was forcing a baboon to labor for his food and furnish his own raiment, and I determined, if possible, to free him from his bondage and transport him to a region where his daily task would be the consumption of unlimited quantities of peanuts and apples. Recognizing the clerk who was receiving the wool as an acquaintance formed at the hotel, I crossed the street and solicited his aid in endeavoring to purchase the baboon. He promised to open negotiations with the driver and said he would report progress at lunch. At noon he informed me that the transport rider was willing to part with the animal and that he had made an engagement for a meeting at the outspan after business hours in the afternoon. On walking out to the outskirts of the town we found the driver awaiting our arrival, but the baboon was missing. He informed us that he generally accompanied the oxen while grazing, but always returned with them and acted as a watchdog at night. That his sole reason for wishing to get rid of him was his incorrigible thieving propensities. Nothing in the way of eatables could be so secured as to prevent him from getting at it, and one of his favorite feats was to break the mess chest loose from its fastenings and tear it open in order to get at the sugar, etc. In a short time the herd came in with the oxen and the baboon in company. Taking his long whip in his hand the driver called out:

"Yawcub, come here and show the gentlemen how you can dance."

He slouched up in front of his master, and on the whip being threateningly shaken over his head, stood up and executed a very fair Kaffir war dance. I soon bargained for him, the owner promising to keep him until a suitable shipping case could be made, and I hurried off to find a carpenter. The next afternoon the cage was carted to the outspan. Jacob called up, a heavy collar and chain which I had provided put on him, and at his master's bidding he sprang up on the cart and walked into the cage, the sliding bars of which were immediately slipped into their places and securely fastened. After I had paid for him and was turning to leave, the driver said, "Remember his name is spelled Jacob, but pronounced, Boer fashion, 'Yawcub,' and I want you to understand that you have a regular devil, who never knew but one master."

It was the old horse-jockey story over again. I had been only shown the good points of my purchase and would have to trust to after-experiences to find out his bad ones. I started after the cart feeling rather uneasy, but Jacob's behavior somewhat reassured me. He sat up in his cage and seemed highly delighted at the pranks and shouts of a swarm or boys, colored in all shades from whitey brown to coal black, who followed the cart. On our arrival at my lodgings, the carman and myself carried Jacob into the back yard, placed him under a shed, and I seated myself at my window on the ground floor and anxiously awaited developments. Jacob came to the front of his cage, peered out, poked his paws out between the bars, sat down and seemed bewildered. He went back, did a headspring, and on arising appeared amazed that he was not outside of the cage. He tried a second time with the same result, when it seemed to suddenly dawn upon him that he had been trapped and was a prisoner. Going to the back of the cage, he screamed and made such a determined rush for the bars that I thought they would fly from their sockets. Springing through the window, I seized a stick and attempted to beat him back from the bars. In an instant it was wrenched from me and I lost the half of a leg of my trousers. By this time the yard began to fill with a gaping, jeering crowd, and I retired to repair damages, being perfectly willing, if Jacob succeeded in escaping, to allow him to take up his old occupation of forelooping for the balance of his days. While in my room he jumped the cage half across the yard and caused the precipitate retreat of his entire audience. Taking a piece of rope, I lassoed the box, drew it back under the shed, and finally succeeded in lashing it to the posts, so as to prevent the thumping, which was disturbing the whole neighborhood, and left Jacob until the next morning. So soon as I made my appearance he commenced yawning and showing his enormous canines, a sure sign of anger with all baboons, so I concluded to attempt his subjection singlehanded, in order to learn him that he had to serve a new master. Purchasing a set of small blocks and tackle with some extra rope, I locked the yard gate and commenced operations. After a deal of trouble I managed to get hold of his chain and instantly hooked it to the tackle, which had been previously fastened to one of the posts of the shed, and a few pulls sufficed to draw him up against the bars of the cage. Then taking two pieces of rope, which had been made into slip nooses, I finally succeeded in catching first one and then the other of his paws, which were drawn out through the bars and securely fastened. By this time it seemed to occur to Jacob that he was so situated that it was impossible to do any harm and the best thing for him to do was to capitulate. All the fight was taken out of him and he allowed me to pass my hands through the grating and pat him on the head, without any movement beyond slightly wincing, as if he expected further energetic treatment. His fastenings were then cast off, and without showing the slightest wish to renew hostilities he withdrew to the back of the cage, where he remained for the rest of the day, in spite of all my attempts to coax him to the front. So soon as he met me the next morning approaching with his breakfast he slowly came to the bars, acting as if he dreaded a repetition of the previous day's lesson, but finding that nothing of the kind was intended, he quietly ate his meal, while I was attending to some other specimens in the yard. On approaching to remove the pan I expected that he would retreat, but he did not, and I offered some fruit from my pocket, which he gingerly took, and from that time forward there was a thorough understanding between Jacob and myself.

A short time after I purchased a female of the same species, whose cage was placed alongside Jacob's, with auger holes bored through the two, so that they could see each other, but I am sorry to say that Jacob did not seem to fancy the company of the opposite sex, and always endeavored to bite her fingers, which she would occasionally thrust through the holes.

Having secured passage on the barque Falcon for New York, on the afternoon before the day appointed for sail-

* Equivalent to "whoa."

ing, Jacob and the rest of my living collection were carted down to the beach, preparatory to embarking. At that time all vessels lay at anchor in the bay, and their cargoes were shipped or landed in large cargo boats, which would run up as far as possible on the beach, and secured to a warp, passing through chocks at the bow and stern, which was fastened to two anchors, one on shore and the other well out in deep water. All the cargo was handled by naked Fingoes, who, watching their opportunity, would wade out between the rollers, which were constantly combing in, and manage to pass the cargo, either to or from the boat, without wetting it. Passengers were transferred in like manner, and I frequently saw ladies trotted through the surf on the shoulders of a naked Kaffir, which must have been a new sensation to them. Having seen Jacob and the rest of his load safely landed on the sand, I turned to the second dray and was busy superintending its discharge, when a series of howls came from the direction of Jacob's cage, which I found lying on its side, having been dropped by the Fingoes, who had incautiously exposed their naked skins to Jacob's paws while in the act of lifting it.

Having righted the cage I borrowed a couple of oars from the captain of the cargo boat, which were lashed to the case, and Jacob was shipped, palanquin fashion, without further mishap. On getting alongside the vessel, Jacob, no doubt remembering the experience he had lately undergone with similar tackle, objected to having the fall properly hooked, for the purpose of hoisting him on deck, consequently I had to arrange it myself and was drawn up with him, as I feared further trouble when the lashings would be cast off. His reception by the crew was not a warm one, as his bad reputation had preceded him; and it required some persuasion, mixed with warnings, to get them to assist me in placing him on the main hatch, where it was intended he should remain during the voyage. Having temporarily secured his cage for the night, I turned in and was awakened early the next morning by the first mate, who requested me "to turn out and look after that infernal baboon, which had nearly stripped one of the crew who had thoughtlessly passed within reaching distance of him." On reaching the deck I found Jacob wrought into a perfect frenzy by the noise and bustle caused in getting the vessel under sail, and in order to keep him quiet I was compelled to seat myself with my back against the bars until we discharged the pilot off Cape Recife, outside the harbor. I then approached the mate with some misgivings, and solicited help in lashing and properly securing Jacob and the rest of my living freight. He mischievously selected the sailor who had been badly used, and another to assist me, and with their help everything was securely fastened, but whenever a lashing had to be passed, or a knot made in Jacob's vicinity, I had to attend to it personally, under their directions, which were given at a safe distance.

As we were to make a winter passage around the Cape of Good Hope, I borrowed a couple of large tarpaulins, which were lashed over all the cages to keep out the wet and cold, leaving the lower portions so they could be raised for cleaning, feeding, etc., and during the whole voyage I had to look after Jacob, as he would not allow one of the ship's apprentices, whom I engaged as assistant keeper, to have anything to do with him. After rounding the Cape and getting up in the latitude of St. Helena, in warm weather, the tarpaulins were so arranged that the portions in front of the cages could be rolled up for air, and I took the precaution to build a rail in front of Jacob's cage, flattering myself that there would be no further trouble with him during the voyage.

Just before leaving Port Elizabeth, the captain had been presented with a large dog, which, from his vicious disposition, had become a terror to his immediate neighborhood, and his care fell to the youngster who assisted me. One day, hearing Jacob screaming with anger, I stepped from the cabin and found the imp feeding the dog just in front of his cage. The pair were ordered forward with the threat that if the like again happened the captain would be informed, which would be likely to be followed by a taste of a rope's end. Jacob did not forget the affront, but it was not until we got up off the Bermudas that he succeeded in having his revenge. One afternoon while lying half asleep in the shade of the bulwarks, I was startled by the yelps of the dog, mixed with the imprecations of the boy. Starting up, I found Jacob vigorously chewing the dog's tail, while the apprentice was shouting and swearing at the top of his voice. On my appearance in front of the cage Jacob instantly ceased hostilities and the dog ran forward howling, followed by his chum, and the upshot was that for several days I had to stand black looks of the captain, and with the limited means at hand endeavor to heal the lacerated tail of a brute who invariably attempted to bite me while undergoing surgical treatment.

After a fine passage the Falcon anchored inside Sandy Hook on the night of the fifty-fourth day from Port Elizabeth. Early the next morning we were towed up off the Battery, and while coming up the Harbor the main hatch was cleared, preparatory to breaking out the cargo. The cages were ranged along each side of the deck and Jacob's was placed just under the foremast shrouds. No sooner was the anchor down than the sailor boarding house runners attempted to come on board, but so soon as one of them would show his head above the rail he was forced to drop into his boat by the dog, who took charge of the forward deck and would not allow any stranger to come over the bulwarks. The captain and myself, standing on the poop, were enjoying the fun and encouraging the dog; when the runners suddenly ceased their attempts and the boats drew off and clustered together just forward of the bows. After a few moments' consultation two boats pulled out from the knot and attempted to board the bark, simultaneously on each side, at the forward chain-plates. As luck would have it one reached the side facing Jacob first and as the runner's head appeared above the rail the dog started for him, thus giving the one on the contrary side the coveted opportunity of boarding while the dog's attention was attracted on the opposite side of the vessel. He instantly took advantage of it by stepping lightly on Jacob's cage and dropping on the deck just in front of it, chuckling at the success of his ruse. In a trice he was seized *en arrière* and forcibly jerked backward against the bars. With a yell of terror he tore himself loose, sprang on to the rail, and took a header into the water. The captain shouted with laughter, while I sprang off the poop, ran forward, looked over the bulwarks and was relieved on seeing the runner being hauled into the boat by his comrades. As soon as he found himself in safety he shook his fist at me, and, speaking to his mates, the boat was pulled off in the direction of the Barge Office. Turning to look after Jacob, I found him gravely inspecting the major portion of the seat of a pair of dungaree trousers, which I left in his possession, taking the precaution to cover the front of his cage with a tarpaulin to prevent any like captures. On returning aft I met the captain, still shaking with laughter, coming down from the poop, who said:

"After the service he has rendered in ridding us of those pests, I freely forgive Jacob for biting my dog's tail. Come on! Breakfast is ready, and let's have our last meal together."

We were just finishing, when the second mate's grinning face appeared, saying:

"The police boat is alongside, sir! and the officer says he has come after the man whom you have in irons."

"Jacob again! by thunder!" exclaimed the captain. "Thompson you go and tell him that you are the doctor, and it's all a mistake, and it is only a drunken sailor whom you are treating."

Trying to put on a professional air, I stepped out, closely followed by the captain, and said to the officer: "I fear you have been misinformed, as it is only a mild case of delirium tremens, and I don't think there will be any further difficulty with my patient."

"A drunken sailor! Well, just give him to me, I am used to handling such fellows. Where is he?"

"Come forward and I will show him to you, and you'll be convinced that I can handle him better than yourself."

Leading the way forward, with the captain in company, I suddenly threw up the tarpaulin just as the officer got in front of the cage. He sprang back with a blasphemous exclamation, just in time to escape a vicious wipe of Jacob's paw, and until he left the vessel, much to the captain's amusement, never ceased calling down maledictions on the runner fraternity generally, and particularly on the one who had so outrageously sold him.

That afternoon the vessel hauled into dock, and all my living specimens passed into the hands of a dealer, and on calling a few days after to inquire after my fellow voyagers, I was grieved to learn that Jacob and his *vrouw* had become the property of some peripatetic showman.

NEW YORK. FRANK J. THOMPSON.

EVENING GROSBEAK AT ELMIRA, N. Y.—Elmira, N. Y., Dec. 6.—While on my way to work, the 25th ult., I heard a bird's note that was new to me. On sneaking up to the songster I saw a bird that was also new to me. I identified my bird as a grosbeak, but of what species I could not make out, so I went and got my gun and brought him down with a charge of dust shot. When I picked him up I confess I did not know what he was. You can imagine that I was surprised when on looking in that most excellent book, Ridgway's "Manual of Northern American Bird," I found my bird was an evening grosbeck (*C. vespertinus*). It was a male in full winter dress. This is the first specimen of this bird that I have known to have been taken in this part of the State. I have heard that one was taken near Buffalo, and came into the possession of Professor Chas. Linden. I mounted the bird in nice shape for my cabinet and placed him in what I thought was a safe place, to dry. The next day when I came home my folks informed me that a Thomas cat belonging to a neighbor had made way with my bird, that I would not have taken a goodly sum for. All that remained was a mangled mass of feathers. It is needless to say that Mr. Thomas Cat sleeps in the valley.—EDWARD SWIFT. [The specimen taken near Buffalo was reported in FOREST AND STREAM, Vol. XXVIII., p. 367].

SEX MARKINGS OF GROUSE.—Elmira, N. Y., Dec. 6.—*Editor Forest and Stream:* In an article by "Jay Beebe" in your last week's issue concerning the identification of the sex of ruffed grouse by the plumage and other markings, I was much interested, as I have made this subject a special study this fall. I agree with "Jay Beebe" that the metallic lustre on the ruff is the surest test that the specimen is a male. The male is generally larger than the hen, but only a very little. The tail is generally a shade longer than that of the hen; of 24 birds examined, 10 adult females and 14 adult males, the average length of the tail was, in the males, 6.74in.; in the hens, 6.25in. The orange-colored spot over the eye on the superciliary membrane is also a sure sign that the bird is a male. I do not agree with Mr. Davison of Lockport, that in the hen grouse the two center feathers of the tail, the black band near the end is broken and irregular, while in the male the pure black is sharply defined. I have found this true in about two-thirds of the birds examined, while the other third were not marked in the way Mr. Davison claims, but the irregular band was on the males. The sex of all the birds I have examined has been carefully ascertained by dissection, after I had observed their plumage and markings.—EDWARD SWIFT.

A WONDERFUL WATCH-DIAL.—A gentleman connected with the Illinois Watch Company has a wonderfully curious watch-dial. Instead of Roman numerals to denote the hours, there are eleven small but very distinct silhouette figures, representing a man out with his dog for a day's sport. At seven o'clock he is seen starting out with his gun and dog; at eight o'clock he makes a shot; at nine o'clock he has a sandhill crane which measures as long as himself; at ten o'clock the man and his dog are scared at the sight of a jackrabbit, which is sitting upon his hind legs, with his big long ears raised above the bushes; at eleven o'clock the hunter takes a drink, and while in this attitude the dog sits in front of his master, with his nose pointing directly at the flask; at twelve o'clock the sportsman is seen sitting on a stump, and is eating a lunch—the dog is eyeing the piece of bread which the hunter has in his hand. At one o'clock he starts out to fish the rest of the day, and so he takes his dog and fishing tackle, and goes to the water; at two o'clock the dog, which is behind his master, has been caught with the hook by an attempt to throw in his line; at three o'clock he and the dog are all straightened out again, and the line is in the water; he has both hands on the pole, and his foot braced on a stump by the water's edge as though he had a tremendous bite; at four o'clock the man has got a big fish on his line, which has pulled him off his feet, and he falls on the dog and doubles him all up, but the man is holding fast to the pole, which is bent almost double; at five o'clock he is all straightened out again; his pole is thrown across his shoulder, and with his fish in the other hand he starts out for home, the dog following behind with his head hanging down, being tired out. The man's name is also painted in the center of the dial in rustic letters. This dial reflects a great deal of credit upon the artist, Mr. Charles Geyer. The figure VI. is superseded by the seconds.—*Jewelry News.*

PATTERN AND PENETRATION.

Editor Forest and Stream:

The following account of the results of a series of experiments relative to the penetration of small shot may perhaps be of interest and possibly of use to some of your readers. My object in making the trials was to find what differences exist between the larger and smaller bores, and for this purpose I used chiefly two barrels, which fit upon the stock of a Maynard rifle. Both are 26in. long and of homogeneous steel, one of .55-caliber or 28 bore, and the other of .65-caliber or 18 bore. The former is chokebored on the usual system, with a constricted muzzle, and the latter on the recess system called tulip-choke in America. For testing the penetration sheets of strawboard were used, placed in groves at intervals of about an inch in a long narrow box, as recommended in a book I possess by J. Long called "American Wildfowl Shooting," and highly spoken of by Greener in his work on the "Gun and Its Development." The strawboards were 7in. long and 6in. wide, but as the ends of the box were protected by strips of zinc, the actual surface exposed to the shot was almost exactly 5½in. square. Only cards penetrated by at least three pellets were counted to prevent errors arising from one pellet here and there being possibly larger than the rest. Every charge of shot was carefully weighed and the charges of powder were measured from the flasks used for muzzleloaders. By always tapping these the same number of times on the hip the weights of successive charges will be found very even. Some of the strawboards were 15 to the pound and others 25. The latter, although obtained from a gunmaker, differ perceptibly in thickness, which will account for the considerable variations in penetration sometimes observed.

With strawboards of equal thickness and texture, I do not think any other method of testing penetration will give such accurate results, because they can be made thin enough to avoid flattening the softest shot, and they are too far apart to stop penetration by being driven one upon another, as constantly occurs when paper pads are used.

The results of the trials were very different from what I expected. With very minute charges the .55-bore had a decided advantage in both pattern and penetration, but when the charges were increased even to such small quantities as ½oz. of shot and 1½drs. of powder, the .65 was equal and sometimes superior in penetration, and nearly always closer in pattern.

For instance, when loaded with 90grs. weight of No. 12 shot (1,272 pellets to the ounce) and 20 to 27grs. of No. 3 powder, the strawboards at 16yds. were so riddled that a humming bird could not have escaped from the .55 barrel, which penetrated on the average 8 or 9 of the 25 to the pound boards. The .65 barrel averaged only 4 or 5 boards, and made a more open pattern, from 40 to 70 shots through the first board.

With larger shot (370 to ounce) at 20yds. the .55 barrel was still superior, though not to so marked an extent. With 90grs. of shot and 20grs. of powder the results were:

	Boards pierced by 3 pellets.	Shots through 1st board.		Boards pierced by 3 pellets.	Shots through 1st board.
.55 barrel..	13	5	.65 barrel..	12	15
	14	34		12	30
	14	24		12	8

With ½oz. No. 12 shot and 1½drs. of No. 3 powder, at 25yds.:

	Boards pierced.	Through 1st board.		Boards pierced.	Through 1st board.
.55 barrel..	7	20	.65 barrel..	7	90
	7	46		8	71

With the same charge but the larger shot (370 to oz.) at 30yds.:

	Boards pierced.	Through 1st board.		Boards pierced.	Through 1st board.
.55 barrel..	12	7	.65 barrel..	15	8
	10	4		16	13
	10	9		15	13

With the same charge but No. 6 grain powder:

.55 barrel, number of boards pierced.....	10	13	11
.65 barrel, number of boards pierced.....	14	14	15

Pattern of .65 rather closer, but not counted on all the boards.

With ½oz. of No. 7 shot (360 to oz.) and 2drs. of No. 3 powder, the largest charge that the brass shells of the .55 barrel will hold, using boards of 15 to the lb., at 30yds.:

	Boards pierced.	Through 1st board.		Boards pierced.	Through 1st board.
.55 barrel..	6	14	.65 barrel..	6	30
	6	11		6	20
	6	11		7	15

With same charge and No. 6 shot (300 to oz.) at 35yds.:

	Boards pierced.	Through 1st board.		Boards pierced.	Through 1st board.
.55 barrel..	6	8	.65 barrel..	7	16
	4	6		6	6
	4	3		7	11

I then tried two shots from the right barrel of a double 16-bore, by T. Turner, of London, 28-inch, recess-choked, Damascus barrels, and brass shells loaded with the above charges in the same manner as those of the Maynard, viz., with two cloth wads on the powder and one on the shot:

	Boards pierced.	Through 1st board.
Double 16-bore.....	7	19
	6	19

On another day, with same strawboards of 15 to lb., ½oz. No. 7 shot and 1½drs. No. 3 powder at 25yds., and the Maynard barrels:

	Boards pierced.	Through 1st board.		Boards pierced.	Through 1st board.
.55 barrel..	7	9	.65 barrel..	7	12
	6	13		7	17
	6	21		8	28

From the above experiments and others not here given I think we may draw the conclusion that for a naturalist in a wild country who wants to economize ammunition in collecting small birds, the .55-barrel would be far superior to the .65, but that the latter would be more

advantageous for a man living in the bush and using even the smallest practicable charges when shooting for food.

I may add that the trials upon birds of the charges of 90grs. of shot and 20grs. of powder were exactly in accordance with those on the strawboards. During the past summer I tried both barrels in clearing off the sparrows which infested my fruit and vegetables, and found that while the .55 barrel almost invariably killed them on the spot, the .65 frequently only wounded them.

While it is generally understood that the larger bores are superior to the smaller with their own proper loads, I certainly did not expect to find an 18-bore better than a 28 with the loads best suited for the latter. Of course a long series of experiments with different guns and with various lengths of barrel would be necessary before thoroughly reliable conclusions could be come to, but it seems to me that a 12-bore might probably beat a 16 with the charges of the latter, and a 10-bore beat a 12 in the same manner. If this prove to be the case there can be no advantage in using small bores for ordinary shooting, now that 12-gauges are made which are perfectly safe at 6lbs. weight. Small bores will indeed be only useful to travelers in wild countries who wish to fire bullets as well as shot, when of course the smaller weight of the ball as compared with that of the gun would give it superior accuracy.

Since making the above experiments I have tried a few more in order to see whether the opinion is correct that the smaller grain powders give more penetration than the larger. I loaded some ordinary cardboard shells with 2½drs. of Curtis & Harvey's powder and 1oz. of No. 7 shot, using strawboards of fifteen to the pound; one thin card wad, one thick felt and another thin card were over the powder; one thin card over the shot. Distance, 40yds.; gun, the 16-bore, 28in., by T. Turner, full choked in both barrels on the recess principle:

	Boards pierced by 3 pellets.	Shots through 1st board.
No. 2 powder, 3 shots with right barrel.	6	7
	5	15
	5	20
No. 2 powder, 2 shots with left barrel ..	5	9
	5	13
No. 4 powder, 3 shots with right barrel.	5	15
	5	10
	5	14

Same gun with brass shells uncrimped, 2 14-gauge cloth wads over powder and 1 over shot. Charges the same:

	Boards pierced by 3 pellets.	Shots through 1st board.
No. 4 powder, 3 shots with right barrel.	4	4
	4	3
	5	12
No. 6 powder, 3 shots with right barrel.	4	13
	5	8
	4	14
No. 6 powder, 2 shots with left barrel ..	5	8
	4	12
No. 6 powder, 2¾drs., shot as before....	5	14
	4	7
	5	11

Maynard .65 barrel, recess-choked, homogeneous steel, 26in., 2½drs. No. 4 powder, 1oz. No. 7 shot, 2 cloth wads over powder, 1 over shot, brass shells:

	Boards pierced by 3 pellets.	Shots through 1st board.
Maynard .65 barrel.....	4	10
	5	6
	6	6

Fourteen-gauge muzzleloader by Purdey, 30in. Damascus barrels, cylinder bore, 2½drs. No. 4 powder, 1 cloth wad, 1oz. No. 7 shot and 1 cloth wad:

	Boards pierced by 3 pellets.	Shots through 1st board.
Right barrel....	5	8
Left barrel.....	5	3

Same charge of No. 2 grain powder:

	Boards pierced by 3 pellets.	Shots through 1st board.
Right barrel	6	9
Left barrel...	6	14
Right barrel.....	6	5
Left barrel.....	6	11

Sixteen-bore Turner gun, with ordinary cardboard shells loaded as before, with 2½drs. powder and 1oz. No. 7 shot; 40yds.; strawboards 25 to lb.:

	Boards pierced by 3 pellets.	Shots through 1st board.
No. 2 powder, right barrel, 3 shots.....	13	16
	11	12
	13	9
No. 4 powder, right barrel, 3 shots... ..	10	11
	10	14
	8	7
No. 6 powder, 2¾drs., shot as before...	12	9
	10	11
	12	15

The above charges of powder may seem small to American sportsmen, but nothing puzzles me more than the enormous charges used in America as compared with the weight of shot, and also the very heavy guns that are so much in favor. Why should any one carry an 8 or 9lb. gun all day, when a 19-gauge of 6½lbs. or a 12-gauge of 7½lbs. can be fired without the least uncomfortable recoil, although the cardboard shells may be loaded with as much powder and shot as can be squeezed into them? When Captain Bogardus's book on shooting was first published I bought it, and found that for a 10-bore, 10lb. gun he recommended only 1oz. of shot and 4½ to 5drs. of powder. That was before chokebores were much used on this side of the Atlantic. I had then been shooting for some years with a double central fire cylinder gun, with 30in. laminated steel barrels, one of W. W. Greener's best, which had cost £45 in his shop. I had made fine bags of ducks, sand grouse, quail and snipe with the ordinary loads, but tried the system advocated by Bogardus both at game and at the target. The result was a complete failure. The heavy charges of powder caused the shot to scatter so much that there was little chance of the game being hit by more than one pellet at 40yds., and when smaller shot was used to remedy this the penetration was too poor except at short ranges. I doubt if any amount of powder would give No. 8 shot the same force at or beyond 40yds., as is given to No. 5 by the usual charges. I think Captain Bogardus himself proved this while in England. In a pigeon shooting match with Mr. Coventry at 30yds. rise, the latter used a 12-bore of 6¾lbs., loaded with 3¾drs. of powder, 1¼oz. of No. 6 shot in one barrel and the same of No. 5 in the other. Bogardus had a 12-bore of 10lbs. weight, loaded with 5drs. of powder, 1¼oz. No. 8 shot in one barrel, and the same of No. 6 in the other. He killed 79 of the blue rocks and lost 10 wounded. Mr. Coventry killed 78 and lost only two wounded. The reporter of the London *Field* who was present attributed the large number lost by Bogardus to his using the No. 8 shot.

During three or four successive years, long before I heard of Captain Bogardus, I had tried various sizes of shot and various proportions of powder to lead, and finally settled down to certain loads simply because they bagged most game, at least with my guns, which were in the muzzleloading days a 30in. Damascus barrel, 16-gauge, 6½lbs. weight, by Sam Smith, of London, and afterward the 12-gauge central fire by Greener mentioned above.

For snipe and quail I tried every size of shot from No. 10 (1,700 to the oz.) to No. 6 (280 to oz.), and found that No. 8 (600 to oz.) was by far the best. On very calm days No. 9 (980 to oz.) did as well but not better, and it was far inferior when there was any wind. For ducks I tried all sizes from No. 6 to No. 2 (112 to oz.), and finally settled down to No. 4 (175 to oz.). No. 5 (218 to oz.) hit as many, but I gave it up because they often escaped when wounded by diving under weeds. The shock given by No. 4 seemed to paralyze them, so that even when not killed at once they were rarely able to get away. For wild blue rock pigeons, hardly I think so large or strong as those bred for English trap shooting, No. 7 (340 to oz.) always seemed to me to make the largest bags.

For large birds nearly always killed at long range, such as wild geese or coolen (a kind of large crane), I found nothing so good as BB (60 to oz.) or A (50 to oz.).

The loads which did best work in the 12-gauge cylinder, and afterward in a 12-gauge, 28in. recess chokebore, were:

No. 8, 1 oz. to 3 drs. powder
No. 7, 1 oz. to 3½drs. powder
No. 6, 1¼oz. to 3½drs. powder
No. 5, 1¼oz. to 3½drs. powder
No. 4, 1¼oz. to 3¼drs. powder
BB or A, 1⅛oz. to 3drs. "

Always using the strongest No. 4 or No. 6 grain powder for the breechloaders, and No. 2 for the muzzleloader.

I may add that when making the above-mentioned experiments I was living in parts of India where game was plentiful, and was out shooting once ar twice a week and sometimes from three to ten days at a time during about six months of each year. My conclusions were, therefore, not formed hastily.

I do not, of course, mean to assert that any rule can be rigidly adhered to, for some guns throw certain sizes and charges of shot better than others. For instance, I have a combined gun and rifle, the right barrel of which is 16-gauge for shot. It is 28in. long, by the same maker as the No. 16 double shotgun, and recess-choked like the latter. Yet, while it makes a good pattern with No. 4 shot and bad with No. 3, the double shotgun makes a very close pattern with No. 3, actually putting far more pellets into a 30in. circle than it does of No. 4.

We regard to the recess system of chokeboring, Mr. Long, in his work on American wildfowl shooting, says that they cannot give as close or regular shooting as the true chokes. It is very likely that he is right, but I am inclined to doubt if he has seen recess chokes by makers who have thoroughly studied that system of boring. At any rate, they have advantages of their own. They carry soft shot as regularly as hard, while the true chokes require hard to do their best shooting, and in some cases seem to throw soft shot worse than cylinder bores. Some of your correspondents have complained that they do not throw buckshot so well as the latter and they are certainly not fit for ball shooting. If the bullet fits closely from the breech upward it must be likely to split open the muzzle, and if it passes readily out of the muzzle it must be loose in the after part of the barrel and liable to dent it. These are certainly defects for all-round work in the bush, and a properly made recess choke is free from them. Mine carry bullets, one size smaller than the bore and tightly tied in linen, accurately enough to kill deer regularly up to 50yds., and they shoot buckshot with great closeness up to 40.

With 1oz. No. 6 shot and 2½drs. of powder, the number of pellets put by the 16-gauge on a 30in. target at 40yds., with the left barrel in five shots were 189, 179, 182, 171, 187; with the right barrel and 2¾drs. of powder, 171, 197, 220, 198, 173.

With the shot barrel of the combination gun I tried three cartridges loaded with 3drs. of powder and nine buckshot of a size which form 3 in a layer at the muzzle. At 40yds. the first shot put the nine pellets into 25in. wide by 19½ deep, the second into 13in. wide by 10½ deep, and the third into 15 wide by 15 deep. J. J. Meyrick.

Dublin, November.

Adirondack Deer Hounding.—At the meeting of the New York Fish Commission last Monday, according to a report by the *Times*, "a gentle breeze was raised in the Commission by Gen. Sherman's somewhat scathing criticism of the manner by which deer are slaughtered during the hounding season. Gen. Sherman wanted the report of the Commission to advise the Legislature that these abuses had all crept in since the laws had been revised, so as to permit a limited hounding season. He said that it was a common occurrence since hunters had been allowed to take dogs into the woods to find the remains of the deer rotting on the ground where they had been left by sportsmen who were unable to use what they had killed. Commissioner Bowman thought Gen. Sherman's language a little too strong. He had heard that there was a strong difference of opinion among sportsmen as to the effects of hounding upon the deer. Those who knew all about the subject contended that hounding benefited the game and stimulated the deer to breed. If gentlemen sportsmen were only permitted to still-hunt for deer, they might as well give up going into the woods at all. If a hounding season were abolished the only persons benefited would be those who lived in the locality of the woods. Chairman Roosevelt agreed with the views expressed by Judge Bowman and believed that no harm was done the deer by the recurrence of a hounding season, but rather that they were stirred up and benefited by it. The other Commissioners maintained a discreet silence during the discussion, and even appeared a little alarmed. Gen. Sherman stuck to his first position and said he merely spoke of what he had seen. Commissioner Blackford, who probably knows more about the ways of the finny tribe than the fish do themselves, said he wasn't an expert on deer and was therefore inclined to pin his faith on the statements of Gen. Sherman. Gen. Sherman said he would be contented with a minority report which should express his views as they were set forth in the report. At this point the situation, which was rapidly becoming strained, was relieved by Judge Bowman offering to accept Gen. Sherman's recommendation, and the meeting arrived at a peaceable termination."

HUNTING IN FLORIDA IN 1874.—IV.

THE next day being Sunday we spent in camp, cooking and wishing we might hear from home, as no letter had yet reached us. About 2 o'clock Mr. J. rode into camp, horseback, with letters for both of us, and said he had a good chance to trade with the Indians if he had silver. So I accommodated him with $15 and engaged him to come for us in nine days. Wandering to the further side of our 50ft. island for meditation the thought suddenly struck me what should either of us do if the other should perchance be killed? Until that moment such a possibility had not occurred to me, and I felt the cold shudder creeping over me till I had worked out a plan that seemed feasible for preserving the remains in such an exigency. My plan was to sew up the body in our stout tent cloth and my India rubber blanket and suspending it in a tree, the survivor find his way back to Mr. J.'s as best he might. In case of severe indisposition or maiming only the problem was less easily solved, as the indisposed or injured could not be left alone. Considering all the risks I began to regret there was not a third member of the party, and I resolved then and there that I would run no such risk again.

On our third return to the cypress-slue, while Fred was bailing out the scow I was attracted toward the margin in an effort to get within gunshot of a spoonbill circling overhead. Was it indirect vision or was it God's overruling providence that caused me as I raised my gun to fire to look down instead of up to see that I was within a gun's length of the snout of a 10ft. alligator half concealed in the water, but whose jaws were slowly opening to close about my limbs with a snap defying any mechanical motion for quickness. To pour the contents of three chambers of buckshot into his side just back of the foreleg was the work of a moment. As he rolled over on his side we left him for dead, but returning to the spot three hours later he was gone.

We often found on the same tree eight or ten different kinds of nests, and observed that no nest was ever left vacant when undisturbed—one mate instantly taking the place of the other—as a regular system of robbery was constantly carried on between the rapacious hawks and crows, and the inoffensive herons. The slue was not very extensive, and after robbing the lower nests from 10 to 20ft. in height, and shooting the owners, we turned our attention to those nests from 30 to 40ft. in height. On the fourth day Fred's shoulder became so lame from climbing he could hardly raise his arm and was forced to exchange work with me. Unfortunately we had no climbing irons, but fastening my claw-hatchet securely to my wrist and carefully testing the strength of every limb with a pull upon it before trusting my weight to it, I succeeded in mounting higher than I had ever done on trees, since the venturesome period of childhood. It was not a pleasant sight in my elevated position to see a dozen heads of alligators with pop-out eyes watching all my movements, and I knew that a treacherous branch might furnish them with a feast. Merely throwing them down a stick would start them out of their lurking places, and bring into display their activity in the water, as well as their flexibility in winding in and out among the half concealed cypress knees. The climber let the eggs and young birds down by a string in a handkerchief to the one remaining in the scow.

One of the Crackers in the settlement happening to be at Fort Capron when the semi-weekly mail arrived by sailboat from Jacksonville, he undertook to bring our second batch of letters to us with a package of my photos for which I gave a sitting the morning before I sailed from the North. But after searching for us two days he gave it up, and delivered the letters to Mr. J. to bring to us when he should send for us. Another Cracker learning that we had taken a scow to the heronry laid in with Mr. J. to direct him to it that he might avail himself of our means of navigating the slue to secure egret plumes, which were in great demand for ladies' bonnets. When half way back to our camp on the fifth day, we found him wading toward us. Joyfully welcoming him he returned to our camp, but as our tent was hardly large enough for Fred and myself he slept outside rolled up in his blankets.

We frequently saw deer feeding in the open waterprairie, but as there was no cover for still-hunting were unable to secure any.

Our constant firing had either killed off or frightened away the more timid spoonbills, so that Fred and the "Cracker" decided to take night and morning rations and spend the sixth night in the heronry to secure egrets as they should come in at night from their feeding grounds or go forth in the morning—thus leaving me alone at the camp for that night. It was a new experience for me, although I had become accustomed to our nightly serenade medly of alligator bellowing, wildcat yawling, frog peeping, turkey gobbling, heron screaming, owl hooting and every other kind of unearthly sound pertaining to a wilderness swamp. The death rattlings of alligator or wildcat victims were frequently repeated on every side of me, and about midnight I was aroused by a second visit from our prowler of the first night. Again he tapped the canvas over my head as though clawing it, and bounded away with a heavy tread as I tapped back. Determined to identify the creature and, if possible, secure it for the museum, I hastily lit my dark lantern, and lifting the side of my tent, saw a little way off in the darkness two eyes gleaming upon me. Fearing to shoot my gun lest I should alarm my companions two miles distant, I fired my pistol at the eyes, with only the effect of elicting a yell and a bound into the thicket. I was soon asleep again, not waking till long after sunrise. Fred and the "Cracker" returned toward night well laden with birds and plumes. Our provisions growing short, we sent the "Cracker" into the settlement on the morning of the ninth day to hasten Mr. J.'s coming for us, as we had only flour enough left for one meal, nine eggs and a little coffee. Our spoonbill carcasses being all gone, we were forced to eke out our larder with white ibises. About noon the next day Tom arrived with the team, and after loading on to the axles the scow, we filled it with our luggage and started for civilization, such as it was. While on the island Fred was stung twice by scorpions, but our bottle of hartshorn brought quick relief. About dark some of Tom's family met him, and they held a long consultation apart from us. As yet Tom had no reason to suppose I knew anything about his being one of the murderers of Mr. Lang, but I saw from their countenances there was trouble brewing for them. When

he returned to the team, I put on as cheerful a countenance as possible and commenced joking him, but he had no heart for my jesting, and I left him to his forebodings, which were not unfounded, as the sequel will show.

Once more encamped on the old spot, we hoped, as we bunked for the night, the thievish hogs had forgotten us during our ten days' absence, but were wofully mistaken, as our frequent alternations of "Shoo, shoo," and snatches only of dozing without real sleep proved. While breakfasting we were planning how to provide the grub necessary for carrying out a plan proposed by our Cracker visitor at the rookery for the next ten days, to the effect that we should proceed to a locality on the coast called Fort Pierce, four miles south of Fort Capron, where he had a boat, and camping there let him supply us with shore birds and fish in such numbers that we would be kept skinning and preserving all the time till we were ready to say "halt." This plan would cut us loose from Mr. J., who, subsequent experience showed, was not quite ready to let the goose that was laying the golden egg for him fly away. So he and our new parasite, whom we will hereafter call Jim, came to our camp with many protestations of interest in our success, and proposed a postponement of the ten days' shore hunting and fishing for a ten days' trip, more or less, to another rookery two days' distant, much larger than the one we had just left, and bordered by a pine hummock affording good camping ground immediately upon its shore. As it was yet early in the season for gathering some kinds of eggs, we snapped at the bait, and, sending off Tom to Fort Capron for replenishing our larder, spent the day in recaulking our scow and packing the material we had left to dry in the loft of Mr. J.'s log stable. Vermin of some kind, despite the arsenic, had ruined my rattlesnake's skin, leaving me only the head and rattles. The mammal and bird skins were on the eve of moulding from the excessive dampness of the nights, and it was becoming a serious question whether we had not better get out of so swampy a region, to save what we had already secured at so great an expense of fatigue and money. To leave a cherished plan unaccomplished had not been the experience of my life of nearly three score years, and I also felt some responsibility in reference to introducing my young companion of less than a score to such an unfortunate future. After another sleepless night through the unwelcome visitations of our porcine tormentors, we repacked the scow placed upon the ox-team axles, and bade a final adieu to the settlement on Ten-Mile Creek, with no regret, though in Mrs. J. we had found a true-hearted woman, who, alone of all we had met in the settlement, had manifested toward us the least spark of unselfishness.

In the outgoing of this trip, Mr. J.'s little son of ten year accompanied us, and enlivened the monotony of the tramp by his cheerful and unsophisticated nature, often plying me with questions concerning Yankeeland that made me grieve to think so bright a lad was being raised under such outlaw influences. An incidental remark, as we were fording a deep stream, whose quicksand bottom threatened to sink oxen and load out of sight, that in my country I had often driven oxen with a load of wood across a pond without sinking an inch, so taxed his credulity that he called upon my companion for confirmation of the statement. He had never seen a flake of snow or a film of ice, and no kind of illustration at our command could make him comprehend the fact. Dressed only in shirt and trousers, he scrambled around in the briers and saw-grass with naked feet as fearless of harm as though rattlesnakes and moccasins were as unknown in that region as ice and snow.

Camping soon after dark, we were too tired to unload our tent, and each chose his own place and lay down upon a bed of palmetto leaves and went to sleep counting the stars. Our little "cheerfulness" went searching in the dark for water, and just on the brink of a pool felt a ground rattlesnake wriggling about his naked ankles. Nimbly jumping aside, he captured the reptile and brought it to me as a trophy. At early dawn we were off, and soon after sunrise crossed fresh tracks of deer, and not much further a panther's tracks. The panther should be hunted only with dogs, that his attention may be diverted from the hunter while he is drawing sufficiently near to make sure of a deadly aim. In the course of the day we arrived at the rookery, and for once realized all the expectations raised by our Cracker guides. It was a cypress-slue of ten or twelve acres, with the exception of the end nearest us, of about two acres of clear water, the whole encircled with a margin of dense undergrowth twenty-five or thirty feet in thickness. So matted was the marginal growth it was impervious to the gaze beyond eight or ten feet, but on climbing a tall tree and looking over the underbrush, the clear water furnished to the sight a unique aquarium that no other State than Florida, I imagine, can furnish. I counted one hundred alligators, from three to twelve feet in length, leisurely swimming in all directions in the two acre space, and ceased counting. Some were dragging long rushes in their mouths across the water, evidently to construct their nests, which are built on the margin above the water. The alligator lays from fifty to seventy eggs in alternate layers of reeds and eggs, and leaves the mass of rubbish to putrefy and heat the eggs for incubation. Instinct brings the mother to the spot at the right time to tear open the pile and release the chicks on their first peeping.

Selecting a place for our camp just far enough from the swampy undergrowth to feel safe from the visits of alligators, in two hours we had a path cut through the undergrowth with a corduroy bottom laid, along which to push our scow for launching in the clear water. Mr. J. and his son returning with the team, this time we had with us Jim, an experienced hunter and boatman. Our experience in the first rookery led us to provide a boat-hook for this, besides poles and paddles. Our boat launched, we essayed to cross the clear water to the cypress-slue, above which we could see hundreds of spoonbills, white ibises and egrets sailing, while others were diving in and out among the branches. So far as Crackers or Indians knew, we were likewise the first ever to launch a boat of any kind upon these waters, as well as at the first rookery. To the alligators, our invasion of their hitherto undisturbed domain must have been something akin to the astonishment of the natives when the vessels of Columbus hove in sight. Fearless, they swam up to the gunwale as to a floating log, and but for the thumping of their snouts with our poles, they would evidently have boarded us and taken possession of our frail batteaux. A few charges of shot so educated them, however, that on the second or third day they were ready to give us a wide berth as we issued among them. As we boated among the cypress-knees, they were still more numerous and audacious, so that we found it almost impossible to secure a single bird we had shot, a half dozen at a time springing from their lurking places the moment the bird touched the water. Another set of nest robbers than ourselves we found in the slue. The fishcrows by the hundreds were perched near the nests of the curlews and herons, just out of reach of their long necks; but the moment a bird left the nest, either to exchange places with its mate or because frightened by the crack of our guns, these crows, so intent upon their plunder as to be themselves unterrified, would dart upon a nest, and, if the egg was small enough, fly away with it in its bill, or if large, pierce it with its bill and fly off with the contents dripping away through the air. Forced thus to change our tactics, either to secure birds or eggs, we made it a rule each morning to first shoot a number of crows as they flew out and in, and by occasionally getting ahead of the alligators secure a portion of them. Placing these upon the slanting bow of the scow, if our shot dropped a spoonbill or other bird, we would throw a dead crow in front of the nearest alligator making for our game, and thus manage, by giving away sometimes two or three crows, to secure one spoonbill.

In crossing the open water on our campward trips, as we came out of the slue, our guide Jim was very expert in often hitching the boat-hook over the shoulder of a huge alligator headed the right way, and making him in his fright drag us across the pond, till, nearing the shore, he would let go by thrusting the hook forward and then, giving our steed a punch in the side, dismiss him. In a few days we had secured all the spoonbills, egrets, ibises and snake-birds and their eggs we could well care for, and began to think of leaving the interesting place. Our provisions, too, were giving out, so I told Jim he must take our breechloading rifle and go out and get us some venison hams. In about fifteen minutes after leaving us, we heard three shots in quick succession, and in a few moments more he came in with the request that we go out and help him bring in the hams. Repairing to the spot, we found a buck and a doe lying as they fell, about ten feet apart, the third, a doe, running off with a broken shoulder, but found the next day a few hundred feet away, dead. Securing our hams, and a portion of the liver of each, we had jerked venison for days to come. In one of the livers I found the parasite fluke, always to be searched for in the hepatic system of herbivorous animals.

Toward night of the sixth day Tom appeared with the oxen and axles. Quickly converting our scow into a wagon-body we prepared to bid farewell to cypress-slues and 'gator swamps, well pleased with our experience in seeing wild beasts and birds in their wild haunts. A day's tramping across pine hummocks and wallowing through intervening sloughs brought us upon an old army trail leading from Fort Capron on the Atlantic coast to Fort Bassinger on the Kissimmee. Following this with the forests on fire on both sides and trees falling across it, which had to be cut away, we camped at midnight for four hours by simply halting and lying down on the grouud and sleeping as best we might. Resuming our march by earliest dawn we soon found our way impeded by thick undergrowth and crosswise logs, which had to be cut away for the team. The last six miles being across a sandy hummock with the thermometer at 100°, for six hours man and beast suffered exceedingly from thirst, and I began to long for the knee-deep morass as more desirable. Toward night we reached Fort Capron, and as I drew near was espied by Judge P., who had so kindly warned me as I was about to leave for Okechobee of the danger of trusting myself to the outlaws who alone inhabited the region besides Indians. The instant he recognized me he rushed out of his house and clasped me around the neck, declaring he was never so relieved in his mind, for he had about concluded his worst fears for our welfare had been realized.

At Judge P.'s I found Doctor P. and Erwin, who had returned but the day before from their circumnavigation of the lake, having had a very sorry and to Erwin at least a very unprofitable time, for he had suffered most of the time from chills and fever, which had now assumed a bilious form, and had so reduced his strength that he was unable to leave his bed. At first sight of him, I saw that, if I would take him home alive, I must change my rôle and turn nurse. Therefore I chose a camping place not far away on the left bank of a stream about one-eighth of a mile above its débouché into Indian River. Just across the stream a stalwart negro by the name of Trott had recently "squatted," having a reputed lawful wife and a concubine, whose incessant quarreling made day discordant and night hideous, except when the lord of the harem interfered and for the time turned one or the other out of the one-room shanty, as his fancy dictated. He was a native of the West Indies, and had served on a man-of-war in varied capacity, till he had acquired more or less skill as a navigator. His strength was fully equal to that of two ordinary men, and if provoked would have been a dangerous man to deal with. As soon as possible I sent by boat for a hermit doctor across the Indian River, whose prescriptions dispelled the bilious tendency and gave me encouragement that in eight or ten days I might commence my homeward journey. Subsequent acquaintance with this physician revealed a singular history. Originally from Vermont, where he had long practiced medicine, he acted as surgeon during the war in a Western regiment, but instead of returning to his home at the close of the war, drifted to this frontier land, and doubtless under an assumed name commenced a hermit's life on the sandy island nearly opposite Fort Capron, whiling away his time in fishing and corraling green turtles for the Savannah market. At this time he had corraled about fifty, weighing from 40 to 125lbs. I bought of him the largest as a specimen for Brown University Museum. Two months later, he embarked on a sloop commanded by the negro, to take his turtles to Savannah, and was wrecked and drowned on the coast near Fernandina.

Brown University, Providence R. I. J. W. P. Jenks.

Narcoosee, Fla., Nov. 26.—Snipe are coming in fast, and we have had some excellent sport. A party of six guns close to Kissimmee bagged 211 the other day, which is the best bag that has been made so far this season around here.—General.

NEW ENGLAND GAME NOTES.

It seems that the late grouse shooting in Maine, New Hampshire and Massachusetts has not proved very satisfactory this fall. The Boston market is almost entirely bare of such birds. Now and then a few are seen, but they have been smuggled through in boxes of chickens or turkeys. But not one partridge can be found in the stalls, where on former seasons twenty, and even a hundred, were to be seen. The new transportation laws of the above-named States (Massachusetts always excepted where the marketman has an interest) and the Provinces have much to do with the absence of these birds in the Boston market. The few that are to be obtained in this State make but very little show in the markets, and to obtain them from the other States and districts noted, the gauntlet of game wardens has to be run, and if the truth is told, the shippers are getting tired of the work. In the first place the receivers of such game here do not pay them enough to make the risk worth while. In this State it is evident that the grouse are sadly on the decrease, but now and then a few are to be found. They are ever on the alert, however, and it takes one of the best shots, accompanied with the best of trained dogs, to cope with them successfully. It is, in fact, patent to all who have observed these birds for a series of years, that they yearly become more and more shy of both the gun and the dog.

But in Maine and northern New Hampshire the case is more hopeful. The early shooting was not very satisfactory, but of late those who have had the courage to invade the woods with anywhere from a few inches to a foot of snow on the ground and the weather very cold for November, have been rewarded with good bags of grouse. A couple of guides, of Andover, Me., who follow gumming in the early winter, have lately come out of the woods, where they have been since the first of October. They report the partridges wonderfully thick in the lake region. They carried no firearms other than a long revolver a piece, not caring to be burdened with shotguns on their gumming trips, but with these revolvers they were able to kill all the partridges they cared for in camp. This number was not a few, as anybody knows who is acquainted with the habits of these men in camp. The breasts of the birds, pulled out of a slit in the skin, are all the bits they have the time or the inclination to prepare. These gummers say they have never seen so many birds in the woods. If they winter well it means good shooting next fall. But somehow the best gunners were not remarkably successful in these very woods early in the fall. One Boston gentleman, Mr. Dwinnell, of the firm of Dwinnell, Hayward & Co., in the coffee trade, made his annual trip to the Umbagog Lake region a little later than usual, and as he is a full believer in the fish and game protective laws, and as it was full October before he got into the woods he took no fish-rod with him, but devoted his entire vacation to shooting. He took some seventy-five partridges in all, fully enough for one sportsman.

By the way, it may be suggested that although the black bear did not "pan out" very abundantly in the fall, yet the early snows that have fallen this year in Maine and New Hampshire have made good bear hunting. Quite a good number have been followed by their tracks in the snow and either driven into their dens or treed and shot. The two gunners mentioned above had an encounter with a good-sized bear, or rather as they were returning one night to camp, laden with gum, bruin started from beneath an old treetop and the boys begun emptying the contents of their long revolvers into him. Evidently the bear did not like the smell of powder, for he quickened his rather lively run into a furious rush up hill, affording the chance for several revolver shots, though at rather long range. The old bear got away, of course, but the gummers say that if there had been sufficient daylight left, and they had not been a mile or two from camp, with only a very dimly spotted trail, they should have followed him up. As it was they drew blood with their revolvers. An old bear and her cub were driven to den and killed in the vicinity of Mount Bigelow by a couple of hunters from Kingfield, one day a week ago. They report seeing another very large one that did not succumb to their bullets. A bear has given the hunters of Anson and New Vineyard the long chase, within a short time. He was tracked across two or three townships, in the snow, and he finally outwinded the hunters among the mountains of Kingfield. The old hunters claim that bears are increasing in Maine.

Another big moose has been added to the number of the slain in Maine the present season. This makes eight this year, so far as heard from, killed in that State in the open season. The last was an enormous fellow, estimated to be nine years old. It measured 9ft. from the base of the horns to the end of the tail. The girth was 9ft. 4in., and the measurement along the back from the end of the nose to the extremities of the hindfeet was 18ft. The horns spread over 4ft. The giant was killed by A. B. Douglass, a well-known hunter and guide. It was killed in the Dead River region, on Spruce River. It was followed up by the hunters for days by tracking in the snow.

The number of deer killed in Maine during the present open season appears to be rather small, and but very few have been smuggled through to the Boston market. Still, a few have arrived. In one case, about the first seen of a couple of haunches of venison, done up in the hides, was on the back of a man coming around from Merchant's Row into North Market street. The man when asked where the deer came from, declared he did not know. But the venison was fresh, and it evidently came from Maine. The commission merchants who receive either venison or partridges here, killed in the States where the non-transportation laws exist, are very reticent concerning the way that the game reaches their stores. If they answer at all, it is not always to speak the truth. Western deer are not yet being received in the abundance of former seasons here, but it is probable that the recent cold weather in the West is to bring them forward.

As for the quantity of deer in Maine, the reports are very favorable, but the success of the hunters on the first snows has not been great. The report comes from the lumber camps that the deer are unusually plenty. This is the case in the upper regions of Somerset and Franklin counties, while in Oxford county the woodsmen say that they have never seen the signs of deer so plenty. A gentleman here from St. John, New Brunswick, who is

interested in a large number of logging crews this winter, says that he has never heard as many reports of the tracks of deer as his "toters" bring in this year. He is of the opinion that the deer are let alone by the lumbermen, but his statements are to be taken, in that direction, as are those of a party that desires to be let alone. If the deer can be killed and nothing said about it, the purpose is served, that of cheap meat for the men. Still, there are honest lumbermen in the woods. Mr. J. A. French, of Andover, Maine, for instance, has a very heavy contract for lumber to be cut this winter in the vicinity of Metallic Pond, near the Narrows, between the Upper and Lower Richardson lakes. He is now in the woods with a large crew of men. Mr. French loves the gun as well as any man living, as witness his success in shooting a bear by moonlight, and in shooting foxes, already told about in FOREST AND STREAM, but he declares that any one of his men found guilty of meddling with the deer in the vicinity of his camps, after the close time begins, will not only be discharged, but that they will be dealt with according to law. Under the law he cannot prevent any one of his men from killing three deer previous to Jan. 1, but he will do all he can to discourage it, and the influence of the boss is very strong over the men.

This Metallic Pond is a noted one for deer, as many a poacher can bear testimony to, who has been paddled silently around the shores of the little lake in the depth of the forest, and even the sound of the falling of a leaf was caught by both guide and sportsmen, and when nothing could be seen but leafy shores in the dim glare of the jacklight. Who says that such sport is not enough to send a thrill through the heart of the lover of the woods? But, alas! the doe, the mother of the helpless fawns, is the more likely to fall to the rifle aimed at the two shining eyes, and hence the sport is robbed of all its charms, to him who has a heart in his breast. The signs of deer are wonderfully numerous in that region this winter, and who is not glad that French is there to prevent crust hunting and the wholesale slaughter that might take place were the conditions otherwise?

SPECIAL.

THE NATIONAL PARK.

WASHINGTON, Dec. 1.—*Editor Forest and Stream:* I send you copy of Senator Vest's new bill for the protection of the Yellowstone National Park. He will introduce it as soon as Congress meets, and will endeavor to secure its early passage.

It differs from the bill which passed the Senate at the last Congress in two main particulars: (1) It retains the boundaries as marked out by the Revised Statutes; (2) it leaves the military organization in the Park as it exists at present, but gives the appointment of three Park police or scouts to the commanding officer. Provision for the civil establishment of superintendent and assistants formerly existing and provided for by the bill of last Congress, is omitted. The officer in command of the military will exercise control under the supervision of the Secretary of the Interior.

Many of the friends of the Park will be disappointed to find that the new bill does not increase the area of the Park to the east and south, as was provided by the bill of last Congress, so as to make the Park fully serve its functions as a great game and forest preserve.

No one recognizes the value of this increase more than the framer of the new bill. At the same time he recognizes the difficulty in obtaining Congressional recognition of the necessity of the change, and at the same time the danger of altering the present boundaries. Moreover, the most pressing need of the Park is some scheme for its protection and for the administration of justice within its boundaries. To these ends all other objects should be subordinate, and it may be well that the bill which is mainly for their attainment should not be incumbered with extraneous provisions. It may well be said that what is most wanted at present is protection for the Park as it at present exists. When that is obtained the scheme for the National Park can then be perfected.

Similiar observations apply to the retention of the military sway. While it can be strongly argued that it does not properly pertain to the army to act as police or perform civil duties, it cannot be denied that so far the experiment with the military has in the main worked well. Of course much depends on the officer in charge, and the good effects which have resulted so far may in a measure be attributable to the energy and high administrative qualities of Captain Harris. Since he has been in command of the troops stationed in the Park, he has displayed an intelligent interest in its affairs, which cannot be too highly commended.

It cannot be denied, however, that military control, although it may be accused of being arbitrary, is never found to be corrupt, and is seldom incompetent.

While I believe that a civil establishment would be best for the Park when it is seated on a sure foundation, I also am of opinion that at the present time a control by the military is best for the protection of the Park. The communities now surrounding it are not altogether law-abiding, and it takes the "strong hand" to prevent them from committing depredations and from slaughtering the game.

It is earnestly to be hoped that the same interest which has been manifested in the protection of the Park in the Senate, will now be displayed in the House, and that at the present Congress the nation will provide for preserving what it has created. W. HALLETT PHILLIPS.

THE NATIONAL PARK.

A BILL

To amend sections twenty-four hundred and seventy-four and twenty-four hundred and seventy-five of the Revised Statutes of the United States, setting apart a certain tract of land lying near the headwaters of the Yellowstone River, as a public park.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled:

That it shall be the duty of the Secretary of the Interior to cause an accurate survey to be made of the boundary lines of the Yellowstone National Park as established by section twenty-four hundred and seventy-four of the Revised Statutes, said survey to be recorded in the offices of the Surveyor-General and Commissioner of the General Land Office of the United States, as provided by law.

SEC. 2. That the said Park shall hereafter be under the sole and exclusive jurisdiction of the United States, except so far as modified by this Act, shall be in full force and effect in said Park. That nothing in this Act shall be construed to forbid the service in the Park of any civil or criminal process of any court having jurisdiction in the county or district of the Territories of Wyoming or Montana in which the Park or any part thereof is located. If any offense shall be committed in said Yellowstone Park, which offense is not prohibited or the punishment thereof is not specially provided for by any law of the United States, or by any regulation of the Secretary of the Interior as provided by this Act, the offender shall be liable to and receive the same punishment as the laws of the Territory of Wyoming in force at the time of the commission of the offense may provide for a like offense in the said Territory; and no subsequent repeal of any such law of the Territory of Wyoming shall affect any prosecution for such offense committed within said Park. All fugitives from justice taking refuge in said Park shall be subjected to the same laws as refugees from justice found in the Territory of Wyoming. That until otherwise provided by the laws of Wyoming Territory, the said Park, for all the purposes of this Act, shall remain and constitute a part of the third judicial district of said Territory; and the district court of the said judicial district, when exercising the jurisdiction of a district or circuit court of the United States, shall have jurisdiction of all felonies committed within said Park.

SEC. 3. That all of the territory embraced within the limits of the Park shall be reserved and withdrawn from settlement, occupancy, or sale under the laws of the United States, and dedicated and set apart as a public park or pleasure-ground for the benefit and enjoyment of the people of the United States; and said territory so set apart shall be under the control of the Secretary of the Interior, and subject to all the provisions of sections numbered twenty-four hundred and seventy-four and twenty-four hundred and seventy-five of the Revised Statutes of the United States, except as herein otherwise provided.

SEC. 4. That the Secretary of the Interior shall make and publish such rules and regulations as he may deem necessary and proper for the management and care of the Park, especially for the preservation from injury or spoliation of all timber, mineral deposits, natural curiosities, or wonderful objects within said Park, and for the protection of the animals and birds in the Park, to prevent their capture or destruction. He shall cause all persons trespassing upon the Park to be removed therefrom, and shall take all measures which he may think necessary to carry out the purposes of this act; and the Secretary of War is hereby directed to make such detail of troops as the Secretary of the Interior, with the approval of the President, may require to preserve order, protect the game and objects of curiosity and interest, and the public property, and enforce the rules and regulations for the government of the Park. It shall also be the duty of the officer in command of such troops to appoint not exceeding three persons from civil life to act as policemen and scouts within the Park, who shall be familiar with the roads and trails, and well acquainted with the different localities therein, and who shall receive not more than nine hundred dollars each annually for their services, to be paid from the treasury upon the certificate of such commanding officer, and the approval of the Secretary of the Interior indorsed thereon.

SEC. 5. That all hunting, or the killing, wounding or capturing, at any time, of any wild animal or bird, except dangerous animals when it is necessary to prevent them from destroying human life or inflicting an injury, is prohibited within the limits of said Park; nor shall any fish be taken out of the waters of the Park by means of seines, nets, traps, or by the use of drugs or any explosive substances or compounds, or in any other way than by hook and line. Any person wilfully violating the provisions of this section shall be deemed guilty of a misdemeanor, and upon conviction shall be fined for each offense not less than twenty nor more than one hundred dollars, or by imprisonment for not more than three months, or by both such fine and imprisonment. Possession within the said Park of the dead bodies, or any part thereof, of any wild animal or bird shall be *prima facie* evidence that the person or persons having the same are guilty of violating this Act. Any person or persons, or stage, express or railroad company, receiving for transportation any of the said animals, birds or fish, shall be deemed guilty of a misdemeanor, and shall forfeit and pay for every such offense the sum of two hundred and fifty dollars, to be recovered by a proceeding in the nature of an information before any Territorial or United States District Court within whose jurisdiction such offense was committed, or, when the offense is committed within the Park, before the Commissioner appointed under Section 7 of this Act; and it shall be the duty of the District Attorney of the United States for such Territory or district to institute and prosecute said proceeding in the name of the United States, the amount collected from the party offending to be paid into the Treasury of the United States.

SEC. 6. That the Secretary of the Interior may lease small portions of ground in the Park, not exceeding ten acres in extent for each tract, for a period not exceeding ten years, to any one person or company at any one place, on which may be erected hotels and out-houses and such other buildings as he may deem necessary for the use of the public; but such lease shall not include any of the geysers or other objects of curiosity or interest in said Park, or exclude the public from the free and convenient approach thereto, or include any ground within one-quarter of a mile of any of the geysers, the Yellowstone Falls, the Grand Cañon of the Yellowstone River, or within 300ft. of the Mammoth Hot Springs; nor shall any hotel or other buildings be erected within the Park until such lease shall be executed by the Secretary of the Interior; and all contracts, leases, agreements or exclusive privileges heretofore made or given in regard to said Park, or any part thereof, inconsistent with this Act, are hereby declared to be invalid; nor shall the Secretary of the Interior, in any lease which he may make and execute, grant any exclusive privileges within said Park except upon the ground leased.

SEC. 7. That the President shall appoint, by and with the advice and consent of the Senate, a commissioner, who shall reside in said Park, and who shall have jurisdiction to hear and act upon all complaints made of any and all violations of the law or of the rules and regulations made by the Secretary of the Interior for the government of the Park and the protection of the game and objects of interest therein. He shall have the power, upon sworn information, to issue process, in the name of the United States, for the arrest of any person charged with the commission of any misdemeanor within the Park, and to try the person so charged, and, if found guilty, to fix the punishment as in the next section provided. The said Commissioner shall also have power to issue process, as hereinbefore provided, for the arrest of any person charged with the commission of any felony within the Park, and to summarily hear the evidence adduced; and if he shall determine that probable cause is shown for holding the person for trial, he shall cause such person to be safely conveyed to a secure place of confinement within the jurisdiction of the district court, having jurisdiction as provided by the first section of this Act, and shall certify the record of his proceedings and a transcript of the testimony in the case to said court, which court shall have jurisdiction of the case and proceed therein as provided by law in chapter eighteen, title thirteen, and chapter three, title seventy, of the Revised Statutes of the United States, the punishment inflicted to be the same as prescribed in said chapters for like felonies. All process issued by the Commissioner shall be directed to any sheriff or constable in the counties of Montana, or Wyoming, nearest to said Park, or to the police therein, who shall have the same power to execute the same as is vested in the marshals and deputy marshals of the district courts of the United States for the execution of writs from said courts; but nothing herein contained shall be construed as preventing the arrest without process of any person taken in the act of violating the law or any regulation for the government of the Park. The forms and proceedings had before said Commissioner shall conform, as near as may be to the forms and proceedings in criminal cases before commissioners appointed by the courts of the United States as now provided by law; and the said Commissioner shall receive the annual salary of two thousand dollars, to be paid quarterly, as in the case of judges of Territorial courts for the respective territories. In all cases of conviction an appeal shall lie from the judgment of said Commissioner to the district court for the third judicial district of the Territory of Wyoming, said appeal to be governed by the laws of said Territory providing for appeals in cases of misdemeanor from justices of the peace to the district courts of said Territory.

SEC. 8. That all costs and expenses arising in cases under this Act and properly chargeable to the United States, shall be certified by the Commissioner to the Department of Justice, and, if approved by the proper officer of that Department, shall be paid by the Marshal of the United States for the Territory of Wyoming, as other such costs in the United States courts. The violation of any regulation made and published by the Secretary of the Interior in regard to the control and management of the Park, and the protection of the animals, birds, fish, and the property therein, is hereby declared to be a misdemeanor, and the party convicted shall be punished for each offense by a fine of not more than one hundred dollars, and be committed until such fine is paid, or by imprisonment for not more than three months, or by both such fine and imprisonment.

SEC. 9. That the Secretary of the Interior shall cause to be erected in the Park a suitable building to be used as a jail, and also an office for the use of the Commissioner, the cost of such buildings not to exceed five thousand dollars, to be paid out of any money in the Treasury not otherwise appropriated, upon the certificate of the Secretary as a voucher therefor.

SEC. 10. That the Secretary of War shall detail an officer from the Corps of Engineers, whose duty it shall be to survey and lay out suitable routes in said Park and select the proper location for bridges therein; and the Secretary of War shall, upon the report of said officer, make annual estimates for the cost of such improvements, and communicate the same to Congress, with such other recommendations in regard to the Park as he may deem proper; and all sums received by the Secretary of the Interior from rents in the Park, or arising from fines or forfeitures for violation of the laws and regulations made for the government of said Park, and protection of animals, birds, fish and public property therein, shall constitute a separate fund, and shall be applied to the improvements hereinbefore mentioned; and the officer or officers collecting such fines and forfeitures shall pay the same to the Secretary of the Interior for the purpose aforesaid.

A GREAT DAY FOR LOONS.—Hornellsville, N. Y.—Thanksgiving was a great day here for loons; nine were killed, some very large ones. I weighed four, one of 13½lbs., two of 12lbs., and one of a little over 11lbs. I think they ate so much they could not fly over 100yds. One that I dissected had one trout in him over 5in. long, three suckers about the same length, three shiners, one chubb and a whole lot of little fry.—J. OTIS FELLOWS.

Camp-Fire Flickerings.

"That reminds me."

226.

A CERTAIN man owned what he was pleased to style a "wolfhound," of whose exploits against wolves he was never tired of boasting. In an ungarded moment he was persuaded to join a party in pursuit of wolves, and to take this mighty dog with him. On reaching the ground the dog went off out of sight, the party following. After going some distance without seeing or hearing the dog, they met a man, whom they asked if he had seen a hound chasing a wolf. "Oh, yes," he replied, "but the wolf was chasin' the dog. The dog was runnin' like a streak, but the wolf was a-gainin' on him." M.

IN THE LAND OF THE MICMACS.—III.

[Continued from Page 323.]

AS it was late when we found camping ground, our tent was pitched in a hasty and, as it proved, insecure way; for about 2 o'clock in the morning the whole thing collapsed and fell upon us. Roused suddenly by any unusual cause, it takes a man some time to get hold of the sheet ropes of his reason and steady himself into a proper understanding of the situation, but this was especially difficult last night, when we heard Davey, who slept nearest the door, shouting at the top of his voice, "Murthur! Murthur!" He was rolling and flouncing around in a violent way, but was succeeding only in getting himself more and more entangled in the folds of canvas. At the first alarm the Indians sprang from their lairs and were soon around the scene of trouble. Thinking some dark tragedy was being enacted beneath the surging canvas, they commenced pulling right and left, Davey all the time screeching 'Murthur! Murthur! I'm kilt, I'm kilt."

Presently one of them caught him by the arm and pulled him out, but as quick as lightning Davey sprang to his feet and grasped the poor fellow by the throat.

"Ye black spalpeen, ye y'ud murthur a Christyun 'ud ye!" shouted he, forcing the Indian backward. Poor Sebatis had just wind enough to mutter in gurgling tones, "Me no you hurtum."

"Nor anybody else, be jabers, whin I'm done wid ye!" yelled Davey, crowding the savage toward the edge of the bank. Just here there was a quiet little cove, the bank was a low terrace, and only 2 or 3ft. higher than the water.

Emerging from the wreck our ears caught the sound of a splash, followed by struggling in the river. We ran to the bank and looked down, but as the sky had become overcast, it was very dark, so we were only able to make out a vague object rolling in the water. James, Walter and Sân were soon beside it, parted the combatants and assisted them to the shore. Davey was completely dazed, like one coming out of a nightmare, but as soon as he felt himself on his feet he cried out:

"Is that ye, Misthur Miller?"

"Yes," replied James.

"Air ye alone, thin?" continued Davey.

"Yes, yes, my good fellow, alive and all right," returned James, shaking with suppressed laughter.

"So yer fixed the rest o' thim. Bad cess to m' luck. Ef I'd no lost m' grip o' 'is throat, the vilyan 'ud be in purgatory, rest 'is sowl, or a wee bit further down be this toime."

Arrived at the freshly stirred camp-fire, the dreamer could scarcely believe his eyes at seeing the whole band around him still in the land of the living, and for some time he cut a sorry figure in the midst of roars of laughter, rising and oft repeated on all sides. The Indians laughed heartily too at poor Sebatis, making him the butt of many jibes and jokes in their own language. Fortunately neither was hurt, but, soaked to the skin, they moped around like two half-drowned rats, until some one suggested a change of clothing. Davey was soon arrayed in his holiday attire. But alas! poor Sebatis!

"Why no you changum?" asked Phil.

"Spose me walkum down to wigwam, gettum dry uns, Sebatis dry putty soon. More better here, no walkum; puttom on pole, dry putty soon. Sebatis lie roun' fire all time" mumbled the poor fellow, shivering like a half-drowned cur. Rather than see Sebatis "lie roun' fire all time" while his garments would be drying, the party came to the rescue. One donated a pair of pants, another a linder, and the third a flannel shirt; and soon Sebatis was attired in the best suit he had been inside of for years. Whether elated at his good luck in this respect, or amused at the farcical nature of the incident to which

he had been a most unwilling party, he was seen to chuckle often to himself, but whenever he felt of his throat, where two or three ridges were rising, his countenance fell, and he looked very sheepish. In less than half an hour from the collapsing of the tent it was pitched again, and the whole company turned in and slept until the sun was two hours high. Then Davey's cheery voice calling, "Breakfis', gintlemin," brought us to our feet, and presently to the table.

"How are you this morning?" said Walter, addressing him.

"Es fresh es a daisy, sur, washed wid doo," replied cookey, setting down a plateful of nicely fried salmon.

"And as clean, too, I see. Your midnight bath did you good," continued Walter.

"But done 'im betthur," replied he, pointing to Sebatis, strutting about in light pants and navy blue shirt. "Troth it wus a muricle I didn't dhrownd 'im, un' anither, un' a bigger one, be jabers, to turn the greasy, durty vilyan o' yisterday into sich a rispictible luckin' man, barrin' the black face."

"Come, Davey, you must hold up on your miracles. They are too expensive. We won't have a rag to wear soon, if you perform two or three more of them," remarked James.

"Luck a-here, sur," quickly rejoined cookey, turning on his way for the coffee pot, "doan't bid the divil good-morn' till ye mate 'im. Ef the nix one gits clear o' m' grip we'll dhrap 'im into yon illigint breeks an' shurt o' Saybacktus's danglin' on the sthick beyant. My word fur it, that 'ull ind the muricles," and, giving us a knowing wink, he turned and went to the fire. A hearty laugh greeted this burst of native wit.

"There, gintlemin," resumed Davey in proud tones, as he poured out the rich, yellow coffee, "there's a dhrap fit fur a quane, though I say it mesilf."

"'Tis very fine, cook," remarked Walter, after taking a sip; "is it made from spring or river water?"

"Spring!" ejaculated cookey with a laugh. "Do ye think I'm Moses, man, to dhraw water from the dhry rocks?"

"O, I forget there's no spring here. Still, Davey, you worked a miracle last night, why not another this morning?"

"Fur the best of raisons, sur: m' rod was left behint in the ould countherie. Cud I ha' gripped m' blackthorn last noight, m' word fur it, the muricle 'ud inded different. So it's as well fur the muricle un' a soight betthur fur Saybacktus m' sthick wus beyant the say."

"So you used the river water?" said Phil.

"Uv coorse, but it's no the bree from the pond beyant, where I transmogrified that black spalpeen las' noight. I fitched it from the pint above."

"Why you surely didn't think the water was dirty down here where you two fell in, did you?" asked James in the midst of a general laugh.

"Fell in!" repeated Davey with a sneer, "troth there was little fallin' in about it; I twusted 'is whuzle till 'e wus riddy to dhrap, un' thin I trowed 'im in; an' es to the wather, I'd es soon take a dhrawin from an ould woman's doye pot."

"But how did you get into the water then?" queried one of the party.

"Why, sur; when I stipped down t' the sthrame t' clane m' hands o' the durt o' 'is throath, begorra, the schamp wus movin'. Cat o' a duzzen loives ur imp o' a hundher, tho' ye be, ses I to mesilf, I'll ind ye; so in I lept on top o' 'im."

"We heard but one splash, Davey," urged Walter.

"An' deef y'u'd be, troth, ef ye hadn't; he made nise enough to wake the dead;" and without waiting for any further discussion of this delicate subject, Davey turned and went toward the fire.

Breakfast over, the work of reloading the canoes was hurried up, as the hour was late and we had hoped to reach North Branch, the goal of our wishes, early in the afternoon. Anxious to have his clothes as dry as possible before transferring them to the canoe, Sebatis had left his "breeks un shurt" hanging on the pole before the fire; so just before we cast off he ran to fetch them. When he re-appeared, however, he was a changed man. A woebegone look had taken charge of his face, his mouth was hanging open, his gait was unsteady and seemingly weak, and his eyes moved listlessly backward and forward between us and something hanging across his arm. A telegram announcing the loss of wigwam, squaw and pappooses, could not have affected him more. What was the matter?

"Hallo, Sebatis! what's up now?" came from the middle of one of the canoes.

"Ugh, pole fallum, fire eatum up clothes, mor'n half gone b'low," replied the poor fellow in regretful tones, turning over the scorched portions.

"Never mind, Sebatis," said Phil, in cheery accents, "you are all right, they're long enough for pappoose yet."

"Un good enough, begorra, the rale thing fur the nix muricle," remarked Davey with a broad smile.

It was hard to keep from smiling at the sad, but comical looking fellow, as he stepped aboard and deposited the object of his sorrow in the bow of the canoe, but as he was the most simple and good-natured of the red men we felt like sparing his already harrassed feelings.

Soon we were among the rapids and swirls and boulders, fighting over again the battle of yesterday. The sun had not yet swung clear of the southern hill wall, but shone brightly upon the rocky terraces of the opposite side, where crag and gulch, gray precipice and gloomy forest were scattered in endless variety and profusion. Projecting far above the dwarf trees which seemed to cling to the face of the rock were seen huge pines, scarred and blackened, pointing heavenward their lifeless trunks, monuments in this wild cemetry of nature, commemorating a giant race long since swept away.

How refreshing the morning air, just moving down the valley, companion of the rushing current and dashing spray, from which it borrows much of its coolness. How fresh and green the mosses and ferns' carpeting and embroidering the rocky shores, covering the harsh stern face of nature with wreaths of mildness and beauty.

Here in the heart of nature's wilds, some of her most charming flowery forms are met. Almost by the edge of the river the bluebell of childhood's memory nods its head to the passing water, as if expressing its thanks for the cooling spray showered upon it at noonday. The tiny violet, emblematic of sweet humility, keeps watch, too, over the thundering stream, reclining its little head as if listening to its giant strains. The honeysuckle and meadow rue, the wild rose and showy lady's slipper, both yellow and rose colored, the oddly formed blossom of the pitcher plant, and the drooping favorites of the immortal Linnæus, the twin flowers, cover the mossy banks or paint the velvety mantle where they grow. These and many others welcome the hardy voyageurs to their rugged homes.

As we ascended the river we found much of the country had been burned by forest fires, and presented a bleak, desolate appearance, the exposed rocky ledges grinning and frowning on us as we threaded the narrow stream at their feet. We found also many rows of pickets still standing in the river, where poachers had lately been pursuing their nefarious work, but these we took the liberty of pulling up and starting on a trip to the distant sea. About 10 o'clock our progress was arrested by a net stretched from shore to shore, completely blocking the river, so that not a salmon could get past. In the pound, a bag-like projection of the middle of the net, generally made with small meshes so as to prevent grilse from passing through, we found a salmon, which we appropriated, cutting the net into several pieces, pulling out the pickets, and sending the whole contrivance adrift. Nearly concealed among shrubbery on the bank was a small bark hut, from which smoke was rising, and a narrow "dugout" canoe lay upon the pebbly shore. We imagined the poachers were observing us from their hiding place, and grinding their teeth in anger at the destruction of their fish traps.

We took dinner about a mile below the mouth of Shore Camp Brook, a little tributary tumbling in from among the hills and gulches on the north side of the river. As the day had been very warm and our men worked unusually hard, we decided to give them a longer rest than we used to at midday; so after the meal was over James announced a three hours' "hang up." One by one the Indians ceased sucking their tumakuns and dropped to sleep beneath the shade of some silver birches, from which they were aroused at the end of the siesta by the cry "All aboard." Soon the swirling, gurgling sounds from the bow, and the measured thud, thud of the poles were heard, and as North Branch, the goal of our wishes, was reported but two miles off, our feelings kept urging us to a keener lookout for a first glimpse of the great pool. In an hour we passed Shore Camp Brook, where swarms of trout lay, as at the mouth of Devil's Brook, in the cool water, and scudded away at our approach. Half an hour more and the dull roar of falling water reached my ears.

"What makum big noise, Louis?" I asked.

"Big fall, North Branch, all same's there now."

The noise grew louder and more distinct. There could be no doubt now about it being the falls, for from a maze of rocky cliffs on our right and a little above issued hollow rumblings, hoarse and deep, as if the great battle of the universe, water versus rock, was raging there in all its fury, away in among those rifts and chasms.

"What green spot is that just ahead, Louis?"

"Little island just mouth North Branch."

Straight ahead and on the shore of the main river a little above the island, we saw a small beach of glistening white sand, fringed with alders and low birches, and thither our canoe was directed. As we passed the mouth of North Branch the thundering of the falls on the latter, not more than thirty rods up, became terrific; the main river, too, seemed to grow wider and smoother, and presently I noticed the Indians pushing with their poles. Looking into the water, what was my surprise to find myself in the middle of a great pool, the width of the main river and ten or more feet deep. The water was eddying in numerous circles and gently bursting wreaths as it swept slowly down from the head of the pool about fifty rods above, where a big rapid spat and sputtered and growled, casting its white foam and angry water into the great basin, where their wild, savage energy was soon transformed into easy curves and graceful movements. What a magnificent pool. And what visions of future sport rose before our excited fancies. How we cheered as we stepped out on the soft, warm, white sand, and how the ancient rock-ribbed hills reverberated, throwing back hollow echoes like the warning growls of fabled giants, whose abodes might be amid the dark caverns of those rugged heights.

Looking the ground over we found ourselves on a flat terrace about two or three acres in area, flanked a few rods back by a semicircular range of low hills extending from the mouth of the North Branch to the main stream a little above the rapids. The face of this was nearly perpendicular, cracked and split in every conceivable manner, so that much of the little flat at its base was covered with a confused heap of sharp stones which had tumbled from above. Here we pitched our tent, almost on the bank, where we could look down into the great basin and enjoy the river breeze so delightful in these inland places during the very hot weather. This terrace looked like an old field of Bannockburn, for it was thickly pitted with holes of all sizes from 2 to 5ft. in diameter and as many deep. Some had recently been dug, others were old, partly filled with rubbish, and overgrown with grass and scrub. Sâk informed us that these were smoke holes for curing salmon; the fish were hung over the opening, a fire built at the bottom, and the whole inclosed with spruce or birch bark. He also pointed out some old prostrate pine logs which had been hollowed out into great troughs where the salmon were packed and "struck" with salt before being transferred to the smoke holes. Judging from the evidences around us this pool and terrace have been for ages a veritable Black Hole for the poor fish. Sâk's explanation, however, was by no means satisfactory to Davey, who seemed to entertain a lurking suspicion that he had hit upon a graveyard of victims of Indian cruelty. Into the large holes especially he was often observed looking, as if thinking in what stage of decay the grinning skull of some poor Yorick might be; and Walter did say that in one of these pensive moods he was heard to mutter "Rest 'is sowl."

About half-past six, tea being over, we repaired to the pool. Lots were cast for positions, James winning first toss, and choosing the head of the basin, just below the rapids. Phil was next in luck, and selected the middle, leaving to Walter the lower end, into which North Branch flowed, but where he was obliged to cast from a canoe. In a few minutes James raised and struck the first fish in the eddy of a big rock under the opposite bank, and was having some fine sport playing it, when a shout from Walter, followed by another from the Indians, told that he too had struck game. Presently James's fish sulked a few rods below the head of the pool, and persistently refused to leave its moorings, although artfully coaxed to do so, until big Peter in a canoe tried the value of a punting pole on it, with the result of sending it scudding toward the rapids again.

All this time Walter was having excellent sport with his. He had played it toward the island, and was soon out on terra firma, but the fish suddenly "took" the current, obliging him to take again to the canoe and follow it. After an exciting chase and struggle it was netted on the bar at the lower end of the island.

James had now his fish pretty well in hand, and Louis netted it very cleverly as it was swimming past the edge of a rock. Walter's fish marked 10 and James's 9½lbs. on the spring balance.

After mutual congratulations and a gentle "all round" of booktawichk, not forgetting a hearty toast from cookey expressing the hope that we might find the fish as "plinty es rocks un es hungry es Injuns," our flies were sporting over the surface, dancing their lively challenges to the spectators below. Phil struck a large fish, but lost it on the first run; probably it was but slightly hooked. Walter was again in luck, and shortly after sunset landed an 11-pounder on the island shore. The fish seemed to take the fly with more avidity in the colder water at the mouth of North Branch than they did further up the pool, for James had several lazy rises, always failing to "fasten" to one. As twilight came on we returned to tent, made a change in our toilet, and sat down to luncheon. We then adjourned, as usual, to the Indian camp-fire, always two or three rods from ours, to smoke our pipes, talk over the experiences of the day, and particularly to enjoy the quaint conversation of our swarthy friends.

The talk naturally turned upon the many evidences of poaching we had seen, the parties by whom carried on, and the provision made by the Government for protecting the spawning grounds.

"Do you come up here often, Sâk?" some one inquired.

"O, sartin; two, tree, more time one summer," replied the Indian.

"When is this netting begun and how long does it last?" queried Walter.

"Well, see, fish walkum 'bout firs' June, pretty tick. Then white man b'low, come up t'ree, four, five canoe. Settum nets clear 'cross Park's Landing, Catamaran, Devil Brook, Stoney Island, Push an' be Dam', all good place. Mebbe stayum there t'ree, four week, makum shingle same's men down wigwam we pass, when byme bye 'bout end June fish no walkum, go home."

"But what do they do with the fish?" asked one of the party.

"Sellum, sartin," replied Sâk; "ev'ry two, t'ree night, one canoe go down near full. Mose Blink, Cud Higgin, Bob Stern, all buyum."

"Is there any poaching done after that time?"

"O, yes; more big in fall. Sposem big rain 'bout middle Septem'r, great heap fish walkum up here. River near full. Then seeum white man go up 'gen past village. 'What gotum in big box there, brudder,' ses I, 'sposem pork, beans, eh?' 'O, sartin,' him say, 'much grub; me goum up North Branch, North Pole, Guägiss lookum lumber chance.' 'Eatum big, sposem in woods?' ses I. 'O, yes,' him say, 'eatum bigger, bigger ev'ry day.' Now Injun no fool. He knowum what in big box same's white man. Injun knowum too, why for white man al'ays huntum lumber chance soon's one big rain."

"I suppose they catch them as they do in June?" said James.

"Putty much same, but likum better holes. Salmon berry t'ick in hole; puttum net all roun' pullum out one time twenty, t'irty, mebbe more."

"What use do they make of them, Sâk?"

"Well, firs' smokum in big hole same 's here an' here (pointing to several depressions around the fire), then rollum up birch bark; when all catchum go home."

"Why don't they take them down fresh as in June?"

"Sposem did, might get in jail. 'Gin law catchum then, 'sides salmon all black and big nose (referring to the "hook-bill" growth on the jaw just before spawning), so cutum off heads, smokum all black, so 's can't tell when catchum."

"Are they good to eat then?" asked Phil.

"W-e-l-l, putty strong, as one old hog, but smoke killum smell, makum all same 's smoke," replied Sâk with a grunting laugh.

"Have you no fish wardens on this river?" queried Walter, removing his cigar.

"O, sartin, warum fish, no peace tall; chasum, chasum all time, same 's I tellum," replied Sâk with energy.

"I don't mean that," said Walter, observing Sâk's mistake, "have you no men to keep bad white men from killing salmon in that way?"

"O, yes, sartin," returned Sâk, "two, t'ree Lookumovers one river. See Great Chief 'way up—what you callum, Mohawk country? Kenedy, eh?—all same. Well, Great Chief makum man down Newcastle Big Lookumover. Berry good un, too; he walkum all over Nor'west, Big Sevogle, Little Sevogle, Little Sou'west an' down b'low, too. Byme bye he makum white man Little Lookumover er-ry five six mile uv river, tellum watchum bad white man no killum salmon, givum twenty, t'irty, mebbe forty dollar one summer; sposem look sharp, 'spec' Great Chief givum more. Little Lookumovers sayum not 'nough, takum all same, but stayum home all time.

"Well, byme bye, sposem some un goum up river, same 's you now, seeum white man nettum smokum salmon, findum poles an' traps, him writum *Tomahawk*, paper on little side (opposition), an' *Tomahawk* tellum people nex' time how big side (Government) doum all wrong. Spec' soon no salmon 'tall, much men nettum, killum fish. Little Lookumovers no good 'tall. Money all t'rown away—country goum to devil. Byme bye, two, t'ree days, *Arrow*, paper on big side, come out. Me seeum both down Mose Blink when me sellum ee's. Mose gettum for nothin' keepum in shop for people readum; big side an' little side sendum up. Me gettum top pile codfish in corner an' readum. Byme bye Mose come sayum easy like, 'Well Sâk, you one putty smart Injun, what you makum out papers, eh?' 'Putty big job makum anyt'ing out 'tall', me say, 'one sayum 'tis, toter sayum 'tisn't, all same's two cross pappoose.' 'Don't peer knowum much how cat jumpum up here, or's you say, which hole musquash in, eh?' Mose sayum with sly wink, an' goum 'way sellum white squaw queer t'ing, likum one big eel pot, madum uv steel to holdum all 'cept head an' legs.

Well, *Arrow* come out an' sayum, 'Berry sorry to seeum *Tomahawk* tellum one big lie, when it sayum good men 'long river so bad. Little Lookumovers bes' men all world, so is der brudder and cousins. Watchum berry good river all time. Never so well lookum after 'fore.'

"Sartin this makum men 'long river feel berry good, swearum for big side votum nex time, but all same catchum salmon all time.

"Well, Big Lookumover t'ink somet'ing all wrong, come up seeum Little Lookumover, but Little Lookumover seeum come, hidum.

" 'Where Lookumover?' him say to white squaw.

" 'O him gone up river two, three day, lookum for nets,' squaw say. Big Lookumover tinkum all right, go home.

"Well, game 'peep no seeum' goum on all summer, Little Lookumover dodgum Big Lookumover, an' bad white man dodgum both, all same 's old schoolmaster an' cunnin' pappoose down village. Byme bye Little Lookumover tinkum better takum peep up river. Putty soon he findum net jes same 's you to day, takum home, no lookum more. Well, nex' time, two, t'ree, four day, *Arrow* havum long pow wow 'bout how smart Little Lookumover be, gettum net, only one on river. Never nets so scarce 'fore. Hopum all peoples no forgettum bad *Tomahawk* nex' 'lection."

"Now, Sâk, you've told us all about bad white men, are there no bad Indians killum salmon, too?" asked Phil.

At this Sâk and the rest laughed heartily; but presently the former rose from his squat, cross-legged posture, straightened himself up, and added with much good humor:

"Sposem more better, as Mose say, me no tellum—tellum—what you callum? Wag, wag outen school."

And now we rose and said "Good night." How calm and cool the air! How deeply blue the sky studded with glistening pearls! How black the great pool! How solemn the deathlike companionship of those rugged hills! Here we seemed to stand mere conscious atoms amid the vast, the grand, the sublime in nature, and how strongly felt we the truth of that awful dictum, "Dust thou art!" And as we lay in our tent and listened to the hollow roar of the mighty falls, how near we seemed to the Great Unknown, and how strangely was our falling asleep like a sinking, sinking into the vast eternity of forgetfulness. CHIKTEK.

NEWCASTLE, New Brunswick.

COLORADO TROUT STREAMS.

DENVER, Col., Nov. 23.—On the 21st of July my good friend the Judge (Bourgeois) was with me on the banks of Grand River for a campaign against the trout. For eleven summers we have fished together in the streams of Middle Park, and will probably keep it up as long as we are able to fish at all. We have pretty well learned each other's gait, and make a fair working team, if not a handsome one. The Judge is a good fisherman, and, of course, a capital fellow; but he professes to think that catching a trout in any other way than with a fly is wrong in principle and an imposition upon the fish. Imagine my surprise, then, at the discovery that he had brought over with him this season a coffee pot full of angle worms. Of course, when I rallied him about his lack of faith in the seductive fly and falling back on fish worms, he denied any such intent, and averred that he brought them, not to fish with, but to "plant." Why he should want to plant that which he never expects to gather or use, and which he thinks no other fisherman should ever use, is one of those problems that I cannot guess; but in order that his conscience might be clear and easy, I went with him to plant the worms, and saw that it was done, and well done. He afterward admitted to me, under a searching cross-examination, that he had once or twice before brought along meal worms for bait, "but" (mournfully) "the plagued trout wouldn't look at them." Also, that he had a similar experience in carrying angle worms to the Arkansas in San Luis Park. But what the Judge especially condemns is the use of the grasshopper for bait, and the reason for this I can understand perfectly—he cannot overtake, or circumvent, or otherwise capture the festive grasshopper.

The Judge has another hobby; he believes religiously that no bird should be shot except on the wing—that the man who is unable to knock down a quail, a grouse or a duck while flying ought not to be allowed to shoot at all—that he shouldn't eat chickens. I have almost convinced him that it is the further duty of the sportsman who shoots on the wing to audibly count three after the bird is flushed before he pulls the trigger. This is to give the bird a show. But the Judge's kindness of heart and consideration for the birds is more practical than toward the fish. I have never known him to ruffle the feathers of one, except an old hen grouse, that he accidently kicked off her nest when fishing. It is true he carries with him every season a fine Parker 12-bore and several hundred cartridges, but I never saw him use it. Formerly it was in an ordinary leather gun case, and formed a visible parcel of his varied impedimenta, but five or six years ago, one day while the Judge was out fishing, the Professor, who figures conspicuously in most of the Judge's fishing romances, borrowed the gun and christened it by killing two or three grouse. The gun was back in camp all right when the Judge came in with his, as usual, creel full of fish, but he saw the chicken feathers, pursued his suspicions, convicted the Professor, and hasn't pardoned him since. But he learned something, and took effective precaution against such accidents thereafter. Since that day his chokebore has taken its summer outing hidden away in the interior of the Judge's "war bag," among his other "duffle" that is sacred to himself only. That is, he tells me it is there, and I never doubt his word—not even in a fish story. I have not seen the gun for five years. I don't believe it has been fired since it left the factory, except when the Professor stole it out as stated above.

Well, we had day after day of delightful sport. Fished up the river and down the river, and went several days to William's fork of the Grand, four miles away. When going a distance of three miles or more we generally rode on horseback to the ground, picketed our horses and fished as long as we cared to, saddled up and returned. Our creels would be filled in from 1½ to 3 hours and we never caught more. Many of the fish were of good size, running from 1½ to 1¾lbs. by the scales, but they did not average as large, nor as evenly in size as the fish I caught in the same waters a month earlier in the season. Mosquitoes, that occasionally troubled in June, had now all disappeared and there was no discomfort or annoyance whatever.

About the first of August a party of us went with a carriage down the Grand to the mouth of the Troublesome, and when we returned in the evening left the Judge there, sojourning at the house of a friend, to continue his sport among the big trout of that neighborhood. He remained several days and had a capital time. The next day I went fishing alone; rode horseback over the divide and down to the mouth of the short cañon three miles below the Springs. I went determined to fish a certain place, very difficult of access, in the mouth of the cañon, where in former years I had several times taken fine lots of trout. After picketing my horse in good grass I walked across the point of the mesa and clambered down into the gorge, finding the water at a good stage for my purpose. I had tried it twice in June, but the river was then too full, the water reaching up into the brush. Now it was just right. There was the narrow strip of broken rock between the foot of the steep hill and the river channel, with strips and pools of still water showing between them, and outside of that the two great flat blocks of granite, rising 10 or 12in. above the water and reaching out well into the channel. At their outer edge the water was 4 or 5ft. deep, and I had always found it, when at or near its present stage, a favorite feeding place for trout. Repeatedly I had stood upon the big flat rocks, or between them and the brush, and taken from half a dozen to a dozen good fish, but the last time was five years ago. The hillside is thickly covered with brush and trees, of which the lower fringe is black alders that project over the water, leaving no room to cast. The water was perfectly clear, and I found the pool, instead of having a school of fish in it, was occupied by one very large (for these waters) trout and a small one. The big fellow lay just outside the rocks and generally in such a position that he could see through between them and watch my motions. Occasionally he would take a place a little higher or a little lower, but I could always see some portion of his body through the 6 or 8in. space between the rocks. The small fish danced about in the current 6 or 8ft. below.

Naturally I wanted that particular trout because it was larger than any thus far caught in the neighborhood this season. I tried my flies on him, one after another, until I had exhibited samples of the entire assortment. At each new fly he would rise lazily and take a look at it and then settle as lazily back to his resting place. His appetite appeared to be satisfied and his curiosity was not impulsive. I "rested" him by fishing up and down stream, to come back after a time, but it was no use. He remembered the cheat and would have none of it. Then I regretted the departure from my rule that day for the first time that season, which was to always carry a little tin box with a few grasshoppers in it for just such emergencies as this one had become. It was clearly a case of grasshopper or no trout—that is, not that trout. Possibly a grasshopper would not entice him, but it was worth the trial anyhow. So I laid down my rod and clambered up the side of the mountain, through the tangle of alders and briers and then among the sage brush and over sliding rocks until I reached a shoulder or bench studded with small nut pines and cedars, where half a dozen big fluttering grasshoppers were soaring and rattling their castanets. The sun beat square against the face of the hill, all breeze was cut off by the trees and it was broiling hot. The warmer it is the more active, lively and wary is the big grasshopper, the further and higher he soars and the louder he rattles his wing cases. Armed with a pine bough, back and forth, up and down I chased after one 'hopper and then another. The first would climb up the mountain, the next sail across the cañon and the river, one would take refuge in a tree and another would crawl under a rock. I tumbled over the rocks, got tangled up in sage brush, thrashed the ground, perspired and thanked my lucky stars that the Judge was not in sight. In fact I was glad he was at that moment ten miles away. Perseverance tells and at last a poor unfortunate grasshopper was overtaken. He was caught between my brush and the mountainside. When the cyclone was over he looked like the victim of a railway disaster. I gathered the remains from the dust and was rejoiced to find that they hung together. They were all there, the great double wings with their gaudy colors, and bright mottled body and the vigorous legs. I plunged down the mountainside with my prize, bent on a snelled hook, baited it with the late deceased and dropped it in the current just above my speckled friend. As it floated over him he looked at it with one eye. Waiting a moment I repeated the maneuver. He looked at it with the other eye. He even rose a hand's breadth from his resting place. I waited a little nervously for the third cast. "The third time is the charm," you know. I learned that when a barefooted cub, I caught "shiners" and "goggle-eyes" and "catties," in the creeks of the old Buckeye State. Had the third cast, with my pulverized and only grasshopper, failed now I would have been discouraged and utterly cast down—but it didn't. Like a snowflake (or a snowball), the lure again fell upon the shimmering water and was borne gently adown the current. As it came near his troutship there was a dash and a strike; an involuntary motion quicker than premeditated thought and he was fast. For a moment the water fairly foamed around him, and into it came another flash from below. The small trout, the big one's tender, had struck and hooked itself upon a small dropper fly a yard above the other. A moment and the big one darted for the middle of the river and the reel sung its familiar song.

I realized that it would be hopeless to attempt landing my fish where I stood upon broken, jagged rocks that extended far out into the stream. Fifty yards below there was a little sand beach that sloped gently into the water. It was 3 or 4ft. wide above the water and perhaps 20ft. long and marked the slack current below the rocks. Below that again the river cut into the bank beneath the trees so that it became absolutely impassable. The little sand beach was my only hope. Keeping my unequal team well in hand, away in the middle of the river, I slowly made my way down to the sand and took my stand on the lower end of it. Just below began the next rapids, over a rocky bar, and if the fish got over that I could not hope to save them. As time passed I became more and more anxious to secure them both. A double, and such a double, was an event to talk about. In a little while the big one began to show signs of exhaustion and slowly I reeled in until I thought my line was short enough to draw them upon the sand to the water's edge. Slowly swinging my rod around behind me to the left, the big fish had reached the sand and his back was out of the water when the rod stopped. I could swing it no further. Taking my eyes from the fish for the first time I glanced backward and discovered that the bend of the rod was against the brush, but I also discovered that the tip was within my reach. Holding the butt in my left hand, I reached out with my right, caught the line beyond the tip and in a moment my fish were drawn up along the sand out of the water, and I was between them and the river—I had saved them both. When I reached home in the afternoon and they were dressed, I found the big one to weigh a trifle over three pounds, and the small one a little less than one pound. In the stomach of the larger one there was a fish that must have weighed, when alive, nearly a pound. The process of digestion had already removed all the outside parts, the skin and fins, leaving the surface as smooth and white as though polished down with sandpaper. I could easily understand then why his lordship was so fastidious after his recent feast. He wanted no feathers and tinsel. Nevertheless, a grasshopper enticed him. The Judge, with his "fly" notions, would have had to leave him. No! the Judge never would have gone in where he was.

[I once caught a large trout at the same place that had swallowed another trout, the tail of which was visible in the swallower's mouth. Digestion had barely set in.] I fished on quietly down the river and filled my creel as full as it would hold. Caught one other fish of over 2lbs. weight, but most were from 10 to 18oz. each.

The next day I went to Grand Lake and did some fishing there. A few days after met the Judge at Cozens', on the Fraser, and we returned together to Denver. He had heard of my big trout, and was evidently a little bit envious, I think, for this year he has placed me on his list with the Professor who borrowed his new gun.

Later this season Mrs. Barney Day caught in the Grand, near the mouth of Troublesome, a 3lb. trout, and her little son, eight or nine years old, caught one of 2¼lbs.

CAMP ADAMS.—II.

THE days were spent with varying success visiting one pool and another until Saturday night arrived, when rods were put away, not to be taken up again until Monday morning, Sunday being spent in reading, loafing about camp and sleeping.

Sunday morning, however, Armstrong and Ferguson decided to leave for home, as they were unable to stay away any longer from their business, and in consequence the camp is earlier astir than usual. When breakfast is over the buckboard is brought out, and after a hearty "good-bye, boys," the two are off. Although somewhat out of sorts at having to leave so soon they continued on their way as best they could until within about six miles of Way's an accident occurred, for which neither will take the blame, but each tries to make the other bear the responsibility. Between them ,be it. One of them who was driving managed the horse so well that one shaft tried to pass a tree on one side while the horse and wagon were to take the other, a feat seldom accomplished. In consequence the weaker member of the concern, off on its own hook, suddenly parted company. A pretty fix. Six miles to walk and help to guide and haul the buckboard. Imagine the appearance they cut when Way's was reached and the state of their tempers at hearing Adams's hearty laugh at their quaint appearance.

On Monday morning two or three days' provisions were got ready, preparatory to a trip to the Forks, some eighteen miles above the camp and the intervening pools en route. Of the latter there are quite a number of excellent ones, where good fishing can generally be had, fully repaying any one for the extra amount of fatigue encountered, especially if he is made of the metal of true sportsmen.

There being no Saratogas to pack, the things were soon stowed in a dugout, and the horse hitched to it by means of a hook in the whiffletree passing through an iron ring in the bow. The men tumble in on top of the grub and off they go. Where the water is shallow the horse is kept so attached, but when it becomes too deep he is unhitched and driven along the shore, and the men pole as the motive power, causing sore backs and a few blisters until they become accustomed to it, and then, like almost anything else, they do not mind it.

After the deep water is passed the horse is again hitched on, and they continue their way up river until a fishy-looking pool is reached. Then the horse is turned loose and allowed to look after himself and graze along shore, while the canoe skirts the edge of the pool, going round it to get above, so as to make casting the fly an easy matter. Here our friends kill two or three fine fish.

The first night out they camp on the shores of the Square Rock Pool, a short distance below the Forks of the main North West River.

After a good night's rest, as the midges and mosquitoes were not very troublesome, they resume their journey. This day was but a repetition of the previous one, so I will not dwell upon its incidents. That same evening the Forks are reached, where the party are to camp for the night, at the foot of Bald Mountain and many other peaks shooting far above the level of the surrounding country. It is just above this mountain that the South and North Forks uniting form the main river.

On the South Fork, not far above the junction, there is a fine salmon hole, known as the Devil's Gulch Pool, while the same distance up the North Fork is the North Branch Pool, so called, and at the junction is the Forks Pool, the last two of which are wholly upon land owned by Mr. Adams, at the base of Bald Mountain, comprising some one hundred acres. He owns somewhere in the neighborhood of a thousand acres at different points along the river and containing within their boundaries, with the exception of a few, nearly all the A1 pools.

After fishing the pools above mentioned they start the next day on their return journey, reaching camp that night, making the return trip in one day.

The sun is hours high before there are any signs of life around the camp the following morning, and not much fishing is done as they are to leave for home on the morrow, after having spent nine days in the wilderness.

In the afternoon they proceed to sum up their catch, and on going to the smoke house count sixty salmon tails suspended on poles, which, together with the five they ate fresh, makes a total of sixty-five. There is a good smoke house alongside of the camp, as fishermen in

this country do not believe in taking fish just for the fun of the slaughter. If they cannot make use of them fresh, preserve them for future use in this manner, and there is nothing much more tasty for a breakfast relish than a piece of smoked salmon cured in the way the fishermen in this country preserve them.

There is no better salmon fishing ground to be had in the Dominion of Canada than the property known as Camp Adams, with its record this past season of 187 salmon—every one of which was killed with the fly—during periods that would not on the whole aggregate over three weeks, and never more than three rods fishing at one time, and often not that many.

On the morrow everything is bustle and confusion. The Falls have to be visited, looks taken of spots, to be borne away as cherished memories, until they can again be visited, perhaps the following year, or perhaps never—who can say? Time will tell its own story. We will wait and watch, hoping that when next the camp is visited none of the merry party, now about leaving it, will have crossed the brink of the great beyond.

It is late before a start can be made, late when they reach Way's and later still when they reach Newcastle, where after a change of clothing we find our friends looking like civilized beings, with the exception of a few fly bites, and the rich brown tan of a ten days' August sun not much the worse for wear.

In speaking of Reddick on Saturday morning I asked him how he enjoyed the trip. "Well, if I were going to die and could get up to Camp Adams for a week I would be good for two years more, and all the medicine they might give me would not kill me. Two years ago I wasn't worth a cent when I came down here. I went home a well man. I have not been sick since till this spring, and just as soon as I got well enough I left for Miramichi. Now I will go home, and if I get sick again look out for me, doctors are nowhere alongside of fresh salmon, salt cod fish, pork grease and potatoes and Camp Adams."

Crawford and Reddick left on Saturday morning, reaching St. John in time for Saturday night's boat, arriving in Boston Sunday evening and New York Monday morning, where Reddick taking leave of his companion returned to his home in Wilmington, to dream by day and night of the murmuring waters, sporting scenes and pleasant shades around Camp Adams. SALMO.

GEN. EMORY'S WHITEFISH.—"A Washington Angler" writes to the *Post* of that city: "The death of General W. H. Emory has recalled to my mind a fishing incident which will interest some of your piscatorial readers. It occurred in the spring of 1851 when the General joined his friend, Charles Lanman, on a fishing expedition to the Little Falls of the Potomac, where he captured a 16lb. rockfish, and, as Daniel Webster had only a fortnight before taken a fish of the same size in the same pool, the General sent his prize to the statesman with his compliments by way of showing that the American army was invulnerable. No fish of that size have been taken in the Potomac with the hook during the last thirty years."

CATFISH ON TROLL.—Rochester, N. Y., Dec. 1.—I notice in your issue of November 17 a note of E. A. Black's rare catch while trolling from a canoe. I had the same experience last June fishing on the Bay of Quinte, near Massassaga Point. I was trolling for bass and was thunderstruck when I landed a 6lb. catfish. The troll was caught in the upper jaw near the corner of the mouth. My brother, who was trolling at the same time, thought I had a large bass, as I had to play him some time before I could land him.—F. S. J.

THE CHEMICAL CHANGES IN OYSTERS BY FLOATING.

BY PROF. W. O. ATWATER.

[Read before the American Fisheries Society.]

Concluded from Page 369.

THE following experiments were made with oysters supplied by Mr. F. T. Lane, of New Haven, Conn., a communication from whom was just quoted, and for whose courteous aid as well in furnishing the specimens as in giving useful information, I take this occasion to express thanks.

The oysters had been brought from the James and Potomac rivers and "planted" in the beds in New Haven Harbor (Long Island Sound) in April, 1881, and were taken for analysis in the following November.

Two experiments were made. The plan of each experiment consisted in analyzing two lots of oysters, of which both had been taken from the same bed at the same time, but one had been "floated" while the other had not. The first specimen was selected from a boat-load as they were taken from the salt water and the second from the same lot after they had been floated in the usual way in brackish water for forty-eight hours. For each of the two experiments, Mr. Lane selected, from a boat-load of oysters as they were taken from the salt water, a number, about three dozen, which fairly represented the whole boat-load. The remainder were taken to the brackish water of a stream emptying into the bay and kept upon the floats for forty-eight hours, this being the usual practice in the floating of oysters in this region. At the end of that time the oysters were taken from the floats and a number fairly representing the whole were selected as before. Two lots, one floated and the other not floated, were thus taken from each of two different beds. The four lots were brought to our laboratory for analysis.

The specimens as received at the laboratory were weighed. Thereupon the shell-contents were taken out and the shells and shell-contents both weighed. The solid and liquid portions of the shell-contents, *i. e.*, the flesh or "solid" and "liquor" or liquids, were weighed separately, and analyzed. We thus had for each lot the weights of flesh and liquids, which together made the weight of the total shell-contents, and the weight of the shells, which with that of the shell-contents made the weight of the whole specimens. We also had, from the analysis, the percentage of water, nutritive ingredients, salts, etc., in the flesh and in the liquids. From these data the calculations were made of the changes which took place in floating. For the details, which are somewhat extended, I may refer to the publications mentioned above. It will suffice here to give only the main results.

The body of the animal may be regarded as made up of water and so-called water-free substance.* The water-free substance contains the nutritive ingredients or "nutrients." These may be divided into four classes: (1) Protein compounds, the so-called "flesh-formers," which contain nitrogen; (2) fatty substances, classed as fats; (3) carbohydrates; (4) mineral salts.* These constituents of the flesh of oysters have been but little studied. It is customary to assume them to be similar to the corresponding compounds of other food materials, but very probably the differences, if known, might prove to be important. The mineral matters especially, which are very large in amount, appear to include considerable of the salts of the sea water. Of the nature of the ingredients of the liquids but little is known. They consist mainly of water and salts, and the amounts of their ingredients which are here reckoned as protein, fats and carbohydrates, are very small, so that whatever error there may be in classing them with the ordinary nutrients of food, it will not very seriously affect the estimates of nutritive values.

GENERAL RESULTS OF THE EXPERIMENTS.

During the sojourn in brackish water both the flesh (body) and the liquid portion of the shell-contents of the oysters suffered more or less alteration in composition. In order to show clearly what the principal changes as shown by the chemical analysis were, some statistics may perhaps be permissible here.

CHANGES IN THE COMPOSITION OF THE (BODY) OF THE OYSTERS IN FLOATING.

1. The changes in the constituents of the body were mainly such as would be caused by osmose, though there were indications of secretion of nitrogenous matters, and especially of fats, which are not so easily explained by osmose. This I will speak of later.

2. The amounts of gain and loss of constituents which the bodies of the oysters experienced may be estimated either by comparing the percentages found by analysis before and after dialysis, or by comparing the absolute weight of a given quantity of flesh and the weights of each of its ingredients before, with the weights of the same flesh and of its ingredients after dialysis. For the estimate by the first method we have simply to compare the results of the analyses of the floated and the non-floated specimens. Taking the averages of the two experiments, it appears that:

The percentages of	Before Dialysis.	After. Dialysis.
Water rose from	77.9 to	82.4
Water-free substance fell from	22.1 "	17.6
Total flesh	100.0	100.0
Protein fell from	10.5 "	8.9
Fat fell from	2.5 "	1.9
Carbohydrates, etc., fell from	6.9 "	5.2
Mineral salts fell rrom	2.2 "	1.6
Total water-free substance of flesh.	22.1	17.6

There was, accordingly, a gain in the percentage of water and a loss of that in each of the ingredients of the water-free substance. This accords exactly with the supposition that during the floating the flesh gained water and lost salts and other ingredients.

It will be more to the point to note the absolute increase and decrease in amounts of flesh and its constituents—in other words, the actual gain or loss of each, in the floating. Estimates by this method have been made and explained in the detailed accounts referred to. They make it appear that 100 grams of the flesh as it came from the salt water was increased by floating, in one specimen to 120.9 and in the other to 113.4 grams. This is equivalent to saying that the two specimens of flesh gained in the floating, respectively, 20.9 and 13.4 per cent., or on the average 17.3 per cent. of their original weight. By the same estimates the water-free substance in the 100 grams of flesh before the floating weighed on the average 22.1 grams, while that of the same flesh after floating weighed 20.6 grams, making a loss of 1.5 grams or 6.6 per cent. of the 22.1 grams, which the water-free substance weighed before dialysis. The main results of the two experiments thus computed may be stated as follows:

In the "floating" of 100 grams of flesh (body) of the oysters:

The Weight of	Before Dialysis.	After Dialysis.
Water rose from	77.9 grams to	96.6 grams.
Water-free substance fell from	22.1 "	" 20.6 "
Whole flesh rose from	100.0 "	"117.2 "
Protein was assumed to remain the same	10.5 "	" 10.5 "
Fat (ether extract) fell from	2.5 "	" 2.3 "
Carbohydrates, etc., fell from.	6.9 "	" 6.0 "
Mineral salts (ash) fell from	2.2 "	" 1.8 "
	22.1	20.6

Estimating the increase or decrease of weight of each constituent in per cent. of its weight before floating:

	Per cent. of original weight.
The water gained	23.9
The free-water substance loses	6.6
The who flesh (body) gained	17.3
The protein was assumed to neither gain nor lose.	
The fat loses	8.8
The carbohydrates, etc., loses	12.5
The minerals salts loses	15.5

In brief, according to these computations, the flesh lost between one-sixth and one-seventh of its mineral salts, one-eighth of its carbohydrates, and one-twelfth of its fat, but gained enough water to make up this loss and to increase its whole weight, by an amount equal to from one-seventh to one-fifth of the original weight.

These estimates are based on the assumption that the amount of protein in the flesh remained unchanged during the floating. It seems probable, however, that the flesh may have lost a small amount of nitrogenous material. If this was the case the actual gain of flesh and of water must have been less and the loss of fats, carbohydrates and mineral salts, greater, than the estimates make them. But there appears to be every reason to believe that the error must be very small, and since it would affect all the ingredients in the same ratio, the main result, namely, that there was a large gain of water and a considerable loss not only of mineral salts, but of fats and carbohydrates as well, can not be questioned.

CHANGES IN THE COMPOSITION OF THE LIQUID PORTION (LIQUOR.)

3. The liquids might be expected to receive material from the flesh, and to yield material to the surrounding water. The materials coming from the flesh would be such as the latter parted with by either osmose or secretion. Those yielded to the water would either escape by diffusion or be washed away when the shells were open wide enough to allow. What share each of these agencies had in effecting the changes that actually occurred in the liquids, the experiments do not and, in the nature of the case, cannot, tell. Comparing the percentage composition of the liquids before and after floating, as shown by the averages of the analyses in the two experiments, it appears that:

The percentages of	Before Dialysis.	After Dialysis.
Water rose from	94.9 to	95.5
Water-free substance fell from	5.1 "	4.5
Total	100.0 "	100.0
Protein rose from	1.9 "	2.1
Carbohydrates, &c., rose from	0.7 "	1.1
Mineral salts fell from	2.5 "	1.3

The increase in the percentage of water, and the decrease in that of mineral salts are very marked. The quantities of fats (ether extract) are too small to be taken into account. The increase of nitrogen and that of carbohydrates, though absolutely small, are nevertheless outside the limits of error of analysis, and must, like those of the salts, represent actual changes in the composition of the liquids.

The experiments give no reliable data for the determinations of the absolute increase and decrease of the liquids and their constituents, so that it is impossible to say with entire certainty whether there was or was not an actual gain of protein or fats or carbohydrates. It would seem extremely probable, however, that the liquids received and retained small quantities of these materials from the flesh (bodies) of the animals.

CHANGES IN THE COMPOSITION OF THE WHOLE SHELL-CONTENTS, FLESH AND LIQUIDS.

4. Comparing the average percentage composition of the total shell-contents before and after floating in the two experiments, it appears that:

The percentages of	Before Dialysis.	After Dialysis.
Water rose from	85.2 to	87.1
Water-free substance fell from	14.8 "	12.9
Total	100.0	100.0
Protein (N. X. 6.25) fell from	6.8 to	6.5
Fats (ether extract) fell from	1.4 "	1.2
Carbohydrates, etc., fell from	4.3 "	3.7
Mineral salts (ash) fell from	2.3 "	1.5
Total water-free substance	14.8	12.9

After so much detail, I ought perhaps to simply summarize the results in a few words and close. But one or two matters call for brief notice.

If the changes in composition of the oysters in floating were due to osmose or dialysis alone, we should expect simply a gain of water and loss of salts (and perhaps of carbohydrates). But the flesh seems to have lost a little carbohydrates and fats and probably protein also, along with the salts, while it was absorbing water. A way in which this may have come about is suggested by my colleague, Prof. H. W. Conn, who calls attention to the fact that some mollusks, when irritated, produce an extremely abundant secretion of mucus or "slime," so much, indeed, as to sometimes render a small quantity of water in which the animals may be confined, quite sensibly gelatinous. He suggests that the change to fresh water may, indeed, induce such a secretion of mucous and perhaps of carbohydrates and fats as well, which would account for the increase of these substances in the liquids. The observation of oyster dealers that water always thickens the natural juices that adhere to the surface of the oyster and makes it slimy, accords with Prof. Conn's statement.

If such secretion did take place, the flesh must probably have lost a little protein during the floating. The estimates of absolute gain and loss of weight of flesh and ingredients (see detailed accounts of the experiments) are based upon the assumption that the quantity of protein was unaltered in floating. If protein was given off, therefore, the estimates are wrong. But the quantity of protein secreted and the consequent error must be, at most, very slight. If there is an error its effect would be to make the quantities of nutrients after floating appear larger than they really were. In other words, if the error was corrected it would make the loss of nutritive material in floating greater than it appears to be in the figures above given. As explained in the detailed report above referred to, I have assumed that the changes due to the ordinary processes of metabolism would be to small too materially affect the results.

The experiments might have been so conducted as to decide this question. It would have been necessary to simply take a larger number in each lot before and after floating and be certain that the number, weight and bulk were the same in the floated and not-floated lots of each experiment. For instance, we might, in each experiment, carefully select two lots of, say a bushel, each, as taken from the beds, have the number of oysters the same in each bushel as an additional assurance that the two lots were alike, float one bushel and weigh and analyze both. A few experiments of this sort made under different conditions of time, temperature, kind and age of oysters, etc., would give reliable and valuable data. Unfortunately the means at my disposal did not permit so thorough experiments. I am persuaded, however, that the results of such series of trials, if they could be made—and I wish they might be—would be very similar to those of the trials here reported.

It is very interesting to note that these processes which we have been considering in the body of oysters are apparently very similar to processes which go on in our own bodies, namely those by which our food, after it is digested, finds its way through the walls of the stomach and other parts of the alimentary canal into the blood, to be used for nourishment. Physiologists tell us that the passage of the digested materials through the walls of the canal is in part merely a physical action, due to osmose, but that it is in part merely dependent upon a special function of the organs. In like manner the changes in the composition of the oyster, if the above explanation be correct, are caused partly by osmose, and partly by special secretive action, the cell walls and outer coating of the body of the oyster corresponding to the walls of the alimentary canal of the human body.

CONCLUSIONS.

The main points presented in this paper may be very briefly summarized thus:

In the floating of oysters for the market, a practice which is very general and is also used for other shellfish, the animals are either taken direct from the beds in salt water and kept for a time in fresher (brackish) water before opening, or water added to the shell-contents after they are taken out of the shell.

When thus treated, the body of the animal takes up water and parts with some of its salts; and small quantities of the nutritive ingredients escape at the same time. The oysters thus become more plump and increase considerably in bulk and weight. But the quantity of nutritive material, so far from increasing, suffers a slight loss.

In the experiments here reported, the increase in bulk and weight amounted to from one-eighth to one-fifth of the original amounts. This proportion of increase is about the same as is said to occur in the ordinary practice of floating or "fattening" for the market. According to this, five quarts of oysters in their natural condition would take up water enough in "floating" to increase their bulk to nearly

---

*The technical terms here used demand perhaps a word of explanation. The "water-free substance" is the dry matter which is left when the water has all been driven out. Over three-quarters of the whole weight of the flesh ("solids") of oysters is water, so that the water-free substance makes less than one-fourth of the whole weight as the oysters are ordinarily sold, *i. e.*, after being floated, the flesh averages about one-fifth water-free substance. Taking both the flesh ("meat") and liquids ("liquor") together, the oysters as commonly retailed in our markets are about seven-eighths water and one-eighth water-free substance. That is to say, the actual nutritive material in oysters, as we usually buy them, makes on the average just about one eighth of the whole weight. It is worth noting that this proportion of actual nutriment is very near the same as in milk.

or quite six quarts, but the six quarts of floated oysters would contain a trifle less of actual nutrients than the five quarts not floated.

The gain of water and loss of salts is evidently due to osmose. The more concentrated solution of salts in the body of the animal as taken from salt water, passes into the more dilute solution (fresher water) in which it is immersed, while a larger amount of the fresher water at the same time enters the body. But part of the exchange and especially that by which other materials, namely fat, carbohydrates, protein, etc., are given off in small quantities, is more probably due to a special secretory action. There is thus a very interesting parallelism between these processes of secretion and osmose (dialysis) in the oyster and those in the bodies of higher animals, including man, by which the digested food is carried through the walls of the alimentary canal into the blood.

The flavor of oysters is improved by the removal of the salts in floating, and they are said to bear transporting and to keep better. When therefore the oysterman takes "good fat oysters," which "yield five quarts of solid meat to the bushel," and floats them so that "they will yield six quarts to the bushel," and thus has an extra quart of the largest and highest-priced oysters to sell, he offers his customers no more nutritive material—indeed, a very little less—than he would have in the five quarts if he had not floated them. But many people prefer the flavor of the floated oysters, and since they buy them more for the flavor than for the nutriment, doubtless very few customers would complain if they understood all the facts. And considering that the practice is very general and the prices are regulated by free competition, the watering of oysters by floating in the shell, perhaps, ought not to be called fraudulent. But rather than pronounce upon this and other questions suggested by the above considerations I, however, should prefer to leave them to the Association for discussion.

MIDDLETOWN, Conn.

SEBAGO LAKE LANDLOCKED SALMON.

SEBAGO LAKE, Me.—For a number of years the project of restocking Sebago Lake with landlocked salmon has received some attention from our fish commissioners as well as from many private individuals, who are firm in the faith that with proper efforts this charming lake may equal Moosehead or even the far-famed Rangeleys as a fishing resort. Sebago waters are the natural habitat of the landlocked salmon, and here they obtain a size unknown, so far as the writer is informed, in any other lake in the country. In old times this fish was very plentiful and ascended the streams at the spawning season in great numbers. From the settlement of the country it was the custom of the people in this region to take advantage of the semi-torpid condition of the fish at that season and spear them, or capture them as best they could, and by this practice, together with the construction of dams for milling purposes, the breeding grounds have become reduced to the minimum, and the fish have become quite scarce.

The reduction of the stock has been so great that Mr. Stilwell, in a recent interview with a representative of the Portland *Press*, gave it as his opinion that not over 800 or 1,000 adult fish now visit Crooked River to spawn. He based his opinion on the fact that last season the salmon were all confined in a river, and the run of that season did not exceed 400. He thinks that, if there had been no interference this season, a like number would have been taken. It is now pretty generally understood that the salmon do not spawn oftener than once in two years, so an experiment covering that time will give a fair estimate of the whole number. Crooked River is the largest stream to which the salmon have access. Those known to frequent other streams would not bring the whole number of Sebago salmon above 1,500 or 2,000 at most.

Thus were these noble fish being almost wiped out of existence. An army of fish butchers had grown up, little or nothing was thought of the effect of the indiscriminate slaughter, less was thought of the game qualities of the salmon, and nothing of the value of the fishing to this section of the country. For years the salmon had been the prey of a few persons who live near enough to go by night and with torch and spear hunt down every fish to be found. Seeing the depletion constantly going on, and beginning to appreciate the game qualities of the fish, and to realize the benefit that a good stock of salmon would be to the community, some interest was awakened to correct the errors and improve the fishing.

At first it was thought that by observing close time and abandoning all doubtful or unsportsmanlike methods of destruction "the work would do itself," but after waiting and watching a number of years it was found that the increase wss less than had been expected, the spawning ground left by the mill men was not sufficient for the purpose. Such as was available was not exempt from ravenous fish and vermin which preyed on the eggs and fry to such an extent that little was added to the stock. Other hindrances had been encountered in the form of what is best described by the term "poacher;" we know that this word is considered "English, you know," but recent nomenclature has failed to provide a suitable one to take its place. These men claimed that their rights were interfered with, they had always speared salmon and they always would, provided any were left to spear. They paid no attention to the rights of others. They ignored the fact that the salmon were the property of the State, and could only be used for private purposes under such regulations as the State grants. They care nothing for the fact that every citizen has an equal right with themselves to that which they propose to monopolize and use for their own selfish ends. The fact that by a successful effort the whole surrounding country would be benefitted and valuation increased has no part in their logic. Their depraved appetites, crying out for fish fresh from the spawning bed, when they are as unfit for human food as it is possible, gets the control of their reason, and in clamoring for their rights they seek to trample on that of every other man in the State. The mischief done by this class is beyond calculation.

To return, when it became evident that from various causes the increase was likely to be too slow, attention was turned to artificial propagation. The attention of the U. S. Commissioners was called to Sebago Lake. Some men were sent to take salmon eggs and a hatchery was built, and everything looked favorable for a speedy remedy for what ailed us. If the writer is correctly informed, the U. S. Commissioners were to take the eggs, and hatch and return to these waters 25 per cent. of all taken, free of cost to this State. Under those terms the probability is, that had there been no interference, that by this time the lake would have been beautifully stocked. But this was not to be. One night a party of these men with inherent rights came down the stream and ruined the nets which were used to secure fish, damaging the Commissioners to the amount of several hundred dollars, and causing an abandonment of the work. For a long time little was done, except to now and then arrest some poacher against whom sufficient evidence could be secured. In this matter of evidence a showing could be made which might convince even those who would have us breathe it gently, when we say "poacher," that as a class they are entitled to little esteem. A long struggle against the Maine laws has made them experts in testimony.

Within three years renewed efforts have been made toward propagation. A little experiment conducted on Rogers' Brook, though nearly defeated by freshets, was sufficiently successful to encourage the Commissioners to try the same on Crooked River. Last year a weir was constructed on that stream, and about 400 salmon were captured, which yielded 800,000 eggs. These were successfully hatched at Edes Falls, and all the fry turned into tributaries of Sebago Lake. This weir was a bitter pill for the irregular fishermen above mentioned. It prevented the fish from going up the stream to such points as afforded the best channels for them to secure their dainty messes of spawning salmon, and a great cry went up. Threats of a blood-curdling nature were indulged in, and all winter long the disgruntled sat in convention telling what they would do if that weir was ever used again. Stories were concocted to work upon the sympathies of the people, to have them rise up and demand that the Commissioners should be removed from office, and the weir be discontinued. One of these yarns, which we believe was patented, was to the effect that the fish were all blinded or had their snouts torn off by their attempts to go through the weir, that the fish were so unskillfully handled that thousands of them died after the eggs were taken. We were solemnly assured that a much larger number than has ever been in the weir were found washed ashore on Raymond Cape in a single day. The fact is, the work was done by Mr. I. P. Harriman, of Bucksport, Me., reputed to be one of the most skillful operators in the States, who has had long experience with the United States Commission. Last spring some desultory harangues were made on this subject at the lake. It was boldly announced if the weir was used this fall it would come out, let the consequences be what they might. Graves, the warden killer, was extolled for his miserable act, and we were assured that "there would be more Graveses this year," and we have had them in embryo.

In September last the weir was replaced in Crooked River by Mr. Harriman, who, with his young son and another young man were in charge. One night early in October, when something like 125 salmon were in the pound and cars, a gang of eighteen men, with faces blackened, armed with shotguns, axes and saws, came to the weir, drove in the youth on watch, extinguished the lanterns, and proceeded to destroy the weir and cars, killing some of the fish and liberating the rest. Mr. Harriman was aroused from his slumbers by his assistant, and made an attempt to reach the weir, but was met at the door of the camp by two blackened men with shotguns, who advised him to stay in the camp. This order was disregarded, but he was kept under the surveillance of the two men with guns, while four men with axes and saws cut away the weir, twelve other "moonshiners" stood on the opposite bank to give such aid and comfort as they thought was necessary.

The work of destruction completed, the raiders departed across the fields, taking with them such fish as they had killed. Resistance was out of the question; the gang was too numerous for the small force in charge. Mr. Harriman at once repaired the weir and gathered in twenty-five salmon. He had previously taken 100,000 eggs, and thought he should secure 40,000 or 50,000 from those he had left. The effect of the raid is very damaging to this year's operations. About $1,400 was expended last year to get the works established. The final effects are not yet clear. It is evident that there is an intention to drive the Commissioners from that stream. If "they must go," Sebago Lake may be counted as abandoned to the poacher element for all time, and the cottages and camps we had anticipated seeing dotting the shores at no distant day will prove but myths. Reed's Pond, in the eastern part of the State, we are told, offers great inducements to the Commissioners to go there and establish works. The salmon there are second only to Sebago in size, and the residents would gladly welcome them. Once abandoned, and it is a matter of only a few years when a salmon will not be found in Sebago waters.

The Commissioners appear much disheartened by the opposition they have met, and the unreasonableness of the opposition makes it more provoking. They have ever stood ready to do anything in their power to improve this, the largest and most beautiful lake in western Maine. Surrounded as it is by picturesque scenery, and immortalized by poets, and the scene of historic events, it has every attraction to make it the resort of tourists and anglers. That a few masked men with hearts as black as their faces should stand in the way is a grievous thing to contemplate. Our Commissioners are reticent about "what they are going to do about it." Mr. Stilwell, in the interview mentioned, declared they are not to be driven away.

One amusing fact comes out of this tragic affair. In a neighboring town, remote from the scene of the raid, we are told every stranger is looked upon as a detective, whether the honest appletree man or the book agent, he is a suspected being. A woman agent for some new-fangled corset tightener has fallen under suspicion and may be waited upon by some of the "Klu-Klux" and advised to seek some other place to dispose of her merchandise. Why such suspicions are aroused in the rustic minds of orderly people does not appear. Alas! for the poor salmon. The Commissioners are almost empty-handed, the small sum doled out by the gentleman who held the seats down at our State capital last year is nearly expended, and detectives are an expensive luxury when indulged in to any extent, yet our neighbors have a "right" to regard every new comer in that light. It is an expensive luxury which is not likely to be denied them, so long as no overt act is committed. The outlook for Sebago Lake is not so encouraging as one could wish.

M.

NEW YORK STATE FISHERY COMMISSION.—Rochester, N. Y., Dec. 5, 1887.—*Editor Forest and Stream:* On behalf of the New York State Fish Commission, I desire to announce that I shall receive applications for fish from date until March 1, 1888, from parties desiring to stock public waters in this State. The kinds of fish offered for distribution are: Salmon trout, brook trout, German trout, California trout, black bass, rock bass, yellow perch and pike. Application blanks with full directions will be furnished by addressing the undersigned.—SETH GREEN, Supt., Rochester, N. Y.

The Kennel.

FIXTURES.

DOG SHOWS.

Dec. 6 to 8.—Third Annual Dog Show of the Central Berkshire Poultry, Pigeon and Pet Stock Association. W. T. Webster, Secretary, Lee, Mass.

Dec. 6 to 10.—Second Annual Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill. W. J. Hamley, Superintendent.

Dec. 14 to 16.—Third Annual Dog Show of the Winsted Kennel Club. Frank D. Hallett, Superintendent, Winsted, Conn. Entries close Dec. 3.

Jan. 10, 11, 12 and 13, 1888.—Bench Show of the Ohio Poultry, Pigeon, Kennel and Pet Stock Association, Columbus, O. H. O. Bridge, Secretary, Columbus, O.

Jan. 23 to 27, 1888.—First Dog Show of the Agusta Pet Stock and Poultry Association, at Agusta, Ga.

Feb. 21 to 24, 1888.—Twelfth Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

April 3 to 6.—Fourth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Dec. 12.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

Jan. 10, 1888.—Second Annual Field Trials of the Texas Field Trials Club, at Marshall, Tex. W. L. Thomas, Secretary, Marshall, Tex.

Jan. 16.—Fifth Annual Field Trials of the Pacific Coast Field Trial Club, near Kingsburgh, Cal. N. P. Shelden, Secretary, 320 Sansome street, San Francisco, Cal.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 5582.

THE EASTERN FIELD TRIALS.

THE ALL-AGED SETTER STAKE.

ON Friday of last week, after the last heat but one of the Derby was run, the All-Aged Setter Stake was begun. A list of the starters and the order in which they were drawn to run was published last week. The judges were Messrs. Bergundthal, Coster and H. B. Duryea, of New York.

JOE B. AND NELLIE II.

This brace was put down at 11:41 in sedge and scattered pines. Joe is a black, white and tan dog, above medium in size, rather loosely put together and well up on his legs. He is by Baronet (Belton—Nellie) and out of Nellie (Maydawn—Nettle). He was entered by Mr. O. H. Boyden, who sold him a short time ago to Bayard Thayer. He was handled by Hart Haight. He is fast, a wide ranger, and appears to have a good nose and considerable hunting sense. Nellie II., handled by Tallman, ran in the Members' Stake. She was under good control and did some good work. She had the best of it in style, but was not quite up to Joe in other points. After a run of 32 minutes the heat was decided in favor of Joe B. It was now past 12 o'clock and we went to lunch, which was spread for us at the Holton schoolhouse.

DAISY F. AND JEAN VALJEAN.

This brace was put down after lunch at 1:12 in the field by the schoolhouse. Much interest was manifest in the race, as both were known to be good ones. Both ran here last year and are well known. Daisy had many friends that she had won by her gamy way of going, and by her display of remarkable hunting sense. Jean also had admirers who had seen his work last year here and at Grand Junction. It was a very good and close race, and there was not much to spare at the finish. Both did capital work with the balance slightly in favor of Daisy until near the close of the heat, when she got the trail of a bevy wrong end foremost while Jean cast in the right direction and got in a couple of nice points before Daisy came back. This ended the heat in favor of Jean at the end of 1h. 4m. Both are very fast and wide rangers and show lots of style both when in motion and on game. Rather an amusing incident occurred during the heat. Daisy had retrieved a bird and before the dogs were ordered on she made a point and her handler called it. Avent had his dog by the collar and he instantly turned him toward Daisy, and holding up his head, claimed a back. Daisy was not up to her form of last year, although she ran a good race. Jean ran about as last year, but has had considerable experience since and handled his birds much better than then. Daisy was handled by Rose and Jean by Avent.

GLOSTER AND GALATEA

were put down at 2:20. Gloster was handled by Tucker, who brought him to the post in splendid condition; Galatea was handled by Tallman. She is a handsome bitch, fairly fast and quite stylish when on game. Both pointed and backed perfectly, and both retrieved well. The heat wes run over the ground where Gloster beat Lady C. last year, and he was again the victor after a run of 26m. He had the best of it in pace, style, and range and number of points.

NAT GOODWIN AND RUBY BUCKELLEW.

This brace was put down at 2:55. Nat was handled by Col. Merriman, who made his debut as a handler in public. Except that he went to a branch for a drink while his dog was on point, he acquitted himself creditably, his attitude while missing a corkscrew bird being especially fine. Nat ran here last year in the Derby, and his was the first name drawn; he was beaten by Fred W. He has lost none of his speed or style, and has gained in experience. He was much the best in pace, range and style, and found nearly all the birds. Ruby, handled by Gleason, is a good-looking bitch, not very fast, but an easy mover, and with fair style when on game. She appeared to be over-trained, and was watching her handler for instructions instead of hunting. Both pointed and backed nicely. At the end of 39m. the heat was awarded to Nat.

ROYAL PRINCE II. AND BELLE OF PIEDMONT.

The last heat of the Derby was run, and this brace was put down at 4:15. Prince was handled by Luke White. He is a well-known bench show winner, but is not a field trial dog. He puts on a little style when on point, but his way of going is lumbering and awkward; he gets over the ground moderately fast, but runs with head and tail down. Belle is well known; she was handled by Captain McMurdo; she was all off, and ran in nothing like her usual form. After a very poor heat of 55m. they were ordered up and Belle was declared the winner. Near the finish of the heat Captain McMurdo had the misfortune to seriously injure his eye by the springing back of a twig, and that evening he went home, leaving his dogs in care of Mr. Buckle. This ended the work for the day.

ALLIE JAMES AND CAN CAN.

On Saturday it was hot and sultry with scarcely a breath of air stirring, scent was very bad and flushes and poor work were the order of the day. Not feeling quite up to the mark we did not start and are indebted to Mr. Rose for notes of the work for the day except in the first heat which was kindly furnished us by Mr. Watson. The dogs were put down at 8:17. Allie ran here in the Derby last year, she is a sweet little bitch with lots of speed and style; she was handled by Ed. Merriman. Can Can, handled by Rose, is a very handsome, nice-moving bitch, fast and stylish; she appeared to be off in nose. In pace, range and style they were nearly equal. Allie showed the best nose and won after running 40m. Both pointed and backed in elegant style. Allie was under fairly good control while Can Can appeared to be nearly perfect in this respect, and is said to be a wonderful performer when she is all right.

ROY MONARCH AND FOREMAN'S LASS.

This brace was put down at 9 o'clock. Both ran in the Member's Stake. Roy was handled by Tom Aldrich and Lass by Tallman. In pace and range they were nearly equal, Lass having the best of it in style. Both were off in nose and made flushes, Lass having much the worst of it in this respect. After an indifferent heat of 1h. 15m. Roy was declared the winner.

ROGER AND DASHING NOBLE

were put down at 10:38. Roger was handled by Aldrich and Noble by Seager. Roger is a fast, very easy moving dog and a wide ranger, having the best of it in these respects, while Noble is more stylish on point. The latter ran here last year. He is also fast and moves fairly well; he had the best of the work, getting two points to Roger's one, the latter scoring a flush and a refusal to back. They were down 52m. when the heat was decided in favor of Dashing Noble.

BREEZE GLADSTONE AND CASSIO.

This brace was put down at 11:30. Breeze is a very nice-going dog, fast and stylish; he was handled by Tucker. Cassio ran here last year, he was handled by Avent. In pace

and range Cassio had a trifle the best of it; in style when going they were about equal; in style on point Breeze had decidedly the best of it. They made a capital brace and ran a very close and good race notwithstanding the extreme heat and with scarcely a breath of air stirring. Breeze had slightly the advantage in retrieving and Cassio scored a flush. At the end of 45m. the heat was ended with Breeze the winner. We then went to lunch at the barn of the Model Farm.

KING LEO AND ROYAL VICTOR

were put down at 1:25. Leo, handled by John Lewis, is a a large dog fairly fast, with some style and range, having much the advantage in these respects. Victor is a big, heavy dog, much too fat for work, with a lumbering gait and low carried tail; he was handled by Seager. At the end of 25m. Leo was declared the winner, having greatly the best of it in the work, making three points to none for Victor.

CHANCE AND DAN NOBLE.

These dogs both ran here last year. Chance was handled by Avent, and Dan by Seager. They were put down at 1:57. In pace and style there was not much to choose between them. In range Chance was the best, Dan was a trifle unsteady in backing. After a heat of 38m. with not much work done, Chance was declared the winner, having outworked his competitor. Keystone having a bye this ended the first series as follows:

First Series.

Joe B. beat Nellie II.
Jean Valjean beat Daisy F.
Gloster beat Galatea.
Nat Goodwin beat Ruby Buckellew.
Belle of Piedmont beat Royal Prince II.
Allie James beat Can Can.
Roy Monarch beat Foreman's Lass.
Dashing Noble beat Roger.
Breeze Gladstone beat Cassio.
King Leo beat Royal Victor.
Chance beat Dan Noble.
Keystone a bye.

Second Series.

KEYSTONE AND JOE B.

were put down at 2:48. Keystone ran here last year. He was handled by Tucker. In pace and style Key had the advantage, while Joe had the best of it in range and nose. Key retrieved nicely, but Joe refused. Key was undecided in his points, leaving them in two or three instances and birds were soon after flushed there by spectators. Scent was bad and both made some flushes. Joe had the best of it in the work done and was declared the winner at the end of 1h. 2m.

GLOSTER AND JEAN VALJEAN.

This brace was put down at 4:05. In pace Jean had a little the advantage; in range and style in going they were about equal, in style on point and in nose Gloster had the best of it. Both pointed, backed and retrieved in good style. Scent appeared to be much better than it had been at any time during the day and both did some good roading on running birds. They were ordered up after a run of 47m. with Gloster the winner. This was a good heat, Gloster getting in some of his sensational work among scattered birds, where he is at home and having the best of it.

NAT GOODWIN AND BELLE OF PIEDMONT

were put down a short time at night after the finish of the last heat and taken up without having done any work. On Monday morning they were put down near the Glass house at 8:15. The morning was dark and some rain had fallen and the weather looked threatening, but the change was welcomed by all, as it promised to be much better for the dogs. Both had changed handlers, Avent taking Nat in charge and Buckle handling Belle. In pace and range they were nearly equal, Nat having the best of it in style. Belle went much better than in her previous heat, but she has grown cunning with age and is also jealous. She pointed the first bevy found, but the birds were probably running, as she left them and made a cast to head them, and they were flushed by the judges before she got in her work. This performance will often help to fill the bag, but is not just the thing at a public trial. After a run of 47m. they were taken up, with Nat the winner.

ROY MONARCH AND ALLIE JAMES

were put down at 9:11. It was now raining, and as we were not in first-class condition we sought shelter and soon after returned to town, Mr. Rose very kindly giving us notes of the running for the remainder of the day. In pace and range Roy had the advantage, Allie showing the best style. Roy had the best of it in the work, and at the end of 52m. he was awarded the heat.

BREEZE GLADSTONE AND DASHING NOBLE

were put down at 9:57. This was a short heat and not very satisfactory. Breeze flushed a bevy and got a good point to some of the scattered birds of a bevy flushed by the spectators and a retrieve. Noble made rather an indifferent point and scored a retrieve. This comprised the work and they were ordered up at the end of 19m., and the heat was awarded to Breeze. In pace and range Breeze had the best of it; in style they were equal.

CHANCE AND KING LEO.

This brace was put down at 10:25. Except perhaps in style on point Chance had much the best of it all round, and at the end of 32m. was declared the winner of the heat. This ended the second series as follows:

Joe B. beat Keystone.
Gloster beat Jean Valjean.
Nat Goodwin beat Belle of Piedmont.
Roy Monarch beat Allie James.
Breeze Gladstone beat Dashing Noble.
Chance beat King Leo.

Third Series.

JOE B. AND GLOSTER

were put down at 11 o'clock. Gloster had the best of it in pace, range and style, and after a run of half an hour he was declared the winner. It was raining when the dogs were put down and all of the reporters went to cover, and we are indebted to the judges for the particulars and the succeeding heat.

NAT GOODWIN AND ROY MONARCH

This brace was put down at half past eleven. Roy was off in nose and Nat had the best of it on the birds. In pace there was not much to choose between them. Nat was the widest ranger and showed the most style on point, while Roy had a little the best of it in way of going. They were taken up at lunch time and Nat was awarded the heat.

CHANCE AND BREEZE GLADSTONE.

were put down at 1:40. The rain had ceased and the clouds had broken, giving promise of a fine afternoon. In pace and range Chance was the best, in style they were both equal. Breeze did not go so well as in previous heat. Not much work was done by either dogs, and at the end of 48m. Chance was declared the winner. This ended the third series as follows.

Gloster beat Joe B.
Nat Goodwin beat Roy Monarch.
Chance beat Breeze Gladstone.

Fourth Series.

GLOSTER AND NAT GOODWIN

were put down at 2:42. In speed they were about equal. In range and style Gloster had the best of it. At the end of 48m. Gloster was awarded the heat after doing some very good work on a bevy. Chance having a bye, this ended the fourth series as follows:

Gloster beat Nat Goodwin.
Chance a bye.

Final for First Place.

CHANCE AND GLOSTER

were put down at 4 o'clock to decide first money. This proved to be the last heat of the stake, and like the last heat in the Members' Stake, it was the best one of all. In pace and range Chance was superior. In way of going and in style on point, although altogether different, they were very nearly equal in merit. Gloster had the advantage in experience and was the more readily thrown in the direction his handler wished him to go. He would also stand being hurried when among scattered birds better than any dog at the trials. Although he was in a hot scramble for points under most trying conditions several times during the meeting, he kept his head and did not get rattled once. Both dogs behaved very well through the heat and very few faults were committed. The character of the work done by both was of a high order and there was very little to choose between them on this score. The judges evidently were puzzled to decide, as at one time they ordered them up and held a consultation that lasted for more than ten minutes and then ordered them on, and after a little more work they again compared notes for a few minutes and once more sent them on. Finally, after 50 minutes, they were taken up and the heat was decided in favor of Gloster, and he was declared winner of first prize. Gloster had the most points to his credit, but one or two of them were made when in reality the dogs were not under judgment, having been ordered up. He also scored one point some little time after the judges had ordered them in a different direction and Chance had gone in that direction. We did not learn whether the judges allowed these points or not. They certainly should not have counted in his favor, as his competitor had no opportunity and was at the time obeying the order of the judges. Both pointed and backed to perfection, and both retrieved well and were steady to wing and gun under very trying circumstances. Taken altogether, it was a grand heat, and we have no doubt that the judges would have been better pleased had either dog done less creditable work or committed a serious fault.

Final for Second Place.

CHANCE AND NAT GOODWIN.

The judges decided that Nat Goodwin was the best of the dogs previously beaten by the winner, and as the rules provide that when two dogs, the property of the same owner, remain in for the deciding trial, the judges may determine which is the better without running. Chance was selected and declared winner of second prize, and Nat Goodwin and Jean Valjean were declared winners of the two third prizes. Following is the

SUMMARY.

All-Aged Setter Stake, open to all setters that have never won a first prize in an all-aged stake at any recognized field trial in America. First prize, $300; second, $150; and two equal thirds of $50 each.

First Series.

Joe B. beat Nellie II.
Jean Valjean beat Daisy F.
Gloster beat Galatea.
Nat Goodwin beat Ruby Buckellew.
Belle of Piedmont beat Royal Prince II.
Allie James beat Can Can.
Roy Monarch beat Foreman's Lass.
Dashing Noble beat Roger.
Breeze Gladstone beat Cassio.
King Leo beat Royal Victor.
Chance beat Dan Noble.
Keystone a bye.

Second Series.

Joe B. beat Keystone.
Gloster beat Jean Valjean.
Nat Goodwin beat Belle of Piedmont.
Roy Monarch beat Allie James.
Breeze Gladstone beat Dashing Noble.
Chance beat King Leo.

Third Series.

Gloster beat Joe B.
Nat Goodwin beat Roy Monarch.
Chance beat Breeze Gladstone.

Fourth Series.

Gloster beat Nat Goodwin.
Chance a bye.

Final for First Place.

Gloster beat Chance and won first prize.

Final for Second Place.

Chance beat Nat Goodwin and won second prize.

Equal Third.

Nat Goodwin and Jean Valjean.

THE ALL-AGED POINTER STAKE.

On Tuesday, Nov. 29, the All-Aged Pointer Stake was begun. There were 29 nominations, and, judging from the reputation and breeding of the dogs, we were expecting to see something remarkably good, both in the dogs and their work. Only 13 starters put in an appearance, however, and with few exceptions they showed up a very moderate lot indeed, not nearly so good as the pointers in the Derby, and their owners may well congratulate themselves that there was a separate stake for them, as, had they run with the setters, there is not much doubt that they would have emerged from the contest with little glory and less cash. The stake was judged by Messrs. Bergundthal, Coster and Duryea. A list of the starters was published last week. The winner, Tammany, is well known. He came to the post in capital condition, and ran better than we have ever seen him, doing good work in all of his heats, and in some of them he got round to his birds and handled them in a style that was very creditable. His winning the "double event" was taken in good part by his handler, Jack White, who very modestly put it this way: "Tammany is now High Point-er; he beat Buckellew, who beat Gloster, who beat Roderigo, who beat Gath's Mark, who beat a lot of others, ergo he has beaten all the best dogs, including the champion, and is the best dog in the world. He will now retire on his laurels and give the others a chance." Tuesday was a beautiful day, with scarcely a cloud to be seen. It was quite cold, however, and even with heavy overcoats it was not possible to keep comfortably warm on horseback. Scent was apparently good, although the birds did not run about much, and at times were hard to find.

NEVERSINK AND SPRINGBOK

were the first brace. They were put down at 8:36. Both have run here before. Neversink was handled by Luke White and Springbok by John White. In pace, range and style Springbok was much the best, going at a fairly good rate of speed and moving nicely, he also showed fair style when on game. Neversink also went fairly well but appeared to be rank and would not back. Spring found three bevies, two of which he pointed nicely and one he flushed a portion of and dropped and then pointed the remainder, he also retrieved but had no opportunity to back as the only point that Neversink scored was to the first bevy after Spring had found it; none of the scattering birds could be found except two that were flushed by the handlers. At the end of 49m. Springbok was declared the winner.

DUKE OF HESSEN AND NICK OF NASO.

Considerable interest was manifest in this brace. Duke was imported last May and won first at New York in the light weight class. He was a winner in the English Derby and great things were expected of him. He is a very stylish going dog with a fair turn of speed and ranges well. In these respects he is superior to Nick, the latter was more stylish on point and has had more experience on our game and had the best of it in the work. He did not come up to his form of last year, having slowed down somewhat and shortened his range. At the end of 1h. they were ordered up and the heat was awarded to Nick. Duke refused to back while Nick backed in elegant style. Nick retrieved but not in first-class form, Duke having no opportunity.

CORNERSTONE AND TAMMANY.

This brace was put down at 10:42. Cornerstone, handled by Gleason, divided third at the Western trials last year. He moved fairly well, but is not fast. In pace, range and style Tammany had the advantage. He also had the best of it in the work and at the end of 36m. was declared the winner. The heat was far from being a brilliant one, both dogs going slow a large portion of the time and it was very fortunate for both that the other dog did nothing. Finally Tammany woke up, made a cast and found a bevy in good style and had much the best of the work among the scattered birds.

KING OF KENT AND BEN

were put down at 10:23. King is a recent importation. He is a very good looking dog, fast and stylish, a good ranger and goes with his head well up, he also shows up well when on game. In the absence of Capt. McMurdo Buckle handled him, but as he had never run him before King was under a disadvantage, as he was continually looking for the Captain. Ben is far from handsome, goes at a slow lumbering gait and has no pretensions to style. He is said to be a very killing dog, but he evidently did not understand the noise and bustle of a field trial. King beat him at all points, and at the end of 1h. was declared the winner. We then went to lunch at the Model Farm.

DON'S DOT AND MATCH II.

This brace was put down at 1:25. Don ran here last year, and in our report we wrote her down a dog, but a careful examination has convinced us that she is now a bitch, and quite a good-looking one too, having improved in appearance, pace and range. She is also quite stylish and is said to be an excellent performer, but either scent was bad or she was off in nose, as she did not locate her birds readily. Match is a handsome dog of medium size, a nice mover with a fair amount of speed. He was handled by S. C. Bradly, of Greenfield Hill, Conn., who made his first appearance in public. In pace, range and style Dot had a trifle the best of it. Both pointed and retrieved nicely, and Dot backed in grand style while Match was indifferent about it. Dot had the best of the work in a moderate heat, and at the end of 1h. 12m. she was declared the winner.

JETSAM AND LALLA ROOKH

were put down at 3:38. Jetsam ran here last year. She was handled by Seager. Rookh is an old campaigner and is well known. Both went fairly fast and put in considerable style, Rookh having a trifle the best of it in these respects. At the start Jetsam did some very pretty work on some scattered birds in the open field south of the Model farm house, getting a good lead, but Rookh got in some of her fine work soon after, and at the end of 22m. was clearly ahead and was declared the winner. This ended the first series, Dana having a bye. Following is the result:

First Series.

Springbok beat Neversink.
Nick of Naso beat Duke of Hessen.
Tammany beat Cornerstone.
King of Kent beat Ben.
Don's Dot beat Match II.
Lalla Rookh beat Jetsam.
Dana a bye.

Second Series.

DANA AND SPRINGBOK

were put down at 3:02. Dana is rather a nice looking little bitch, an easy mover with a moderate amount of speed. She was handled by Gleason. In pace, range and style Springbok had the best of it. He also outworked her, and after a moderate heat of nearly an hour Springbok was declared the winner. Both pointed nicely and Dana backed in good style. Springbok had but one opportunity to back, which he failed to improve.

NICK OF NASO AND TAMMANY

were put down at 4:13. In pace, range and style Tammany had the advantage. In style on point they were nearly equal. Both pointed and backed in first-class style, and both behaved well except Tammany was at one time a trifle unsteady to wing. Tammany got in some very good work among scattered birds, and won with something to spare in 28m. During the heat Tammany whirled on a gamy point, and a second later Nick also whirled and backed him in capital style, making a very pretty picture.

KING OF KENT AND DON'S DOT

were put down at 4:52 and ten minutes later were taken up to go down again in the morning. On Wednesday it was clear and cold, with a fresh breeze from the northwest. The dogs were cast off to finish their heat at 8:30. King went better than in his previous heat, having become acquainted with his handler. At the start they were about equal in pace, but toward the finish King cut out the work. There was not enough to choose between them in style of going or on point. Both pointed and backed nicely, and both were steady to wing and gun and each retrieved well. There was not much to choose between them, King having slightly the best of it in the work. After a moderate heat of 30m. King was declared the winner.

This ended the second series, Lalla Rookh having a bye. Following is the result:

Springbok beat Dana.
Tammany beat Nick of Naso.
King of Kent beat Don's Dot.
Lalla Rookh a bye.

Third Series.

LALLA ROOKH AND SPRINGBOK

were put down at 9 o'clock. It was almost a sure thing that Rookh would win this heat, as she had the best of her competitor all round, and her well-known ability to do good work left no room for doubt that the little lady would come out all right with a lot to spare, but the race was a go-as-you-please, for the handlers and both dogs were urged on when on game, and forced off point and taken away from their birds until they were completely bewildered and incapable of doing any creditable work. Rookh got the worst of it in the scramble and lost her chance to win by mismanagement. After an hour and a half of such work as we never before saw at a field trial, and sincerely hope never to see again, the head was decided in favor of Springbok. The rules forbid any such proceedings, and it was the duty of the judges to put a stop to it. As a show, however, the performance was most amusing. Near the finish of the heat Springbok made a point at the edge of a pine thicket and Rookh backed him some 10yds. away. Luke did not think her near enough to get a fair start in case the point should prove to be false, and he ordered her on, and she took a few strides and dropped within a few feet of Spring; he held his point, but naturally cringed a little when Luke said, "Your dog is moving Jack. Go on Rookh," and she, not having the

scent, made a break for the woods and was soon on point. This was too much for Jack, and as he had failed to put up a bird he ordered his dog on, but he would not budge, and Jack started toward him to get him going and flushed the bird he was pointing from under his nose.

TAMMANY AND KING OF KENT

were put down at 10:40. In pace, range and style they were nearly equal, and after 18m. with two flushes, one of them excusable, and three points for Tammany and one point and one flush for King they were ordered up and the heat was awarded to Tammany. This ended the third series as follows:

Springbok beat Lalla Rookh.
Tammany beat King of Kent.

Final Tie for First Place.

SPRINGBOK AND TAMMANY.

These dogs were both owned by Mr. Hitchcock, and as the rules provide that in such cases the judges may determine which is the better without running they selected Tammany and he was declared winner of firse prize.

Final for Second Place.

SPRINGBOK AND NICK OF NASO.

The judges decided that Nick of Naso was the best of the dogs previously beaten by the winner, and they were put down at 11:44 to decide second money. At 1:30 they were taken up for lunch and again put down at 2:22 and 24m. later the heat was decided in favor of Springbok and he was declared winner of second prize. Spring had let down somewhat in speed, but was still going well, although Nick was a trifle the faster. Nick appeared to be off in nose, as he flushed several birds that he should have pointed. The work was nearly equal until the finish, when Springbok found and pointed a bevy that Nick had passed by and had an equal opportunity to point. The judges selected Nick of Naso and Lalla Rookh for the two third prizes and the stake was finished. Following is the

SUMMARY.

First Series.

Springbok beat Neversink.
Nick of Naso beat Duke of Hessen.
Tammany beat Cornerstone.
King of Kent beat Ben.
Don's Dot beat Match II.
Lalla Rookh beat Jetsam.
Dana a bye.

Second Series.

Springbok beat Dana.
Tammany beat Nick of Naso.
King of Kent beat Don's Dot.
Lalla Rookh a bye.

Third Series.

Springbok beat Lalla Rookh.
Tammany beat King of Kent.

Final for First Place.

Tammany beat Springbok and won first prize.

Final for Second Place.

Springbok beat Nick of Naso and won second prize.

Equal Third.

Nick of Naso and Lalla Rookh.

THE CHAMPION STAKE.

The Champion Stake was run on Thursday, Dec. 1. There were ten nominations, eight of which filled. The judges were Messrs. Bergundthal, Coster and F. R. Hitchcock. Following is the list and the order in which they were drawn to run:

GLOSTER (Jas. L. Breese, Tuxedo Park, N.Y.), black, white and tan English setter dog, 3½yrs. (Dashing Rover—Trinket),

against

MAINSPRING (J. J. Perkins, Brooklyn, N. Y.), liver and white pointer dog, 6yrs. (Mike—Romp).

RICHMOND (J. E. Gill, Franklin, Pa.), white and lemon pointer dog, 4yrs. (Vandevort's Don—Beulah),

against

ROBERT LE DIABLE (Highland Kennels, Red Bank, N. J.), white and liver ticked pointer dog, 4yrs. (Croxteth—Spinaway).

BOB GATES (Whyte Bedford, Blythe, Miss.), black, white and tan English setter dog, 3½yrs. (Count Rapier—Belle of Hatchie),

against

FOREMAN (C. Fred Crawford, Pawtucket, R. I.), black, white and tan English setter dog, 7yrs. (Dashing Monarch—Fairy II.).

GATH'S MARK (Dr. J. N. Maclin, Keeling, Tenn.), black, white and tan English setter dog, 3yrs. (Gath—Gem),

against

RODERIGO (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan English setter dog, 4½yrs. (Count Noble—Twin Maude).

The running of this stake had been looked forward to eagerly by nearly every one interested in field sports throughout the country, and expectation was on tiptoe as to the result of this battle of the giants. There was a goodly number of spectators present, and among them each dog had admirers, who discussed the coming contest with more or less intelligence, explaining to their own satisfaction, at least, why their favorite was the better dog, and of course bound to win. Even the colored boys who led the dogs caught the spirit, and some of their criticisms and comments were, to say the least, fully as intelligent and more to the point than were some of those that emanated from some of the shining lights of the dog world. The weather was all that could be desired, except that it was rather too cold. The dogs all appeared to be as fit for the race as it was possible to get them, and the stake was opened under very favorable conditions. The judges are well known as gentlemen of probity and experience, and they performed their duties in a painstaking manner that won commendation from all, and in no instance was a decision given that was not unanimous. The stake was the most important event ever run in this country, and it brought out a better lot of dogs than were ever before seen together. The work throughout was of a very high order, and much of it was far better than even the most sanguine had expected to see.

At 8:45 Gloster and Mainspring were cast off for the first heat. In pace and range they were nearly equal. In style of going Mainspring had the advantage, being one of the easiest-moving dogs in the stake. In style on point both are very gamy, Gloster having slightly the best of it. Mainspring was trained for the race by Capt. McMurdo, but the Captain was absent and he was run by Buckle. Gloster was handled by Tucker. He opened the ball with some capital work on a bevy that were running down wind. Mainspring soon after pinned a single in fine style. At the finish of the heat Mainspring struck the trail of a bevy and was roading it out in capital style, when Gloster, not seeing him, struck the same trail ahead of him, and making a cast found and pointed them in his best style. This ended the heat in favor of Gloster after a run of 47m. Both backed nicely and were steady to wing and gun.

The next heat was between Richmond and Robert le Diable. In pace and range there was not much to choose between them. Neither one let out, appearing to be somewhat confused by the crowd and the pace was moderate. In way of going Richmond had the advantage. In style on point Robert showed up the best, neither of them appearing so gamy as we have seen them. Toward the finish in the open both went better, Richmond the faster and also the widest ranger. He appeared to be off in nose, however, and did not take to his birds readily. Robert clearly had the best of it in the work and at the end of 45m. was declared the winner.

The next brace, Bob Gates and Foreman, were put down at 10:21. Bob was handled by Tucker and Foreman by Tallman. Bob has a nice, easy way of going and appeared to be much the faster, but when they came together the long stride of Foreman carried him over the ground very nearly as fast. Bob had the best of it in range and style. Foreman showed the most hunting sense in looking over the likely places. He ran a very creditable heat, doing some good work in roading out and locating a bevy, but his younger and more agile competitor was too many for him on some marked birds, and at the end of 1h. 15m. Bob was declared the winner. In looking for a bevy that had been seen by the roadside Bob got wind of them and pointed and then moved on and roaded the trail the wrong way, Foreman going in the same direction. Tallman seeing that his dog had given it up, called him back and sent him toward where Bob had first struck it. Tucker by this time surmised what was up, and, calling frantically to Bob, started upon a run in that direction, and both he and Tallman put in their best licks, spending what spare breath they had in urging on their dogs. Bob got there first and made one of his grand points to the bevy which was just in front of him. There was then a race for the scattered birds and Bob was again ahead. Both pointed, backed and retrieved in first-class style, and both were under good control, Foreman having the best of it in the latter respect.

The last brace in the first series, Gath's Mark and Roderigo, were put down at 11:50. Mark was handled by Tucker and Roderigo by Avent. At the word go both were off like rockets. Mark bolted and was not found for some time, and when he was brought back Rod was lost, but he soon came round, and after a spin of 15 minutes they were taken up for lunch, which awaited us at the Holton schoolhouse. Half an hour later they were again put down. Both showed phenomenal speed, with the advantage slightly in favor of Mark. Rod is much the best mover, going level and carrying his head and tail in perfect style. He was also under the better control. Mark was a bit wild from lack of work, and could not be brought round in time when most wanted. Rod clearly had the best of it in the work, and after 51 minutes he was declared the winner. The race between these two flyers will long be remembered by those who were so fortunate as to witness it. Even the weary and disconsolate reporters woke up, and one of them, at least, will ever hold in grateful remembrance the beautiful animals that by their graceful movements and wonderful performances revived his drooping spirits and lightened his irksome task.

At 1:15 Gloster and Robert le Diable were cast off to run the first heat in the second series. Robert went better than in his previous heat, but was not the equal of Gloster in either pace, range, style or work, and at the end of 50m. the heat was decided in favor of Gloster. Both did fairly well, hut the heat was not a brilliant one.

Bob Gates and Roderigo were put down at 2:12. In pace and style Rod had the advantage. In range Bob had the best of it. Rod had slowed down somewhat, but was still going at a very lively gait. He got round to the likely places and clearly had the best of it in the work and at the end of 24m. was declared the winner.

At 3:46 Gloster and Roderigo were put down for the deciding heat. Great interest was manifested in the result, and each stride of the dogs was keenly watched. Both had let down in speed, although they still went at a good hunting gait and had settled down to work as though they realized that honor and fame were at stake. Rod had a little the best of it in pace and style and in range they were about equal. Gloster was lucky in getting on to the birds and scored the most points. No faults were committed except that Rod made a false point and Gloster made several. While the quality of the work done by both dogs was first-class that done by Rod was of a very high order of merit, and in this respect was superior to that of his competitor, and notwithstanding the fact that Gloster found the most birds, we believe that Roderigo is the better dog as sincerely as we believe that Gloster is a better dog than Roy Monarch, who beat him in the Members' Stake under very nearly the same conditions. The judges we have unbounded confidence in and great respect for their opinion, knowing that they would decide nothing without a firm conviction that exact justice was being done. In arriving at their decision we fear that they did not sufficiently take into consideration the fact that Gloster had the luck of the birds in finding the first bevy, and that when sent after the scattered birds he was again lucky in being thrown in the right direction, and that his last bird was practically found for him by Rod, who made a cast up the hill and found a bird which he pointed, and Gloster was brought round and backed until the bird was flushed, when he took a step or two and made a point to a bird that was rather too near him to have lain had he been going at speed. The heat was a close one and had continued for 1h. 24m., and the greater amount of work done by Gloster was probably thought by them sufficient to overcome the advantage that Rod had in the better quality. They were ordered up at 4:10 with Gloster the winner, and he was declared winner of the Champion Stake, and the meeting of 1887 was brought to a close.

MASTIFF PRIZES.

Editor Forest and Stream:

At the twelfth annual show of the Westminster Kennel Club, Feb. 21 to 24, 1888, the American Mastiff Club will offer the following prizes:

1. The club's silver challenge cup, value $150, for the best American-bred dog or bitch.
2. The club's two challenge cups, value $100 each, one for the best mastiff dog, the other for the best mastiff bitch, the property of a member of the American Mastiff Club.
3. Silver medal to the winner of each of these three cups.
4. Mastiff puppy sweepstakes, $25 added by the club, open to all comers.
5. A $50 cash prize for the best American-bred dog, the property of a member of the American Mastiff Club.
6. A $50 cash prize for the best American-bred bitch, the property of a member of the American Mastiff Club.

Any information desired by intending exhibitors can be procured of the secretary of the American Mastiff Club, 9 West Thirty-fifth street, New York. By order of the Executive Committee, AMERICAN MASTIFF CLUB.

STOP THIEF.—Jersey City, Dec. 5.—Stolen, Nov. 18, from 206 Pacific avenue, two pointer bitch puppies, 4mos., quite large for their age and well-developed. One liver and white ticked on chest and forelegs, with liver saddle, the other orange and white, evenly marked. Will brother sportsmen keep a lookout for the pups, and if seen communicate with me?—C. J. PESHALL.

THE COLUMBUS SHOW.—Columbus, O., Dec. 2.—The premium list of the second annual exhibition of the Ohio Poultry and Kennel Association is ready for mailing, and will be sent to all who apply for it by postal. Our prospects are very bright; the indications are that we will have a very successful show in every respect.—H. A. BRIDGE, Secretary.

DISQUALIFICATION OF T. J. FARLEY.—Hornellsville, N. Y., Dec. 4.—The Hornell Kennel Club has disqualified T. J. Farley, of Albany, N. Y., on the charge of stealing at our show in 1886.—J. OTIS FELLOWS, Secretary Hornell Kennel Club.

IMPERIAL CHANCELLOR.

Editor Forest and Stream:

Your correspondent, Mr. Marshall, errs in imagining himself to be the importer of Imperial Chancellor. Mr. Marshall is the purchaser not the importer. Kindly allow me space to reply to his statement: "So far as I am able to ascertain Chancellor is by for the largest and most powerful of the Crown Prince family. He has the most robust body I ever saw on a dog." I do not object to Mr. Marshall giving his new purchase a free ad. but as I own a Crown Prince dog, champion Ilford Caution, I would like to know where Imperial Chancellor beats him in size except about 1in. in length of legs and muzzle. I examined and measured Chancellor very carefully the past summer. Caution beats him 1in. in girth of skull, the same in muzzle, 1¼in. in forearm, and also in chest, ears and in hocks.

Mr. Marshall further quotes from a letter from Mr. Wade, where he says, "Chancellor has * * * better hocks than any other Crown Prince dog that ever came over here." Perhaps Mr. Wade has not seen them all. There is one in Boston miles ahead of Chancellor in mastiff points, and if I remember rightly both Debonair and Prince Waldemar are very much more truly formed in hocks. It is on record that Imperial Chancellor was a cow-hocked dog when in England, and it seems to me that defective limbs in Liverpool would also be detective limbs in New York. Sea air is very invigorating, but I have never known it to straighten the crooked. E. H. MOORE.

MELROSE, Mass.

Editor Forest and Stream:

Your are wrongly informed. I imported Imperial Chancellor about a year ago, and have recently sold him to Mr. C. C. Marshall. ASHMONT KENNELS.

BOSTON, Mass.

[The mistake of crediting to Mr. Marshall the importation of Imperial Chancellor was made in the absence of the editor of this department.]

Editor Forest and Stream:

I find that owing to a misunderstanding I misquoted Mr. Wade, and hence a mistake appears in your note in regard to Imperial Chancellor in your issue of Dec. 1. I understand Mr. Wade's declaration was not that Chancellor is the best-hocked dog of the Crown Prince strain, but that he is one of the three or four Crown Prince dogs imported here that did not call for the severest criticism in regard to hocks. It is also an error to state that I imported Chancellor; that honor belongs to Dr. J. Frank Perry, of Boston.

CHARLES C. MARSHALL.

NEW YORK, Dec. 5.

COCKER SPANIELS.

Editor Forest and Stream:

I notice that correspondents in FOREST AND STREAM are arguing what should be the correct type of the cocker spaniel. To my mind there is but one and that is the spaniel that we often read about but very seldom see—the small variety, weighing under 23lbs. and corkily made. There is hardly a doubt but that the Principality of Wales and the county of Devon have been the homes of the cocker proper—but thanks to outside fanciers of field spaniels—all that we see nowadays on the English show benches are simply wastrels of large spaniel litters, and are called by their owners to a gullible public cockers. Save the mark!

Now to my mind—but please remember I do not put myself forward as an infallible authority on the subject—the cocker should not be self-colored, *i. e.*, liver or black, but if a choice is to be made between the both colors let liver be chosen. Liver and white, black and white, lemon and white, are the colors some of us remember as the old sort, which were not only useful in the field but also greatly admired by sportsmen. I need hardly tell you there are several spaniel men in this country who know just as much about a gun or a day's outing in a field as a pig does about a holiday, and to these sports (?) we may put down the fashion of long-backed cockers.

As you may perhaps be aware, I visit nearly every show in the United Kingdom, but for over two years I have not seen a half a dozen real cockers. Every day or so I receive letters asking me to look at such and such a spaniel and to let the correspondents know what I think of their animals at shows, but without exception they all at foot add their own ideas of their dogs. Such has been going on for a long time and there is no doubt will continue, but candidly speaking each correspondent's idea of a spaniel changes with every new dog he happens to possess and wants to rush. Ah! there the secret comes in, and where the owners make themselves ridiculous. Long and low cocker spaniels, for myself, I cannot stand at any price, but the corky liver and white, with well ticked legs, head inclined to apple shape and under 23lbs. I have a weakness for. If the coat has just the slighest twist, and the feather on the ear inclined to curl just a bit, I should not discard him, so long as his body was shorter than the field or clumber spaniel's.

The best cocker of the old stamp was to be seen at Brighton show last week. She hailed from Devonshire; a liver and white bitch, weighing about 19lbs., as far as I could judge. She was very corky, but as a show dog very faulty in shoulders and her head was not shown in the correct manner, and, of course, from such I mean it could have been very much improved if it had been done properly. I spoke to one or two new fellows in the spaniel line, and pointed out the old type of cocker to them. They looked, but passed no remark; but when my back was turned probably laughed at my choice. Of course, they had never seen anything like it before, but when the judge gave it first over two very good—but modern—cockers, they opened their eyes, and then, of course, brought all the uninitiated to see the wonder of a real alive cocker.

I have seen a reference made to the late Mr. Langdale as a thorough judge of a spaniel. Can I pay a greater tribute to a deceased friend than in saying I indorse such to the very letter, and perhaps the following reminiscence of "poor old Langdale," as he is still affectionately called in this country, may give readers an idea of what he thought was the difference between a field and a cocker spaniel.

He was judging at two shows that followed very closely on one another, and in each case he took the spaniel classes. At the first exhibition there was a class for cocker spaniels and he put the very neat short-backed Nelly VII. first and Rinka, a longer bodied, but lovely bitch, second. In a short time afterward he reversed his decision, and of course the usual grumbling and humbug about inconsistency took place.

Over our dinner we had a friendly chat, and among other things we talked the matter over.

"Well, what was the reason," I queried, "you upset your decision at Cardiff?"

"Ah, Lloyd," he said, "I was judging cockers there; but to-day the class is for spaniels under 28lbs."

And there was the secret and no mistake. Rinka was better as a spaniel under 28lbs., but not so good as a cocker, although both were within a half a pound of one another in weight, and to make a long story short, the reason of Rinka being put back in the first place was because of her length of back.

Some time ago I wrote rather a severe article in one of our English journals, and maintained that show spaniels were unfit for work, and subsequently Mr. Otis Fellows backed me up in my arguments, which, strange to say, not one of our English spaniel men had the courage to refute, but the change is coming about slowly but surely.

Mr. Bryden's kennel of well-known spaniels have changed wonderfully of late, and shorter in back these are becoming; and consequently a more workmanlike specimen is recognized in every new face we see.

By and by there will be reaction in the cocker spaniel world. Mark my word, and the time will come when particolored spaniels, well-ticked, of little weight and corky in style, will be the recognized type, as they were before wasters of long-backed litters, by hook and by crook, sneaked into the cocker classes. I could for a long while go on and give the antecedents of some of our show cockers, but perhaps more anon. FREEMAN LLOYD (The Wanderer).

LONDON, England.

Editor Forest and Stream:

In your issue of Nov. 17, Mr. Charlesworth again makes personal charges on Mr. Nelles. After giving his letter most careful attention I fail to see in what manner he is endeavoring to benefit the modern cocker spaniel.

It is something new to me to think that the cocker spaniel owes his great beauty "to his great girth, deep chest, strong loin and powerful limbs." Every one of these attributes might be used in describing the beauty of the bloodhound, but for the merry cocker to be thus described has fairly taken my breath away.

Mr. C. most undoubtedly gave Tippoo and Toronto Jet as his idea of cockers, but when corrected by Mr. Fellows or myself he says it was to show that the modern cockers had field spaniel blood in them. If this was his intention I failed to see that point in his letter, and must apologize for my obtuseness.

Mr. C. wishes apparently to appear to the public as one who has exhibited largely, at least I gather this from his letters; but an extraordinary fact in this connection is that his name does not even appear in the catalogues of any of our big shows for the last ten years. I never heard of him owning a prize dog except Brant, and he had not sense enough to hold on to him, or he did not know how good he was. It looks to an outsider as if he were jealous of Mr. Nelles because he had the good judgment to buy Brant.

As to Canadians importing dogs from the States he is quite right, he himself being the one important exception that I know of, except the Woodstock Kennels, who imported one or two Obos. The foundations of the Canadian modern cockers were brought from England. In years gone by Toronto had one of the best cocker spaniels in America in the bitch Brawnie, but I do not think there are many like Brawnie left, and "more's the pity" as she was not one of the "fag out kind," and I should say from what I recollect of her that she both could and would act in any capacity that a dog ought in the forest, lake or stream. My object in writing this letter is to show what bad form it is to make personal a newspaper correspondence. No good can come from it, but much oftener bitterness is most likely to ensue, which most surely defeats the original object, which in this case was to benefit the modern cocker spaniel. M. B.

DOG LICENSES.

JUDGE DIXON yesterday decided that the dog ordinance passed by the Board of Aldermen some time ago is valid and that the authorities here have the right to compel every dog owner to pay a license fee of two dollars per year. The decision was rendered at the instance of the Passaic County Fish and Game Protective Association. Nearly every member of this association owns a dog or two and there had been a great deal of complaint in relation to the license fee exacted by the city. It was common talk among lawyers that the ordinance requiring the payment of a registration fee of two dollars was worthless, and more than one lawyer told the Recorder that the ordinance would be peremptorily set aside should the case ever be taken to the Supreme Court. The Fish and Game Association was anxious to be of as much service to its members as possible and still did not desire to indulge in any bootless litigation. A resolution was accordingly passed employing ex-City Counsel Francis Scott to take such steps as might be advisable in the matter, and in case there was any reasonable hope of success to carry the ordinance to the Supreme Court for review. Mr. Scott accordingly set himself to work to find out just how matters stood. He looked up the law on the matter and soon ascertained that there was no question about it that the city had no right to levy a tax on dogs; it is given the right by charter to regulate the running at large of dogs and to exact a registration fee for the registry of dogs. The weakness of the ordinance consisted in the fact that it fixed two dollars as the registration fee, a sum which appeared to be altogether out of proportion to the services rendered. The city collects about six thousand dollars per year from the dog license; the cost to the city is about ten dollars, being the price of the tags and the printed blanks. Then the city provides that men who keep or harbor dogs shall pay the registration fee, whereas the charter declares that the registration shall be exacted from owners. Mr. Scott prepared affidavits on these two points and yesterday afternoon argued the matter before Judge Dixon. He laid the whole case before him, not as a counsel against the ordinance, but as a lawyer would who is anxious to get an opinion from a judge without going to the expense of litigation. He represented both sides of the question.

Judge Dixon expresses it as his opinion that in cases of this kind action ought first to be taken in the lower courts. The recorder ought to be applied to to set the ordinance aside, and there ought to have been an actual prosecution; it was true that ordinances might be taken to the Supreme Court for review when there was a threat to enforce them, as there was in the present case, but he thought that this was one of the cases in which it ought to be made to appear to the Supreme Court that the relief which might have been afforded by the recorder had been denied. Mr. Scott then asked whether the court would grant a writ of certiorari in case the recorder decided against the appellant.

This brought on a discussion of the case on its merits, for had the judge decided to grant the writ in case of an adverse decision below such a decision could have been easily obtained, as Recorder Greaves takes it for granted in every case that the city ordinances are as solid as the constitution of the State. Judge Dixon declared that even under such circumstances he would not grant the writ, after having carefully examined the law in relation to the matter.

In reference to the question of excessive fee the judge decided that the city had the right to charge a fee in proportion to the services rendered. In this case it was necessary to employ men to do the work of registering; the fact that these men were employed to do other work and that it cost the city no more if the work were done by its regular officers did not lessen the amount of work done; it might as well be argued that the salaries of police officers ought to be reduced because in some years they made more arrests than in others. The city was entitled to fair compensation for the work it did, no matter whether the work was done by the officers in charge of other work or whether it was done by a special officer designated for that purpose. The judge thought that $5,000 to $6,000 was not too much to receive for the work done.

In relation to the right of the city to tax dogs not belonging to persons harboring them, the judge said that that would raise a very fine point. It was a question whether harboring a dog did not constitute ownership, just as much as a man owns a house he rents and is responsible for its proper keeping. He would certainly decline to grant a writ of certiorari on such a point. The result is that in the opinion of Judge Dixon, after listening to an exhaustive argument, the dog ordinance of this city is valid, and that dog owners will have to continue to submit to what has appeared to them as an imposition.

It is certainly a relief to dog owners that this question has been definitely settled, and that there is no use making any further fuss about the fee. Mr. Scott in his researches in the matter wrote letters to the city clerks of various cities making inquiry as to the fees required from dog owners. A glance at these figures will convince dog owners that they are lucky to reside in Paterson, where only $2 per year is charged for the questionable luxury of keeping a dog. The following are a few facts gleaned from the letters received by Mr. Scott:

In Richmond, Va., the fee is $1 for a male dog and $2 for a female dog. In Toledo, O., the difference between a tax and a registration fee is observed, 50 cents being charged for registration in all cases where the dog is listed for taxation and assessed as so much personal property; where the dog is not assessed as personal property $1.50 is charged for males and $2.50 for females. In Massachusetts the matter of registering dogs seems to be regulated by the Legislature, for the fee for registering all over the State is $2 for a male dog and $5 for a female dog. In Kansas City, Mo., the registration fee is $1 for a male dog and $3 for a female dog. New Haven, Conn., takes the bakery for regulating dogs. There it costs a man $1 per year to keep a male dog and then he has to pay a registration fee of 15 cents. It costs $6 per year to keep a female dog in addition to the fee of 15 cents for registering the dog. The $1 and $6 are evidently the tax and 15 cents is considered a proper fee for the trouble of registering, for which the city authorities here charge $2.—*Paterson (N. J.) Press, Nov. 29.*

AMERICAN KENNEL CLUB.

AT a special meeting of the A. K. C. at 44 Broadway, Dec. 6, 10:45 A. M., President Childs in the chair, the following were present: American Fox-Terrier Club, Thos. H. Terry; Cleveland B. S. Association, K. E. Hopf; Hartford K. C., C. D. Cugle; Hornell K. C., Jas. Watson; New England K. C., Jean Grosvenor; New Haven K. C., S. R. Hemingway; New Jersey K. C., C. J. Peshall; St. Paul and Minnesota K. C., H. F. Schellhass; Westminster K. C., J. O. Donner; Philadelphia K. C., J. H. Winslow.

The amendments to the constitution, of which a draft was given in the FOREST AND STREAM of Nov. 3, were considered. Amendment to Sec. 1 Art. IV., carried; to Sec. 2 Art. IV., lost; to Sec. 1 Art. V., carried; to strike out Sec. 3, carried; to Sec. 3 Art. V., carried; to Sec. 4 Art. V., carried; to Sec. 6 Art. V., lost; to Sec. 7 Art. V., carried; addition to first clause, Art. VI., carried; change in second line of second clause, carried; change in Art. IX., lost; change in Art. X., carried.

Amendments to by-laws: Secs. I., II., III., IV. and V., carried. Amendments to Rules 2, 3, 4, 5, 6, 10, 11, 12, 13 and 15, carried. Rule 6, substitution of "P. M." for "noon," carried. Rest of amendments lost. Insertion of a new Rule 17, amendment of Jas. Watson, lost; insertion lost; Rule 18 carried; Rule 21, strike out on second line beginning with "exhibition" to word "association" and substitute "person," lost; remainder regarding deposit of $5 and insertion of word "show" before "committee," carried. Other amendments carried.

Notice of meeting and forfeit clauses adopted. Rule 22, part relating to suspension, disqualification, etc., carried; addition at close of second paragraph, carried; addition of new rule, "No person under suspension," etc., carried; Rule 23, carried; Rule 24, portion referring to payment of prizes, etc., carried; balance, insertion of new rule, "The person presenting," etc., carried; amendment to Rule 25 carried. List of recognized shows adopted, with following additions: Fox-Terrier, 1887; Hornell, 1887; London, Ont., prior to 1886; Milwaukee, 1887; Manitoba Pet Stock, 1885; Meriden prior to 1885; St. John, N. B., 1886; St. Paul and Minnesota, 1887. Amendment to Article II., lost; amendment to Article V., Section 3, lost; substitute for Rule 18 withdrawn.

Quarterly meeting of the Executive Committee, held Dec. 6, at 44 Broadway, 2:45 P. M. President Childs in the chair. Present, the American Fox-Terrier Club, T. H. Terry; Hartford K. C., C. D. Cugle; New England K. C., Jean Grosvenor; New Jersey K. C., C. J. Peshall; Philadelphia K. C., J. H. Winslow; St. Paul and Minnesota K. C., H. F. Schellhass; Westminster K. C., J. O. Donner.

Minutes of last meeting accepted as read. Treasurer's report accepted as read. Report of Stud Book Committee accepted as read. Committee on Haldeman matter reported that the matter was settled; accepted and committee discharged. In St. Paul and Minnesota K. C., O'Shea evidence read. Mr. Peshall moved to suspend O'Shea for six months. Mr. Donner amended to strike out "for six months." Amendment carried. Motion of Mr. Peshall as amended carried.

Communication of J. Otis Fellows, secretary of the Hornell Kennel Club, in matter of disqualification of T. J. Farley, laid over.

Motion of Mr. Peshall, as follows, carried: "That whereas James Watson, Esq., who is now the honored delegate of the Hornellsville Kennel Club, and that whereas the said James Watson, Esq., is now engaged in publishing and as editor of the *American Kennel Register* in opposition to the American Kennel Club Stud Book, and as editor of the same, and as editor of the kennel department of the Philadelphia *Sporting Life*, uses his positions in opposition to said Stud Book published by the Association, therefore be it resolved, that the Hornell Kennel Club be respectfully requested to name some other delegate to represent said club, and that the Secretary be requested to send a copy of this resolution to Mr. Watson and a copy to the Hornellsville Kennel Club."

Motion of Mr. Cugle, seconded by Mr. Winslow, as follows, carried: Rule 2. "Every dog entered at any show held under these rules must be the *bona fide* property of the person making such entry, on the day of closing the entries, and must be registered in the American Kennel Club Stud Book. In case a dog has not been registered previous to date of entry, owner must fill out registration blank and forward same with fee of fifty cents together with show entry to the secretary of the show, who shall mark the dog as registered and forward blank with registration fee to the Secretary of the American Kennel Club." (The above to take effect Jan. 1, 1888.) Then follow with second clause as in old Rule 2.

Mr. Donner moved to change Rule 21, Paragraph 2 to read as follows: "The Committee shall at once meet and decide upon any objection lodged during the show, and from their decision an appeal may at once be taken to the local delegate or to any member of the Executive Committee of the American Kennel Club, who may be called upon by the show committee." Carried.

On motion of Mr. Peshall, seconded by Mr. Winslow, the American Mastiff Club was unanimously elected to membership.

On motion of Mr. Peshall, seconded by Mr. Donner, application of Stafford Springs K. C. laid over.

On motion of Mr. Winslow, seconded by Mr. Schellhass, the application of Winsted K. C. rejected.

Resolution *re* Hornell K. C. delegate offered by Mr. Peshall, seconded by Mr. Donner, carried.

THE AMERICAN FIELD TRIALS.—Cincinnati, O., Dec. 3.—*Editor Forest and Stream:* Referring to my message to the Eastern Field Trials Club in relation to Mr. Mitchell handling in the American trials this month, which was published in your paper recently, permit me to say that no one inspired the telegram or asked that Mr. Mitchell be permitted to handle for them. I alone am responsible for the message; I had my reason for sending it.—W. B. SHATTUC, President.

FOX-TERRIER CLUB STAKES.—The Homebred Puppy Stakes are for puppies whelped on or after April 1, 1887.—FRED HOEY.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Don Carlos. By E. C. Johnson, Framingham, Mass., for white and tawny St. Bernard dog, whelped March 15, 1885, by Rosso (Don—Gretchen) out of Doxie (Romeo—Juliet).

Blaze. By J. W. Gale, Providence, R. I., for dark red Irish setter dog, whelped Oct. 13, 1887, by Chief (Berkley—Duck) out of Bizreena (Nimrod—Bizorah).

Timferna. By E. M. Crouch, Thomaston, Conn., for liver and white pointer bitch, age not given, by Tim (Wise's Tom—Wise's Beulah) out of Kennerly's Guiferna (Randolph's Guy—Kennerly's Lady Fern).

Onota Belle. By Nelson McIntosh, Providence, R. I., for dark red Irish setter bitch, whelped Oct. 13, 1887, by Chief (Berkley—Duck) out of Bizreena (Nimrod—Bizorah).

Greenwood Kennels. By W. A. Power, Greenwood, Mass., for his kennels of mastiffs.

NAMES CHANGED.

Glen Dart to Dart Glen Rock. English setter bitch, by Glen Rock out of Countess Flirt, owned by M. M. MacMillan, Mahanoy City, Pa.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Sally—Tim. Geo. Langran's (Yonkers, N. Y.) red Irish setter bitch Sally (Chief—Princess Alice) to Wenzel's Tim (Biz—Hazel), Nov. 14.

Lil—Fairy King. E. B. Clark's (Orange, Conn.) English setter bitch Lill (Ranger II.—Maud) to Rosecroft Kennels' Fairy King (Foreman—Jessie), Nov. 27.

Fancy—Monarch. W. A. Power's (Greenwood, Mass.) mastiff bitch Fancy (A.K.R. 5503) to E. B. Sears's Monarch (A.K.R. 5507), Nov. 30.

Coquette—Resolute. Jos. R. Trissler's (Lancaster, Pa.) fox-terrier bitch Coquette (Bacchanal—Trifle) to Blemton Kennels' Resolute (Result—Diadem), Dec. 2.

Gaudy—Resolute. R. Gibson's (Delaware, Ont.) fox-terrier bitch Gaudy (Brag—Tricks) to Blemton Kennels' Resolute (Result—Diadem), Nov. 19.

Festive—Regent Vox. L. Timpson's (Red Hook, N. Y.) fox-terrier bitch Festive (Bacchanal—Blemton Arrow) to Blemton Kennels' Regent Vox (Tackler—Sandy Vic), Nov. 15.

Killarney II.—Tim. R. Q. Taylor's (Baltimore, Md.) Irish setter bitch Killarney II. (Shomberg's Hela—Killarney) to Max Wenzel's Tim (Biz—Hazel), Nov. 6.

Alice—Tim. S. F. Sniffen's (Orange, N. Y.) Irish setter bitch Alice (Glencho—Bess) to Max Wenzel' Tim (Biz—Hazel), Dec. 5.

Syreen—Chief. Herbert Flint's (Haverhill, Mass.) Irish setter bitch Syreen (Elcho—Rose) to Max Wenzel's Chief (Berkley—Duck), Dec. 1.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Linda. C. H. Spring's (Newton Lower Falls, Mass.) St. Bernard bitch Linda (A.K.R. 2552) Nov. 24, ten (six dogs), by J. H. Long's Hector.

Lady Friend. Onota Kennels' (Pittsfield, Mass.) Irish setter bitch Lady Friend (Bob—Friend), Nov. 26, three (two dogs), by Glenmar II. (Glencho—Red Lassie).

Gamma. Blemton Kennels' (Hempstead, L. I.) fox-terrier bitch Gamma (Bacchanal—Delta), Oct. 30, three (two dogs), by their Lucifer (as in præsenti) (Splinter—Kohinoor).

Rejoice. Blemton Kennels' (Hempstead, L. I.) fox-terrier bitch Rejoice (Roysterer—Ransome), Nov. 11, two dogs, by A. H. Clarke's Reckon (Reckoner—Rachel).

Tony. Max Wenzel's (Hoboken, N. J.) Irish setter bitch Tony (Tim—Jersey Beauty), Nov. 27, eleven (four dogs), by his Chief (Berkley—Duck).

Meg. G. G. Cleather's Dandie Dinmont bitch Meg, Dec. 4, six (four dogs), by Border Wang.

Duck. C. Palmer's Gordon setter bitch Duck, Nov. 28, nine (seven dogs), by J. F. John's Lock (Tom—Pansy).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Catfoot. Dark red Irish setter dog, whelped March 16, 1885, by Chief out of Fashion, by Max Wenzel, Hoboken, N. J., to Thos. B. Penton, Jr., New York.

Si. Red Irish setter dog, whelped March 22, 1886, by Tim out of Florid, by Max Wenzel, Hoboken, N. J., to Thos. B. Penton, Jr., New York.

Vixen. Red Irish setter bitch, whelped Jan. 26, 1887, by Tim out of Yoube, by Max Wenzel, Hoboken, N. J., to Edward Dunn, Brooklyn, N. Y.

Edwy. Light fawn mastiff dog, whelped June 30, 1887, by Orlando out of Countess of Woodlands, by Wm. Wade, Hulton, Pa., to Dr. Geo. B. Ayres, Omaha, Neb.

Wacouta Jess. Fawn, black points, mastiff bitch, whelped Sept. 26, 1887, by Wacouta Nap out of Wacouta Bess, by Wacouta Kennels, St. Paul, Minn., to Robt. Ray, Bellmont, Dak.

Corsair. Fawn mastiff dog, age and pedigree not given, by Wacouta Kennels, St. Paul, Minn., to R. K. McNeil, North St. Paul, Minn.

Wacouta Lena. Fawn, black points, mastiff bitch, whelped Sept. 26, 1887, by Wacouta Nap out of Wacouta Bess, by Wacouta Kennels, St. Paul, Minn., to Geo. P. Zeiss, Mount Pulaski, Ill.

Wacouta Hope. Fawn, black points, mastiff bitch, whelped Sept. 26, 1887, by Wacouta Nap out of Wacouta Bess, by Wacouta Kennels, St. Paul, Minn., to A. D. White, same place.

Rex. Black and tan Gordon setter dog, whelped July 27, 1887, by Dreadnaught out of Dora (A.K.R. 1183), by Claire-Reeta Kennels, Palmyra, N. Y., to S. C. Steuber, Williamsport, Pa.

Bacchanal—Miss Tackler whelp. White, black and tan fox-terrier dog, whelped May 27, 1887, by Blemton Kennels, Hempstead, L. I., to L. Timpson, Red Hook, N. Y.

Young Gath—Belle Starlight whelp. Black and white ticked Llewellin setter dog, whelped July 12, 1887, by Chas. York, Bangor, Me., to V. G. Chadevne, Sing Sing, N. Y.

Gun (A.K.R. 1538)—Morning Star (A.K.R. 1541) whelp. Black, white and tan Llewellin setter bitch, whelped July 8, 1887, by Chas. York, Bangor, Me., to L. R. Avery, Bremen, Ind.

Chief—Bizreena whelps. Dark red Irish setters, whelped Oct. 13, 1887, by Onota Kennels, Pittsfield, Mass., a dog to John D. Gale and a bitch to Nelson McIntosh, both of Providence, R. I.

PRESENTATIONS.

Timferna. Liver and white pointer bitch, age not given, by Tim out of Guiferna, by Wm. C. Kinnerly, White Post, Va., to E. M. Crouch, Thomaston, Conn.

DEATHS.

Bessie Bondhu. English setter bitch, whelped Aug. 27, 1887, owned by Lake View Kennels, Roxbury, Mass.; distemper.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

W. S., New York.—My setter dog 4 years old has most always a dry nose, by what means can I get his nose moist as it ought to be? It would no doubt improve his scent, although he points and is staunch, but sometimes it seems as if his scent lacks on account of the dryness of his nose. Ans. It the dog's general health is good the nose should be moist. Keep bowels regular. Feed meat only when dog is working.

C. A., New York.—Use following salve:

R. Ung. diachylon..... ℥ss
Ung. zinc oxid..... ℥iss

Mix. Sig. Apply to affected parts after sponging with warm water and castile soap. Keep bowels clear. Probably due to infirmities of age.

THE MEMPHIS AND AVENT KENNEL will offer a number of broken dogs for sale during the Eastern and American trials. Among those offered for sale will be their entire Derby, All-Aged and Champion entries. This kennel will not send dogs to purchasers on approbation, preferring for purchasers (or their deputized agents) to see the dogs at work during the trials and privately. This will be a rare opportunity to secure some first-class dogs from combined field-trial and bench-show winning strains, broken by Mr. J. M. Avent.—*Adv.*

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co

RANGE AND GALLERY.

BOSTON, Dec. 3.—The attendance of riflemen at the range at Walnut Hill to-day was large. The weather conditions were favorable, and several good scores were completed. Following is the day's shoot:

BOSTON, Dec. 6.—Yesterday Mr. F. E. Bennett, of this city, began an effort to shoot 100 shots per day with an army revolver for ten consecutive days at an American standard target, 50yds. distance. The work was done at the Walnut Hill rifle range, and the following unparalleled score was made:

1.	6	10	8	10	7	10	10	10	10	—91
2.	8	10	9	10	7	9	9	9	10	8—89
3.	9	10	10	6	9	10	9	10	10	—93
4.	10	9	9	6	10	10	10	8	9	9—90
5.	8	10	7	6	9	8	9	9	10	9—85
6.	8	9	9	10	10	10	10	10	10	8—94
7.	7	9	10	10	6	9	10	8	7	6—82
8.	10	10	9	10	7	9	8	9	7	9—88
9.	10	10	8	8	10	9	10	10	7	8—90
10.	9	7	7	10	10	8	8	9	9	7—84—886

This total of 886 beats Chevalier Paine's best record by 45 points, and is 12 points better than Bennett's best previous score. It will be noticed that the sixth string was a clear score of bullseyes, and that during the 10 shots 16 consecutive bullseyes were made. The shooting is simply phenomenal. A wager is made that during the week Mr. Bennett will, on three days, beat Paine's best record of 841 in a possible 1,000, and another bet is posted that the aggregate of the six days' shoot will average 841 or better.

OWENSVILLE, Ind., Nov. 29.—Only six of the Owensville Ballard Rifle team met on their range to-day, Messrs. John Daugherty and Perry Stone were visitors and were invited to shoot a score with the team, standard target, 200yds., strong reflection of light from snow:

G Wetter	6	8	6	7	10	9	8	5	9	5—73
J Montgomery	4	7	5	10	6	10	10	6	4	8—70
W Gentry	10	10	6	7	5	7	6	8	3	8—70
W Roberts	4	9	5	8	5	5	8	10	5	5—64
J Stone	10	5	5	4	4	4	5	9	3	6—55
Jas Daugherty	0	5	4	5	3	0	3	1	0	4—25
Perry Stone	8	4	4	5	2	5	5	8	3	2—44
John Dougherty	3	4	1	4	3	3	7	1	5	9—40

G. Wetter wins gold medal, Jas. Daugherty leather medal.

WILMINGTON, Nov. 24.—The scores of the rifle contests to-day at Healdmoor are as follows in the grand popular prize match at 200yds. on Creedmoor target, out of possible 25 points:

H B Seeds	55553—23	J R D Seeds	54444—21
T F Carlin (mil.)	1 64454—23	W Rice	44454—21
W F Seeds	54554—23	J R Wickersham	44444—20
J F McCafferty	44455—22	H Simpson	53344—19
C Heinel, Sr	45454—22	E J Darlington	54325—19
J B Bell	45445—22	J W Geyer (mil.)	1 34442—18
I S Bullock	45445—22	E H Rhoads	33444—18
Charles Hunt (mil.)	1 44543—21	Wilmer A Ruthven	34243—16
F H Eachus	54444—21		

The following scores were made in the beginners' match at 200yds.:

J S Jefferis	44545—22	W B Haddock	45444—21
H Chapman	44554—22	G Vanaman	44544—21
J P Wickersham	45445—22	C Gottwerth	44444—20
F Kane	44544—21	William Lawton	44444—20
W Davis	54444—21	T Robinson	45344—18
I S Bullock	45444—21		

WORCESTER, Nov. 24.—At the rifle shoot at Broad Meadow Range to-day, besides the usual practice and record shooting, there was a handicap shoot for four turkeys offered by the club, the shooting being at 200yds., Creedmoor count. The handicap allowance and scores stood:

With Military Rifles.

Shumway	43 42 41—126+15—141	Taylor	40 39 38—117+15—132
Early	41 41 41—123+15—138	Pepper	39 36 33—108+24—132
White	45 44 43—132+ 5—137		

Sporting Rifles.

Leighton	47 46 46—159 —159	Bernard	41 40 40—121+12—133
Burton	46 44 43—133+6—159		

Shumway, Leighton, Burton and Early took the four birds home with them.

A few of the members of the City Guards shot for practice at the Peat Meadow Range, at 200yds., and the following scores were made:

Lieut Tisdell	3454443455—40 4544545545—43	Pvt McIntosh	2544433455—39 4445144444—41

EUROPEAN SMALL ARMS.—The ordnance officers of the army have been watching with keen interest the recent European experiments with small firearms, and to satisfy himself of the merits of the Hebler and Labelle rifles, General Benet, Chief of the Ordnance Bureau, has procured samples of these weapons, which are now on their way to this country. One of the Swiss rifles has already come into the possession of one of General Sheridan's aids, and has been for some days an object of interest to army officers. This rifle embodies in a high degree the principle of reduced calibers in small arms. The caliber has been reduced from .44 to .30, and a small bullet composed of an alloy of lead and antimony covered with steel has been substituted for the old lead bullet. The result has been an increase in the velocity of the bullet, greatly increased penetration and range, and a very flat trajectory or arc described by the ball, which means much better accuracy of fire. Owing to the smooth surface of the steel-clad bullet it is also believed that the wounds inflicted will be much more readily healed.

CAMBRIDGE, Mass., Nov. 30.—The second annual competition between the two military companies of Cambridge for the *Tribune* trophy took place at the North Cambridge Rifle Range this afternoon. The wind and light were all that could be desired, but the extreme cold made the handling of the rifles rather unpleasant, and to a greater or less extent served to lower the scores of both teams. In the competition last year the City Guard, Co. B, Fifth, won by a score of 164 to 158, and during the year has pointed with pride to the *Tribune's* handsome gift, which was hung upon the wall of its meeting room. This year its colors were lowered by the score of 174 to 173. The shooting was at 200yds., each team consisting of 7 men, and each man being allowed 7 shots. The score follows:

Company B, First Regiment.		Company B, Fifth Regiment.	
Pvt Osborn	4443544—23	Sergt Balmer	4534444—28
Capt Dallinger	5344445—27	Pvt Lounsbury	4444443—27
Lieut Dodge	5444443—26	Corp Henderson	4245344—26
Pvt Marshall	4444234—25	Pvt Chittick	4434325—25
Pvt Dillaway	4333443—24	Pvt Mason	4424442—23
Pvt Boardman	4344043—22	Lieut Sinclair	0444434—23
Sergt Parkhill	2435440—22—174	Sergt Henderson	2344404—21—173

AUBURN, Nov. 25.—The Auburn Light Infantry celebrated Thanksgiving by a target shoot for the company's gold badge, the conditions of the shoot are that a member must win the badge for three successive times in order to own it, and as Corp. Larrabee had won it twice, quite an interest was manifested in the result, Pvt. G. V. Tufts making the best record with a score of 26 out of a possible 35. The best scores being as follows:

Pvt Tufts	4552343—26	Corp Larrabee	2324353—22
Mus Read	4545223—25	Pvt Danforth	4324422—22
Capt Storah	4444225—24	Pvt Fuller	4323343—21
Pvt Cookson	0354354—24	Pvt Pettengill	4323232—19
Lieut Bisbee	5432235—23	Pvt Bumpus	5033334—19—225

LA CROSSE, Wis., Nov. 23.—A few days ago the members of the city police force instituted a competitive rifle contest, the best marksman to be given a Thanksgiving turkey. The contest was concluded this evening with the following highly flattering score, the possible having been 72 points:

Keys	66½	Henry	63½
Taylor	68	Jackson	65
Yehle	70	H Byrnes	64½
A Byrnes	60	McLeod	63½
Parks	60	McMillan	67

As is seen Officer Yehle won by half a point and carried the turkey home. The victor is a member of the North Side squad and his comrade officers from that section are greatly elated over the outcome of the shoot.

NEWARK, Nov. 29.—A meeting of the delegates appointed by the various rifle clubs of Newark and vicinity was held this evening at Bloomfield, and the books of admission to the organization were closed. The committee on constitution and by-laws submitted a report which was adopted, and a schedule committee was appointed to arrange for the tournament which will begin on Jan. 16. The name chosen for the organization is the Essex County Amateur Rifle Association, and the clubs comprising it are Rutgers, J. Magory, Our Own, Union and Monroe. The total membership is 110. Each club will shoot two matches, one at home and the other on a neutral range.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

MONTREAL, Nov. 26.—Notwithstanding the very unfavorable weather there were over a hundred spectators on the grounds of the Montreal Gun Club, this afternoon, to witness or take part in the Costen cup. A great number of intending shots thought the match would be postponed, and did not turn up, and only teams from Montreal and St. Lawrence were entered. There were several members of other clubs present, but not enough from one club to make up a team. The following sweepstake at 5 birds was shot off previous to the shoot for the cup:

J H Bedard	11110—4	O J Trotter	11000—2
W McCaw	01110—3	J W Lesage	01001—2
J Allen	00111—3	J Leroux	10010—2
E O Champagne	01110—3	Frank Dowd	10100—2

The ties for second and third were shot off by Messrs. McCaw, Allen and Champagne, the latter winning with 3 birds, McCaw taking third place. Then followed the match for the Costen cup for teams of five at 20 Peoria blackbirds, St. Lawrence beating Montreal by 2 birds. Following is the score:

St. Lawrence.

E O Champagne, Capt	1110010011101011111—14
J B Bedard	0010111101011110100—12
Joe Bousquet	1101101101101101100—13
J W Lesage	0100101101111011001—12
F Dowd	1001101101000100000— 7—58

Montreal.

J Leroux	0010001001010001111— 8
J Allen	1000600110111010111—11
L T Trotter	0010110100011110100—10
W McCaw, Capt	1101011111110101011—15
W Emond	1011010001011011011—12—56

Considering the fog the scores of Messrs. McCaw and Champagne are very creditable. A final sweepstake at 10 birds had fifteen entries. It was won by W. Emond with 9 birds, J. Bousquet second with 8, and W. McCaw and C. Bonneville with 6 each. Mr. E. G. Williams acted as referee to the satisfaction of all parties.

SAN FRANCISCO, Nov. 24.—Notwithstanding that a cold north wind swept in fitful gusts over the range at Bird's Point, this afternoon, a few local cracksmen put in appearance late in the afternoon. The traps, considering that they have been out of use for some time, were nicely handled by George Bird, while Whiskers acted as retriever. The scores were, in almost every instance, above the average, and the birds, clays included, were excellent flyers. Owing probably to the state of the wind, several of the pigeons were inclined to be "tailers," but very few escaped unharmed after all. The first match arranged was a single 6-bird sweepstake, $5 entrance, 18yds. rise:

Fanning	112112—6	Harper	121001—4
Clark	011011—4	Carden	101101—4
Coombs	111220—5	Smith	111211—6

Fanning and Smith shot off the tie at 6 pairs of double birds, with the following result:

Fanning	11 10 11—5	Smith	11 01 10—4

After the clay-bird traps had been placed in position a 15-bird match, at 18yds. rise, was arranged. The entrance was placed at $1; two moneys. The score:

Clark	111101111000110—11	Smith	111110111101111—13
Fanning	111010011001110— 9	Coombs	111101111111111—14
Harper	111011101111111—13	Halpen	111001100101111—10
Carden	110101101111101—11		

The first money was taken by Coombs. A tie for second money was shot off by Harper and Smith:

Harper	11 10 11 01 11 11—10	Smith	01 11 01 11 01 01—8

KANSAS CITY, Nov. 24.—The Independent Gun Club held a sweepstakes shoot at the Kansas City shooting park to-day at noon. It resulted in the following score:

J P Barbour	1111101111—9	R C Van Horn	0110101111—7
J M Anderson	1110111111—9	A E Thomas	1100110110—6
G Stockwell	1111110111—9	A W McBride	1110101001—6
George Hall	1111101111—9	D C Thomas	1100110110—6
A H Van Horn	1101111101—8	W K Everingham	0011110010—5
W M Anderson	1110110011—7	R C Johnson	1100001001—4
W V Rieger	1111010110—7	J C Reeves	1010000101—4

First money was divided by J. M. Anderson and J. P. Barbour. J. C. Reeves won second and W. V. Rieger third.

WELLINGTON, Mass., Dec. 3.—The weekly shoot of the Wellington Gun Club was fairly attended this afternoon and some good shooting done. In the merchandise matches, Snow scored one in Class A with 18, Perry one in Class B with 17, with Wild one in Class C with 16. The first prize winners in other events follow: 20 blackbirds, Gerry; 6 blue rocks, Gerry; 6 blue rocks, Wild; 6 blue rocks, Wild; 6 pigeons, Snow; 6 pigeons, Gerry; 6 pigeons, Wild; 6 blackbirds, Wild; 6 blackbirds, Snow, Swift and Perry; 6 pigeons, Swift; 10 blackbirds, Perry; 10 pigeons, Snow; 6 blackbirds, Gerry and Sanborn; 6 pigeons, Perry; 6 blackbirds, Perry and Sanborn; 6 pigeons, Perry; 6 pigeons, Wild and Snow; 6 blackbirds, Sanborn and Perry; 6 pigeons, Swift; 6 blackbirds, Wild and Perry; 6 pigeons, Swift and Snow. In the contest for a combination marker, presented by Warren, much excitement ensued, and after a close contest Sanborn won the same with a score of 15 straight.

YONKERS, Nov. 30.—Jack Elliott, of Pelham, and Andrew Ward, of Yonkers, shot a match to-day for $50 a side at the Yonkers Driving Park at 50 birds each, 30yds. rise, Hurlingham rules to govern. Ward was the favorite and won, killing 43 birds to Elliott's 40.

BROOKLYN.—At a shoot at the Bay Ridge Gun Club grounds on Nov. 26 a bet was made that Mr. F. M. Eames, President of the Bay Ridge Gun Club, could not break 45 bluerocks out of 50 shot at. This was at once accepted by a friend of Mr. Eames, and that gentleman broke 48 out of 50, winning the money. Referee and scorer, Mr. N. D. Hemenway.

BROOKLYN, Nov. 29.—The pigeon shooting match for $150 between Gus Haas and William Rohrs was won by the former, the score being 13 to 11 birds out of 25 shot at. The birds were very strong and fast flyers, Haas had the lead from the start, Rohr missing his first five birds. The score is as follows:

Aug Hass	0011111100011111010001000—13
W Rohrs	0000010111010101011010001—11

Referee, Mr. W. H. Tomford.

QUINCY, Nov. 24.—The following scores were made at the gun club medal shoot yesterday:

Slocum	1111111111110001111111110001—29	Dewey	1111111111110001—12
Pennoyer	1101101111111111—13	Smith	1011111100001111—10
Dazey	1011110011011111—11	Hunsacker	1110101001101101—10
Fletcher	1111111011001101—11		

Slocum wears the medal.

NEWARK, Dec. 3.—To-day's shooting at Erb's was decidedly interesting. The event of moment was a match between J. H. Outwater, of Jersey City, and L. B. Campbell, of Little Silver, at 35 birds, 25yds. rise, one barrel and gun below the elbow, for $100. The shooting was excellent and the birds were of a good quality. William Sigler acted as referee, and the match was watched by nearly all of the noted shots of this vicinity. The score was as follows:

Outwater	1111111111111001111111111001011—29
Campbell	1111111011111001111101111110100—26

Campbell immediately offered to make another match for $150, and it was arranged to take place on Christmas at Dunellen, find trap and handle for each other.

After the match to-day a miss and out sweep was shot for a Smith breechloader. The result was as follows: Lindsley, 110; Ems, 210; Sigler, 1111211; Class. 1112111; Wareing, 1110; Outwater, 20; Lever, 12210; Campbell, 10. Darkness prevented Class and Sigler continuing the shoot.

NEWARK, Nov. 29.—The pigeon shooting match between Frank Berry, of Paterson, and John Ryan, of Hackensack, under old Long Island rules, was decided on Erb's grounds to-day, and was witnessed by a party of friends of each shooter. The match was for $200, 30 birds each, 21yds. rise, find trap and handle, 80yds. bounds, one barrel. Miles Johnson found the flyers for Berry to shoot at and he trapped them very scientifically. His lot, however, were not as good as those furnished by Bill Wilkinson, of Paterson, for the Hackensack champion to blaze away at. For all this, Ryan, after a close and exciting shoot, won by one bird, killing 24 to his young rival's 23. Although Berry is but a young man, he has been practicing pigeon shooting since he was ten years old, and he showed good judgement in making his shots. Almost every bird of the 60 was hit, several just reaching the top of the boundary fence. Following is the score:

John Ryan	1111101101101010111111111111—24
Frank Berry	1111110011101001111101111110111—23

Referee, W. Seigler, of Montclair.

TORONTO, Nov. 30.—W. Hine, of Winnipeg, and W. Felstead, of Toronto, shot a match to-day in beautiful clear weather on Chas. Ayres' grounds, Eastern avenue, at 50 Peoria blackbirds, 18yds. rise, for $50 a side. Mr. Dan Blea judged for Hine and Mr. T. Sowden for Felstead, Mr. Wm. McDowall was referee and Mr. J. Townson scorer. It was a hard and cracking good contest throughout and gave opportunities for a good deal of variation in the betting. At first the stranger had the call, and then Felstead, Hine money after 30 birds had been shot at going almost a-begging:

W Hine	1111110101101101010011111011111101111111101110—38
W Felstead	1111001110111110111111101101001101111111100101—36

NEW JERSEY SHOOT.—Just south of the old village of Springfield, nestling among the hills of Union county, is a flat grassy field, the grounds of the Union Gun Club. The organization has been in existence for several years, but until last summer was but little known. Under the able management of Mr. Enoch D. Miller the club built a comfortable shooting house, and during the summer several enjoyable one-day tournaments were held. Not content with a local reputation the club now gives notice of a two-days' tournament on Dec. 20 and 21, and includes in the programme a match for a diamond trophy for the New Jersey State championship. Other events, seven in all, complete the list.

MONTREAL, Nov. 26.—A blackbird shoot took place at the byres this afternoon, and was well attended considering the weather. Rain fell all the afternoon, and the smoke hung over the traps like a dense fog. About twenty competitors took part, most of whom made good shooting. Messrs. Hine and Felstead headed the score with an average of 8 out of 10. No sweeps were shot, the only contest decided being a practice shoot from 5 traps at 18yds. rise.

A LIVE GUN CLUB.—Springfield, N. J., a little village nestling under the hills of Union county, boasts of the Union Gun Club, one of the liveliest organizations in the State. Under the able management of Mr. E. D. Miller, they held, last summer, a number of one day tournaments, at all of which the participants enjoyed themselves immensely. They now announce a two-day shoot on Dec. 20 and 21, including in the programme a match for the New Jersey State championship and a diamond trophy. Seven other events, open to all, will complete the menu, and any one going there can be assured of a most enjoyable time. The club has a fine house, platform, a beautiful ground, good light, and can trap as many clay birds in a day as any. If your trap-shooting readers will address Mr. Miller they will be accommodated with a programme. Officers: J. M. Roll, Pres.; C. H. Johnson, Jr., Sec.; E. D. Miller, Manager.—HUNT.

LAST WEEK we had the pleasure of a call from Mr. J. H. Barlow, of the Ideal Manufacturing Co., and Mr. A. G. McAusland, of the Colts Arms Co. Mr. McAusland reports trade throughout the country as very good. He has been twice to the Pacific coast this year, twice to the Mexico line and several times through the South and West. Mr. Barlow's visit to New York was to introduce to the trade a new reloading tool, consisting of a capper, decapper, rammer and extractor, all in one "do funny."

Kunz. Price $1. Canoes and Canoeing. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON, } Albany, N. Y.
Secretary-Treasurer: F. L. MIX. }
Vice-Com. *Rear-Com.* *Purser.*
Central Div..Henry Stanton..R. W. Bailey.....E.W. Brown, 1465 Broadway, N.Y.
Eastern Div..L. Q. Jones.....Geo. M. Barney.....W. B. Davidson, Hartford.
N'thern Div..A. D. T. McGachen. W. G. McKendrick, S. Britton, Lindsay, Can.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in the Central Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

A. C. A. MEMBERSHIP.—Northern Division.—The following gentlemen, of Orillia, Canada, are desirous of becoming members of the A. C. A.: H. Pellatt, Chas. Corbould, J. L. Tepping, Wm. Thomson, Bruce Murphy, Geo. Thomson, Rich. Henderson, W. H. Stevens.—S. BRITTON, Purser, Northern Division A. C. A.

A GROWL FROM A CRUISER.

Editor Forest and Stream:

Last spring, after writing several lengthy open letters in the Forest and Stream and getting no satisfactory answers, or rather proof, to show that I was wrong and no sign from the A. C. A. or the regatta committee, that they wanted to do anything to favor the cruising canoe, I made up my mind that in future I would devote my spare time entirely to our Canadian Division.

However, that letter of "Retaw" in the last *Canoeist* stirred me up again, and I thought I would give the thing another go and see if I would be more successful, so here goes for another shot. I wish I knew "Retaw" as I could grasp his hand as a man after my own heart. As he says, it's poor fun tackling an editor in his own columns, unless one has a strong case, but it strikes me that any cruising canoeist who has watched the A. C. A. cruising canoes degenerate these last two years since the A. C. A. cruise has fallen from grace, has an argument that cannot be refuted. The editor of the *Canoeist* immediately jumps on "Retaw" for wanting to substitute an A. C. A. cruise for the regatta. I did not read his epistle in that light. I think what he asked was, "If the Canadian and English canoeists can have a cruise at their meets, why can't we?" He did not wish to do away with the racing, but simply asks why we cannot have a cruise. The *Canoeist* also says that cruising is better than racing, and yet is unwilling to give us of that which is good, and as the editor warms up to his work he stands on his tip toes, pounds the desk and wants to know if the A. C. A. is not for the benefit and pleasure of the A. C. A. members who have the time and money to gather once a year, whom it is for.

Well, I don't know. I suppose I must be wrong, but I always thought it was for the cruising as well as the racing members of the A. C. A. I did not know that the constitution was changed so that it excluded the cruisers from the meet, and I ask, if they are not excluded, why is not some entertainment provided for them? Why has the catering been all for one class, *i. e.*, the racers? And it strikes me forcibly that they have made a mess of it, when a member has to own a Pecowsic or somewhat similar craft to win our highest and only sailing races.

Last spring I endeavored to prove to Mr. Gibson, now our worthy Commodore, that the cruising canoe had no show in our races, and I asked that the 75ft. limit be done away with and a race substituted for it that would give them one race at the meet. He maintained that the 75ft.-limit race was given expressly for the one-rig cruising man, and that there was just as much need for it now as there was when it was adopted.

Well, that was a statement, but I did not see any facts or records to prove it; and I am of the opinion that when an event is given for the benefit of a cruising man and is won by the racing man with five rigs, I think it is about time to hunt up something that will give him a better show. Some may say that this is not so, but I have the records in my favor. Since I last wrote on this subject we have had another meet and have gathered another batch of evidence supporting what I then claimed, namely, that canoes of the Pecowsic type were bound to scoop our 75ft.-limit race every time, as well as having as good, if not better, show in the unlimited.

Who won the 75ft.-limit race (that was given for the cruiser) this year? The records say Pecowsic. How many rigs has she, and is she the class of canoe you want cruisers to build for the only race said to be for them?

However, I see I have wandered from "Retaw's" letter, wherein he wants an Association cruise. I think we have about 600 members in the Association, and I am of the opinion that at least three-fourths of them are cruisers as well as racers, and I think we should provide some entertainment for them at the meet. If the regatta committee have not time, what is wrong with the Commodore appointing a cruising committee of say three cruising members, who would look after one or two cruises at the meet.

We are supposed to have seen a place where we camp for two weeks, and yet some of us have seen as much of the beauties of the Thousand Islands as the chap who said he had seen the Pyramids of Egypt when he had seen a corner of rock taken from one of them. What we want to do is to offer prizes (flags or otherwise) for the best canoe kit, best canoe and shore tent, best cruising sails (that you do not require to run ashore to lower) best cruising canoe, etc.

This would stimulate cruisers to show up at our meets, as they are ashamed to bring cruising canoes around for fear the boys will laugh at them for expecting to win a race in them. Give them something to come for and they will come by the dozens. At first some of the kits will be awful to look at, but after they have all seen one another's kits just wait for the improvements at the next year's meet. Just notice the difference that there will be in cruising sails, canoe tents, and everything for which prizes are offered, and when you get them at the meet let them have a couple of short cruises, of a day each or longer if suitable, and you will gather men at your meet who would no more think of going to them now than they would think of going to a rooster fight.

I hold that canoe racing has now reached that point in the A. C. A. where it does not need so much fostering, it has reached the point where it does not require all the energies of the management to look after it, and where we have more cruisers than racers in the A. C. A. I ask not as a favor but as a right that the majority have something for which they can compete at our meets.

Now, though some of these remarks are a little strong, I hope they will be taken as good naturedly as they are sent, and that the management will take to heart some of the facts that are presented to them. Will G. MacKendrick.

Toronto, Dec. 2.

THE DEFINITION OF AN AMATEUR.

We have received in the form of a very neatly printed pamphlet, the minutes of the sixteenth annual meeting of the National Association of Amateur Oarsmen, with the report of the executive committee for the year ending August, 1887. The report deals with the question of defining an amateur in a most comprehensive manner, and represents the latest phase of this important issue. Fortunately it has not yet assumed any great importance in canoeing, but it may come up at any time, and canoeists are directly concerned in the action of similar bodies in the matter.

We quote from it as follows: "At the annual meeting of the Canadian Association of Amateur Oarsmen, held in Toronto, there was discussed, and finally adopted an amendment to the amateur law intended to exclude any oarsman 'who shall abandon or leave his daily avocation (for more than two weeks) for the purpose of training, and who has no visible legitimate means of support while training during a longer period, but rows for some real or anticipated profit.'

"It seems difficult to phrase any rule which will be effective in reaching the objectionable element, without encroaching upon personal liberty, or to arbitrarily fix any period of time beyond which it shall be unlawful for an oarsman to absent himself from his office or shop. An enthusiastic sculler who is a man of means may devote a month to training and yet be an unquestionable amateur, while another may be away from his business no more than a week under such circumstances as would justify a regatta committee in refusing his entry.

"We recommend as a rule proper to adopt, an amendment, stating that the Association considers an amateur to be one 'who rows only for pleasure or recreation, and during his leisure hours, and does not abandon his usual business or occupation for the purpose of training.' Recognizing as we do that it is for the Association to make laws, and the duty of its executive committee merely to enforce them, we propose submitting to the clubs, to be considered at the annual meeting a year hence, an amendment to your constitution embodying these restrictions, and we shall request the several clubs to instruct their delegates as to the feasibility and wisdom of such a provision. No formal action has been taken by your committee with reference to a proposed narrowing of the lines which bound the qualifications of an amateur, and, while we do not feel that the time has arrived for making any recommendation, it is proper that we note the progress of the movement alluded to in our last annual report.

"Among the amateur oarsmen of the State of Virginia a rule prevailed excluding from their open regattas all who are mechanics or artisans, but admitting farmers and the tillers of the soil. The rules of your Association have since been adopted there, and everywhere else in this country has there been put in force any definition which is more stringent than the National law. We learn, however, that in the Northwest, and in several clubs on the eastern seaboard, some of the pioneers and active promoters of amateur sport are strongly advocating the division of amateur oarsmen into two classes, placing in the one those whose occupations involve direct manual labor, and consequent muscular development, and confining the other to brain-workers, such as merchants, professional men, tradesmen and clerks, whose vocations do not tend to an improvement of the physique.

The gentlemen actively interested in the promulgation of these ideas (none of whom are connected with your Executive Committee) have as yet taken no concerted action, but a limited correspondence has convinced them that the movement has unexpected strength. Nevertheless we are inclined to the opinion that the supporters of such a change are at present in a decided minority. Your committee believe that it will be found very difficult, if not well nigh impossible, to draft any definition which will not injure many innocent athletes, and create hardships alike unintentional and unjustifiable. One amendment recently suggested would debar farmers, surveyors, many civil and mining engineers, and not a few architects and other professional men, who, during the years of early manhood, with a view of fitting themselves for their calling, have labored as artisans or mechanics; while it would not exclude gamblers, poolroom attachés and professional idlers.

"Your committee are firmly convinced that any radical change in the amateur definition can be successfully enforced only when supported by an enlightened public opinion, and this popular sentiment will not follow, but must precede any amendment to the National laws. No one pretends that a classing of oarsmen on any basis which would even seem to savor of caste distinction is now demanded by the great body of the rowing fraternity. In some sections it may be found practicable and desirable to draw a dividing line between the mechanic and the clerk. If so it rests with the provincial associations to inaugurate the innovation, and to give such an experiment a fair trial; but for the National Association to make such an attempt at the present time we feel would be almost suicidal, and calculated to retard rather than advance the best interests of amateur rowing. Your committee concludes, therefore, after a careful and thoughtful consideration of the matter in all its bearings, that some time must elapse before a rule enforcing class distinctions can be engrafted on the national rules with any hope of success."

CLUBS AND THE A. C. A.

Editor Forest and Stream:

I wish to suggest to the consideration of A. C. A. members, the question whether the time has not arrived for the A. C. A. to recognize the numerous clubs or such of them as wish for more intimate relations with the larger body. Having divided the A. C. A. into divisions it would seem the most natural step to subdivide the divisions, and at the present moment, when it appears more than probable that a new division will be formed, is certainly an opportune one for such a course. I should therefore suggest that the new division, when applying to the A. C. A. for recognition, ask permission to admit, under suitable conditions, the clubs within its limits desiring membership. The principal objections to such permission being granted, will probably be on the grounds of representation, finance and club rights or independence, but these can, I believe, be overcome. To take each objection separately:

Representation.—The division will primarily consist of individual members. To all these give representation in proportion to their numbers. As clubs are admitted, give them representation in similar proportion, to the number of active members on its roll. In this way a fair and even representation would be obtained, while the A. C. A. would help the clubs by encouraging the building up of strong, healthy bodies and would thereby itself be helped.

Finance.—I would suggest that non-club members pay dues ($1 each) as at present into the division treasury, and the clubs pay the balance of the expenses for the year, each club contributing in proportion to its representation, and no club being entitled to representation or other privileges until such contribution be paid. It might be necessary to establish rules to prevent excessive contributions, made to secure unfair representation.

Club Rights.—It would be desirable to guard against any loss of independence by the individual clubs in the management of their internal affairs, otherwise they would not be induced to join the Association. The A. C. A. would gain nothing by controlling the clubs, while the clubs would suffer by such control and would refuse to join were such a course attempted. It would also be necessary to allow any club to resign its membership if at the commencement of a year it should disapprove of the proposed expenditure of a division and the consequent proportion falling to its share to pay.

Under such a plan as that which I have outlined, the canoeing interests would be united and work harmoniously together while the present inconsistency by which the A. C. A. refuses to recognize clubs directly, and yet indirectly does so would be abolished. By offering inducements to clubs to join, the membership of the A. C. A. would be doubled, and since the expenses would not increase proportionately, the contribution out of the club treasury would be reduced to so small an item that the majority of clubs could easily pay it without increasing their dues for the purpose. Each year the A. C. A. Executive Committee would apply to each division for its quota of the estimated expenses. The division would in turn add this to its estimated expenses and call on the clubs to contribute, and they would pay the amount out of their treasuries and not add it to club dues as is now done by some among them. The club would as now govern itself and by its representatives in the division, and so ultimately in A. C. A. Executive Committee, would have a voice in the framing of laws affecting the club, and would be bound thereby instead of as at present accepting such laws if agreeable to it to do so.

I have simply attempted in these remarks to throw out a rather full general outline, omitting the minor details, all of which could be settled in committee. The fact that its adoption might necessitate some amendments in the A. C. A. constitution is not very serious, judging by the numerous changes in the past and the ease with which they have been effected. A Club Member.

[The question here suggested has been frequently discussed by A. C. A. men, and we believe that the general opinion is in favor of a recognition of the clubs, but thus far no practical method of admitting them has been suggested. It is evident that as the number of clubs and the proportion of members increase, the difficulties mentioned by our correspondent are lessened, and it may be that the time has come when they can be surmounted in the manner indicated. There can be no question but that it would be to the advantage of all to have each canoe club firmly connected with the A. C. A., and it is at least worth the time and trouble to consider the scheme outlined above. As we understand it, the representation would be somewhat on the plan of the nominating committee, say one man from each club of not less than six men, and a fraction, and one extra, as now, for ten extra members; while the non-members in a division would be allowed one man for each six, ten, or fifteen, as might be found best; the numbers are merely by way of illustration. If the result would be to give too many representatives to each division, making the main legislative body too cumbersome, it would be practicable to hold a division meeting, at which each club and the non-members should be represented in this way, which meeting should nominate the division representatives for the Executive Committee of the A. C. A. and perform other similar functions. This would secure a fair representation in division work of all members, both club and individual. As to the financial part, the scheme is based on the supposition that the cost of running a division, or indeed an association, of one hundred members, is as great practically as for one of five hundred; and this assumption is correct. The cost of camp fees, of cash prizes, printing, and minor expenses are the same in one case as the other, the main additional expense being postage; a small item at most. Proceeding on this assumption, each additional member must lessen the cost per head, and if this cost can be properly distributed it may be reduced even below the present low sum, and indeed not even be felt by the man who pays it. The non-member would pay then as now, $1. If the meets be arranged on one of the proposed plans alluded to last week, of each division bearing the entire expense, whether it is merely the division meet, or the combined A. C. A. and division meet, the expense of a meet would not exceed $350 at most, and the tax of $1 per head for each man in camp would defray a large part of the expenses. The remaining sum required for the meet, as well as all minor expenses of the division and A. C. A., could not well exceed $200 in any division. This would be partly made up by the dues of individuals, $1 each, and the balance would be divided pro rata among the clubs in the division. It is evident that the most any man could be called on to pay would be $1 per year dues and $1 for camp expenses, as now, while the expense to club members, with a fair number of clubs represented, would be reduced to almost nothing, except the $1 for camp when they attend. To carry out this scheme it would be necessary to make an estimate of the amount to be paid for the coming year by a division to the A. C. A., of the cost of the meet to be held in the division, and then to deduct the number of individuals at $1 each, and the probable attendance at the meet also $1 each. The balance would remain to be raised by the clubs, and any club entering the circle would agree to pay its proportionate share. We believe this scheme can be successfully put in practice in the new divisions, and so commend it to the attention of the preliminary meeting on Friday night at 247 Fifth avenue, New York.]

THE DELAWARE RIVER MEET.—Philadelphia, Dec. 2.—*Editor Forest and Stream:* I wish to correct an error in Mr. Binder's communication of last week concerning the Delaware River meet, in which he says, "The meet will be held under the auspices of the Keystone Club and not by individual persons as it was last season." The meet was held under the auspices of the Quaker City C. C. and not by individual persons. In justice to one individual, Mr. J. A. Barton of the Q. C. C., the originator of the Delaware River meet, I wish to say if it were not for his energy and perseverance we would yet have long to wait for a canoe meet on the Delaware River.—Fair Play.

OTTAWA CANOE CLUB.

Editor Forest and Stream:

The following is a report of the sailing races of the Ottawa C. C. for the past season:

FORTNIGHTLY SERIES SAILING RACES.

	1st	2d	3d	4th	5th	6th
Marabel, C. A. Thompson	1	1	1	.	.	1
Irene, R. W. Baldwin	3	3	2	1	1	2
Iolanthe, W. McL. Maingy	2	5	*4	2	2	4
Nixie, P. B. Symes	4	4	3	.	.	.
Dolphin, P. A. Maingy	5	2	.	.	3	3
Aline, Henri Roy	6	.	.	3	.	.

*Iolanthe broke her rudder early in the race.

Besides No. 4 race of the fortnightly series, which also formed one of our regatta races, and by winning which Mr. Baldwin became the owner of the Brough challenge cup, having won it twice in succession, we have had the following races:

1. Upset race.—A. O. Wheeler 2m., R. W. Baldwin 4m., R. J. Wicksteed did not finish.

2. Sailing race.—This race was not concluded within the time limit, and has not yet been sailed over again.

3. A one mile with a turn, tandem paddling race.—A. O. Wheeler and C. G. Rogers, double blades, 10:32; W. H. Cronk and F. H. Gisborne, double blades, 11:08; W. C. E. Stewart and B. Bell, single blades, 11:10.

4. A one-mile with turn single paddling race, single blades only.—A. O. Wheeler 12:17, W. H. Cronk 13:18, N. H. H. Lett 14:00.

5. A 7-mile tandem paddling race.—J. S. Brough and C. W. Badgeley, double blades, 58:40; A. O. Wheeler and C. G. Rogers, double blades, 59:35; N. H. H. Lett and R. Lett, single blades, 62:00; J. D. Campbell and G. A. Davies, single blades, 63:15.

In the account of the fortnightly series of paddling races it should have been mentioned that by winning the fourth race of the series (which also formed one of our regatta races), Mr. Baldwin became the owner of the Brough challenge cup, having won it twice in succession, the previous occasion being in the regatta of 1886. Francis H. Gisborne, Sec. Ottawa C. C.

Yachting.

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50.

A NEW AMERICAN INDUSTRY—THE NAPHTHA LAUNCH.

It is always pleasing to note the successful growth of a new industry, and when this growth is rapid and steady it argues well for the sterling merit of the invention. When the difficulties which beset the introduction of every invention out of the beaten track are considered, the success which the naphtha launch has attained in a very short time must be taken as very strong proof of the inherent excellence of the machine itself, as well as of the skill and ability of the leaders and directors of the enterprise.

It is less than two years since the first engines were built as an experiment by what is now the Gas Engine and Power Co., the enterprise being commenced on a small scale, the first boats being built for the company by outside builders. Though inferior in many details to the present boats, these experimental craft were successful from the first, and in the summer of 1886 the concern secured a site on the Kills, at the junction with the Harlem River, and not far from Port Morris, where a boat shop and factory were built, and the construction of the hulls as well as engines begun. The demand grew so rapidly in the first season that the shops were enlarged, but even with the present extensive facilities the company have been unable to keep up with their orders this season.

The present factory is a large brick building, the lower floor being devoted to the offices, engine room, machine shop and show room. In the latter, a large and well lighted room, are kept launches of all sizes, from 16 to 35ft., fitted up in different woods, the boats being finished here prior to shipment. The floor above is mainly used as a boat shop, the drawing-room, copper shop and store rooms occupying one end. The boat shop is well equipped with woodworking machinery, while on the stocks are boats of all sizes from 16ft. to 40ft. The hulls are mostly caryel built, and are entirely fastened with copper. The frame is of oak, with planking of cedar or mahogany. Inside the hulls are neatly finished in hard wood, being decked over for 3 or 4ft. at each end, with narrow water ways and coamings. The placing of engine and boiler in the extreme after end of the boat leaves the interior entirely free, so that a seat runs down each side for the passengers, the 16ft. boat carrying six to eight persons. When a hull is nearly completed the naphtha tank of copper, well stayed inside, is placed in the bows ahead of the forward bulkhead, and a deck or open grating laid over it. The after part of the boat, divided by a half bulkhead, is lined inside with tin, and the engine and boiler set in and the shaft connected. This floor is provided with a large hatchway and powerful tackle, by which a 40ft. boat, the largest yet built, is lowered readily. On the bulkhead in the rear of the factory is the boat house, with a slip and an overhead railway and differential blocks, by which the boats are easily launched or lifted. The growing demand for the boats has proved too much even for the present enlarged premises, and the company has lately bought ground further up the Harlem River, near Morris Dock, where the new buildings, covering between three and four acres, will be ready by next summer.

The motive power of these boats is sufficiently ingenious and novel to merit a special description. The fuel is deodorized naphtha of 76°, and the vapor from it is also used in the cylinders in place of steam, no water being required. The engine, very small and compact, weighing but 200lbs., including boiler for two H. P., is situated low down in the boat, the three single-acting cylinders being contained in a cast-iron casing. The upper part of this casing forms the valve seats, the cylinders being suspended below it. The three plain D valves are operated by one valve stem, operated by gearing from the crank shaft. On top of the engine casing is the boiler, two spiral coils of copper pipe, one within the other, and a vertical cylinder within the inner coil. The coils and cylinder are connected by piping, the whole being inclosed within a brass casing, above which is the smokestack. The naphtha is carried by a pipe outside the keel from the tank in the bow to the inner coil of pipe, thence down and into the outer coil, and from the top of the latter into the vertical cylinder. The heavier gases pass directly to the engine, but the lighter gas is taken from the cylinder by a pipe and carried to an injector, where it is mixed with air and then carried to the burner directly beneath the two coils. Here it is ignited, the flame surrrounding the coils and interior cylinder. The portion of the naphtha vapor which passes from the engines is condensed in a tube outside the keel in the usual steam-yacht style, and then returns to the tank to be used again. The only part expended is that burned beneath the coils. The rate of consumption for a two H. P. engine is about three quarts per hour. The tank being connected with the burner only by tubes surrounded by water, there is very little possibility of an explosion, as any flame would have to pass through a long tube of small diameter and kept at a low temperature.

It will be seen that the engine is very economical in its working, while the details of its construction are so arranged that there is little possibility of a breakdown. The crankshaft is turned up in one piece, of cast steel, the single valve stem is more properly eccentric, that operates all the valves, is turned from solid stock, so no slipping is possible; the pistons are very long while the rods are attached to them by a simple ball and socket joint. The reversing is instantly done by a small hand wheel on the valve stem. The engine is easily started by applying a match, and may be run within three minutes. No licensed engineer or fireman are required and the machinery is so simple that it may be run with little practice by any intelligent person. There is no fuel to handle, no ashes and cinders, no smoke; and the engine being aft the products of combustion and the smell are of no annoyance. The light weight and great convenience of these boats specially recommends them for yacht use, and nearly all the schooners and steam yachts may be seen with the small brass stack which indicates the naphtha launch, in the stern of at least one of their light boats, while many sloops of moderate size carry one, or have one as an attendant when in port.

Within the short time that they have been in the market the boats have made their way to all ports of the world, Norway, Sweden, England, France, South America and even the Sandwich Islands. The Indian Prince Thakore Sahib, lately in this country, purchased two, while the Duke of Marlborough carried home one. A launch taken to England some time since by Mr. Kyrle Bellew has attracted much attention there. Besides their use in connection with yachts the launches are much used in Florida, among the Thousand Islands, and in summer and winter resorts where the steam launch in some form is a necessary adjunct to every well appointed villa, and for this use their simplicity, cleanliness and low cost of running specially fits them. The great success they have met with thus far seems to be well deserved and promises still further improvement as their manufacture extends.

A POSSIBLE CHALLENGE FOR THE CUP.

WE understand from reliable sources that Mr. Jamieson is about to build a 90ft. cutter to challenge next season. A rumor has been circulated of an intended challenge from St. John, New Brunswick. The only basis for such an absurd report is the fact that Mr. David Lynch, a shipbuilder of St. John, has been in New York on business and visited the model room of the New York Y. C.

A MILITIA OF THE SEA.

THE efforts now making by the peace congress toward an era of arbitration and the peaceful settlement of all international differences may in time bear good fruit and pave the way to a state of society in which wars shall be less frequent, if not entirely unknown; but whatever degree of immediate success may attend these efforts it will be many a year before the question of defense ceases to be one of the most vital that a government must face. The period of great wars has probably passed away forever, the days of invasion and conquest for the acquisition of territory have gone by, the necessity for a foreign war as a vent for dissatisfaction and inquietude at home is disappearing as reforms and social advancement become more general, the influence of the great nations of the earth as a body is now apt to be more strongly exerted than ever before against a recourse to arms between two of their number; while the greatly increased efficiency in the machinery of warfare is certain to exert a restraining influence of its own in favor of peace, as well as to make war, if it does come, far briefer than in the days of long marches and hand to hand encounters. In spite of all this, however, it is little likely that the coming generation or even the next will see merchant keels laid in the navy yards, car wheels cast in the gun foundries or the extensive steel plants that furnish the armor plating of to-day devoted solely to pacific uses. The necessity for adequate means of self-defense is apt to exist for a long time yet, and however strong the tendencies toward a peaceful state of society may be, they have not thus far attained a prominence which would justify any nation, however powerful, in recognizing their existence by a relaxation of its efforts toward the perfection of its army and navy.

Situated as it is with a vast territory whose frontiers are largely made up of two great oceans, with comparatively harmless neighbors on either hand, and isolated in a great measure from the danger of international complications or a sudden attack, the United States enjoys a measure of security that is not possible where half a dozen great powers are crowded together, jostling and pushing, with many conflicting interests, and where an incident that would be but trifling in the interior becomes at once or imposing proportions if on the frontier, or where a false rumor or a sudden political excitement in one capital may throw the whole continent into war.

The difference in these prime conditions finds a corresponding state in the military policy of the United States as compared with the European powers, and has permitted an apparent neglect of preparations for defense which is almost an invitation of an attack. It is well for us that such a policy is possible, that the vast cost of standing armies, with their demoralizing effects, has been saved, and that the conditions have been such that we have been able to look on and learn from lessons in armament and naval architecture for which other nations have expended millions; but, at the same time, this apparent immunity from attack brings its own danger, in that it leads to a neglect of all preparations for defense. Fortunately for us, it has so happened that to-day, while we have been spared the enormous outlay which England alone has made within the last dozen years on experiments with guns, armor and ships of war, much of which was necessarily wasted, we are enabled to avail ourselves of the same knowledge, and almost without cost; but, at the same time, it is past dispute that we have incurred a most serious danger through that policy, which found us but three years since absolutely without a navy. With each steel plate rolled to-day in American mills for American war ships, even with each rivet driven, the danger is decreasing; and under the vigorous policy of the present Administration it is likely to be past before many realize its extent, but it teaches a lesson that should never be forgotten. It is not necessary to turn back many leaves in history to learn that no nation can ever be secure which relaxes for a moment its efforts for defense, and that however distant war may seem, there is no guarantee of peace so effective as the knowledge on the part of your adversaries of the fact that you are fully prepared for war.

The means of defense which a nation must rely on are of two kinds, material and moral; and while it is the former with all the pomp and circumstance of war, the brilliant uniforms, the imposing battalions, the Krupp guns and the ponderous steel-clad ocean warrior, that most men would rely on, it is in its moral means of defense that America must always place the strongest dependence. This it was that in '76 created an army from a scattered body of peaceful farmers and mechanics, an army almost without the materials of war, but which defied and conquered the trained officers and the hired soldiers, the brave and loyal as the brute strength that were brought against them. Drill and discipline, a long military training and perfect equipment, availed nothing against the frontiersman and farmer, earnest, united and determined to be free. Again, nearly a century later, the call to arms went forth and the answer came back from ocean to ocean in one cry, "We're coming, Father Abraham, five hundred thousand more." History furnishes many instances of battles won through skilled generalship and superior training and equipment, but against them are scores of others in which the victors were a clan or a people, united in thought and action and fighting for their homes against all the odds that military skill could bring against them.

The two then go hand in hand, and no nation can call itself safe which has not, besides the best of tools and materials of war, the moral support of a large body of its citizens, ready at the word to leave all else and work with heart as well as hand for its defense. This principle has long been recognized in the land defenses, and the militia of the several States offers an auxiliary whose value has been tried not only in the rebellion, but on a smaller scale in the local disturbances that arise at times in all communities. It may seem ridiculous to compare a business man, with other pursuits and interests, who gives a few hours a week for a period of five or seven years to military training, with old soldiers whose lives have been spent in forts and barracks; but it is to the former no less than to the latter that America will turn in time of need for the nucleus of the great national army which experience tells that she will soon be able to organize.

The expense of a standing army similar to those of European nations and large enough to garrison the United States would be enormous, but that would be the least evil attending such a system. The demand on the industrial forces of the country for the support of a large body of non-producers, the demoralizing effects of so many men in a state of comparative idleness, and the power given to the party having control for the time of such an army, dependent on it in a measure for pay, are evils of the greatest magnitude which our surrounding have enabled us to avoid. The standing army of the United States to-day is a mere handful, but beside it stand a body of trained officers capable of handling an army of vast proportions, thousands of veterans ready again to step into the ranks, and back of them the militia, soldiers in spirit and thought, though never yet under fire. How they will stand the first long march or the first bivouac in the rain is a small matter, the great point is that they are ready, and the past experience proves that they will fight. On land the nation is prepared, the brains, the hands and the backbone are there, and the matter of equipment and the final training in the hard duties of actual war are comparatively trifling. The raw material is ready, and it is, as old officers will testify, of the best.

But how about the navy? Looking at its history for the greater part of the period since the war, there is little ground for any feeling but disgust and disappointment that this once magnificent arm of the service should have become shrunken and palsied, its vessels rotting, its navy yards left to slime and weeds, the material part dead, and only the spirit kept alive by those who trod the decks with Farragut at Mobile Bay, or fought with Worden on the Monitor.

No American, even the farmer of the Western prairies who knows no sea save the long miles of rolling grass, and in whose mind the word ship is associated only with the old "prairie schooner," can read the history of the navy of the United States with a feeling of pride and enthusiasm; nor can he be blind to the defenseless condition the country was in but yesterday, or fail to rejoice in the change now fairly inaugurated. To repair in two years the neglect of twenty, to replace a worn out fleet by a new one fully up to the requirements of modern science, is a difficult task; but nevertheless the work of reconstruction, in spite of many difficulties, is well under way, and there is every ground for hope that a very short time will see a new and modern navy, fully up to the requirements of times of peace; while still more encouraging is the fact that back of the new vessels and guns is a plant fully equal to any demands of war. Not with ships and guns alone is the nation provided, but with means of duplicating them; the last two years has witnessed a most marvelous development of the great metal industries in immediate response to the demand made by the Navy Department, and even now America is independent of other nations for her steel and iron for guns, for ship plates, for heavy armor plate, and for all the machinery for modern navy warfare. The new plants established and the old ones improved are now capable of turning out everything from the raw pig iron to the finished rifled gun, of a quality that more than meets the very high requirements of the Navy Department; and more than all, the work of preparation has been done with a rapidity thoroughly American. Within the Navy itself the reforms are many and radical, not the least being the reconstruction of the navy yards, and the enlargement of their facilities to suit the requirements of the new fleet, so that war vessels of the first grade may be built and docked by the department, independent of private enterprise. The actual work of construction, however, is being done very largely by private firms, at various points on both coasts, and in a manner that is highly encouraging to our native industries. The blast furnace, the steel works, the rolling mill and the shipyards have each found in the Government a customer, whose requirements, while they tax the skilland inventive powers, are sufficiently well paid for to offer every inducement toward the elevation of the standard of American industries. As to the machinery of defense, there is every prospect that ere long it will be not only commensurate with all present needs, but that the means will be at hand for its expansion to meet any call that may be made by a sudden probability of war.

The question then comes up, Where are the sailors to man the ships and guns? and the answer is far from satisfactory. Even if it was desired now to establish a large standing navy it is tolerably certain that the men are not to be had, while in the event of a sudden call the case would be much worse. The extinction of our mercantile marine was naturally followed by the dispersion of its seamen, many going under other flags while others left the sea and sought a more certain means of livelihood ashore. The whaling fleet, available in 1861, with its tried and hardy mariners, has now passed away, and it is hard to say where we should turn for seamen in event of sudden need.

From a population of sixty million there should be no difficulty in recruiting a far greater number than would be needed, the love of the water was bred in our ancestors too strongly for even an absence of a generation or two from the seacoast to eradicate it; but in order to draw seamen from the people at large it is essential that the moral means of defense be utilized to its fullest extent. To do this it is necessary to keep alive that love of the sea, that pride in our naval history and in the national marine, that has always been the heritage and safeguard of English-speaking nations. The intense and universal enthusiasm awakened by the success of Puritan, Mayflower and Volunteer in yachting has an important bearing on this matter, and points to the possibility of further progress in the same direction. The national sentiment of admiration for these vessels, and of pride in their achievements, is most surprising when we consider that it is found in localities far distant from the water, where sailing is unknown, and among classes in sympathy with the sea or with yachting. The result has been to make yachting more thoroughly a national sport than it has ever been, and to awaken an interest in it even in localities distant from the water.

The hint given in this way has not been lost on yachtsmen, and it is from them that the first movement for the strengthening of our naval contingent has come. The idea of a naval militia is not new, it is found abroad, and has been suggested in this country, but nothing had ever been done toward the practical carrying out of the idea up to the past winter. At that time the Seawanhaka Corinthian Y. C. of New York was busy with a wide and far reaching scheme for the improvement and education of its members in all pertaining to seamanship and navigation, and in the course of its discussions the idea of a naval reserve was suggested. The subject was but briefly alluded to in the report of the special committee last winter, as the question of a club house was then paramount to all others, but it attracted the attention of Rear Admiral Gherardi, U. S. N., Commandant of the New York Navy Yard, who wrote a most encouraging letter to the club, in which he summed up the subject as follows:

"The long delay has so reduced our strength afloat that the ships that have been authorized to be built, though seeming an increase, scarcely make good the deficiency created during the past few years by the decay and withdrawal from the service of the many wooden vessels built to meet the exigencies of the late war, and give adequate employment to our officers and 8,000 enlisted men and apprentices now constituting our naval strength. These new vessels differ from the old in being full-powered steamships, some with rig and spars to carry a fair spread of canvas, the majority, however, fitted with only military masts, with electric lights and machine guns in the tops. This change of rig and armament can in no way affect that very essential quality of the man-o'-wars man, seamanship, and the problem that we will have to meet in case of another war, not an improbable occurrence, will be how to recruit the Navy with capable seamen. With our merchant marine almost gone this becomes a very serious question. The late war brought with it the sweeping away of our commerce; but patriotic seamen without employment rapidly found the Navy a field to exercise their training, until its strength reached 60,000 as well trained, efficient and reliable men as ever did arduous duties afloat. But now where shall we look for help? The comparatively small number of able-bodied men engaged in maritime pursuits under our flag, gives but a limited field to increase our naval strength. The only available body of men, it seems to me, outside of the fishing and coasting fleets, are amateur sailors, the gentlemen of the yacht clubs, who would form a body of intelligent and efficient officers. Your voluntary enrollment as a naval reserve, with the exemptions and rules similar to those accorded to the militia of the several States, would prove a service of the greatest maritime strength to the Government in case of war. Your proficiency in seamanship and general nautical knowledge would render your instruction, by the officers of the Navy, in the many duties on board an armed vessel, an easy and agreeable task. This once accomplished, your value would be particularly felt in organizing a naval force from the blue jackets, unfortunately, of nearly every nationality but our own, that find occupation in American bottoms."

A letter to the Secretary of the Navy, Hon. Wm. C. Whitney, met with a hearty response, the aid of the Department being promised in furthering the scheme, and Commander B. H. McCalla, U. S. N., being detailed to visit New York and consult with the committee. As a result of the discussion, the following points outlining the general policy of the movement were laid down:

First—The whole scheme must be, not of an honorary, but of an essentially utilitarian character, in order to obtain the dignity and value necessary to insure its success.

Second—The yachtsmen enrolled in a Naval Reserve must form a distinct and separate class, and be fitted to serve in positions of authority.

Third—The inducements and rewards must be worthy and valuable.

Fourth—The men, not the boats, are of paramount importance.

Fifth—The needs and representation of all sections of the yachting public must be considered.

At the suggestion of Commander McCalla, the committee opened a correspondence with Senator W. C. Whitthorne, of Tennessee, chairman of the Committee on Naval Affairs, who had introduced a bill in the last Congress providing for bounties to merchant vessels built with a view to adaptation to naval uses in case of need, and also to establish a naval reserve of merchant seamen. Mr. Whitthorne at once fell in with the new details of the scheme relating to the pleasure navy, and an extended correspondence between him and the committee followed, the result being that important additions to the original bill were suggested by the Seawanhaka C. Y. C. It is recommended that the Naval Reserve be divided into three classes, the Mercantile Naval Reserve, composed of reserves derivable from the merchant marine, the class contemplated in Senator Whitthorne's original bill; the Coast Defense Naval Reserve, composed of fishermen, live-saving corps and men of similar pursuits along the coast; and the Naval Reserve Volunteers, composed of yachtsmen. In the full and exhaustive report lately presented to the club by its special committee the plan is outlined in these words:

"In view of the value and availability of the men of the Coast Defense Naval Reserve it was intended that their training and drill should be so arranged as to interrupt in the least degree possible, their regular avocations, by suitable arrangements as to time, place and length of drill, and it practicable to limit as the name implies, their duty to a defense of the coast line. Thus it was hoped to render the service attractive, while the necessary compensation for their time while under training might be reduced to a minimum.

"At the same time they should enjoy the same privilege as to computation of pay, bounty for continuous service, benefits due to length of service and the privilege to fly a distinctive flag, under the same conditions as the Mercantile Naval Reserve as provided in Mr. Whitthorne's bill.

"The yachtsmen composing the Naval Reserve Volunteers should first be enrolled as cadets, and within two years of their enrollment qualify by examination before a proper board for the duties of ensign and upon such qualification shall obtain that rank.

"That after two years' service as ensigns they may qualify for and obtain the grade of junior lieutenants, and junior lieutenants after three years that of lieutenant. But that the number of lieutenants shall be limited and that the examination of this grade shall be competitive in character. Also that this same principle should apply if any higher rank were deemed advisable. It was intended that this limited number of officers of higher rank should act as a board representative of the interests of this branch of the Reserves.

"That members of the Naval Reserve Volunteers may be called out for drill during two weeks in each year and shall be required in addition to follow such a course of instruction and study as may be deemed necessary by the board. That they shall receive no compensation except when called out by executive order for active service and shall then be subject to the provision of Section 7 of the Whitthorne bill.

"That the name and grade of members of the Naval Reserve Volunteers shall be borne upon the navy list, together with letters significative of the subjects in which they have severally qualified.

"That they shall wear the United States Navy uniforms of their grade, together with a distinctive mark to be determined by the Secretary of the Navy, indicative of the Naval Reserve Volunteers.

"That they shall salute and be saluted by officers of the navy, but shall in every case take rank after those of an equal grade.

"The yachts owned and commanded by members of the Naval Reserve Volunteers shall, in case of war or emergency, be at the disposition of the Government, and that the owners thereof shall be entitled to compensation as provided in Section 4 of the aforesaid bill.

"That they shall fly an ensign to be determined by the Secretary of the Navy, distinctive of the Naval Reserve Volunteers, which ensign will carry the full rights of, and shall be recognized as a flag of the United States.

"That the said owners and commanders of such yachts shall be subject to the following regulations and enjoy the following privileges, to wit:

"1. They shall report their yachts, together with such particulars as may be required, to the Secretary of the Navy.

"2. They shall obtain permission from the Secretary of the Navy, or such person as he may designate, before leaving with their yachts the waters of the United States, and shall report to him the return of their yachts from foreign waters, and when so returning they shall not be required to make a port of entry.

"3. The commissions as officers shall stand in lieu of, and except them from taking out yacht licenses, sea letters or clearance papers.

"That any unlawful act or misdemeanor committed under cover of the above mentioned flag of the Naval Reserve Volunteers shall be punished by dismissal from the service in addition to the usual legal penalties; and that any person unlawfully displaying the said flag shall be punishable by a fine not to exceed one thousand dollars."

At this stage of the work it is not possible, nor indeed necessary, to decide on the practical details which must govern the successful carrying out of the scheme, but throughout the past summer the club has been at work collecting statistics of the number in each of the proposed classes from which recruits could be drawn, in securing full information in regard to similar work in England and on the Continent, and in thoroughly preparing the way for immediate action when the time arrives. The first step, the presentation of the amended bill, will be taken as soon as Congress is again in session, and there can be no doubt but that it will be willingly passed. This much done, the work of organization will be considered, and the co-operation of all the yacht clubs will be invited, in order that yachtsmen as a body may unite with the Navy Department in the furtherance of the work. At the same time the other divisions of the new service will be organized as far as possible, and the many details of training and practical instruction will be provided for.

Of course, this will not be the work of a day, many minor difficulties will be met, and progress at first is likely to be slow until a popular feeling in favor of the movement is strong enough to make itself generally felt. It is from the people themselves that the real support for such a movement must come; even with the most earnest efforts on the part of the Government its success would not be assured, or even if established solely by Government aid this would not be sufficient. It must be a movement of the nation at large in the direction of its self-defence on the seas, recognized and supported by all classes.

The objection may be raised that it is impossible to make sailors and seamen without long sea service, and that the practical instruction of the new body will be attended with unusual difficulties from the fact that little time is afforded its members for such service; but this objection relates rather to the material than to the moral means of defense. Granted that the skill and experience acquired by naval officers only after years of hard service and a severe course of study cannot be obtained by civilians in the way proposed; the main point of the measure is in no way affected. It is not proposed to provide officers and men to man the ships at a moment's notice from this body, but rather to create the raw material if it may so be termed, from which to construct a navy in time of need. The aim of its projectors is to create a body of men fully capable of naval service, but above all thoroughly in sympathy with the national navy, participating in its *esprit du corps*, sharing its interest in all professional matters, and ready at any time to hasten to its aid. Such an auxiliary body will in turn have back of it the moral support and enthusiasm of a very great part of the nation, the whole forming a bulwark of defense that no sum of money expended in the hire of trained seamen, however competent, could give. The value of such a body, its practical utility in time of need, have been fully demonstrated by the parallel case of the national militia, and now it is proposed to extend the same advantages to the navy that the army has so long enjoyed. That it can be done there is no reason to doubt; and now, when the national pulse beats high over the triumph of American yachts on the seas, when the work of reconstruction of the navy is going on in the seaports of the Atlantic and Pacific at the same time, and when the question of the national navy is prominently before the country, is the time for its successful inauguration.

A LANDSMAN'S CRUISE ON A CUTTER.

AN Editor of my acquaintance, in partnership with a young man whom we will call Smith, sails a yacht, the G. B., habitually, in the waters of the East River and Long Island Sound. On a Saturday last summer the Editor invited me to go sailing with him. The yacht lay in Echo Bay, at New Rochelle, 17 miles from New York, and the Editor proposed to meet me at the Grand Central Depot, so we could go out together. It was a muggy day when I took the horse-cars at Eighth street, and before I reached the depot a car-horse dropped, overcome by the humidity. I got there a little too late to see my train go out, but in good season for the next one. The Editor hadn't waited for me, and I went to New Rochelle alone. It is a historic town, and contains the old Paine farm and the Paine monument, but the cars don't go within a mile of Echo Bay, and that distance I footed. From a bluff in Hudson Park I saw the G. B. rocking at anchor, looking something like a white duck in a mill-pond. A small yawl, painted to match the yacht, floated alongside at the end of a boom. A yellow signal with a red crescent in the middle waved from the masthead; a little brass cannon planted across the starboard rail; a sailorfied chap in a sennet hat (by which not intentioned) sat forward on the roof of the cabin; and, resting his arms on the main ward on the roof of the cabin; and, resting his arms on the main sheet and gazing shoreward through a binocular glass, I recognized the Editor himself. After striking several attractive attitudes, waving my hat, wiping the perspiration from my brow, and adding such other gestures as I thought would probably lead to my identification, I was pleased to see the Editor get into the yawl and commence making demonstrations toward the shore. He took me on board the yawl and thence to the yacht.

The G. is a keel sloop 25 or 30ft. in length and 9ft. in beam, with four sails—mainsail, topsail, staysail and jib. She needs 5ft. of good water to sail in, and she has some 30in. of freeboard, as they call that part of a vessel's side which is above water. In the center there is a cabin 10ft. long and 6ft. wide, with a snug forecastle or galley or kitchen forward, and lockers along both sides and aft. On both sides are cushioned seats, dubbed transoms, to sit or sleep on, between which is a short table that stands on two legs screwed into the floor, and shuts up like a lemon squeezer. The chap sitting on the roof was Ollick, a Finnish sailor. He is the crew of the G. B. He has sailed in deep water on square-riggers and fore-and-afters, and knows all about working a vessel, but the occupation he dotes on seems to be rubbing up the brasswork, scouring the lamps, polishing the little cannon and cleaning the paint and varnish. In conversation he is profane beyond the bounds of necessity. It grieved me to hear him do so much swearing when there was apparently no occasion for it; it looked as if he was wasting italics that would be needed in a emergency.

The Editor dressed me in a flannel shirt, a slouch hat, and soft slippers that wouldn't scratch the deck; and gave me some refreshment. Then we sat down and waited for Partner Smith, who came later. Smith, and the Editor, and the crew are three quite dissimilar persons. The Editor is inclined to be fat, and follows his inclination in that regard. Smith's tendency to be lean is gratified; while the crew is small, and short, and lithe. They also have different methods of making their several ways about the boat. Smith scrambles there, the Editor rolls and slides there, and the crew squirms his way about. I introduced a new method by making a sprawl in the general direction, and then gathering myself up. This system affords great facilities for holding on.

At 5 o'clock we made sail. It was understood that, so far as I

was concerned, this was to be a pleasure excursion, and myself a mere passenger, but I consented to help hoist the anchor. I pulled at the cable with much energy, and sat down with the regulation thud when the anchor finally consented to let go the bottom. If it had been a cork it couldn't have bobbed to the surface any quicker than it did when it had once made up its mind to rise. Just as I struck the deck Smith yanked the cannon lanyard and let off the cannon with a bang; Ollick hoisted the jib, and the Editor hauled the main boom close aboard. The wind came from the side, and the boat suddenly careened half over. With the noise of the gun and the tipping of the boat I concluded that my sudden sitting down had started every timber in the craft, but as the others showed no excitement I concealed my surprise and got to a safe place by the sprawling method I have mentioned. The Editor was holding the tiller and looking aloft with a professional and critical eye, and Ollick and Smith were calmly coiling down ropes. I afterward learned that the gun was fired as a parting salute to Echo Bay, and I found out before the cruise was over that the G. B. never sailed on an even keel. In order to do herself justice she must have her lee rail about 6in. under water.

We headed for Oyster Bay, an arm of the Sound that indents the north shore of Long Island some twenty miles from New Rochelle. The sail was without incident, but not without interest, especially to the passenger. The loose ends of ropes had a way of tying themselves up into bowlines and lassoing his feet, and the boom lay in wait for his head and gave it a good thump whenever it got a chance. The greater part of the time the deck sloped to leeward at about the pitch of an ordinary shingled roof, but tacked its stability, having a compound motion impossible to follow. A seat beside the rudder post offered the best advantages as to permanence, but those advantages were somewhat lessened by the slack of the sheet coiling itself about the passenger's legs, the tiller striking him in the stomach, and the boom getting a crack at his head whenever the boat went off on a fresh tack.

About dark the G. B. was off the bluff that guards the entrance of Oyster Bay. It was known that there were in the vicinity certain buoys to be rounded, and certain shoals and reefs to be avoided, but exactly where they were located nobody aboard was prepared to say. Smith, therefore, went below, and proceeded to overhaul the chart, the result of his endeavors going to prove that while those hydrographical objects were readily located on parchment it is quite another thing to pick them up in a waste of water whose surface had a monotonous and uninteresting sameness as far as the eye could reach. In anticipation of having to sail by chart, the binnacle containing the compass was roused out by Ollick, and placed where the Editor, who was steering, could keep his eye on it; but it is worthy of note that no buoys were sighted, and that if there were shoals in the way of the G.B. she sailed over them without touching.

We dropped anchor in Oyster Bay at 10 o'clock that night, and the deck came once more to a level. Ollick inserted himself into various lockers and boxes, and brought forth potatoes and meat, and bread and butter and coffee, put an iron chimney on the stove in the forecastle, started a fire, and directly set forth a toothsome meal on the table in the cabin. The passenger, who had hitherto been inactive, now displayed a renewed interest in the proceedings, and his achievements at that little table were duly entered on the log of the G. B.

Before going to bed the passenger mounted to the roof of the cabin and took a confident header into Oyster Bay, as a preliminary to a contemplated swim. Owing to the shallowness of the water he was enabled to make the valuable scientific discovery that the bottom there was formed chiefly of aluminal deposits and other ingredients which go to make up an unusually hard kind of clay. These mineralogical specimens were afterward removed from his hair by means of a comb, and examined at leisure.

The passenger slept that night on one end of the port transom, the Editor occupying the other end. As the transom is 9ft. long and the combined length of the occupants something over eleven, there was a tangled up mass of feet in the center. However, the sleep of the passenger must have been uncommonly deep and satisfying, as he got enough of it by 4 o'clock the next morning, and at that hour he went on deck. The water looked cool and inviting, so, slipping off his night clothes, he dropped over the side. After swimming about for a while, and satisfying himself that his natatorial powers were still retained, he concluded to go back on board. Then he made the discovery that it was somewhat easier to get into the water from the G. B. than to get into the G. B. from the water. Her rail was above his reach, and after jumping for it and catching it just as he had exhausted the strength which he had need of to pull himself aboard, he hung on the side of the boat like the fender of a tug, and called vociferously to the Editor to come and pull him aboard. The literary man was aroused at length, but not until the occupants of neighboring yachts, some of whom were females, had come on deck and leveled their glasses at the victim. Observing this, the man overboard swam to the other side, where the Editor reached down a friendly hand and took him in. Smith protruded his head through the cabin hatch long enough to inquire why the passenger hadn't climbed up the bobstay, as he might easily have done, and then went back to sleep. The passenger then got a field glass, and, sitting down in the cockpit, proceeded very collectedly to familiarize himself with his audience on the other yachts.

After a breakfast as hearty as the supper had been, we got out of Oyster Bay, and started for New York, with a fair wind and sun right behind us. Perhaps it wasn't hot and perhaps the passenger didn't get his hands and his face burnt, and his neck gridded, but appearances were otherwise. There was shade on one side, but there was spray there also, and the water squirted through the scuppers in a moist, disagreeable way. Ollick, dressed in simply undershirt and trousers, was everywhere with bucket and sponge, sloshing and swabbing right and left. Then followed a scouring process that left every piece of brass on the boat so bright that it shot back the rays of the sun in dazzling little streak; and, the angle of reflection being equal to the angle of incidence, one of these streaks met the passenger in the eye, no matter which way he looked. When Ollick had driven every one three or four times around the yacht with his scrubbing things he disappeared in the forecastle, and when he again emerged he was very gorgeous in a white shirt with navy blue collar, cuffs, and bosom, duck trousers, white as snow, and sailor cap. He took a seat forward, and was for some time an object of deep admiration to the passenger.

Smith is something of a vocalist. He has a strong bass voice that issues from his elongated larynx with the vibrating effect of a whistling buoy and shakes him like a reed whenever he exercises it. He got himself in the proper frame of mind by a close perusal, at frequent intervals, of a temperance journal, and then, grasping the mast to steady himself, he beguiled the tedium of the day by singing a series of cheerful verses, ending thus:

Now all take warning by this 'ere song!
Yo! ho, ho! and a bottle of rum!
Never drink whisky so terribly strong!
Yo! ho, ho! and a bottle of rum!

Having rounded the bluff and pointed toward home, we had the wind and tide dead against us, and all day long we cut the waters of Long Island Sound into saw-teeth beating down toward that estuary called the East River. A lubberly schooner tried to accompany us, the captain of which was the most diabolically mean man I ever saw. He blanketed us with his patched and slovenly sails whenever he had a chance, and he would heave to and wait for us in order that the chance might occur often. Finally we left him astern, and he went on his evil and malicious way. Later on a big-sailed catboat came down toward us with the breeze and rounded up to windward of us, where he lay back stiff for a race. It would have been more polite of him, according to marine etiquette, to go to leeward, and Smith reminded him of the fact in rather plain language. He didn't appear to be a gentleman, though, and held on. The weather was squally and Smith had ordered our topsail in, but this fellow's breach of good manners awoke the yachtsmen's instinct in him, and in a moment Ollick had monkeyed up the mast and reset the sail. The G. B., feeling the increased pressure, dipped a little more of her rail under, gave her head a jaunty toss, and kicking up her heels began to forge through the water with a pleasing rustle. The fellow had the windward position of us, and his boat was a racing box, but in spite of all that we out-footed him. As we crossed his bows and he dropped astern, Smith gave vent to some derisive language, pointed out small and insignificant craft which he might tackle for a race with a reasonable prospect of success, and otherwise so harrowed up the man's feelings that he went about and put off in another direction.

After the squalls were over the wind died out entirely, and we had to anchor to keep the G. B. from going backward. While we lay there Ollick got supper; then a little breeze ruffled the water, and, taking advantage of it, we bore down upon the anchorage of the Knickerbocker Y. C., of which the Editor and Smith and the G. B. are members. It was dark when we got there; the tide was running like a mill race, and the G. B.'s buoy, to which she was in the habit of tying up, was surrounded by so many other yachts that she had to be warped in by passing a line from one boat to another, and finally to the buoy. During this process I found that I had done Ollick injustice in supposing that he had exhausted his powers of objurgation on the previous occasions that had drawn upon them. For, added to the perplexities of darkness, a stifling atmosphere, and a rushing tide bearing us toward some black rocks that looked like the discolored teeth of dragons, a swarm of mosquitoes settled down upon the devoted tar, and made life a burden; I may simply say that Ollick's profanity did the subject simple justice, and whenever he paused for breath the Editor took up the strain and enriched the air with his ornamental blasphemy. Smith is a member of the Congregational church, but he showed signs of satisfaction at hearing his sentiments expressed in so much better terms than he could command. I never saw so many mosquitoes before in my life. The air was thick with them, and their voracity was unbounded. To protect myself from them I lay flat upon the floor of the cabin, covering myself, head and heels, with a blanket, under which I sweltered until morning broke, and then Ollick, his face and arms swollen from the bites of the pests, took us ashore, and we came to the city. All that day my chair in the office rocked and tipped with a compound motion, as though at sea, and I had only to close my eyes to find myself back upon the waters of Long Island Sound, tossing and dipping among its restless waves. The click of the type as it went into the compositors' sticks answered to the lap, lap of the water against the sides of the yacht, and upon opening my eyes the delusion was not the more readily dispelled when I observed that in the office and aboard the G. B. the same editor sat at the helm.

G. E. M.

THE DEED OF GIFT.—A well-known barrister and yachtsman has written to us saying he has carefully gone into the deeds of gift and conditions of the America challenge cup, and he is of opinion that any deed subsequent to the original is illegal; also the new deeds and conditions might be held to be as bad, as they create a "perpetuity" in possession, and such a condition is at variance with the meaning of a challenge cup. That is, the conditions are such as to make it impossible for any foreign yacht to win the Cup, and the New York Y. C. will therefore hold it in perpetuity. Perhaps this is exactly what the Americans desire. At any rate, the conditions have always enabled the American yachts to figure as much superior to those of this country, and the new conditions (should any one challenge for the Cup again) will enable them to exhibit this superiority to a much greater extent. This, after all, is a very cheap kind of notoriety, and we can console ourselves with a not irrational belief that our yachts are not so bad as they appear to be when in competition in New York Bay. Some of the American papers are professing to admire the new conditions on account of their wonderful elasticity, and point with a fine air of triumph to the clause which allows the parties concerned in the challenge to make any arrangements they like for a match, even to the waiving of the ten months' notice. We quite remember that the club waived the six months' notice in the case of the Livonia challenge; but then they were quite safe in doing so, as with such vessels as Columbia, Sappho and Palmer, the suddenly altered measurement rule and time scale, and the choice of a vessel on the morning of a race, they had about a 100 to 1 chance. Would they waive the notice in the case of a Thistle? We think not; neither would we. So far as we can see, this wonderful clause is simply a *tour de passe-passe*, which could never be used except for the advantage of the Cup holders. So far as the present *régime* of the New York Y .C. is concerned, there is no fear that they would not make a fair match so far as course and such like things are concerned, but they dare not throw away such a chance as ten months' notice if they had the least doubt as to the capability of their best yacht for defending the Cup.—*London Field, Nov. 26.* That in which we can agree with the English journals is, that it is to be feared that we will be deprived of the interesting spectacle to which we have been accustomed for three years, the struggle for the Cup; a struggle of which the final issue should proclaim the superiority of American or English construction. This is specially to be regretted by us, who have so much to gain from the lessons which accompany the contest.—*Le Yacht, Nov. 26.*

NO BOTTOM TO IT.—The discovery has been lately made that from a utilitarian standpoint the famed America's Cup is but a hollow sham, that it has no bottom and cannot be utilized for convivial purposes. Whether it will be less highly prized by the present holders on this account remains to be seen, but now that the club has knocked the bottom out of international racing, it cannot complain because the Cup exhibits a similar deficiency. It has long been acknowledged that from an æsthetic point of view the Cup was not a remarkable production, the new deed of gift has entirely destroyed its symbolic value, and now, after this last sad disclosure, it may be asked what is it good for any way?

SEAWANHAKA C. Y. C.—On Saturday last a musicale was given by members of the club at the clubhouse. The attendance was good and the affair was quite successful. The next lecture, on the history and general theory of navigation, will be delivered on Dec. 10, by Lieut. T. C. McLean, U. S. N., navigating officer of the Dolphin. The lecture will begin promptly at 8:30, and at its close a special meeting will be held to act upon the recommendation of the classification committee. The class in navigation under Capt. Howard Patterson, will begin on Dec. 17, at 8:30, meeting once a week thereafter. An upper room in the clubhouse has been fitted as a class room.

GRAYLING.—On Friday last Grayling was lowered from Lawley's ways, the alterations being completed.

A NEW DESIGN FOR LAKE ONTARIO.—A yachtsman of Hamilton has lately received a design for a wide cutter from Mr. C. P. Clayton, of Southampton, the designer of the best of the Itchen length racers. The design is both deep and wide, with a midship section somewhat like Pappoose. Her dimensions are:

Length, over all	60ft.
l.w.l.	42ft.
Beam	13ft. 5in.
Draft	9ft.
Least freeboard	2ft. 7in.
Displacement	30.3 tons.
Area midship section	48.3sq.ft.
Sail area—L. Y. R. A. rule	3360sq.ft.
Sailing length—L. Y. R. A. rule	42.95ft.

The design shows a clipper stem and long counter, a sternpost with the rake of the average cutter, and a rocker to keel, the depth being amidships, rather than aft, with forefoot rounded well away, but not to such an extent as in Thistle. The yacht may be built this winter.

HERRESHOFF VS. NAVY LAUNCHES.—Some complaint has been made by naval officers against the Herreshoff launches as compared with the old navy launches built and being in use by the Department, and in a recent discussion of the subject Commander W. B. Hoff, of the sloop of war Ossippee, compared the former to race horses and the latter to draft horses. A couple of weeks since Captain Bruce, of the Atlanta, senior officer of the North Atlantic Squadron, while at Newport, ordered the launch of the Ossipee, one of the navy boats, to be tried against the Herreshoff launch of the Atlanta. The two were joined stern to stern by a heavy hawser, and then both started ahead slowly, increasing until they were turning at full speed, the Herreshoff boat first stopping and then towing astern her opponent until the latter was entirely helpless. Commander Hoff, who followed the race in another launch, was unable to keep up with the Atlanta and her tow, and discovered that the racer was more than a match in all ways for his draft horse.

BOAT BUIDING NOTES.—R. J. Douglas & Co. have partly repaired the damage done by fire in September, by which their shops were destroyed, and now have a large new building erected, containing the boat shop, office, planing mill, one machine shop and engine and boiler house. They expect to have 20 to 24 stocks busy by Christmas. The firm have been successful with small racing catboats, 15ft. 6in.×7ft. 4in., having sold 17 within the past six weeks....Mr. Rushton has his entire shop employed on an order for 100 Douglas folding boats, prior to beginning to build up stock. He has now at work a builder from Saranac Lake and will add the Saranac boats to his stock.....In answer to an inquiry Mr. Clapham informs us that he has built three of the "Flying Pontoons," the largest 18×4½ft., and that they have proved very fast under sail and row easily. They are best in smooth water, but still will stand considerable sea.

A BRITISH STEAM YACHT FOR AMERICA.—The steam yacht Lady Torfrida has been sold by Sir William Pearce to Mr. Bayard Brown, an American, who will start at once on a long ocean cruise. The Lady Torfrida is of steel, about 200ft. l.w.l. and 25ft. beam, by 13ft. draft and was built by J. Elder & Co. from their own designs in 1883. She is rated 100 A1 at Lloyds.

THE BURDEN SCHOONER.—Mr. Burgess has completed the design and Lawley has made a model of the yacht, which will be 80ft. l. w. l. She resembles Volunteer in sheer plan, but is still deeper, though retaining the centerboard. Lawley & Son will build her, of wood.

VOLUNTEER.—Captain Haff was in Boston last week to look after the hauling out of Volunteer, and on Saturday she went on the ways vacated by Grayling, where she will remain until spring. She will be scraped and painted at once.

CARRIE E. PHILLIPS.—The new Burgess fisherman sailed last week on her first trip to the Banks.

GITANA.—Capt. Sherlock is at work fitting out Gitana for a cruise to the West Indies.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

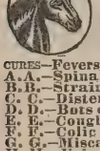
WEST BRANCH, Williamsport, Pa.—The A.K.R. number of your dog is 4080.

A. F. S., Brooklyn.—The charge you now use is not excessive, if there is no flaw in the barrel.

E. V., Mount Vernon.—Read "Gibson's Complete Art of Trapping," where the process of tanning skins is fully described.

W. A. W., Cedar Bluffs, Iowa.—We have not access to the Scotch Register. Your dogs are eligible, provided you are sure of the pedigree.

JOHN, New Lisbon.—For beagles write to some one of our advertisers; and the blanket can be procured from any dealer in sportsmen's goods.



W. C. K., Columbia, Ala.—To join the Audubon Society it is necessary only to subscribe to the pledges, blank forms of which will be furnished on application by the secretary, P. O. Box 2,832, New York.

I. S. & S., Fayette Court House, Ala.—Will you please refer me to some one breeding St. Bernard and Newfoundland dogs, one whom I can fully rely on for fairness. Ans. Consult our advertising columns.

BEAGLE, Baltimore, Md.—Can I keep successfully through the winter ten or fifteen wild rabbits in a coop 15ft. long, 3ft. wide and 2ft. high, sides, top, bottom and ends closely boarded up, front of wire? Ans. Yes, but it may be necessary to keep the males from fighting by a compartment for each. Feed the same as tame rabbits.

SUBSCRIBER.—The only one of the pedigrees that we can give is that of Boz, A.K.R. 443 (E. 13,020), white, brindle markings, dog, whelped June 13, 1881. Breeder, Mr. C. M. E. Browse, England. Owners, Messrs. R. & W. Livingston, 16 West Thirty-sixth street, New York. Sire—Gamester (E. 10,770), by Turton's Crib (Duke II.—Rush) out of Berrie's Rose, by Vero Shaw's Sepoy out of Nell. Sepoy by Crib (E. 2,606). Dam—Browse's Betsy, by Parson's Sultan (E. 9,494) (Barker's Duke—Bertha) out of Browse's Busy (E. 8,572), by Young Sambo out of Browse's Kit. Record—Equal second, puppy class, bulldog show, 1882; first, puppy class, Alexandra Palace, 1882; equal third, Crystal Palace, 1883.

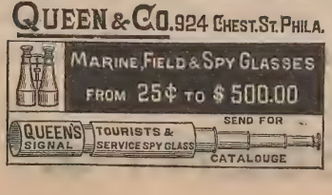
"SHOOTING."



The only English journal devoted exclusively to sport with gun and rifle is *Shooting*, edited by Sir Ralph P. Gallwey, Bart., author of the Badminton Library, and G. T. Teasdale-Buckell, Esq., who exported all the Llewellin setters to America and won the National Brace Stake and the Field Trial Derby four times each.

The most practical correspondence and the best selection of advertisements appear in *Shooting* weekly.

Few Americans ever heard the names of ur best English gunmakers.

Price of *Shooting*, postpaid, $3.25 per annum. Send post office order to the Publisher, 182, Strand, London, England.

QUEEN & CO. 924 CHEST. ST. PHILA.

THE AUDUBON BADGE

Is a brooch pin in coin silver with the motto and monogram of the Society.

Chaste in design and tasteful in execution, it resents an attractive appearance, and is procted from tarnishing by a beautiful satin finish on its surface.

We are now in a position to execute orders for these badges to any extent. Wherever they have been sent they have met general approval, and every member of the Audubon Society should wear one as a reminder of the pledge and an open declaration of principles.

PRICE 50 CENTS, POSTAGE FREE.

Forest and Stream Publishing Co.
40 PARK ROW, NEW YORK.

The Forest Waters the Farm;

OR,

The Value of Woodlands as Reservoirs.

BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGRICULTURE ET LES FORETS.

PAR M. ANTONIN ROUSSET.
Translated by
REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

Price in cloth, 75 cts.; paper, 50 cts.

JAMAICA PUBLISHING COMPANY,
Jamaica Plain, Mass.

WOODCRAFT.

By "NESSMUK."

A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English. The chapters are written to teach the amateur to journey through the wilderness with ease; to sleep on a fragrant elastic bed and pillow at night, instead of abrading his vertebræ against roots and stubs; to go light; to keep warm and dry; to cook plain, wholesome meals; to come out of the woods refreshed and comforted; to get a dollar's worth of recreation for every dollar spent. It is the thing that thousands of novices are looking for, because it gives them just the advice and practical information they want. Then there are hints as well for old campers, who will be surprised to see how much "Nessmuk" can tell them; and stories, anecdotes, and a never-failing supply of mother-wit for the entertainment of all who can appreciate a good thing told in camp or in print. Cloth, 160 pages, illustrated. Price $1.00.

FOREST AND STREAM PUBLISHING CO., 39 Park Row, New York.

A NOTABLE ART ENTERPRISE!

The Sportsman's Reverie.

A SERIES OF PICTURES FOR SPORTSMEN.

READERS of the FOREST AND STREAM cannot fail to recollect Mr. Thomas F. Watson's poem entitled, "The Sportsman's Reverie," printed in this journal about two years ago. Later on a few stanzas were added to cover other scenes of typical American sport with the gun. The author depicted vividly the varied visions which come before the view of the veteran sportsman as he sits in easy chair before the fire. Of the author and his poem the *Detroit Free Press* said in an appreciative notice: "The author is evidently a man of the most acute sportsmanly enthusiasm, as well as of nice literary taste. His poem is built upon a very simple plan. Before a cheerful fire—like Ike Marvel's hero—sits a veteran of rod and gun; he grows half drowsy over pipe and fire and the poet has caught—with a nice and sensitive appreciation—the reminiscences of a hundred hunts which flit through his brain. One experience after another is described with graceful pen touches; the quail, the woodcock, the snipe, the deer, fall before the crack of the gun; a long day's sport—a glorious day such as no man ever compassed between sun and sun—is described, even the trout, from the clear rapid, paying tribute to the prowess of a dreamland sportsman, until at last, with the fall of the quiet night shadows, the sportsman draws his boat to the shore, his tired retriever crouches at his feet, and, with his ducks, the final trophies of his sport, at his side, he looks back over the darkening water; and then, once again at his fireside, the end of the vision comes naturally and gracefully."

And now these "word pictures" of the poet have been complemented with the actual canvas pictures of the painter. Artist-poet and poet-artist have united to give us the poem in a magnificent setting. Mr. Robert Hopkin, the celebrated artist of Detroit, has painted a series of twelve pictures, each telling in color what the poem tells in words. From these paintings have been made superb heliotype engravings, each having beneath it the particular verse of the poem illustrated. The series is remarkable for strict adherence to nature fidelity in portraying action, and artistic merit.

THE TWELVE PICTURES:

No. 1 shows the hunter seated in an easy attitude in an arm chair, gazing reflectively into the fire on the hearth. Above the fireplace are the head and antlers of a deer. The sportsman's right arm is around the neck of his dog, which is resting on his haunches beside the chair. His left hand holds his pipe. The firelight flickers on the floor and around the legs of the chair.

No. 2 represents dawn breaking over a small lake. The night shades are fleeing. A mist is rising from the eastern end of the lake, of which trees fringe the edge. A plover is circling in the air, and in the foreground is a mallard lazily flying out over the glassy water.

No. 3 represents snipe shooting. In the foreground is the sportsman, his body twisted around to the left in the attitude of making a double on snipe. Standing beside him is the setter, waiting for the word to retrieve. To his right is the border of a wood, the branches bending to the strong wind. In the distance are the sails of craft on the lake.

No. 4—woodcock shooting—shows an opening in the copse around whose border a brook is winding. In the foreground, standing deep in the ferns and rank vegetation, is a setter on a point. Behind the dog is the sportsman in the attitude of shooting at a bird flying directly over him.

No. 5 shows a quail hunter in the foreground, walking along ready for the shot, which will follow the rise of the birds, on which the dog is drawing to a point. A haze is over all, and the sky is that of a day in Indian summer.

No. 6 depicts grouse or partridge shooting in the beech woods. The hunter is walking down a slope. The dog has come to a point ahead of him. The bird has flushed and the hunter is shown aiming. The pointer has stiffened into an attitude of strained attention, as he watches the bird fly away. The upper part of the sportsman's body is in the shadow, the lower part in the strong light of the sun rays.

No. 7 shows an angler reeling in a trout. A brook is tumbling down through the woods and over the rocks into the pool. The sky is cloudy and the sunlight is struggling through.

No. 8—deer shooting—is a forest scene. In the foreground a buck, just shot, is falling on the edge of a lake. Tearing down the slope behind him are two hounds. To the left, behind the roots of an upturned tree, are seen the head and shoulders of the hunter, whose rifle is still bearing on the deer.

No. 9 represents shooting over decoys. A gale is blowing and the water of the channel outside is lashed into whitecaps. In the bay the decoys are tossing in the chopping waves. In the foreground is a point of rushes, in which the skiff of the hunter is partially concealed. The flock of ducks, which has just swung in outside the decoys, is broken by the discharge of the first barrel. One section is wheeling out over the river. The other has broken off to the side and is wheeling out again to meet the first section. Some scattered birds are dashing above the head of the hunter, and he is twisted around in his skiff aiming at a bird flying above and behind him.

No. 10 shows flight duck shooting. The scene is a marsh, on whose broken surface the sun is setting behind the clouds. In the foreground, on a grassy point, are the hunter and his spaniel. The hunter is in a kneeling attitude and in the act of firing his first barrel. The spaniel is plunging into the water to retrieve the bird which has fallen to the first barrel. In the distance are flying ducks.

Nos. 11 and 12 represent the hunter retiring from the marsh and at home, and these two are among the strongest of the set.

The pictures are printed on the best 150lb. plate paper; size of paper 24×30in.; size of print 14½×17½in. The pictures have the tint and tint border, and the artist's remarque and signature, and form artist's proofs, an édition de luxe.

PRICE, $30 FOR THE SET; SINGLE PICTURES, $3.

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1887 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1888 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1888 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportsmen, anglers and naturalists, make up these pages.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away. Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

ANSWERS TO CORRESPONDENTS.

BULLDOZING EXHIBITORS.

THE American Kennel Club is an association which assumes to have special charge of the interests of dogs and dog matters in this country. How it has failed to guard those interests in the past the public knows, for the record of blunders and crudities has disheartened all those who are interested in the improvement of the dog. The crowning blunder of its career was committed last week, when its executive committee passed a new rule which provides that every dog entered at any show held under the rules of the A. K. C. must be registered in the American Kennel Club Stud Book.

This so-called stud book has an unsavory history, a full account of which need not be given here. It is a publication which was started eleven years ago, and since then has been knocked about from pillar to post, now in the hands of one publisher, then passed along to another. Sometimes it has died, and then after two or three years has been resuscitated by some sanguine publisher, who has succeeded in collecting a few registry fees and has then allowed it again to sink into oblivion. It has never been a success. Every one who has tried to bring it out periodically has lost money on it. It has always been in the hands of irresponsible parties, has never had and has not now a financial backing, without which such a work can never pay expenses. There is no reason to suppose that it will be more successful now than in the past.

The present attempt to bullyrag the dog owners of America into registering their dogs is a last desperate device to keep afloat this venture, which was undertaken by the A. K. C. a year ago, and which then had not the slightest prospect of success. The A. K. C. have been losing money steadily ever since they began its publication, and now they are using their own rules as a club to drive the dog owners of America up to the stud book office, there to deposit the half dollars which shall keep their venture afloat a little longer and pay the salary of the club secretary. This secretary moreover is not himself a dog man. He has no competent knowledge of dog affairs, nor acquaintance with pedigrees, nor any of the other qualifications which might justify putting the confidence in him which the public withholds from the club itself.

The A. K. C. has chosen a very unfortunate expedient to rally the dog public to the support of their publication. Most self-respecting people are much more easily led than driven, and when the A. K. C. says "you must register in our stud book or you cannot show under our rule," they make it certain either that shows will be held under other rules than theirs, or else that the shows which are held under their rules will be failures from a financial standpoint, as well as in point of numbers of the dogs shown.

The sense of justice inherent in every man will rebel at such an arbitrary rule as this, and we venture to predict that if it is enforced, dog shows this year will show such a falling off as will astonish those delegates to the A. K. C. who were concerned in the passage of this rule. In all the history of dog shows in America no such serious blow has been given to these interests as is threatened by the passage of this rule.

It is scarcely to be supposed that the public will tamely submit to dictation of this sort. If it does, we may look out next year for a new rule providing that every dog entered at a show must have its number engraved on a collar supplied on favorable terms by the club secretary, and must be fastened in its stall by a chain bought of the secretary, and fed on dog biscuits supplied by the secretary, and deodorized with disinfectants kept in stock by the same thrifty pursuer of the nimble sixpence. This would be all right and proper enough were the chosen secretary some blind or maimed object of charity, toward whose support the dog exhibitors of the country could properly be asked to contribute by any such fifty-cents-all-around pretext as this obnoxious rule.

CONGRESS AND THE PARK.

ON Monday last Senator Vest introduced in the Senate a bill providing for the care, government and protection of the Yellowstone National Park.

This bill in many of its features is the same that was printed in our issue of last week, but one important change has been made in it, a change which cannot fail to give satisfaction to all friends of the reservation, as well as those who appreciate the great importance of preserving the forests which protect the sources of the Yellowstone and Snake River.

In the draft of the proposed bill as printed, no change was made in the boundaries of the Park, and it was proposed to definitely fix them as laid down in Section 2474 of the Revised Statutes, by which the Park was established. This definition, or rather absence of definition, of these boundaries was adopted in the hope of silencing opposition to the bill, and obtaining from Congress at least an authorized form of goverment for the Park. On further consideration, however, Senator Vest deemed it wise to make the first section of his bill read as did the first section of the bill which he introduced at the last session of Congress. This called for an enlargement of the Park by about thirty miles on the east and ten miles on the south.

The wisdom of this change in the reading of the bill must be apparent to every one. The present boundaries of the Park, as we have often shown, are vague and uncertain, and the southern line moves with the seasons, so that no man can tell on any given day of the year just where it runs. It is clear that these boundaries ought to be fixed and definite, and the phraseology of the present bill provides for this.

The chief importance of this National Park lies in its value as a water preserve. It is a national reservoir, which holds the moisture which fertilizes many thousand square miles of arid territory, territory which without this water could produce nothing more useful than sage brush and cactus. If the Park shall be enlarged, and so the water supply be increased, the area which is susceptible of irrigation and cultivation from these streams will be greatly enlarged, and so a substantial addition at no cost whatever will be made to the actual wealth of the country. The proposition is a very plain one, and can be comprehended by every man of common sense.

While the preservation of the game and the natural wonders of the Park are felt by many people to be matters of great importance, there are some who regard this feeling as sentimental, and not one on which any money should be spent. No man who has the matter put plainly before him is likely to decline to vote for so practical and inexpensive a benefit to our northwestern country as would result from increasing the water supply of Montana, Dakota, Idaho and Oregon.

One of the great problems of the day for the arid West has to do with its water supply. The rivers which flow down from the mountains are tapped at short intervals from source to mouth by irrigating ditches which carry off a part of their volume to be spread over the lands of the farmer. As a consequence of this constant drain, many, even of the largest of these streams, are, in times of drouth, dry at their mouths, or have dwindled to mere rivulets, and the dwellers on their banks consequently suffer from lack of water. This is especially the case in the Southwest along streams like the Arkansas and the South Platte, where farms are numerous. The northern country along the Yellowstone and the Snake is not yet so fully settled as to have suffered in this way, but as the country fills up the same trouble will be found there, unless the forests which protect the sources of their streams shall be preserved.

The practical men in Congress should be made to see the importance of passing Senator Vest's bill.

NOTES AND COMMENTS.

THE proposition of M. Pasteur in relation to the rabbit plagues of Australia and New Zealand may be very practical, but it is exceedingly repulsive. He suggests, since the poisons hitherto employed have been ineffectual to destroy animals which multiply at such a frightful rate, "do we not need rather, if I may so express myself, a poison endowed with life, like themselves, and able, like themselves, to multiply at a surprising rate?" His "poison endowed with life" means the microbe, which is the cause of chicken cholera; and his proposal is nothing more nor less than to communicate this disease to the rabbits, and let the fell pestilence work out its bitter ends. This is to fight fire with fire, plague with plague.

The Passaic County (N. J.) Fish and Game Protective Association has a record well worthy of attention. From a brief report from the secretary, printed in another column, it will be seen that the methods adopted by the association are marked by common sense and attend d with success. The purposes and plans of the Passaic county game protectors are admirable, and in every way deserving of the support of citizens of the country and of sportsmen from abroad.

In our recent reference to the New Jersey game protective societies there was no intention of carping at the good they had done. The only point made was in relation to the license fee which some of these societies insist upon collecting from an outsider before he is permitted to shoot off a gun in the State. The claimed right to do this is explicitely made by Mr. Shriner, when he writes: "Of course we have under the laws of the State a right to collect fees from men who shoot here in our county, for the law provides that hunters or anglers shall abide by the rules of local associations formed under the State law, as ours is." Now the point on which enlightenment is craved is this: Under what provision of the law or by what construing of the English language as in common use to-day, can any New Jersey society find a warrant "to collect fees from men who shoot here in our county," as Mr. Shriner puts it? And again, if the law does require a non-resident to pay money into the treasury of such societies, does not the Passaic County Association shirk its duty when it forbears to collect these dues?

Mr. James Watson hit the nail squarely on the head, at the American Kennel Club meeting, when in reply to Mr. Peshall's objection to him (Watson) as a delegate because he was an editor, he said, "It might not be personal, but it is utterly ridiculous." The American Kennel Club has a rare faculty of doing idiotic things, and the executive committee's adoption of a resolution asking the Hornell Kennel Club to withdraw its delegate because he will not knuckle down to the A. K. C. foolish schemers is one of its choicest blunders. Mr. Watson's further suggestion that Mr. Peshall's profession should not be any objection to him as a delegate, will not have universal acceptance, inasmuch as it is the melancholy truth that many of the A. K. C. blunders have been perpetrated by members who in professional life add lustre to the bar.

HUNTING IN FLORIDA IN 1874.—V.

OUR camping place for the week proved beset with mosquitoes and fleas beyond anything we had experienced in the wilderness, utterly banishing sleep till after midnight, and sheer exhaustion compelled it. We could in a measure relieve ourselves from mosquitoes by filling our little tent, as we lay down, with the dense smoke of fat pine knots. But, for the fleas there was no relief, often observing them to jump from our blankets in swarms as we hung them out to dry in the morning. A second trip would suggest a bountiful supply of oil of pennyroyal with which to perfume our garments, and which is said to be flea-expelling. At this stage of our trip we began to suffer from the stinging bites of the black gnats, an insect so small as hardly to be detected with the naked eye, but whose bite sends a thrill through the nervous system altogether disproportionate to its size. To this annoyance, unlike that of the fleas, if one is provided with essence of pennyroyal, there is no remedy.

A heavy rain for three days and nights kept us under shelter most of the time, blowing the great quantity of eggs we had brought from the "cypress-slues"—our boatman Jim meanwhile making a fish net of stout twine to use for seining the carp and small fish that abounded in the stream near whose mouth we were encamped. When finished we set it a little way up the creek, expecting in the morning to find a variety inclosed in its meshes. But instead, an alligator, or perhaps an otter, swam through it and tore it to shreds, thus in one moment ruining our boatman's work of two days.

The chuck-wills-widow, the analogue of our northern whip-poor-will, enlivened the nights with its plaintive note. To obtain one, as they are utterly secluded during the day, Jim fastened my dark lantern to the top of his head and going toward the sound, soon detected the bird in the cimmerean darkness, by the shine of its eyes, and secured it, though badly mutilated by the shot, as he was unable to judge of his distance from it. As soon as the norther of three days had blowed out, Fred spent a day across the Indian River shooting terns, skimmers and oyster-catchers, which rose from the water in flocks of thousands, while I prepared my large turtle for preservation, poisoning the carcass and salting the meat for our larder. The following day, I hired the stalwart negro to accompany Jim and myself in a large boat to the Indian River Inlet, hoping to secure a sawfish. These fish come in from the ocean through the inlet to prey upon the schools of fish that abound in Indian River. Swimming close to the bottom, when they perceive a school above, they quickly elevate their toothed upper jaw and whirling it about in the school, mangle and kill many to be eaten at their leisure. Our boat being provided with a coil of rope about 100ft. in length, attached to a harpoon, we paddled gently where the water was about 5ft. deep, till discerning our game on the bottom, about 12ft. in length, Jim drove the harpoon completely through its body. Instantly the fish started for the ocean through the inlet, drawing out the line over the gunwale so rapidly as to make it smoke. The line having been made fast to the bowpost, when the end was reached, boat and all followed for half a mile with a velocity so great that I quickly drew my hatchet from my belt and stood ready to cut the rope, if the bow gave indications of going under as the fish went into deeper water. At length he was wearied with the exertion, and slacked up, when we began to play the creature, till worrying him on to a shoal place, I had a fine exhibition of the way he gyrates his saw when mutilating his prey. At length seizing a favorable moment as his head was raised out of the water, I planted a rifle-ball just midway between the eyes, when a quiver ran through his frame and he was dead. None judged him to weigh less than 800lbs. Towing him across the river to our camp, it was the work of an entire day to skin and pack the specimen for transportation.

While at this camp one of the better class of citizens privately interviewed me to learn what I might have learned during my forty days of intimacy with the murderers of Mr. Lang, saying he had in his pocket a warrant received by the last mail from the Governor of the State for the arrest of Mr. J. and Tom and a neighbor of theirs, who were understood to be the guilty parties; and suggested that, if I would leave interrogatories with a notary public before going out of the State it might further the ends of justice. Replying that I had carefully avoided any allusion to the murder myself, yet Mr. J., in our long tramps alone, had seemed to find relief in freeing his mind to me of his own accord, and had revealed enough to satisfy me who were the guilty parties, yet I could not betray confidence unless subpœnaed from Massachusetts as a hearsay witness. I have learned from newspapers that soon after I left the region a determined sheriff went into the settlement with a posse, and shot Mr. J. dead in his tracks while resisting arrest, but brought Tom to trial, who was, for the want of positive evidence, convicted only of manslaughter, and died within a year in the State prison.

In nine days Erwin was strong enough to be conveyed to a couch prepared for him in a small sailboat, and we started northward. It was our intention to start by 1 o'clock at the latest, and were ourselves all ready, but Jim's laziness delayed us till 5. Had we not had a superabundance of experience already in the thriftlessness of the Crackers, we should have gone crazy at the needless delay. The greatest boasters of what they can do, but the poorest performers of what they promise, they are unique in their characteristics, and to the enterprising Yankee a marvel of incongruities. When the anthropologist has satisfactorily traced the Hottentot and the North American Indian to their origin, he may turn his attention to the origin of the Florida Cracker, and he will find a much harder problem to solve. I have been a far more patient man since my trip to Florida than before, two months' experience in Crackerdom doing more for me in the cultivation of that grace than a half century previously.

With a favoring breeze we made twelve miles by 10 o'clock and camped on the west shore of Indian River on the sand, making Erwin as soft a couch of leaves as possible beneath our mosquito bars, while Fred and myself lay down by the fire. By 3 o'clock the mosquitoes and sand-fleas got the mastery of us and banished all sleep thereafter. For fresh water we dug a hole about 10ft. from the shore which soon filled with water percolating the sand, the cohesive attraction of the sand retaining the salt. Breakfasting upon broiled turtle steak, we reached a brown pelican rookery on an island of eight or ten acres in extent. Our large boat grounding about a mile distant we all went overboard but Erwin, and pushed it for half a mile. Then anchoring and pushing our small rowboat a quarter of a mile further we left it and waded as much more to behold the greatest curiosity of the kind I had ever dreamed of. The island was mostly covered with mangrove trees, a kind of banyan, whose limbs turn down from the height of 18 or 20ft. and take root, thus forming an uninterrupted canopy over a large part of the island. An acre, more or less, was covered with a clump of taller trees, in which blue herons were nesting. Hoping these might prove to be Wurdemann, I first gave my attention to them, but through the failure of Fred's gun to fire as the bird rose from its nest, lost my chance, to my great disappointment. Having secured the eggs we turned toward the pelicans. The mangrove is a slowly decaying tree, and though at some time this grove must have been thrifty—probably before the pelicans took possession of it—now every tree was barren of leaves and life. As we drew near every branch seemed covered with nests as closely as they could be packed—indeed so near oftentimes that a bird sitting on its own could easily dip its bill into the nest of its neighbor. On one tree not 20ft. high or more than 6 or 8ft. broad I counted twenty-two nests, all occupied. Acres of the ground also were so thickly covered that it was easy to step from nest to nest across a full acre. In one nest there might be three or four eggs, in no instance more, and in its neighbor young ones in different stages of growth. To these last the old birds were continually coming with fish in their pouches, which they disgorge into the capacious maws of the young by both dropping the lower mandible and the parent bird apparently contracting its pouch from the bottom so as to empty its contents into the pouch of its young. How wonderful the instinct that could find its own nest among so many thousand and also adapt its selection of fish from day to day to the varying size of its young, for I saw the old feeding young nearly as large as themselves as well as those just hatched. Rather than climb the filthy trees we took our eggs from those nests on the ground, gathering a waterpail full in a few minutes, always selecting the freshly laid ones, and might easily have gathered barrels of them. Securing eggs and studying their habits, we commenced securing birds. It was an easy matter to get three or four in a range and drop most or all at a shot. At every crack of the gun thousands would rise from the trees, darkening the sun, but soon settle down again. After a while our continual firing so disconcerted them that they settled down by the thousands on the water around the island, forming semi-circular ranks with two or three feet between, as though platooned under leaders. For my own use I brought away eighteen birds, representing a series in every stage of plumage, from a fledgling just escaping from the egg to the mature bird.

Fearing to leave Erwin longer in the broiling sun, we left the fascinating spot, and camped on a sand-bar at the mouth of St. Sebastian River, intending to spend at least three days in camp, as famous large alligators are found in the brackish water at the mouth of the stream. On a hummock within a mile a squatter had succeeded in cultivating, with great success, a plantation of oranges, bananas, mangoes, etc. Not to be hindered in skinning my pelicans, I hired the squatter's son to watch the mouth of the river for a large alligator. About 1 o'clock he came running to the camp, saying, "the biggest 'gator he ever saw was coming down the river." Calling Fred and Jim, and snatching up our guns and rifles, we ran to the end of the sand-bar, two or three hundred feet away, and sure enough, judging from the distance between his snout and his eyes, he must have been at least fifteen feet in length. Just as we were launching the rowboat to make sure of him, a scream from the camp hurried us back, to find Erwin was suddenly attacked with the severest chill I had yet seen him have. Greatly alarmed, I ordered all things packed as quickly as possible, and in an hour we were under sail with a stiff breeze, towing me in the rowboat that I might continue skinning my pelicans, as there was not room in the sail-boat with Erwin stretched at full length. The wind increasing, in less than an hour the tow-line broke, and before the sailboat could be turned about, I was a half-mile astern, without paddle or oar. Recovered at last, darkness set in and we camped on a sand-bar. Rain setting in, Fred and Jim were well soaked in the course of the night, while I watched with Erwin in the tent without a wink of sleep.

Next day the wind was dead ahead, and we were compelled to remain at camp till 4 o'clock P. M., when we started, and by 8 had reached Eau Gallie, where we had passed a night as we went out. Here I got Erwin into the shelter of a log hut, and as only thirty-five miles remained to Sand Point, I planned to send him on the morrow by another boat to that place, where he could have good nursing and a good bed, till Fred and I should arrive by the way of Banana River, a route twenty miles longer, but on which we hoped to get white pelicans and shore birds; but on awaking a rainless norther was blowing so furiously our boatman dared not go on. Windbound, I tried to think how I could turn the day to some account, having had to throw away all but four of my series of pelicans on account of the hot sun ruining them before I could skin them, through my hasty departure from St. Sebastian. Learning that there was an Indian mound over across the Indian River, three or four miles distant, I requested Jim to take me over in a boat, but he declined, saying, "No boat could live in such a sea." Another Cracker was willing to risk it for a dollar and a half. As the wind blew fortunately for crossing, though dangerously, I took my spade and trowel, and forbidding Fred to risk the voyage with me, I crossed over, the partially decked bow going under several times, but skillful management carried us across safely, though well drenched with the spray. Ascending the mound, about thirty feet in height, and well wooded with wild orange growth, I succeeded in exhuming a perfect skeleton, having its knees bent to its chin, and facing the south—thus fulfilling at the last chance one of the things I promised Prof. Jeffries Wyman I would try to do. "It is an ill wind that blows nobody any good," but Erwin's sickness seriously interfered with my finishing up Florida according to my plans; but as I could not see how I was responsible, I knew it was all right, and according to the plans of my heavenly Father, who is "too wise to err and too good to be unkind."

The norther blowed out during the night and we started about 8 for Sand Point direct, giving up for his sake Banana River and the white pelicans. Before starting I gave Erwin a morphine pill to alleviate the pain in his left side, the second time I had opened my medicine case during the trip—the first being, as stated in the earlier part of the narrative, to give one of my phials of quinine to a man on Ten Mile Creek who camped near me one night with his wife and seven small children, two of them very sick with fever. We parted in the morning, but he sent me word by a cowboy two weeks afterward that my quinine saved the lives of his children.

Having failed to secure a Wurdemann heron at the pelican rookery, I kept on the lookout for one, and during this day's sail espied a nest on the right bank, on a tall pine, which Jim declared belonged to Wurdemann. Sending him ashore with the rifle, he brought me one of the old birds and a half-fledged young he found under the nest. This specimen differs materially from the book measurements of the great blue heron, *Ardea herodias*, but so little in plumage that I was still in doubt, and obliged to wait till I reached Washington to discuss the matter with Prof. Baird and test the find. Night overtaking us ten miles from Sand Point, we were forced to camp again on the sand just opposite the lower end of Merritt's Island. Pitching my tent on the windward side of a rousing fire, and making as nice a bed of palmetto leaves for Erwin inside as I could, I gave the tent up to him and was gratified to learn in the morning that he had slept well. To quote from a letter to my wife written on the sailboat after leaving this camp: "This encouraged me to hope that after a sail of two hours I might yet have the gratification I had been all week anticipating of having a quiet Sabbath at Sand Point, and revisiting that Sabbath School in the pine woods, whose acquaintance I had made on my outward trip, but the wind was contrary, and so we add another day of holy time to the last seven Sabbaths unrecognized entirely as such, except in our tent, and two of those necessarily spent in traveling with an ox-team in Okechobee swamps, as the journal of my sojourn in the wilderness will explain. This journal, by the way, is wholly in my mind, as, till leaving Fort Capron last Monday, I have had no possible opportunity for writing except the few postals I have forwarded. Now I hope to send a postal almost daily, from the time I leave Jacksonville, and a letter weekly, giving daily particulars. This will keep you posted on my movements as you could not have been while I was out of civilization, among murderers and ex-Ku-Kluxans, for at this distance I dare write so, while had I written out my experience in the wilderness, and it had fallen into the hands of the wretches prowling through that region, it might have cost me my life. Yet I was well treated by every one, though I had to hear the most outrageous language respecting the 'Yanks.' I must confess I felt safer in having my revolver under my head and our guns between us as we slept in the tent, according to Cromwell's injunction to 'trust in God and keep our powder dry.' I always sleep the foreside of the tent, as Fred is a sound sleeper, while I usually wake at the tread of a 'possum within ten feet of me; still, into such a wild region you must go if you would study nature first hand instead of second. Hence the reason so few naturalists do anything more than study books and take the observations of others and use them second-handed. To a great extent I have done so, but always to my great dissatisfaction, you know. I now feel as though I had a right to speak and lecture on some subjects pertaining to Natural History, 'ex-cathedra' authoritatively. I cannot but feel greatly pleased with my experience for the last two months as well as grateful, I trust, for God's preserving care. We are just landing at Sand Point, at 11 o'clock A. M."

Learning that a man living a mile in the interior had a spring sulky, I sent a lad for it to convey Erwin to a suitable lodging place for the night and on the next day to the steamer at Lake Harney, twenty-two miles distant, on which we proposed to sail down the St. John's to Jacksonville. Having thus disposed of my sick companion, with gratitude for his convalescence, I chose a suitable camping place for the afternoon and night, and leaving Fred and our guide to take our luggage ashore, went myself in search of a suitable team to transfer us on the morrow to Lake Harney. Having secured a mule team I hastened back to find the last package just piled in a piazza of a store, when a furious thunder shower broke upon us. During my absence the mail-boat had come up from Fort Capron, bringing Dr. P. with three other passengers. It being Sunday the proprietor of the store was absent, leaving for twelve men and all their luggage only the piazza, 6ft. x20ft., for shelter. Feeling it was more important to preserve dry our luggage than ourselves we gave to it the benefit of our blankets and overcoats and took our own chance unsheltered for the most part with the probability of lying down at night drenched to the skin. Toward evening the rain ceased, and the proprietor of the store returning, he kindly offered us all lodging on his attic floor. My rubber blanket served to soften the couch of hard pine, and either it or fatigue induced sound sleep, to find on waking in the morning a cloudless sky.

After cooking and eating our breakfast of coffee, pork and hardtack, I commenced packing the cart, while Fred skinned three shoveler ducks and a woodpecker he had shot before breakfast. This done, he lent his aid to packing, but was soon interrupted at seeing a monstrous black hog run off with one of his duck skins. Giving chase, he overtook it in a boggy swamp, but had hardly deposited the skin in a safe place, when the same or another hog seized another duck skin, and in a trice chawed off one leg, thus spoiling it as a specimen for mounting. Will hog tribulations never cease, thought I. Our things packed, my final experience in "Cracker" honesty was realized. Jim demurred to my construction of the bargain I had made with him two weeks before, to take us to Sand Point in his sailboat and there leave us, at so much per day, more or less number of days. He made out almost as large a bill for extras as the bargain called for, when there were to be no extras of any kind, unless providential ones, and such he could not say there had been. After an hour of abuse, with charges of Yankee meanness and some threatening of legal redress, he calmed down and took his pay at my first calculation. I then donated him my camp cooking utensils that had

cost me about five dollars and were uninjured, supposing I could not possibly have any further use for them.

At 3 P. M. we bade farewell to Indian River, having a boy of twelve for our teamster, who proved to be no exception to an adult "Cracker's" thriftlessness, for when we camped at dark in the woods, he had no cooking apparatus. However, boiling our coffee in a lard can and our eggs in a peach can, and after drinking the coffee, our hominy in the lard can for breakfast in the morning, as it could be handled cold, we lay down on the ground and looking sky-ward went to sleep, as often before, counting the stars. Rising at 3:30 in the morning, I ended my camping career of fifty-one nights, and exchanged my butternut hunting-dress and blue flannel shirt for broadcloth and linen, and donned my beaver in place of the worn-out straw hat which I left sticking upon a stake.

At 9 A. M. we reached the steamer Volusia, gratified to find Erwin comfortably established on board, and at 2 P. M. sailed away from "Crackerdom" down the St. John's. Sharing a stateroom with Capt. B.—previous and subsequent to the war, lighthouse keeper at Cape Canaveral—I learned from him some interesting particulars of his experience during the war. On the secession of Florida he was ordered by the State authority to put out his light. He obeyed, and more. In the darkness of the night and the retiracy of the surroundings, he took down the lantern and everything movable, and transferred all by a mule-cart to a lonely spot four miles distant, and safely hiding them, kept the secret during the war. At its close, when a U. S. vessel came down the coast to re-light the lanterns, he was inquired of for the equipments. Leading the officer to the hiding place, he brought all out to light uninjured, and for his discretion was recommeded by the officer as a suitable person to continue in charge of the light, and was successful in receiving the appointment from Washington. He also informed me that early in the war Jefferson Davis and his Cabinet entrusted him with keeping concealed in the inlet near the cape as large a vessel as possible, to take any of them, in case of disaster, to Nassau, under British dominion, being assured, if once there, they would be protected according to the Mason and Slidell precedent. During the last year of the war the Union gunboats found their way into the Indian River and captured the vessel, with much other contraband material that had been accumulating as the safest place on the coast. On the surrender of Lee and the separation of Davis and his Cabinet, at their last meeting in the second story of the bank building at Washington, Wilkes county, Georgia, each strove to reach, by different routes, the rendezvous in charge of Capt. B., to make his escape to Nassau. Mr. Davis—taking his family, who had been boarding for some time four miles out of Washington—followed the route leading through Taliafero county, and passing across the very plantation where I spent the year 1841 teaching a private school, was captured a few miles further south. Breckenridge alone found his way unmolested to the appointed rendezvous, and was ena led to escape to Nassau by Capt. B.'s furnishing him with an open rowboat of large size, which he had fitted with a jury mast, Capt. B. showing me a gold dollar hanging at his watch chain, which he said Mr. Breckenridge gave him as he stepped aboard the boat, as the only remuneration he could offer him for his kindness.

Natural History.

Address all communications to the Forest and Stream Pub. Co.

WOLVES AND SQUIRRELS IN TEXAS.

Editor Forest and Stream:

I passed much time last summer and fall in Young and Stephens counties, about 60 or 70 miles from Abilene, examining the geological formations with respect to coal and other minerals. In most part it is a hilly country, covered with oak forests. Great rusty and moss-covered sandstones lie along the hillsides, and often crown their tops with rugged and grizzly confusion. This is a feature which almost always marks the carboniferous formation in Texas. Many fine valleys wind among the hills, having a very rich but arenaceous soil. The pecan tree flourishes along the streams, growing to gigantic size, many of them yielding from ten to fifteen bushels of their rich nuts at a crop. These the people gather, and derive no small profit from their sale, selling them this year at $2 to $2.40 per bushel; though some of extra size were sold at more than double these figures. The hogs grow fat on such as escape the eyes of the gatherers. Wild grapes, *V. rupestris* and *V. cordifolia*, abound; also two or three varieties of wild plums. The woods are full of berries. The population is sparse, and wild beasts and varmints are very numerous.

Of some of these animals I learned some curious facts; for instance, that the big gray wolf has expert knowledge of watermelons, and is a great thief of these luscious fruits. I saw where he had eaten many, leaving their rinds as nicely hollowed out as any man could do it with a spoon. That it was the wolf who had done it there was no doubt, for his tracks were plain and abundant, also the print of his teeth. In some instances he had eaten the melon on the vine, but in other instances he had pulled them from the vine and rolled them some distance away to a secluded spot, just as we may suppose men to do when they steal melons. His manner of detaching the melon from the vine was awkward and unintelligent, it being done apparently by rolling it hither and thither till it came off, as was shown by the twisted and disordered condition of many of the vines. That his knowledge of melons was good was shown in the fact that he plucked none but such as were ripe, for I neither saw nor could hear of a single instance where he had molested an immature one. In this he showed a better understanding of melons than men, for I dare say there is not a farmer living who has not made frequent mistakes in plucking unripe for ripe melons. I presume he makes this unerring distinction solely through his keen scent, as nature has not provided him with a finger with which he may thump.

I had considered the wolf as entirely carnivorous, but the fact now stands that he is also a gluttonous eater of watermelons. His brother, the dog, will sometimes eat a little melon when it is given him, but he will not break the rind to get at the meat; much less will he invade watermelon patches to steal. The little civet-cat, a strict feline in appearance and habit, eats the muskmelon, but does not touch the watermelon. Thus, between wolves and civet-cats, the people of Young and Stephens lose a large portion of their melons. However, these fruits grow so luxuriously there that they do not feel the loss.

The absence of squirrels in a country so admirably suited for them, seemed very strange. In all my wanderings through that country I saw not one of these little animals at large. On inquiring I learned that till the fall of 1885 the woods were alive with them, but at that time they all disappeared unaccountably. They had not been stricken with a malady and died; they had not filed away in detachments, but all had quit at once. As a careful observer expressed it, "It was just like this: In the evening there were millions of them, in the morning there was not one in all the country." And since this sudden migration of a whole race, it is said that there is but one nest of living squirrels in every county, and these are carefully preserved as seed for another crop: Noah and his family to increase and multiply and replenish the earth.

The year following this strange movement of the squirrels, there came a terrible drouth in northwestern Texas. All the crops of the field were destroyed. The pecan trees refused to yield their nuts and the oaks their acorns. Late frosts killed the wild grapes and plums. It was a year of desolation and sorrow, and seemed guided in all things by a hand which had determined that it should be so. The people believe that the departure of the squirrels was connected with this drouth, and such also is my own belief. Had they staid it would not have been possible for more than very few to escape death by starvation.

Now, was it instinct that led to this migration? If so, and instinct be solely an inherited feeling, how did the squirrels inherit from their ancestors knowledge of a fact which had not transpired, and from the coming of which they fled? For at the time they fled the country was full of all such things as they rejoice in.

Such things bring us to a period of great perplexity, beyond which when we step we are brought face to face with the Invisible Maker. Then comes the illumination. As I wander in the fields and forests and break the ancient rocks of the hills with my hammer, this saying of the Wonderful One of Nazareth recurs constantly to my mind: "Five sparrows are sold for a farthing, and not one of these shall fall to the ground without your Father. Ye are of more value than many sparrows." I do not question that the Father spake to these squirrels, and they obeyed Him. Man hears His voice, but does not always obey.

That country which the drouth so sorely afflicted seems now as going into great abundance of all fruits of the earth, and I doubt not that the squirrels which fled from the impending famine will soon return. N. A. T.

ABILENE, Texas, Dec. 8.

[The gray wolf is generally supposed to be wholly carnivorous, but as our correspondent shows he is not invariably so. In certain portions of northwestern America, notably in British Columbia, we have found this wolf in berry season feeding almost wholly on berries as a bear would do.]

A QUEER DICK OF A WOODCOCK.

Editor Forest and Stream:

Reading a short time ago an account given of a captured woodcock prompts me to relate an experience of my own with one of these singular birds.

Upon going home to dinner one day several years ago, a twelve-year old son of one of my neighbors, and a born sportsman, met me when near my residence, saying with much eagerness that a woodcock was hidden in the grass in the large yard connected with the house. He had seen the bird drop down, and his keen sportsman's eyes had seen it on the ground as well, but he had not attempted to flush it. Going into the yard, one of my boy friends (and I am proud to say I have many) pointed out Mr. *Scolopax* to me. I saw from the bird's attitude that it was either sick or injured, and telling the boy to stand in front to keep the bird's attention, I crept around in his rear and caught him under my hat. A careful inspection disclosed no injuries like wounds of any sort, still the poor fellow seemed nearly dead. Taking the bird into the stable, I put him in a large basket, placed some grass and earth in with him, with water in a small wooden bowl, and left him for several hours, until after dark. Then, remembering my captive, I went to take a look at him, fully expecting to find him dead. Upon lifting the cover, it was at once to be seen that he was much better than when caught, being able to move about in the basket, trying to hide in the grass inside. I began to believe he might live, and taking a lantern, I went out to the garden and dug nearly a pint of earth worms, and placed them in the basket with my prisoner, or rather guest.

The next morning he was quite bright, running about the basket briskly. I could see no worms in the basket, nor upon the floor, and came to the conclusion that he must have eaten them during the night. Procuring him a fresh supply of ration, I went to my business. Upon my return at noon my wife, who took a lively interest in my odd guest, told me he was all right, and added that he did not seem to have any fear of her whatever; and in fact, the bird did not at that time show any fear of people at all.

I kept him four or five days, and during that time he was taken out of the basket in my own or my wife's hands many times, to show people what a live woodcock looked like, a performance to which he showed but little dislike, like the gentleman he was.

I felt strongly tempted to try to keep him, and see how much familiarity he might acquire; but thinking it would be almost impossible to arrange for his accommodation through our long winter, and preserve the conditions sufficiently natural, so as to maintain his health and insure his living until spring, I concluded to set him free, as he was now well and very hearty—it seemed incredible that a bird of his size could consume the number of earthworms that he did, after getting in feeding trim. Taking my wife along to drive, I got into the buggy with the bird in my hands, and drove out of the city to our club grounds, on one side of which ran a small brook, both banks covered with a fringe of alders, making a good cover for woodcock, and frequented by them every season. At no time during the drive had the bird shown any desire to escape, and when upon arrival at this spot I opened my hands, leaving him sitting on my palm, he failed to take advantage of the opportunity, but sat contentedly, glancing around with a knowing look, and apparently without any fear of myself or wife. Finally, the horse moving a step or two disturbed him, and he sprang out of my hand; but flying away only a rod or two, whirled around and coming back dropped upon the ground two yards from the buggy, and with no notion of being allowed to capture him again, walked slowly toward him, expecting, of course, to see him arise and fly away. On the contrary he ran only two or three feet, stopping under a sweet-fern bush, and there he stayed until I picked him up in my hands once more. He sat in my open hand unconcernedly for a while, until I began blowing upon him and ruffing his feathers, when he left my hand and flew out over the bushes, but turning after going a short gunshot away, and coming back to the edge of the bushes, dropped to the ground again not more than thirty feet from us. Remarking to my wife that I believed I could catch him again, I went down to the spot where he dropped, and after a little looking, found him sitting snuggled up to a clump of alder shoots in true woodcock fashion. When I stooped and picked him up, he never moved other than to cower close down to the ground, and suffered me to again take him in my hands, to all appearances as willingly as a pet kitten.

Returning to the carriage, I gave him a smart fling out over the bushes, and then he finally flew away out of shotgun range before dropping down. I fully believe that he had lost all fear of me, as he flew all right, and I also believe that if it had been early spring instead of late summer, I would have had him about the premises where I live, as familiar as a pet chicken. I have since wished I had made the attempt to tame him so as to let him remain in the stable cellar, and see if the migratory instinct would not have impelled him to leave for his winter home at the proper time, and he ought have come back in the following spring, provided he escaped death from the countless enemies his tribe encounter.

NOR'EAST.

AUBURN, Maine.

TEXAS BUFFALO.—A late number of the Tacosa *Pioneer* relates: "Lee Howard, an old-time puncher of this country, came in the first of the week with a load of buffalo meat which he promptly disposed of. He found this game near the head of the Beaver, upward of 100 miles north of here, and he killed thirty of the noble fellows. He disposed of the hides at $10 apiece. Howard has made himself a stake capturing buffalo calves. HARTLAND, Tex., Nov. 23.—Hunters from the Panhandle arrived here with the carcases of eight buffalo, the residue of a 'kill' of twenty-three, after having supplied the different towns south of here in Stevens and Grant counties. The game was readily sold to local butchers, and the hunters will return for another supply. These men, who seem to be reliable, say that it is all a mistake that the buffalo are all killed off in the southwest, and they claim that vast herds still roam the prairies of the Panhandle and great staked plains. They also report a plentitude of other game, especially deer and turkey, among the breaks and the streams where timber or brush grow, and antelope unlimited. Jack rabbits are quite plentiful, also water fowl along the streams and in the lakes, and some prairie chickens are found; in fact they say—and attest it by bringing with them a supply—that game is still quite plentiful and in excellent condition. Quite a lot of buffalo meat was shipped east from this point to-night."

THE GARTER SNAKE DINES LEISURELY.—I was on my way home from a short shooting excursion with a companion, when we came upon a very large toad coming down the road as though very much frightened at something, and then we saw a garter snake coming after it. We kept perfectly still, and when the toad was in front of us the snake caught him by the hindlegs and began the slow process of swallowing. I think it must have taken at least twenty-five minutes for the snake to get the toad inside its stomach. We did not move until the snake began to crawl off; then I killed it, and as we could see that the toad was alive, we cut the snake open, and I took him out and held him in my hand. He gave a kick and was ready for flies. The last we saw of him he was making for the woods, to all appearances as happy as ever and not the least out by his strange adventure.—COWBOY.

RECENT ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN.—Received by purchase—Two paradoxures (*Paradoxurus typus*), one jelerang squirrel (*Sciurus bicolor*), one moor monkey (*Semnopithecus maurus*), two blue bonnet parakeets (*Psephotus hæmatogaster*), one Cuvier's toucan (*Ramphastos cuvieri*), one Cole titmouse (*Parus ater*), one whistling swan (*Cygnus americana*), and two bullfinches (*Pyrhula rubicilla*). Received by presentation—One opossum (*Didelphys virginiana*), one golden agouti (*Dasyprocta aguti*), one ground hog (*Arctomys monax*), one great-horned owl (*Bubo virginianus*), two turtle doves (*Turtur risorius*), one short-eared owl (*Brachyotus palustris*), one meadow lark (*Sturnella magna*), one killdeer plover (*Ægialitis vocifera*), one turkey vulture (*Cathartes aura*), one rough-legged hawk (*Archibuteo lagopus*), one banded rattlesnake (*Crotalus horridus*), one alligator (*Alligator mississippiensis*), and one menopoma (*Menopoma allegheniensis*). Exchanged—One short-eared owl (*Brachyotus palustris*).

The defeat of the bill to require a license tax of $1 per annum to be paid by the owner of every dog in the State, is more significant than it is generally regarded. The member of the Legislature who introduced the bill asserted that the presence of these pet vermin costs the State of South Carolina $3,000,000 a year, and we have no doubt that a careful investigation of all the facts will substantiate his assertion. But for these worthless animals, at any rate, South Carolina could and probably would soon become one of the leading wool-producing States in the Union. The difference between what it is and what it might be, in this respect, measures a part only of the penalty paid for preferring dogs to more valuable property.

It is useless, it seems, to argue the question; but the laugh that is raised always when a "dog law" of any kind is proposed, is at the expense of the farmer, at least. They save one dollar a year on each cur they own, and lose hundreds of dollars on the sheep and wool they have not, and on the food and clothing they have to buy in consequence of their foolish policy. It is not surprising after all that the farmers should find it difficult to get along when by their votes in the Legislature—where they have a majority—they show that they think more of their curs than of their cows, of a hound than of a hog, of a setter than of a sheep.

Every effort to effect a reform in the whole State on this subject has failed, and is likely to fail hereafter. It should be tried now in single counties, or even in a smaller field.—*Charleston News and Courier.*

SUCCESSFUL SYSTEM OF PROTECTION

PATERSON, N. J., Dec. 12.—*Editor Forest and Stream:* In your last issue you suggest that the New Jersey Fish and Game Protective Association ought to make a test case of the non-resident shooting law of this State. This suggestion indicates to me a probable misconception of the objects of our association or a limited knowledge of the geography of this State, certainly a mistake as to the association which tested the dog law. The Passaic County Fish and Game Protective Association tested the dog law for the benefit of many of its members, and that association, existing in a county in northern New Jersey, has nothing to do with the non-resident shooting law enforced by an association in southern New Jersey, nearly a hundred miles from here. Of course we have under the laws of the State a right to collect fees from men who shoot here in our county, for the law provides that hunters or anglers shall abide by the rules of local associations formed under the State law, as ours is. Our association has never done anything of the kind, but has confined itself strictly to the objects for which it was started, the protection and propagation of game, game fish and song and insectivorous birds. It is true that we have stocked the woods with quail and the streams and other waters with fish, but sportsmen from New York or any other place are welcome to enjoy their sport in Passaic county as long as they do not violate the State laws. We have added no additional burdens or restrictions to those imposed by the legislature and nobody has ever suggested such a thing. Because we happen to live in a county abounding with forests and streams we do not wish to make money out of men who live in neighborhoods so bountifully blessed by nature. Some New York sportsmen recognizing our objects have become members of our association and pay the trifling dues provided for in our constitution, but nobody is required to do this, and in Passaic county all sportsmen, come they from far or near, stand on an equal footing.

While I am writing of protection, perhaps I might add a few words on this subject which may be of encouragement to others who would like to protect the game and fish in their vicinity but are prevented from doing so for various reasons. It is now nearly four years ago when I was in conversation with a prominent lawyer on the subject of protection. I suggested the formation of an association, but he laughed at me and said, "That would not work; I have tried it and so have others. Still, if you think of doing so, go ahead; I will do what I can to assist you, but I know it will be a failure." I did start the association by calling a meeting. About twenty responded, and shortly afterward the organization was perfected as prescribed by the laws of this State. We became a body corporate of which every member had the right to arrest violators of the law. Our membership increased until we number nearly a hundred. Of course, that is not nearly as strong as it ought to be, but it is strong enough to accomplish a great deal of good. I met with the proverbial lack of interest of sportsmen in protection, but that had no deterring influence. Meetings of the association were frequently held with very few present, but we confined ourselves strictly to the business for which we were organized. We indulged in no pigeon-shooting matches, for which a great many "protective" associations are formed, and we had no elegantly fitted up parlors. In fact, we pay no rent for our place of meeting. In all prosecutions for violations of the law one-half the fine goes to the county. We made the proposition to the Board of Freeholders to see the laws enforced, thus adding to the treasury of the county, and asked for the use of the Freeholders' room in the Court House to meet in. The request was gladly complied with, and the sums we have turned into the county treasury have certainly been a fair equivalent for the use of the room, fuel and light.

The odium of being an informer frequently deters men from enforcing the game laws, especially in cases where the Legislature provides that half of the penalty shall go to the informer. Prosecutions are apt to be interpreted into a desire to make money, and sportsmen rather than be open to charges of this kind will look on while the laws are being violated. This is avoided wh n an organization makes a complaint as an incorporated body. The constitution of our association provides that every member shall at once inform the secretary of any violations of the law he hears of. Such information is made in confidence and is not divulged. Generally there is other evidence besides that of the member to prove the offense. It has also been my experience that violators of the game laws are sneaks and men devoid of courage to face an accusation when they know themselves guilty. Nineteen out of every twenty plead guilty and are glad enough to get off with a fine.

Again, some people object to making a complaint even on the evidence of others. I do not propose to discuss the question whether it is ungentlemanly to turn informer as far as game laws are concerned or to make complaints; I have my own opinion on that subject. I also know that the State of New Jersey provides for the incorporation of fish and game protective associations and that it makes the officers and members of such associations officers of the State. I am bound by the by-laws of our association to make complaints upon being furnished with evidence and I have unhesitatingly done so in every case. It is true that I have made a few enemies, but the world is so full of good men who make good friends that I have no desire to step into the ranks of pot-hunters and violators of the laws to increase the number of my friends. I know I have made more friends than enemies by my action, so that as far as friendship is concerned my position has been advantageous to me.

It has been urged that the game laws are still being violated in Passaic county. No doubt this is true enough. We cannot catch all violators of the law any more than the police can catch all murderers and burglars. New York has a fine police force, but a man who declared that the laws were not violated in the metropolis would be a fit subject for Bloomingdale. I have no doubt that birds are snared in this county, that rabbits are trapped, that song birds are murdered and that game is shot out of season, but I also know that it is not done to the same extent it was some years ago. Then violations of the law were the order of the day, and game was openly sold out of season in the markets of Paterson. Game could be procured out of season almost as easily as in season. The first year of the existence of the association there were prosecutions every week until the open violation of the law was stopped. I have no doubt that ninety-five per cent. of the violations of he game laws have been stopped, and that is certainly a large gain.

Prosecutions generally pay for themselves, so that any protective association can devote almost the whole of the receipts of fees to stocking the woods and streams and to other purposes in the interest of the gunner and angler. I think that every State in the Union provides that portions of fines imposed for violations of the game laws shall go to the party making the complaint. Consequently there is no reason why the fees of protective associations should be large; our association charges only fifteen cents per month, and we get along very nicely on that.

Of course no association can stop altogether the violations of the laws, but this should not deter any one from engaging in the work of protection. A very considerable portion of it can be stopped by the very fact that it is known that punishment will follow the crime if detected. Take, for example, the men in Passaic county who are mean enough to kill song birds. I find that they are of two classes. The first shoots birds for the market, for millinery purposes. These fellows would rather work somewhere where they know they will not be molested, and consequently keep away from a county where they know they are apt to be discovered and punished. The other class consists of a number of foreigners, principally Italians, employed in dye works or on the railroads. These fellows shoot birds, no matter how small, for the purpose of eating them. Half a dozen were arrested; some of them left their guns as security, others went to jail. I do not suppose that one per cent. were arrested, but the business of killing song birds received a quietus.

There is no doubt that the methods adopted here could be successfully adopted everywhere, and with the increasing number of hunters and anglers protection is an absolute necessity. I have made this article longer than I intended, but I am interested in protecting game and fish, and would like to stimulate others to a similar purpose.

CHAS. A. SHRINER,
Sec'y Passaic Co. Fish and Game Protective Ass'n.

A BEAR HUNT IN THE HIMALAYAS.

OUR party consisted of S., his wife, and myself, and we had somewhere about forty servants and followers to carry our impedimenta, which consisted of five small tents, called Rowties or Pauls, besides all our baggage, cooking utensils, canned provisions, and food for a month's consumption. We started from Mussoovic on one of the last days of September, as the open season for game commenced on Oct. 1, besides the rainy season was not properly over before that time, and marching and camping in "the hills" is not pleasant in bad weather. After a week or ten days, during which we got some fairly good sport with deer, serow (mountain goats), pheasants, etc., we got into the bear country.

I may mention, by way of parenthesis, that our battery consisted of two double-barreled 12-gauge shotguns which carried ball, 13 to the pound, very well, my own being a particularly good gun in this respect, being very accurate up to 60 or 70yds. (it had a spare pair of full choke barrels to interchange with the cylinder ones when required), while as to rifles, S. carried a double-barrel .50-135-150 Express by Bland, my own being a single shot Winchester .45-125-300 Express. Shotguns are frequently used in this country for large game shooting at close quarters, they are handy to use on account of their lightness, and are not much behind even Express rifles in their effectiveness at short range; they are generally used as reserve weapons. Some people even use explosive spherical bullets with them (Meade's shells).

S. and I, of course, did all the marches on foot, the hills, when away from regular roads, being too difficult going for ponies, while Mrs. S. was generally carried by two men in a "dandy," a kind of litter much used by ladies in the hills in India. Our baggage, tents, etc., were all carried on coolies' backs, and we appeared quite like a small army when on the march. The coolies, being natives of the hills, where we pitched our camp, bivouacked in the open air, under trees, if possible, out of the cold wind, the thermometer was often under 30 at night, and slept in batches of ten or a dozen, feet inward, in circles round large camp-fires. Our marches were not long, generally seven to twelve miles, but the steepness of the hills, and the ruggedness of the paths, made them more fatiguing than double the distances on the level. Sometimes we came to places where our shikaris (hunting guides) had to help us, and we had to use both hands and feet to get along. We had adopted the foot gear worn by the Cashmeris, "chuplies" or sandals, with thick leather soles, and bars of leather screwed on to the soles, worn over soft leather socks, much the same as moccasins, covering our ordinary woolen socks, or we could not have got over some of the slippery and dangerous places at all. The hill men, with their naked feet, never make a mistake, and the way in which they went up and down, carrying heavy loads of from 80 to 100lbs. strapped to their backs, was simply marvelous.

The large number of coolies we had was an advantage to us; they acted as beaters when we wished to turn out a bear or any other beast, and being natives of the hill country we were marching through, they thoroughly knew the ground, and the habits and haunts of the game to be found there. They were a merry and cheerful set of men, and thought themselves very well paid at the rate of four annas (about eight or nine cents) a day, as they could live well, in their own way, at one-fourth of that amount.

I may mention that, early in October in the Himalayas, the black bear is generally to be found among the oak forests at elevations of from 7,000 to 9,000ft., as he lives on the acorns which are then ripe. Later on he descends into the valleys, which are generally from 3,000 to 5,000ft. above sea level, and commits great damage to the crops of "mundwa," a kind of grain, which is very generally cultivated there. He comes into the fields round the villages as soon as it is dark, and eats all night, his traces being very plain by the state of the mundwa, which is trampled down in all directions, and departs up the mountains or lies quiet in some thick jungle close to some water course in a shady nullah or ravine all day.

One day, while we were on the march, going up a forest-covered hill at an elevation of 9,000ft., our shikari suddenly stopped and said, "Look up at those trees, bears are about here." On looking we saw regular "machans" or nests, constructed by bears, on which they sit among the oak trees while eating acorns at night. These nests, built of broken branches and boughs, roughly resemble crow's nests, but of course on a large scale. He further on saw more signs of bears, foot-tracks, droppings and bushes trodden down in all directions near the top of the hill. He advised us to have our guns handy, and sent word back to the coolies, who were a mile or so behind, not to make a noise, while we proceeded as silently as possible and kept a sharp lookout.

On passing the top of the hill we made our way down a nullah or ravine, very thickly wooded, and through which a water-course ran among rocks and boulders—a beautiful spot—and while going along the shikari suddenly stopped and pointed with his finger. On looking down we saw a whole family of bears, two large ones and three or four small ones, playing about among the trees and climbing up them, about 200ft. below us and about 150yds. off. We silently took up as good positions as the difficult nature of the ground would allow on the opposite side of the nullah, the shikari, with S.'s shotgun, getting the nearest place, about 80yds. from the bears; but the movements of the animals and their dark color mingling with the dark shadows of the thick undergrowth and trees, in which only an occasional glimpse of them could be got, made them anything but easy marks. We all opened fire about the same time, S. firing four shots, the shikari one, and myself three. Nearly every shot told, the bear being like a self-registering target, his own marker. The succession of howls, grunts, growls and barks which followed each shot made it pretty evident that most of the shots were hits. As we saw the bears disappear, we ceased firing and waited for the camp to come up. Mrs. S., who had arrived at the top of the hill just as the firing began, saw the whole affair, and naturally was in rather a fright lest any of the bears might escape up the nullah in her direction; but as that would have brought them well into our view and under our fire, there would have been little danger. They went away straight down the nullah, which was very thickly wooded and completely hid them from our view.

On the coolies coming up we hurriedly had our midday meal or tiffin and pitched our camp in the forest just above where the bears had been and then we collected all the coolies for a beat to drive out any wounded bears that might have remained. The coolies formed a line, 3 or 4yds. between each man, at the top of the nullah, while we posted ourselves about 20ft. above the water course at its foot to command the road the bears would be most likely to take. At the signal, a shrill whistle, from the shikari the beat began, the coolies slowly coming down the hill with most unearthly howls and beating the trees and bushes with axes and long sticks. While they were coming down a wounded bear went up hill and broke through them, luckily not touching one of them, as a wounded bear fights desperately and it is almost certain death, or at least a maiming for life to be seized by one of them. On coming further down they found one large she bear stone dead. One of S.'s Express bullets hit her far back in the ribs and ranged into her heart. We were rather disappointed at only finding one dead bear considering the number of shots which had told, so we resolved to make a halt the next day and thoroughly beat the jungles in the neighborhood, as it was getting dark.

This we did and we got one more bear, evidently of the same family, about half a mile away from the camp. He had evidently got separated from his comrades and had come back to look for them. A lucky shot from a 12-bore shotgun at 30yds. hit him in the spine as he was climbing up hill and came out of the V mark in his breast, rolling him over stone dead down a ravine some 60ft. or so deep.

Some days afterward we were down in a valley, and the inhabitants of the village close to our camp said they were much troubled by bears, as their mundwa crops were all spoilt. They said the bea s were to be found in a dense patch of jungle lining the sides of a stream in a ravine close by. We sent our coolies up in charge of a l cal village shikari, who posted them while S. and I took up our positions. I being on the left of the stream about 50ft. above it and seated on a stump of a pine tree which gave me a fairly clear view of both the nullah and another one joining it, while S. and his shikari were posted on its right. We could not see each other on account of the thick jungle. Soon after the beat began, a large bear came trotting along the boulders at the bottom of the stream, and as soon as he was about 120yds. off I fired, but without effect, and the bushes immediately afterward hid him from my view as he continued his course toward S. S. fired and there was a howl, and this shot was followed by two or three others. In the meantime another bear broke opposite me to my left and ran down hill past me. I fired a shot at 40yds. with the Winchester .45 Express, and to my delight he rolled over stone dead, falling some 30 or 40ft. down into the ravine. The bullet entered the right side of the neck, and came out behind the left shoulder.

Soon after this I heard S.'s whistle, a signal for me to join him, but as I knew there was a wounded bear somewhere in the jungle between himself and me, I did not much care to do so. However, accompanied by the gun bearer, who carried the spare gun, I went down most cautiously, gun at full cock, crossed the stream and joined S., who told me he had wounded a very large bear the first shot, and though he had several snap shots since at the beast, he did not seem to be much the worse, and had retreated into some very thick undergrowth in which it was impossible to see him, or to get him out of, though he occasionally growled when a stone thrown in struck him. We then decided to get all the beaters together to throw showers of stones into the bush in which the bear was, the shikari to put himself on the opposite side of the nullah in case he broke out that way, while we guarded a couple of tracks leading into the bushes on our own

side. After about half an hour of continual stone throwing, during which the shikari fired five or six shots, one of the coolies said he saw the bear. He pointed into a bush, but we could see nothing except merely a dark shadow like hundreds of dark shadows in the bushes around, but the man persisted it was a bear.

S. then decided to fire a shot at the shadow (which was only about 10yds. off), whatever it was, and did so. We then waited some time and nothing moved, so we resolved to go up to the bush. On getting there we found a monster he-bear lying dead; the last shot of S.'s had hit him between the ears and brained him. He had four .50-caliber express bullets and three 12-bore balls in him, all except one round bullet which broke his wrist being good body shots, any one of which would have done for most ordinary bears. It took eighteen coolies to drag him out of the jungle into the rice field, where he, together with the smaller bear, was skinned. He must have weighed somewhere about 800lbs. One of S.'s first shots had evidently touched his spine and crippled him, or he would never have stuck to cover the way he did.

Before concluding this, I would like to say something on the sighting of sporting rifles. I found for snap shooting at large game in the jungles, which much resembles shooting at rabbits with a shotgun, that back sights are useless. They make one throw high, and after missing a couple of tolerably easy running shots going across me at bears at 40yds. or so, I tried what I could do without a

back sight at all. I removed mine from the Winchester single express, and for the high fore sight I substituted a pretty coarse bead, which I made myself out of a toothbrush handle. This bead, which showed white against the dark jungle, answered admirably for snap shooting at short range, though it would not perhaps do for fine long-range target work. I have since fitted a folding back sight to lie flat on the barrel when not wanted for use.

BENGAL SEPOY.

GAME AND GUN.

OUR shooting this season has not been up to the standard of other years, quite to my surprise. It may be, however, that it will improve after cooler weather arrives. It is not too hot during the day for comfortable hunting, although lately the nights have been quite cold, and as a result ducks are flying in larger number. Quail, I think, are still back on high mesas and foothills. Deer are being displayed in market, being brought in from the mountains by Mexicans and Indians. Deer shooting will not be real good until snow on the higher mountains drives them down to lower levels. I have two trips in contemplation for December. I think now that the one which I shall decide to take will be an excursion after ducks and sea bass off the coast of Mexico, starting from Guaymas. I hear very flattering reports of the sport to be had with rod and gun in that vicinity.

I have been much interested in articles from different contributors in relation to the best manner of loading a shotgun. After trying every conceivable charge of powder and shot and all kinds of wads and shells, I have adopted the following: My gun is a 10-gauge, 8lbs., full choke. For quail, doves and rabbits I use 5drs. powder with one ⅛in. felt wad with cardboard wad on each side of it over powder, 1¼oz. No. 8 shot with cardboard on top. Loading in this way I made the following target with right barrel: At 35yds. I put inside of a 24in. circle 457 pellets. With the left barrel I made the following penetration at same distance. Shooting at a block of paper the shot penetrated 72 sheets. The only change made in loading for ducks is to use ¼dr. more powder and ¼oz. less shot, thus getting best possible target and penetration.

My purpose in loading is to use a small amount of shot. In your correspondent "C. D. C.," of Northumberland, N. H., I recognize an old school-mate, and am pleased to see that he can tell "trout yarns" on paper as well as before camp-fire or village store stove in old New Hampshire. I hope that he and Mr. Wells will continue their investigations in regard to pulling strength of trout, until we can go into the woods with leaders so carefully tested that nevermore can we tell of the "biggest trout" of all getting away by breaking a leader.

G. N. K.

BIG GAME IN DAKOTA.

ELKHORN RANCH, Medora, Dakota, Dec. 1.—*Editor Forest and Stream:* During the past season my bag has been two mountain sheep, four antelope and eight deer, all shot round the ranch, as I have made no regular hunting trip. One ram had very fine horns.

My old .45-75 being rather the worse for five years hard service, I have taken up the new Winchester model, the .45-90, the so-called model of 1886. It has proved most satisfactory; the first weapon for which I have ever been satisfied to exchange the old .45-75. It has a lower trajectory, a stronger breech action, is absolutely accurate for any range at which game can be killed with the least certainty, and is as handy and capable of standing rough work as the old gun. I use the regular cartridge, 90grs. of powder and a 300gr. solid ball, but I am inclined to think that for shooting bear at close quarters it would be better to take a Keene bullet, half as heavy again. With such a bullet it would be impossible to find a better weapon for dangerous game, and the effectiveness of the Keene principle I have tested with the old .45-75, having been attracted to it by the mention made of it by General Wingate, in his interesting "Horseback Tour through the Yellowstone."

It is worth while carrying a few such bullets for occasions when hunting dangerous game in thick brush, and the new 1886 model Winchester seems to me the most satisfactory rifle I have ever yet come across for the wilder kinds of hunting in the United States. With the possible exception of the nearly extinct buffalo there is no game for which I would not recommend it, and personally I should use it for buffalo, too.

Bear and cougar seem to be getting more plentiful than ever round the ranch, but without properly trained dogs it is nearly impossible to get them out of the dense thickets and heavy timbered bottoms.

THEODORE ROOSEVELT.

FOUR DAYS ON GRAND RIVER.

TWO amateur sportsmen, of Buffalo, N. Y., after mature deliberation as to where to invest in a four days' vacation, decided upon going to Dunnville, Ont., forty miles from Buffalo on the Grand River, and five miles from Lake Erie.

We took the afternoon Grand Trunk train, crossed the International Bridge, and were halted by the Canadian customs officials on the other side, where we were made to deposit 20 per cent. of the value of our guns, as security for our bringing them back to this side, and had to pay 30 per cent. duty on our ammunition. Arriving at Dunnville in the evening, we were piloted to the Queen's Hotel, where we made headquarters during our stay. The house is situated on the bank of the river opposite the dam, and host Root took excellent care of ourselves and belongings, all for a dollar a day. The precautions we had taken to exchange all our money for Canadian currency, we found were unnecessary, although further back in the country we were told a discount was exacted on American paper money, but not on gold.

There are a number of boatmen within a short distance of the hotel, who make it a business to take parties out hunting or fishing. They furnish the boats; carry their own guns, tackle and decoys; shoot after you do, giving you all they kill or catch; and charge $2 per day. After a couple of days of experience under their guidance a person economically disposed can hire a boat for fifty cents, do his own work and save the difference in expense, but it is hardly to be presumed that his bag will be as heavy as with a guide to assist him.

The morning after our arrival found us embarked, I with Marcene Green and my partner with Marcene's son Gorley, each in a little flat-bottomed hunting boat bedded with hay and precious little room to spare. Marsh land extends from quarter to half a mile back from the river on both sides, and the mud is so yielding that walking through it is impossible, while it is entirely overflowed every spring. A boat is therefore a necessity. Four sluggish creeks force their way through the rushes and wild rice, and empty their drainage into the Grand River between Dunnville and the lake. While one boat explored Sulphur Creek, the other investigated Cranberry Creek further down. Turning a bend in the former with cautious punting paddle, we spy through the tall grass a half dozen bluebills beyond range. This creek empties into the river through a sort of delta, which enabled the boat to go back, leaving the writer crouched in the reeds and mud on shore, while Marcene pulled around up through one of the other outlets and started the flock up in our direction. On they came as straight as fate, and twice as fast, until within range, when we let slip a charge of No. 6 propelled by 5drs. of ducking powder, and as one bird dropped and the rest swerved to the right, we attempted to step forward for another shot, but alas, the spirit was willing but the flesh was no match for that mud. While in ambush we had gradually settled into it, and the first attempt was a flounder. We pulled the second barrel and our first boot off together, the former several yards behind the flock. A struggle, a splash, a volley of impatient expletives, a laughing boatman and a woebegone, bedraggled amateur, whose feelings were a curious mixture of pride in having drawn first blood, and of exasperation at what it had cost.

After thoroughly scraping off the mud with the paddle we picked up our bird and went on out into the river and down stream. All along the banks were fresh muskrat houses, and we shot one of the rodents before we reached the half-way tree, so called because it is half way between Dunnville and Port Maitland, at the mouth of the river. We also stopped to look at several deadfalls or letter D traps which Marcene had set at various points along the river banks, and in one we found a mink and in another a muskrat. He told us the best bait for mink was a skinned muskrat, and for muskrat carrots or parsnips; and he ought to know, as he has earned his living from the river for forty-seven years, boy and man.

Well, we overtook the other boat coming out of Cranberry Creek, and they had two butterballs, which my partner had secured after a long and tedious detour back from the bank of the creek, through the weeds and grass on hands and knees. He killed one with the first barrel, and wounded another with the second, and as it started for the reeds on the opposite bank of the creek he fired three more shots at it, but the bird would have got far enough to hide in the marsh had not his boatman came punting along up and caught and wrung its neck, and even after this, as they were starting down the creek, this stubborn duck got up and walked around the boat. We could only say to our partner that we trusted the fowl would not prove so tough after death as before it, but from our friend's looks since our return we are led to believe that he made a mistake and tried to eat that duck instead of giving it to the poor, as we advised.

Half a mile before reaching the lake we selected a hard spot on the bank, and after setting out our decoys, made a hide of the tall grass, and lay in wait for incomers from the lake. First four butterballs dropped in as noiselessly as so many spirits; they departed too short, and left us wondering that we failed to drop them all. Scarcely had we gathered them in and resumed our vigil when seven hooded or crested mergansers decoyed beautifully. To our utter chagrin we killed but one—which was a beautiful drake, and which we have had stuffed and mounted—and wounded another, to which we gave chase and lost it, losing several fine chances at other flocks in the meantime. He was afterward captured by our partner after standing a regular skirmish fire, and nearly escaping after all. We have fully made up our minds that No. 6 chilled shot may kill mallards, as the writer has demonstrated on the Illinois River time and again, but it won't do for these little ducks after they have got their winter underclothing on.

Pulling up stakes—or rather decoys—we rowed down to Port Maitland, ate up everything there was at the hotel, and chased the cook for more; inspected the harbor, the lighthouse, the enormous hills of pure sand; saw a recently captured raccoon keep four men at bay in one end of a flatboat, and finally jump overboard and escape; watched the fishing up of a cargo of wheat from the bottom of the harbor, where it had been thrown to save a sinking schooner; and finally, after another turn behind the decoys, started back for Dunnville, arriving there an hour after dark with tired bodies, consuming appetites and a dozen ducks.

The next day was Sunday, and we improved the time by making friends, among them Major Smith, a prominent business man of Dunnville, and a thorough-going disciple of the rod and gun. His model hunting boat and flock of decoys were placed at our disposal, and a trip was arranged to be made into the country behind his trotter to a place where the partridges were warranted to stand on a log and "sass" a man if he didn't shoot at them, but a miserable warm, misty rain set in Sunday night, and continued with but one intermission until our limited tickets of leave had expired. Meanwhile the ducks sat out in the lake and laughed at us, refusing to come in until such time as a strong northeaster and a snowstorm drove them to it.

We looked out upon a sullen, sodden landscape on the last day of our stay, but finally decided to try it once by ourselves in the Major's boat, just for luck. It may be appropriate to state here that while my partner weighs in the neighborhood of a keg of nails, I weigh about twice that, which accounted for my always playing the galley slave and being chained to the oar when we two navigate together. On the first day out my partner had discovered an inaccessible pond in an unapproachable marsh, where an unassailable flock of eighteen teal had fixed their impregnable headquarters. Nothing would do but we must make an attempt to surprise them, so we rowed up Broad Creek until the oars struck the shore on either side, then punted with the long paddle and an oar till we grounded in the mud, then the light-weight partner waded some ten rods and dragged the boat, while I poled. Then dry ground appeared and we gave up and turned about. After reaching moisture again the evil one possessed the partner to fire his gun in the general direction of the teal pond, to see if he could "scare them up." Sure enough, up they rose in grand style, circled around a couple of times, then came directly toward our boat, pretty well up and eighteen strong. We crouched and glowered in the bottom of the boat, but they piped us off, and as they approached divided into two sections and split to the right and left. Then it was that the writer rose to his knees, sighted the drum major of the flock to the right, pulled the trigger, and found himself past redemption over the side of the boat, which was half full of water, deep in the mud, and no means of knowing what portion of his anatomy went overboart first. His light-waisted partner whose shot he had spoiled utterly refused to come to his relief, and here we will leave him to struggle out or strangle, as best suits the fancy of the many readers of the FOREST AND STREAM.

H. A. P.

MANAHAWKEN DUCKING RESORT.

NEW YORK, Dec. 6, 1887.—Most sportsmen have their favorite haunts. In years past I used to visit every fall such places as Maxon's and Sammy Perrine's on Barnegat Bay. I was younger then and enjoyed them much. But it has been reserved to a recent visit in which to find the gem of all gunning houses—and withal a perfect sanitarium—and at the same time to have a sort of Robinson Crusoe experience.

A friend, one of the chief officers of the New York Central Railroad Company, asked me to join him on Friday last on a short excursion to Humphrey Martin's fishing and gunning house on Barnegat Bay. With his permission I added two friends to the party. The season was late and we were to return on the Monday morning following. You may judge of our surprise when, after leaving the city in the afternoon, we found ourselves in the early evening on a rail track crossing Barnegat Bay at right angles to the main and about ten miles to the south of Barnegat Light. There are several islands in this part of the bay, and the railroad, which is a part of the Pennsylvania Railroad, runs partly on trestlework and partly on the islands. Humphrey Martin owns one of these islands, called Bonnet Island, and on this island on the south side of the track he has built a small gunning house, constructed externally as a house, but internally as a first-class yacht. The house is 20ft. in front and 41ft. in depth and about 10ft. in height. The main room in front is 20x17, with four bunks on each side, making eight in all, with a wash room on one side and a roomy closet on the other. This constitutes the cabin. The room next adjoining is the dining room or mess room, and is 12.6x20, and in the rear of this is the kitchen or galley, and also the men's room or forecastle. The whole is surrounded by a piazza 8ft. in width. A platform 30ft. in length runs to the railroad track, on which you step as you leave the cars. In the partition between the cabin and the mess room is a door, through which you pass from one room to the other, and also an aperture in which stands a stove, one-half in the cabin and the other half in the mess room. The cabin is well furnished with carpet, chairs, center table and a chandelier, while the bunks are provided with mattresses, pillows, sheets and blankets.

The neatness and novelty of the place at once arrested our attention and struck us with surprise. Then we were in the middle of the bay with a commanding view of the waters and the best gunning points within a few minutes' row of the house. And then the table! I will not describe it. Diamond-back terrapin, oysters, fish and game, with vegetables, fine bread and butter and the purest of all waters (filtered rain water) will give you a foretaste of what Martin's noted steward, Clarence Russell, will provide for you.

If you seek pleasure and are fond of gunning and fishing, go there. If you are in pursuit of health you will find it the best sanitarium you ever visited. The air is delicious—no malaria—everything is purity itself. On Sunday we saw hundreds of geese and ducks pass over the house. The place and all its surroundings will charm you. You do not have to wait for wind or tide, for the iron horse takes you to the very spot.

Each bunk is 4ft. 2in.x6ft. 4in. The accommodations for eight are first-class, though double that number can be accommodated by sleeping two in a bunk.

Martin's address is Humphrey Martin, Manahawken, N. J. Write him a week before you start and see if he can provide for you. Martin himself is a superior man. He has gunned for my friend of the New York Central for fifteen years. His house is open to gentlemen only.

To reach his place leave New York from foot of Liberty street via Central of New Jersey for Barnegat, then change to the Tuckerton R. R. for Manahawken and then to the Pennsylvania R. R. for Humphrey Martin's in the middle of the bay.

E. H. N.

GAME TRANSPORTATION LAWS.

Editor Forest and Stream:

I notice in the Dec. 1 number of FOREST AND STREAM, copy of a circular issued by the United States and American Express to their agents, cautioning them against receiving game for shipment contrary to law, including five Western States and one Territory. The circular undoubtedly might have included this and the New England States as well. I do not wish to be understood as condemning all game laws, but I am not alone in thinking that the crude laws we are now trying to accustom ourselves to work out very unfair results to many of our true sportsmen. For instance, the laws of this State give the hunter a right to kill three deer during open season, but deny him the privilege of shipping more than one carcass home. How the leaving of two carcasses in the woods could preserve the stock of game is a query solved by imagination only. The pretense made to gain such a point was, I believe, that the cutting of the market hunter down to the shipment of one carcass was necessary lest he follow up and dispose of this ill-gotten game to his confederate marketmen for the profits attending such a haul. But when we consider the expense of fitting out and getting located in the woods in camp, hunting up and bagging three deer and getting them out to a point for shipment, buying a ticket and personally accompanying them by rail several hundred miles to market in order to comply with the law, does any rational man still claim profits in the transaction? or claim that such a clause of the law was necessary to insure game protection? Not one man in ten, and probably not one in twenty could go through all this and (so far as dollars and cents were concerned) come out even. Thus the laws of this State, whether so intended or not, as those of many other States of the Union, provide complete prohibition of the shipment of game out of the State when killed. The game laws of Maine are spoken of by many as worth copying by other States on account of their liberality. Yes, but when a non-resident sportsman goes there to hunt, he can leave his money without any objections being made, and if he kills any game he can leave that too, say the officials. This is considered necessary for the protection and increase of game within the State. The Canadian authorities, trying also to be very liberal, have enacted that those not domiciled in the Dominion can, by procuring of the Department of Crown Lands a permit, at a cost of $20, kill game, as allowed by law, in open season. But if all or any part of such game is billed or attempted to be taken out of the Dominion, it immediatedly becomes liable to confiscation. I have no knowledge of the amount of revenue thus obtained, but doubt if the Government vaults will need enlarging for some years hence to stow away coin thus collected, nor do I think that Maine or any other State with game laws similar will profit very much financially by such enactments.

Most of the sportsmen that I am acquainted with, and especially those having a family, go to the woods not for the sole pleasure of taking an outing or of throwing off business cares for a few days or weeks, nor do they go for the mere pleasure of bagging each two or three deer and surfeiting from juicy steaks while in camp, but they go, or rather wish to go late enough in the season so that what game falls to their gun may be kept and a goodly portion of it shipped home, frozen, wrapped and hung away to cut from in serving family and friends during the holidays and some weeks thereafter. The three deer now allowed by law in this State to be killed by each hunter in open season, are amply sufficient to fill the bill of fare as above set forth, and still work no extra depletion of game, or hindrance in the enforcing of the provisions. If a man is going to kill three deer, as the law allows him to do, it certainly can not deplete the total number of game in a less degree, by capturing it in the month of November than though he bagged it in the month of September. Neither can it be argued with any fairness that two of the three deer killed (either to stamp out the market hunter or to enforce any other provision) should be left in the woods, given away or sold to parties residing in the wilderness. It does have the effect, however, of keeping from the woods many sportsmen, especially those living at a distance. If this is what the law intended, then it is so far a success. If it intended to give all parties a fair show of participating in the chase, those living at a distance as well as those near by, then it is a miserable failure and ought to be amended the present winter. CAP LOCK.

FREWSBURG, N. Y.

INDIANS AND THE GAME.

Editor Forest and Stream:

The rapid extermination of the noble game in the far West is a loss as serious to the legitimate hunter and trapper as to the ardent amateur sportsman. The first must be kept constantly moving his winter camp into regions less known, more inaccessible, while the other finds a month, or for that matter a whole summer, too short a time to gather the trophies which he covets. Already the buffalo is gone, and the elk, antelope and white-tailed deer are rapidly following in the same course. The mule deer, commonly called the "black-tail," is the only member of its family that can be said to hold its ground. Even the trout streams that four or five years ago teemed with beauteous forms, are now more empty than brooklets near a Catskill Mountain hotel.

This state of affairs calls for a better enforcement of existing laws rather than for fresh legislation on the subject. Perhaps the class most responsible for the wanton and deliberate destruction and extermination of game is protected, by color and by popular eastern sentiment, in practices which would land a white man in jail, or visit him with a heavy fine. The Indian is not solely responsible for the sportsman's loss, but he is culpable to a greater extent than any one else.

My first experience with violators of the law was at the headwaters of the American River in California. In the summer of 1883 a camping party from the mining camp of Michigan Bluff determined to take some fish home for winter's consumption. Hook and line were abandoned for giant powder and eight thousand trout were salted down in a single afternoon. The stream has not yet recovered its prestige and in all probability can never again furnish a good day's sport for the passing tourist. In streams tributary to the Columbia a favorite method of securing large bags of trout is by diverting four or five miles of a stream and allowing the waters to flow broadcast over the land until lost by seepage and evaporation. The time chosen is just after spawning is completed. Large fish are easily picked up while floundering in the mud and small fry are left to perish. Too often the brooks are not turned back and have to form a new channel. This method of fishing is the one commonly employed by Shoshones, Utes and Bannocks.

Along the western slope of the Sierra Nevada the diggers kill a great number of mule deer for their hides, but the Bannocks and Arrapahoes are the most ruthless game destroyers of the West. They work upon the belief that it is better to obtain a high price for a single hide than to sell a quantity at a low figure. Even now an occasional buffalo robe is brought in, for which they ask $25 or $30. Ten years ago an Arrapahoe was well satisfied with $5 for a first-rate buffalo. These Indians do not pretend to observe the law requiring them to remain on their respective reservations. For the last two seasons the Bannocks who should be found only in the southeastern portion of Idaho, have hunted the Bruneau and Salmon River country and gone into both Oregon and Nevada. The result is a total destruction of game in the country south of Shoshone Falls. The Arrapahoe bucks of Wyoming are slaughtering thousands of elk and antelope for their hides, while their carcasses are left to taint the air. Settlers, too, have no idea that game should be preserved. A few mornings ago I saw a rancher shoot five antelope from his front door. Two hindquarters were taken for his own use and the remainder of the flesh was filled with strychnine for the purpose of poisoning coyotes.

The elk is to-day almost extinct in the great Sweetwater region of Wyoming, and is being rapidly driven from the land of the Colorado Utes. I know of but one large band between the Union Pacific and the Yellowstone, where five years ago there were probably thirty immense herds. In spite of the law, hides are being constantly shipped out of the Territory, though buyers and shippers use a certain degree of caution in carrying on their traffic. The Rocky Mountain sheep, partly through his own habits and partly because there is no demand for his hide, is still reserved for the hunter. He is found from the Coeur d'Alene to the southern part of Colorado. For Eastern sportsmen he is most accessible in the western and northern mountains of the Sweetwater region. The bighorn is found in abundance in the Bruneau range, but I believe its central location and favorite breeding ground is between the Teton and Shoshone ranges, immediately south of the National Park.

Now, it is evident that white men who violate the laws can be made to suffer, but what remedy have we against the Indian? He does not need the game, for the Government feeds and clothes him. His money will go for whisky if it can be procured. He slays as a murderer rather than as a hunter. It is high time that Lo had an effectual quietus put upon him, or our sporting will be confined to coyotes and badgers. SHOSHONE.

CHEYENNE, Wyo., Dec. 1.

RABBIT HUNTING WITH UNCLE NED.

FOR eighty years, as boy and man, had Uncle Ned been with the family on the sugar plantation. His locks were now grizzled and scanty, and his back was much bent, but otherwise the old man was still so hale and vigorous that he had thought proper, some months previous, to take unto himself a new wife. Now, Uncle Ned, in contracting this union, had entirely ignored both magistrate and clergyman, arguing that money was too scarce to waste it upon these useless officials; but he had lately been so persecuted by the younger generation that he had finally given his reluctant consent to have his marriage blessed by the minister, provided, however, that Mr. Gray, the colored preacher, should be content with a fee of $2. On this point he stood firm, and won. The solemnity was arranged to take place on the evening of the coming Saturday.

Of course Uncle Ned had to provide a feast befitting the occasion, and being a great hunter he determined upon making the rabbits furnish the principal part of the supper. As usual he was out of ammunition, and had to come to me on a borrowing expedition, inviting me at the same time to come and see what a fool those young niggers could make of an old man. By this I could see that he was not yet reconciled to the reckless expenditure of that $2. The old fellow was furnished with powder and shot, but I made him promise to take me along with him, for I had long been curious to ascertain by what means he invariably returned with one or more rabbits from his hunts. My gun had been sent to the city for needed repairs, and I was somewhat in a dilemma for a weapon, when I remembered an antiquated pair of dueling pistols snugly perched on the top shelf of the bookcase, where they had lain for years undisturbed, and it occurred to me that, with their long 12in. barrels and big bore, they would be just the things to turn loose at the bunnies. They were brought down from the shelf, and one of them was given such a cleaning and burnishing that it really would have looked quite a handsome little gun had the stock only been somewhat longer and less crooked.

Saturday came and I proceeded to hunt up Uncle Ned, whom I could hear in the distant quarters having a lively time with a refractory number of his pack. We had some trouble in locating the said pack, for it was widely scattered, each individual trying to beg or steal something to eat, which I did not wonder at when we finally collected the four of them. Such thin dogs I have never seen since. Uncle Ned had theories of his own upon the feeding of dogs; one was that rabbit hounds should not be fed for three days previous to being brought out in the field, as they were then much more anxious to catch the rabbits, knowing that their dinner depended upon their skill. He had certainly acted on this theory of late, for a more woebegone looking set of curs could not be found anywhere, and yet, when they saw the old man get out his ancient musket, it was astonishing to see how lively they became, frisking around and barking with great energy.

Uncle Ned led the way to an abandoned old field, for years uncultivated and thickly grown over with blackberry bushes, in isolated clumps and again in large patches covering nearly a half acre. Under these the rabbits lurked by hundreds, according to the say so of the old man, who now began showing signs of excitement, and soon exhibited to my wondering eyes his new and original method of hunting. On arriving before a likely-looking bush the old fellow began beating it with all his might, in a very dangerous manner, with his musket barrel, dancing about in a very extraordinary way, yelling to the top of a screechy old voice, and finally winding up the performance by seizing upon the nearest dog and tossing him as far as he could into the prickly mass, where his yelps and struggles to get away from that sticky neighboorhood caused the remainder of the pack to believe a rabbit in sight, and in they dashed, regardless of everything except to be on hand when the game was caught. This is what Uncle Ned called "warming up the dogs." The whole affair was so ludicrous that I was laughing with all my might, and did not notice a large cotton-tail that was sneaking away from my end of the bush. He was fortunately seen just in time by little Washington, a diminutive black and tan puppy, whose lately docked tail caused him to back out in a hurry from the briers, and who now very neatly turned the rabbit back to Uncle Ned. He laid him out with a well-directed shot, much to his gratification, for he had scored one before the boss, of whose armament, I could see, he held but a poor opinion.

The same performance was gone through again a little further on, but it resulted this time in a blank. As we were proceeding, however, along the banks of a dry ditch, heavily fringed with tall grass, the dogs roused out no less than three rabbits, one of which the big pistol knocked over finely, while Uncle Ned scored a humiliating miss. Of course it was out of the question for our famous packs to follow the scent any distance, so they quickly came back. Some acres were gone over without finding game, when the dogs gave tongue again in a damp piece of ground, thickly covered with wild indigo plants; and a big swamp rabbit came bounding out, passing so close to me that I actually blew off his head, thus scoring two for the pistol to one for the musket, whose owner began to look serious. We hunted in this manner with ultimate success and misses, varied at one time by a grand exhibition of agility on the part of Ned, when the dogs had caught and were eating a fine rabbit, which the old man tried in vain to get away from them, but every time he was stooping to catch what remained of the rabbit the dogs would seize it and run off, until they had bolted down skin and bones.

There was never the pleasant music of fine hounds to enliven the hunt, but it must be confessed that for meat-getting qualities Uncle Ned's pack was of service to him, and to me the sport was not so contemptible either, for the noise and excitement was great at times, and of real fun those little dogs and their curious old master furnished a plenty. Uncle Ned's joy was great when we counted out nine fine rabbits as the result of the hunt, of which he had the further satisfaction of claiming five as his own, but I was content with the performance of my little gun.

Those nine big rabbits were the foundation of the big feast which Uncle Ned gave that evening, upon which occasion the veteran of eighty winters actually danced the breakdown with the blushing bride of seventy springs. CARLOS.

DORSEYVILLE, La.

HIS FIRST POSSUM.—Golden City, Mo., Nov. 17.—"One morning about twelve years ago," said the old settler, John started up the creek to my place after a load of wood. He had never seen a possum, and knew nothing about their habits. He said to me after he reached the house, 'I was driving along through the timber when my dog treed something close to the wagon. I jumped out and went up to the dog, and there up a bush was the blamedest critter I ever saw. It looked like a rat, had a tail like a rat, but was too big for a rat. It sat upon a limb and grinned at me, and when I shook the bush it fell out and killed itself so dead it never kicked.' "—OZARK.

WOLVES IN MAINE.—*Editor Forest and Stream:* Some two or three years ago I reported finding a pack of wolves on my hunting grounds, Townships 7 and 8, Range 3, Adirondacks. The report was doubtingly received by many. I now have to record that lumber operators on said grounds state they have repeatedly seen tracks and heard howlings of wolves; and yesterday I met a party of hunters who recently heard the pack and saw their tracks where they were chasing a deer. All my informants are reliable men.—WARFIELD (Aroostook County, Me., Dec. 7.)

A NEW WISCONSIN PRESERVE.—Milwaukee.—A number of prominent gentlemen and sportsmen of Wisconsin are discussing the project of purchasing 10,000 acres in the central part of the State, to be well inclosed and converted into a gigantic preserve, where deer, ruffed grouse, prairie hens, and all other varieties of Wisconsin game shall be cherished and protected forever. This is a step in the right direction, which should be emulated by the genuine sportsman of every State in the Union, as it is the only effectual means of saving noble game animals and birds from utter extinction.—W. T. E.

WEST VIRGINIA.—I have just returned from a very successful hunting trip in West Virginia. Had a grand time. Brought down and into camp one fine black bear, two bucks, one a three-snag and the other a four; also several nice turkeys. If time would permit could tell your readers of a few very plain but successful days' tramp.—G. A. S.

GOSHEN, N. Y.—Game is very scarce around this vicinity, scarcely a quail to be seen. Rabbits few and far between. A few ducks are in the Otter Kill, in Purgatory Swamp, but are very hard to get at. Fox hunting will soon be all the go.—A. V.

This is a series of faithful pictures of life in a corner of Yankee land. The author, Mr. Rowland E. Robinson, has not taken his ideas of Vermont rusticity at second hand. Uncle Lisha and his cronies are sketched from nature. The dialect in which they speak might have been taken down by a phonograph, so accurately are its eccentricities given back through the eye to the ear in these pages. Lowell, in the "Biglow Papers," has not hit it off more truly. The local color is as strictly interpreted as the speech. The whole work is a triumph of literary realism which is very welcome now, as it fixes images that are fast vanishing in the blaze of universal education. The stories of courting, of turkey shoots, of fox and coon and deer hunts, and of maple sugar-making are delightfully told.—*New York Journal of Commerce, Dec. 9.*

Camp-Fire Flickerings.

"That reminds me."

227.

IN the palmiest of my wildfowling days I used frequently to visit a dairy ranch on the Columbia River owned by a worthy son of the soil named Parke, in whose humble abode was enjoyed the heartiest (if simplest) of hospitality; and from the shadow of whose doorway even have I often commenced my day's kill in the shape of perhaps a couple of ducks, or an occasional goose, maybe, picked from a band passing out, low down, toward the river, on some one of the many foggy mornings known to Oregon's lowlands.

While standing at the window one morning, oiling my gun, I was surprised somewhat at hearing the ordinarily phlegmatic Parke crossing the yard at a gait almost a hop, step and jump, and depositing his milk-pails emphatically at the doorway, stride across the apartment and reach down his seldom empty, if somewhat ancient, gun.

"What is it, Parke?" I inquired, as he, breathing like a grampus and with every respiration redolent of the cow-stall, cocked and decapped the right barrel of his treacherous old piece, vigorously striking it with his thumbless hand (that same gun's handiwork) to fetch up the priming.

"Oh, some old mallards out there on the slough trying to coax off the wife's ducks; I'll give 'em something to carry, if they haven't gone when I get out there."

"Here, Parke, take mine," said I, inserting a couple of No. threes into as beautiful a Scott premier-triplex as ever felled a fowl.

"No, s-i-r, I'll stick to the old gal, I know her; them new-faugled breechloaders I aint got no use for, shoot too much in one place."

"All right, said I, unloading, "I like to see a man faithful, even to his gun."

Having recapped and satisfied himself as to the priming of his old fusee, he crossed the yard again, I following to see the fun; and there, sure enough, through one of the openings in back of cowshed for the exit of manure, could be seen three wild mallards, just stepping out of the water on the opposite bank of the slough; while a short distance from them, and all huddled together on the sloping bank —as though excitedly discussing some highly improper overtures from their wilder relations—stood a dozen or more of Mistress Parke's own particular fowl.

To drop on one knee and draw a bead (evidently upon some object across the slough) was but the work of an instant; but the duration of aim and contortion of feature, at least to an onlooker, were something absolutely painful. At last he "turned her loose," and such a quacking, fluttering and streaking into the slough never was heard before from such a small body of fowl, since ducking days began. With an eye to contingencies, I was outside, not waiting to ascertain the result of Parke's shot, and just in time to see three ducks swing into the straight from their semicircle off the slough, and steer exultingly toward the river. The leading bird swerved at the movement of raising my gun to shoot, causing a momentary lap with the duck next following, that, instantly availed of, wrought the simultaneous downfall of the two greenheads, and in spite of the sombre hues and apologetic gasps of the third duck, she, at the touch of the second, threw back her poor bewildered head, folded her wings, and came down as rapidly as only a stone-dead duck knows how.

Mystified somewhat, I ran back to the shed and found Parke, still on his knee, gazing wistfully at four ducks, lying on their backs on the feather-strewn water, convulsively treading vacancy with their poor feet.

With a look the sheepiest Parke ejaculated, "I'll tell you just how 'twas, J. I gave 'em the wrong barrel; I forgot that doggorned right o' mine carried a trifle high, and a little to the right with a wire ketridge. But lovely land, man, don't let the wife know, if she misses 'em I'll swar it were the coons."

Gathering the three wild birds I presented them to Mrs. P. with the assurance that she would lose no more of her ducks through their wiles; while Parke, hugging the lee corner of the house, loaded up again his doubtful right, and restoring his trusty piece to its place over the mantel went off to dispose clandestinely of the slaughtered innocents. HIS FIRST TROUTING.

IN the year 1886 my friend H., who lives in Vermont, invited me to come there and make him a visit in fishing time, saying July would be a good time to come, and on July 6 I started. My route was to Detroit and thence by port Huron to Kingston by rail; at this point I took passage on one of the Canadian steamers down the St. Lawrence as far as Montreal. The sail down the river was grand to one that had never rode the swift currents and boiling waters that spun us along over the different rapids. At some times it seemed the boat would turn over or be dashed to atoms on the hidden rocks in some of these rapids. We stopped at a small Indian town to take on board the Indian pilot Baptiste who was chief pilot in passing down the Lachine Rapids, it taking four strong men to handle the pilot wheel to run the dangerous rapids. At one place the boat drops 12ft. and a person would think by the jar he feels that the boat had struck the rocks on the bottom of the river, but the captain informed us it was only the boat striking heavily on the water. We arrived at Montreal at dusk, and after supper went to bed.

Again taking the train, I was soon spinning along on my journey. H. had said he would meet me at Newport, Vermont, and upon reaching that little station he was about the first one I saw. We staid all night at the Menfremagog House, and at 9 o'clock next morning took the train for Barton, where we arrived at 11 o'clock that forenoon. After dinner H. ordered out his bay mare, although it was raining about as hard as it could. Stowing away my valise under the seat in the carriage, we started for Craftsbury, which lay 10 or 10 miles distant from any railroad. Arriving there at half-past 3 o'clock in the afternoon, we hurriedly changed our wet clothing for dry ones, and sat down to our suppers as hungry as wolves. After supper H. said to me, "Would you like to go down to the creek and catch a trout?" so off we went with rod and line all ready to dip into the stream as soon as reached. Here H. gave me my first lessons in trout fishing. I listened to him closely, and then started to catch my first fish, which I did in about two seconds after the hook touched the water. I caught five before he had any. We fished down stream until it began to get dark, and then started for the house. We found we had caught 40 trout.

The next morning we were up early and started for an all day fish. We were let out of the carriage by Grandpa Doty about ten miles from home and started down stream to fish. H. said, "Always fish down stream for brook trout." H. started in ahead of me, and I thought I would take time and try and catch as many as he could. After fishing along carelessly for half an hour I looked up to see H., but he was nowhere to be seen. I started down stream to catch up to him and took a run, and think I chased him for two miles before overtaking him. After that I kept him in sight, but didn't we catch fish, though! It was a bright, sunshiny day, and the trout bit nicely. Again H. got ahead of me. I was trying one of the little streams that came into the one we had been fishing, and was having splendid luck, when I heard H. calling from way on down stream to come quick. I started on a run, and coming up to him, I saw he had an old granddaddy trout that was giving him all the sport one could ask for. The fish would dart up stream and then sideways to get under some root or log, but H. would hold him back by tightening up on the line. At last the fish gave up and was hauled to shore and thrown upon the grass. Oh, didn't I wish that I could catch such a large trout as that; I had caught some very fine fish, but none so large as this one. I fished on in hopes to get a big one, and by and by I had a bite that made the blood tingle clear to the ends of my toes. I was excited and lost my head, for I tried to throw him on the bank as I would a ¼lb. trout, but Mr. Trout could not be handled so, and when I lifted him to the top of the water he ploughed for an old log and ran in under it and snap went my line. Imagine my feelings! I knew in a moment I had acted too fast and ought to have given the fish a little work before trying to land him.

When we got near town we stopped to count our fish, H. had 185 and I had caught 100. H. picked out the nicest ones and arranged them in my basket and when we got into the village we were hailed and stopped to show up. All thought we had wonderful good luck. Mr. Rand thought H. hadn't better invite any more friends from Michigan to go fishing that had never caught trout, and then have them catch trout like that. He said to me, "Do you say this is your first experience in trout fishing?" I told him it was. "Well, what will you be after having the experience that H. has had?" and I told him I hoped I could be his equal as a fisherman. We dressed enough for H.'s family, two good meals, and gave five other families good portions, our friend Rand included. We fished some nearly every day except Sundays, and had a royal good time for nine days.

Bidding H. and family good-by, I started homeward. On going back into the store I felt that my trip had rested me and felt like taking hold of my work again with renewed strength and vigor. I wish I could spare the time to take the same trip over again. H. writes me I must come next season. BROOK TROUT.

LOWELL, Michigan.

TAMING "OLD WARTY."

SEVERAL years ago the writer, then a young man, in charge of his first school, in one of the rural sections of North Waterloo, Ontario, boarded at a farmhouse, the owner of which, to his great delight, proved to be an ardent lover of nature, and was extremely fond of pets. Adjacent to the house and connected to it by a roofed passageway stood the dairy, a stone building probably 18 or 20ft. square, flooded over its entire area to a depth of from 15 to 18in. from a natural spring, which, rising in one corner, bubbled forth in a constant stream, the overflow issuing through a grated orifice at the opposite extremity and losing itself after a somewhat rapid descent of 100yds. in a millpond beyond. Two-thirds or so of the building was floored slightly above the water level, the other third remaining uncovered and presenting the appearance of a miniature lake, through the transparency of whose shallow water the pebbled bottom might have easily been mistaken for the "natural thing" were it not for an ever present foreground of shiny milk pans ranged with disgusting regularity quite sufficient of itself to dispel the momentary illusion. Safely hidden away under cover of this floor there flourished a colony of speckled trout, varying in size from 8 to 15in., "perfect beauties" of their kind, but wild as deer, into the good graces of which the writer determined to "worm" himself, if possible, without any delay. With this object in view the means of communication were sought for and ultimately discovered in the shape of several knot holes in the floor, to which the now systematically hungered fish soon learned to come quite readily in response to the splash occasioned by dropping a plump worm, grub, or piece of meat through into the water, and subsequently to a sound similarly made with the finger, which latter organ they at length became so familiarized with that they would nibble at it by the half hour with impunity.

Having succeeded thus far, the next important step was to induce them to leave their hiding place, and for this purpose the base of operations was transferred to the edge of the floor immediately overlooking the open water. Here the former tactics were resumed with some variations, resulting, after many an hour of fruitless coaxing, in the animals fearlessly approaching the hand and snatching from the fingers whatever of a tempting character happened to be on the bill of fare. At this particular juncture it was that "Old Warty," so called, partly on account of his "bossing" proclivities, but chiefly from the existence of a wart-like excrescence on the otherwise handsome snout, originated the incipient manifestations of that sublime impudence for which he henceforward became notorious, and the reckless exhibitions of which were evidently regarded by his fellows as a lasting disgrace to their kind. Emboldened by the apparent harmlessness of the human being towering over him, and to whose very shadow he had but recently given a wide berth, this "patriarch of the tribes" would now occasionally venture out to the center of the pool, whence, after eyeing askant and with ill-concealed trepidation the object of his suspicion for several minutes, he would slowly return, by a safely circuitous route, however, to his amazed companions, with the self-satisfied air of one who having carefully gauged the sublimity of a really meritorious action, heroically accomplishes it, and forthwith steps into the niches of a well-earned immortality. Alas for the permanency of laurels mundane! Within a week every fish in the pool, not excepting even the six-inch butt of the colony, had mastered the feat, and "Warty" ranked once more among the ordinaries.

The confidence thus established continued for some time with increasing intimacy on both sides, when one afternoon our deposed friend, after literally gorging himself at the fingers of his trainer, commenced a series of manœuvers which, distancing as they did all previous achievements, constituted him once more the hero of the harem. Having discovered in the fingers of the now wholly immersed hand the means whereby to relieve his itching proboscis, he proceeded without the slightest hesitancy to utilize them as so many rubbing-posts, gliding among and about them, and butting against every protuberance of end, joint and knuckle which seemed to offer favorably for that interesting operation—his companions meanwhile assembled in solemn caucus, discussing, apparently, the alternative of fin-cuffs or expulsion from sane piscatorial society. Encouraged beyond measure at the discovery of a "weak spot" in "Warty's" physical get-up, which, properly manipulated, promised some excellent results, the writer now proceeded to develop the same by cautious advances from the human side. So, watching his opportunity when his subject manifested on the next occasion an inordinate irritation of the snout, a finger was gently laid upon and lightly rubbed over the offending organ, with the result that the now thoroughly appreciative creature speedily learned not only to submit to and court the operation, but actually manifested unmistakable sulkiness when such attention was withheld. By similar cautious advances the fins and sides were by and by reached and manipulated, until at length the extraordinary spectacle became common of "Warty" lying upon his side—tickled, if not exactly "to death," at all events beyond the power of resistance—a passive prisoner in the hand of his conqueror. In this condition he could be lifted entirely out of the water and handled for a reasonable time, and on regaining his native element would invariably seek the hand which replaced him, evidently anxious for a repetition of this terrestrial experience.

As already observed, the outlet from the inclosure was a small aperture through which the overflow emerged in a stream, and ultimately lost itself in a pond in the distance. Down this stream "Warty," when disposed for an outing, was able to glide easily enough, but on the return or upstream trip his progress was at certain shallow points greatly impeded and not unfrequently stopped altogether. In this dilemma his custom was to dam the current by lying across it until sufficient water had accumulated to enable him to wriggle a stage forward; and failing this to set up such a continued splashing and spluttering as insured a hearing at the house and his safe conveyance by hand or, when equally convenient, in a dish of some sort, to his destination. This latter method of locomotion he evidently enjoyed immensely, as evinced by his determination to enter any and every sized vessel put into the water, and so frequently did he accomplish his purpose that it became a standing order to the servants to be careful after nightfall "not to bring Warty up." The best of safeguards sometimes prove inadequate to the situation, however, for despite every precaution "Warty" was on a certain occasion "taken up," and his whereabouts subsequently recorded from the interior of the tea-kettle. His favorite food was worms, grubs and fresh meat—especially sheep's lights—of which latter he was inordinately fond, but which from its porosity and the subsequent abnormal quantity of air it conveyed into his interior completely upset his equilibrinm and constituted him a spectacle to gods and fishes. In this condition with pendant head and tail, sticking an inch and a half above the surface of the water he floated or rather bobbed about by the hour in the most dignified manner conceivable, oblivious alike to the unmistakeable scorn of his disgusted companions and the shouts of laughter that greeted his grotesque maneuvers from above.

Such, in brief, is a record of some of the results arrived at in the taming of old "Warty."

"What became of him?" The writer's feelings prompt him to drop the curtain in response to the query, but in consideration of the fact that others may take warning from the reply, he would simply place it on record that "Warty" succumbed to the effects of bar soap, carelessly left in his path by a stupid, unforgotten and unforgiven servant girl.—*A. L. Anderson in Toronto Globe.*

UNSEASONABLE SHAD.—New York city has of late years been getting Florida shad in February and the supply was kept up by Georgia and more northerly States as the season advanced until the Delaware, Hudson and Connecticut rivers sent in their supply. For the past week several shad have been taken daily in the Lower Hudson, and "North River Shad" has been placarded in Fulton Market, the modest price of three to four dollars each being asked for them. We saw three of these shad on Mr. Blackford's slabs last Monday, roe shad all of them and of rather small size. The theory that the shad migrate in great schools and go to the equator and then circle along up our coast was proved to be false years ago by the work of the U. S. Fish Commission nets which took the fish in different depths of water during the winter season, showing that the shad only went off the coast into deep water to feed and winter. Col. McDonald has advanced the theory that the shad is ever on the search for a temperature of 60° Fahr., but a run of shad in the Hudson in December seems to show that some of them either disregard temperatures or have became lost. The mild winter and the fact that the Hudson is free from ice and boats are still running to Albany, may, and no doubt has, a connection with this unusual visitation.

THE MENHADEN QUESTION.

MR. FRANCIS ENDICOTT, President of the Richmond County (N. Y.) Game and Fish Protective Association, has spent the whole season along the coast of New Jersey, and returned to the city last week. He called in our office and said that the whole community along that coast was unanimous in condemning the menhaden steamers for ruining the fishing by the wholesale capture of the menhaden, on which the bluefish and other food fishes live. Before the advent of the steamers the farmers and others came down to the shore and took striped bass, bluefish, weakfish, etc., in numbers sufficient to salt down for their winter use, but now they cannot do it.

Mr. Endicott found that he could take more fish with rod and reel than the local fishermen could with their nets. His largest catch was at Chadwick, Ocean county, N. J., where on one day he took seventeen bluefish weighing from 3 to 5lbs. each, while in the year before the steamers came it was not unusual for sportsmen to take from fifty to sixty fish per day averaging 8lbs. each. He has seen the steamers within a hundred yards of the shore, rounding up a school of menhaden so that the boats with the nets could surround them. A man at the masthead signals the depth of a school, and when it is too large for the net the steamer would run through the mass of fish and slice off enough for the net, and keep this up until the entire school was captured. The portion so sliced off would not again join the main body, and the steamer would herd them until ready for another onslaught. The feeling against the steamers is very bitter, and various means have been suggested to remedy this state of affairs, but without national legislation the case seems hopeless.

MAINE TROUT.

IT is the opinion of trappers and guides who have been in the woods of Maine on the noted trout waters that the number of brook trout seen on the well-known spawning beds has been unusually small this fall. This is especially true of the Androscoggin waters, wrongly named, but familiarly known as the Rangeleys. The spawning beds in the Cupsuptic stream are reported by one or two hunters to have been almost totally deserted at the time when on other seasons great numbers of trout have been noticed. Now this stream is one of the great spawning grounds for the trout of both the Cupsuptic and the Mooselucmaguntic lakes, and the lack of trout there is not pleasant to contemplate. At the Upper Dam the natural spawning ground of the great trout of Richardson Lake—both the Upper and the Lower, or Molechunkamunk and Welokennebacook—less trout have been seen than usual. This is partly accounted for by those who have been in the way of making observations from the fact that the noted jigging of trout, recently exposed in the FOREST AND STREAM, was carried on all summer at this point, and hence that a great number of the spawning trout were destroyed. But it is a fact worthy of note that the little bluebacks, usually seen in great numbers at the Upper Dam during the autumn run of these fish, have been very much less than usual at that point. Still it is also curious to note that a new spawning ground of these trout (bluebacks) has been discovered this fall. The point is at the mouth of Sawmill Brook, at the head of the Upper Richardson Lake; or rather the trout were found well up into the narrow rugged stream. Parties camping and gumming in that vicinity were the first and about the only ones to notice these little trout. One reliable guide, Mr. Oscar Cutting, says that the stream was lined with them for quite a long distance up into the running water. The bluebacks were so intent upon breeding, or reaching the breeding grounds, that they were literally piled up in the shallow water in the little pools and eddies. The water was very low in the stream at the time—before the fall rains. It was very easy to capture them. The gummers and hunters who saw them say that it was easy to take them. One could easily toss them out of the water with the hands, and that too by the bushel, if so many were desired. The hunters captured all they cared for, and tried them cooked, but were not generally pleased with the flavor, though they selected the males for that purpose. The females they describe as full of ripe spawn, while the males were full of milt. On seizing either, in a majority of cases, the spawn or milt would spurt from the body. The trout were small, the largest seen hardly exceeding a foot in length, and weighing probably less than a pound.

The presence of the bluebacks at that point appears to have driven off the brook trout from a favorite spawning location. Or it is suggested that the brook trout had gone up the stream ahead of the bluebacks. At least the hunters did not see the regular trout in such numbers as they had seen in the same location on previous seasons. Whether those blue-backs are destructive to the spawn or young of the brook trout is a question on which there has yet but little been said and almost nothing written. But to say the least, if the brook trout had visited the spawning beds ahead of the bluebacks, the presence of the latter fish, crowding the stream almost to suffocation, could not be a benefit to the spawn of the brook trout, if, indeed, such was not a positive injury. But little is known about the habits of these blueback trout. They are seen in the waters of the Androscoggin Lakes during the breeding season, and that is about all that has been seen of them in latter years, though there are old residents and frequenters of that region who pretend to say that these fish have at times afforded rare sport in the spring with rod and baited hook. The sportsman who has put himself on record as having taken one of these bluebacks with the fly is wanted to speak up and tell what he knows. To say the least, they are a fish very unsatisfactory to the angler, and the fact of their appearing in great numbers in the location mentioned is not very pleasant reflection for the sportsmen who hold that section of the Rangeleys near their hearts. It is possible that they may invade the pounds above—they were seen this fall almost up to the first Richardson Pond. At least the cautious angler would rather they staid in the lake region.

At the Beaver Ponds, also at the headwaters of Molechunkamunk, trout on the spawning beds have also been very scarce this fall. At points in the Big Beaver, where a year ago the bottom was literally covered with large trout at the spawning time, the same persons who saw the multitude of bluebacks in the Richardson stream—Sawmill Brook—say that they never saw a trout. They do not claim that the bluebacks had invaded this locality also, but they were so much surprised at not seeing the brook trout on their usual spawning beds that they took pains to look for them many times. Still it is possible that the spawning season of these brook trout may have been very early, or very late, this year. I incline toward the theory that the season was very early, for it was the common remark of a party of several sportsmen who annually visit the section in question, very near the close time on brook trout, that they never saw the spawn in the female trout caught so throughly matured in September as this year. At the same time it must not be forgotten that the water in the Richardson Lake has been kept up nearly to the full pitch by the Waterpower Company for nearly six months this year, including the hot months, and this may have had much to do with the spawning of the trout in the streams leading into the lake, and with the presence of little bluebacks in such great numbers in the Richardson stream. Still it could have had nothing to do with the trout in Beaver Ponds, though the water was remarkably low in these ponds all the latter part of the season, and up to the fall rains, which came late. SPECIAL.

WHITEFISH IN NORTHERN WISCONSIN.—There has been considerable discussion among fishermen as to whether there were whitefish in the land-locked lakes on the line of the Milwaukee, Lake Shore & Western Railway or not. A number of these fish, supposed to be whitefish, were speared in North Twin Lake and forwarded to the general passenger office of the Milwaukee, Lake Shore & Western Railway. Some of them were sent to Dr. A. Holbrook, who pronounces them a cross between a whitefish and a herring. If this is correct the question is, must there not be whitefish in the lake to make the cross. [The above is from the Milwaukee *Sentinel*, and the point in the last sentence is well taken. Fish do not hybridize in a state of nature or there would be no well-defined species left. It is a very common error to assume that any newly discovered fish must be a hybrid.]

NOTES FROM NEW BRUNSWICK.—The guardians of the Dungarvon River, a branch of the Miramichi, report having seen a very great number of salmon on the spawning beds during the season. The same is said to have been the case with all of the other salmon grounds on the southwest Miramichi. Dungarvon has been most carefully protected (for the first time) during the past summer. The lessees expect good fishing next year. They have gone to much expense in the matter of protection and also erected a club house on the shores of the stream. One word more about cusk. The Abenaki Indians of the St. John call this fish sachem, chief. I lately asked one of these gentlemen why they gave it so big a name. "Dunno," said my friend, "perhaps because he has so big a head."—EDWARD JACK.

FISH PLANTED ON LONG ISLAND.

AT a recent meeting of the Commissioners of Fisheries of New York, the following petition was presented: To the Honorable, the Game and Fish Commissioners of the State of New York: We, the owners and occupiers of land in the town of Southampton, in the county of Suffolk, State of New York, represent to your honorable body: First—That out of the annual appropriation for the visiting and stocking waters in this State, we hope to have the benefit of your experience and assistance. Second—That we have no information that the waters of this immediate locality, which we deem of so much importance to the whole fishing community, have yet been inspected and stocked. Third—That the waters not only comprise very fine fresh-water lakes and ponds, but also salt-water bays, inlets and creeks. Fourth—We respectfully submit the above to your early consideration, and hereby petition you to act in the matter. —T. GALLARD THOMAS, M.D.; WAGER SWAYNE, and 141 others.

The petition was referred to Mr. E. G. Blackford, the Commissioner in charge of the Long Island work, who returned to the petitioners the following report from the superintendent of the hatching station in that district:

COLD SPRING HARBOR, N. Y., Oct. 31, 1887.—*Mr. E. G. Blackford, Commissioner of Fisheries, New York:* SIR—In reply to your inquiry concerning the number and kinds of fish which have been distributed from this hatching station to the waters of Long Island, have drawn the following list from our books. It does not include shipments to other parts of the State. All the plantings, except those made in 1887, will be found in the reports of the Fish Commission of the previous years:

	BROOK TROUT.	
1883—	John Cashow, Locust Valley	10,000
	Mill Ponds, Cold Spring Harbor	8,000
	John D. Jones, South Oyster Bay	5,000
	N. W. Foster, Riverhead	8,000
1884—	John Cashow, Shoe Swamp Brook	3,000
	Mill Ponds, Cold Spring Harbor	4,000
1885—	George Snyder, Manhassett	5,500
	H. Scudder, Northport	1,500
	H. S. Jennings, Islip	3,000
	W. F. Hawkins, Bellport	3,000
	Wood Fosdick, Bellport	2,000
	Mill Ponds, Cold Spring Harbor	1,500
1886—	J. D. Hewlett, Cold Spring Harbor, eggs bought	117,125
	G. H. Newton, Smithtown	10,000
	L. D. Huntington, Smithtown	5,000
	F. H. Weeks, Cold Spring Harbor	8,000
	H. Scudder, Northport	2,000
	Chas. E. Whitehead, Babylon	5,000
	H. R. De Milt, Oyster Bay	5,000
	Miss Marbury, Oyster Bay	5,000
	W. J. Hawkins, Bellport	5,000
	Wood Fosdick, Bellport	5,000
	J. H. Perkins, Riverhead	5,000
	H. Shoshinsky, Breslau	2,000
	F. T. Underhill, Oyster Bay	5,000
	W. L. Prime, Huntington	5,000
	E. Floyd-Jones, Seaford	5,000
	Geo. E. Ward, Great Neck	1,000
	J. W. Beekman, Oyster Bay	3,000

1885—	Lake Ronkonkoma	340,000
	Great Pond, Riverhead	500,000
	St. John's Lake	50,000
1887—	St. John's Lake	400,000
	Total whitefish	2,340,000
	SMELTS.	
1885—	Cold Spring Harbor	100,000
1886—	Cold Spring Harbor	2,000,000
1887—	Cold Spring Harbor	2,000,000
	Total smelts	4,100,000
	TOMCODS [FROST FISH].	
1884—	Cold Spring Harbor	38,000
1885—	Cold Spring Harbor	750,000
1886—	Cold Spring Harbor	2,225,000
1887—	Cold Spring Harbor	3,400,000
	Total tomcods	6,413,000
	LOBSTERS.	
1886—	Cold Spring Harbor	4,000
	RECAPITULATION.	
	Brook trout	345,471
	Brown trout	97,900
	Lake trout	20,000
	Blue-backed trout	4,500
	Rainbow trout	20,500
	Landlocked salmon	39,500
	Whitefish	2,340,000
	Shad	1,472,000
	Smelts	4,100,000
	Tomcods	6,413,000
	Lobsters	4,000
	Total fish planted on Long Island	14,756,871

In conclusion I would say: Our limited means have been used in needed improvements and in running expenses, and much as I would like to make an examination of the waters of the island I have not done so. An examination of the above list will show that our work has been largely in that class of fishes which are especially food fishes; and for these we have had few applications; and therefore the smelts and tomcods have been turned into the harbor here. All applicants have been answered that their request had been placed on file and that when the season of distribution came they would be notified of the number allotted them. If any persons have neglected to make application for fish or to inform themselves from the reports of the Fish Commissioners of what work has been done since the establishment of this hatching station, the fault, if any, is not mine. Very truly yours, FRED MATHER, Superintendent.

The Kennel.

FIXTURES.

DOG SHOWS.

Dec. 14 to 16.—Third Annual Dog Show of the Winsted Kennel Club. Frank D. Hallett, Superintendent, Winsted, Conn. Entries close Dec. 3.

Jan. 10, 11, 12 and 13, 1888.—Bench Show of the Ohio Poultry, Pigeon, Kennel and Pet Stock Association, Columbus, O. H. O. Bridge, Secretary, Columbus, O.

Jan. 23 to 27, 1888.—First Dog Show of the Agusta Poultry and Poultry Association, at Agusta, Ga.

Jan. 24. to 29.—Augusta, Ga., Richmond County Poultry and Pet Stock.

Feb. 13 to 17.—First show Fort Schuyler Kennel Club, Utica, N. Y. E. J. Spencer, Sec.

Feb. 21 to 24, 1888.—Twelfth Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

Feb. 28 to March 2.—Show of Philadelphia Kennel Club. W. H. Child, Sec.

April 3 to 6.—Fourth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Dec. 12.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

Jan. 10, 1888.—Second Annual Field Trials of the Texas Field Trials Club, at Marshall, Tex. W. L. Thomas, Secretary, Marshall, Tex.

Jan. 16.—Fifth Annual Field Trials of the Pacific Coast Field Trial Club, near Kingsburgh, Cal. N. P. Shelden, Secretary, 320 Sansome street, San Francisco, Cal.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5582.**

NICK OF NASO'S FRACTIONAL PRIZE.

Editor Forest and Stream:

I see by the published report of the Eastern Field Trials Club that my dog, Nick of Naso, has been awarded a prize, that is, a divided third. Please permit me to say that I cannot accept the award for the following reasons:

When I entered the dog I supposed that the club would select some competent sportsmen to act as judge of the trials. I am not a member of the club and I did not know anything to the contrary.

About ten days before the pointer stake was run I wrote a letter to Mr. W. A. Coster, who, I am informed, is and has been for some time the employed secretary of the club, requesting him in said letter to give me the names of the judges who had been selected for the pointer stake. Up to this time I have not received a reply to said letter. However, I did see in the New York *Herald* that Messrs. D. C. Bergundthal, W. A. Coster and H. B. Duryea had been selected. The same paper informed me that thirteen pointers had been entered and drawn to run and also that Nick of Naso had beaten Duke of Hessen and that Tammany had beaten Nick of Naso, consequently as I was at my home and the trials being held at High Point, I was unable to know of the selection of judges unless the secretary would answer my request. Now, I said before that I entered my dog supposing that sportsmen would be selected by the club. Mr. Duryea is not a sportsman and my reason for saying so is that he is the owner of Robert the Devil and Robert was at the time entered and did afterward run in the champion stake, and consequently was an interested party, for the dog winning in the all-aged stake would run against his dog in the champion stake. And it is a well settled rule that no sportsman will or would consent to judge where he is an interested party. Consequently his own act in accepting the place of judge and knowing his interest, is proof positive that Mr. Duryea is not a sportsman, and therefore his opinion or judgment is of no value whatever.

Secondly—At the trial last year of the same club, Nick of Naso was drawn against Mr. Duryea's dog Robert the Devil, and as it was claimed by nearly all of the sportsmen who witnessed the heat between these two dogs, that the heat was fairly won by Nick of Naso—in fact there was quite a controversy in the several sporting papers over this race between these two dogs—yet we find that Mr. Duryea being a member of the Eastern Field Trials Club and present at the trials (while I remained at home), accepted the position of judge and did act. This of itself would conclusively prove that Mr. Duryea was in no sense a sportsman. If he was a sportsman he would have replied, upon being informed of his election, that on account of the controversy and contention over last year's race, he could not consent to act. I do not believe there is a sportsman in America who would have acted as judge under the circumstances. His acceptance proves his disqualification.

The other judge, Mr. W. A. Coster, as I said before, is the paid secretary or clerk and manager of the club. The club advertised a public trial and asks the owners of dogs to pay their money and enter their dogs. The members of the club may be satisfied with the judgment and opinion of their servant upon sporting matters, and may have great confidence in his ability and judgment. But sportsmen who are not members of the club and the public will be almost certain not to agree to any such a proposition. Mr. Coster may be in every way qualified to judge or decide any question arising between members and this club, but when it comes to decide between the dog owned by his master (the member) and the dog owned by the outsider, then he is not qualified, and his acceptance proves beyond a doubt that he is not a sportsman. That is unless he was ordered to act, then obedience to his employer would or may be an excuse for his acceptance.

Under those circumstances two out of the three judges being clearly disqualified, I cannot accept for Nick of Naso any award made to him by these judges. C. J. PESHALL.

AMERICAN FIELD TRIALS.

[From a special reporter, by wire to Forest and Stream.]

FLORENCE, Ala., Nov. 12.—The American Field Trials Club's trials opened to-day. The morning was not very promising; cold, raw west wind, but toward noon the weather came out fair and the sun shone beautifully. Birds were plentiful and the work was very good. There were twenty-six entries in the Derby. The drawing was as follows:

DERBY DRAWING.

MAY (James N. Macklin), black, white and tan bitch (Gath's Mark—Dell), May 2,

against

MISS THOMPSON (Memphis & Avent Kennels), black, white and tan bitch (Roderigo—Bo Peep), Jan. 2.

COUNT PARIS (C. W. Paris), black, white and tan dog (Count Noble—champion Dido II.), May 21,

against

OLLIE S. (W. T. Bowdre), black, white and tan bitch (Paul Gladstone—Lottie), March 7.

QUEEN NOBLE (J. I. Case and F. K. Bull), blue belton bitch (King Noble—Belle Belton), April 12,

against

LATONIA (W. B. Shattuc), black, white and tan bitch (Count Noble—champion Dido II.), May 21.

OSSIAN (P. T. Madison), liver and white dog (Croxteth—Annie), May 8,

against

JACOBIN (W. W. Titus), white, liver and tan dog (San Roy—Nettle), May 18.

HECTOR against LITTLE GIFT.

SIRIUS (C. Tucker), lemon and white dog (Sportsman—Sweet Heart), May 22,

against

KING'S MARK (J. I. Case and F. K. Bull), blue belton dog (King Noble—Belle Belton), April 12.

CINCH (Memphis & Avent Kennels), black, white and tan dog (Roderigo—Bo Peep), Jan. 2,

against

TRINKET'S CASH (E. F. Stoddard), white and liver ticked dog (Croxteth—Trinket), April 4.

JACK MODOC (Edward Dexter), black and white dog (Buckellew—Ida), July 25,

against

SAMUEL S. (W. T. Bowdre), black, white and tan dog (Paul Gladstone—Lottie), March 7.

DAVE R. (Jas. S. Fisher), orange and white dog (Gath's Hope—Daisy F.), April 13,

against

LADY W. (F. J. Stone), lemon and white bitch (Heno—Lady Washington), April —.

TRINKET'S COUNT (E. F. Stoddard), white and liver ticked dog (Croxteth—Trinket), April 4,

against

SUNSHINE (Latonia Kennels), black, white and tan bitch (Count Noble—Lit), Jan. 8.

LILLY B.

against

CLAUD (Memphis & Avent Kennels), black, white and tan dog (Roderigo—Lillian), May 20.

LADDY (W. T. Bowdre), black and tan dog (Roderigo—Bo Peep), June 2,

against

BILLY B. (W. B. Shattuc), orange and white dog (Count Noble—champion Dido II.), May 21.

JOEY B. (Memphis & Avent Kennels), black, white and tan dog (Roderigo—Lillian), May 20,

against

BLUE CHIEF (J. I. Case & F. K. Bull), blue belton dog (King Noble—Elsie Belton), July 12.

Miss Thompson beat May in a poor heat. Ollie S. beat Count Paris in a good heat. Latonia beat Queen Noble in a very inferior race. Jacobin beat Ossian, doing very good work. Hector beat Little Gift in an interesting heat. King's Mark beat Sirius, both dogs doing good work.

There is a large crowd of visiting sportsmen, there being over one hundred on horseback enjoying the trials. The people of Florence deserve the highest praise for their courtesy and attentions. Invitations are out for a grand ball to be given by the young men of Florence to the visiting sportsmen. S.

[*Special to Forest and Stream.*]

FLORENCE, Ala., Dec. 13.—Cinch beat Trinkett's Cash in rather a tame heat. Jack Modoc beat Samuel S. with a fine exhibition of work on the part of Modoc. Dave R. beat Lady W. in a fair heat. Sunshine beat Trinkett's Count, the running tame. Lily B. beat Claude, having the best on points. Laddie beat Billy B. in a long heat with little work. Joey B. beat Blue Chief, a good heat on the part of Joey. This ended the first series. The day was fair and a goodly number of spectators were on hand.

SECOND CHAMPION PRIZES.

Editor Forest and Stream:

At their show last spring the W. K. C. offered prizes to the second best dogs in the champion classes in which there were three or more entries. This was a step in the right direction, but why make the proviso of there being a certain number of entries, failing which only one prize will be given? In the open classes a certain number of prizes are offered, and no matter what number of dogs compete, the prizes are awarded just the same, and none are held back unless the dogs entered are so poor in quality that the judge thinks fit to withhold some of them. Why not follow the same plan with the champion classes? A dog, to be eligible to the champion class, must have won three firsts in the open classes, and must therefore be a good representative of his breed. It seems short-sighted of show committees not to recognize the fact that a good number of entries in the champion class, which could without doubt be got together by offering more than one prize, would attract more notice than any other class from the fact of every animal entered in it being one of proved quality and excellence. Owners do not care to enter dogs in champion classes to compete with a dog that they know can beat theirs and capture the one prize offered, whereas, were there a second prize and a couple of v.h.c.'s hung up, they would be willing to enter. There is not much satisfaction in entering a dog in the champion class and going to all the attendant expense, and then to have nothing to show for it. Then again some owners have two or three embryo champions, all of whom they would enter were more than one prize offered.

The extra expense attached to offering more than one prize in the champion classes would be very small, while the extra attraction to exhibitors and the public at large would be immense. C.

A ST. BERNARD CLUB.

To the Breeders and Fanciers of St. Bernards, in the U. S. and Canada:

The undersigned beg to invite you to attend a meeting to be held on the first day of the Westminster Kennel Club Show, Tuesday, Feb. 21, at 8 P. M., Madison Square Garden, New York, for the purpose of organizing a St. Bernard Club, the election of officers, etc.

We desire to see as many as possible present; the day selected is especially favorable, the day following being Washington's birthday. This will enable those at a distance to attend the meeting without too much loss of time.

The object of the proposed club is the improvement of this noble breed of dogs and the encouragement of the breeding of first-class specimens. There is no reason why we should not be able to compete successfully with our English cousins and with the Swiss; but in order to do this, such inducements are necessary as can only be offered by a specialty club.

Our aim is to establish a club on such a basis as will make it possible to all lovers of the breed to join; it is intended to represent neither a clique nor a ring, but is to be a national club in the broadest sense of the word.

We believe that there is no breed of non-sporting dogs that is more worthy of the support of dog-lovers, than the St. Bernard, and we trust that all those interested in the breed will assist us in our endeavors by becoming members of the proposed club.

Communications may be addressed to K. E. Hopf, Arlington, N. J., who has consented to attend to the correspondence until further notice.

SWEEPSTAKES AT PHILADELPHIA SHOW.—Philadelphia, Dec. 10.—The Philadelphia Kennel Club will offer a series of sweepstake prizes at their coming bench show, open to such dogs as are eligible to the regular puppy classes of the show, viz., all dogs whelped on or after Feb. 28, 1887, of the following breeds: Mastiffs, St. Bernards, collies, greyhounds, fox-terriers, bull-terriers, pugs, pointers, English, Irish and Gordon setters and spaniels. The club will add to this list any other breed provided not less than five entries are made. Entrance fee for the sweepstakes $2 in addition to the fee for entering in regular puppy classes. Whole amount of the sweepstake fees will be awarded as follows: Where five entries or less are made in any class one prize will be awarded; for more than five and not exceeding ten entries, two prizes, 60 per cent. to first and 40 per cent. to second; if entries exceed ten, three prizes will be awarded, 50, 30 and 20 per cent. Entries close Jan. 10. Entry blanks will be furnished on application to WM. H. CHILD, Sec. P. K. C., 613 Commerce street, Philadelphia.

A. K. C. DICTATION.

Editor Forest and Stream:

After reading the report of the American Kennel Club meeting in your issue of 8th inst., I have come to the conclusion that the A. K. C. is in about the same position as the cat in the well, which climbed out one foot every day and fell back two; and the same answer which the boy gave, when asked how long it would take to get the cat out, is applicable to the A. K. C. Bench show managers should see to it at once that Messrs. Cugle and Winslow are substantially remembered for their effort to swell the number of entries at coming shows, and the A. K. C. shows its interest in bench shows by making the following rule: "Every dog * * * * must be registered in the American Kennel Club Stud Book. In case a dog has not been registered previous to date of entry, owner must fill out registration blank and forward same with fee of fifty cents, together with show entry, to the secretary of the show, who shall mark the dog as registered and forward blank with registration fee to the secretary of the American Kennel Club." It seems to me that the A. K. C. have gone a little too far in trying to force people to register their dogs in the club's stud book, and if bench show managers don't see a great falling off in entries under this new rule I am very much mistaken. Why didn't the *American Kennel Register* "lay in" with the bench shows and force exhibitors to register their dogs in the A. K. R.? Would the public have stood any such nonsense? Will this scheme of the A. K. C. to force exhibitors to pay their fifty cents work? I hardly think it will. I would like to see the views of your readers on this subject. As for my views, I deem it simply highway robbery. J. A. NICKERSON.

BOSTON, Mass.

AN OBJECTION TO EDITORS.

AT the late meeting of the American Kennel Club, when the question of whether or no the Executive Committee should pass on the acceptability of delegates sent from clubs came up, this is what was said, as reported by the FOREST AND STREAM's stenographer:

The amendment to Article IV. of the constitution, to strike out "or delegate," was read by the secretary.

MR. PESHALL—That certainly should not be passed.

MR. WATSON—It just amounts to this, whether this is an association of delegates or an association of clubs.

MR. PESHALL—We should deal with both of them, I think.

MR. WATSON—Deal with the club and not with the individual representative. If the club does not conform to the rules of the association, turn the club out. But as long as the club is in, it is entitled to do as it sees fit, within reasonable bounds.

MR. PESHALL—In all parliamentary assemblies they always deal with the delegate, and there is no reason why he should not remain either, if the people that send him wish it.

MR. WATSON—But we have the elective power; we elect the club. What parallel is there between a delegate to an association of this kind and a representative in a legislature?

MR. PESHALL—We might have a club in good standing and they might send as a delegate some one who might not be acceptable. I will offer at this meeting a request to the Hornell Kennel Club not to send you (Mr. Watson) as a delegate, and I will tell you my reasons. One reason is that you are editing and running a newspaper, and another reason is that you are publishing an opposition stud book. It is not personal, this, but it is for the good of the association. It is just one of those cases that should be covered. It is wrong for this association to have you as a delegate here. We are publishing a stud book, it is costing us money, you are running a newspaper, and you are using every means in your power to fight that stud book.

THE PRESIDENT—That is a matter for the executive committee, and cannot be brought up here.

MR. PESHALL—There is no personal feeling between us. At the time of establishing the stud book I was one of those who wanted to bring all the stud books in. I remember distinctly a remark I made to you.

MR. WATSON—I don't think the gentleman should bring in any business dealings before this meeting.

MR. PESHALL—We should have the power to ask the club, "We would like you to send somebody else." It might not be personal.

MR. WATSON—It might not be personal, but it is utterly ridiculous. The idea of supposing that because I happen to be an editor I am not entitled to be a representative on this floor. Mr. Peshall is a lawyer; I don't think for that reason he is not entitled to be here. With regard to publishing an opposition stud book, I should like to know who is doing the opposition. My book was in existence long before the book of this association.

THE PRESIDENT—This is altogether out of order, and I shall put the question.

The amendment was then put and declared not carried—seven to three.

MONARCH'S RECORD.—Melrose, Mass., Dec. 12.—*Editor Forest and Stream:* I beg your pardon for using your valuable space so soon again to straighten out another mastiff fancier. But I see the proprietor of the Wyoming Kennels, Melrose, Mass., not being content with the reading of his ad. in last week's paper, fearing the card would not draw, has claimed prizes his dog has never won. He claims for Monarch, first, third and special prizes at N. E. K. C. show, 1887. Minting won first, Orion second, Monarch third (so his first was in a puppy class). So much for first and third prize. Now let us see what specials he won. I won both kennel prizes, also the stud dog prize with champion Ilford Caution with two of his get, beating Monarch's sire with Monarch and another. Minting won the special for best mastiff, dog or bitch in the show, special for best mastiff dog in the show. Duchess, a daughter of Caution, won the mastiff sweepstake prize. This is all the special prizes offered except for the best dog or bitch sired by Ilford Caution, which was won by Ilford Caution III. I fail to see where there is any left for Monarch.—E. H. MOORE.

THE AMERICAN TOY DOG CLUB.—A meeting of the American Toy Dog Club was held Dec. 9. A resolution substituting the word pet for toy in the name and title of the club was unanimously adopted. It was also voted that the club decline the offer made by the secretary of the New York Poultry Exchange, that the dog show, Dec. 14-21, be under the management of the club, and that the club have no connection whatever with the Poultry Exchange dog show. A committee, consisting of Messrs. Surles, Holmes and Ormsby, was appointed to draft rules and by-laws, and to determine what breeds of dogs shall be included in the club's catalogue.

WHO LOST FRITZ?—Brooklyn, Dec. 12.—About three weeks ago a red setter dog, had on nickle-plated collar, on which is engraved the name Fritz. The loser may have him by giving satisfactory description. I think he is a very valuable dog.—W. D. C. SCHULJE, 520 Third avenue, South Brooklyn.

COLUMBUS SHOW, Dec. 8.—Please announce that the Ohio Poultry and Kennel Association have made a class for Irish water spaniels, first $5, second $3.—H. A. BRIDGE.

ENGLISH DOG CHAT.—I.

[From an English Correspondent.]

GOODNESS knows there have been plenty of dog shows in this year of British grace. How the majority of undertakings have steered clear of disaster is a matter of surprise. Yet with all these shows can it be said the dogs have improved? Some have; but others deteriorated. Well, there is nothing like beginning the year well, so I started at Staleybridge on New Year's Day, and notwithstanding that the worthy secretary and some of the committeemen went out on the spree the show was a success.

Here perhaps for the first time a cherry-nosed terrier was given a prize, and by Astley, too. Miss Holdsworth judged the pugs, and quite the right thing, too, for fancy a man (?) messing about such snuffy little animals. There is nothing more ridiculous than to see Mr. Sheffield, the Birmingham pug man, going in breeches and leggings and black melton coat and box hat, leading a pug in a show ring. He looks more like a hunting swell than a pug fancier. It is very amusing to see a meeting of the pug club, it is a regular hens' convention.

Dumfries also had a show on the first, and nearly every tradesman in the town gave a special prize of some sort or another. One enterprising fishmonger gave a box of bloaters. If several had subscribed their "saxpences" and bought some work on dogs and presented it to one or two of the judges it would have been much better, for of all the judging I ever saw, well, that was the worst.

Paisley show was held a couple of days afterward and things were improved upon by the appointment of an English judge.

The next week was an eventful one in the English kennel world. Mr. Wyndham Carter having been re-arrested, as his friends who had gone bail for him, refused to stand so any longer, and he was hurried off to Maidstone Gaol, and Justice Denham afterward gave him five years penal servitude for feloniously shooting a bailiff. His father died a week or so back.

We now come to the Kennel Club winter show. The most remarkable figure in that show was Herr Ernst von Otto-Kreckwitz, the editor of *Hunde Sport*. He was dressed in a remarkable fur-lined coat, inside of which he carried an ugly little monkey pincher. His visits to the refreshment bars were often, and by night our German friend found out that Bass was stronger than lager. Then we were introduced to the mouse trap trick in the fox-terrier ring; only fancy, and it just shows what some of our fellows know about sport. I suppose most people on your side know there is nothing a dog likes worse to kill than a mouse, and every school boy can tell you the reason. It is to be hoped that the Kennel Club will not again hold their winter show at the Crystal Palace, as the Westminster Aquarium is much more suitable, and is greatly preferred by exhibitors.

The next show was at Liverpool, and notwithstanding that it followed so closely on the Palace, it was well patronized. There was a tremendous class of Welsh terriers here; in fact, these dogs are getting wonderfully popular in this country. It was in Liverpool, though not at the show, that Mr. Edmund Buckley gave £200 for the Welshman Mawddy Nonsuch. Mr. Maxwell had bought him a few days previously for about £15, and there has been nothing out to touch him yet. Mr. Buckley has plenty of money, but is no judge. I have seen dogs he has given from £12 to £20 for, and they are not worth so many pence, whereas he has sent back good ones as of no use. He has spent a lot of money on them this year, in fact, I hear that two Pembrokeshire men have had a couple of hundred out of him, and they swear the best they ever sent him he returned as no good. However, Mr. Buckley has been the making of the Welsh terriers, and has done more for the breed than any half dozen others. I do not think he misses a show, and it would be interesting to know how many times Bob Bethesda has been benched this year.

Ebbu Vale show was also held about this time, and were it not for the Great St. Bernard Baron Cardiff incident I might pass it over without remark. Now George Helliwell left the Palace show with Jack Hussey, of Cardiff, the spaniel man. In Cardiff, which is not far from Ebbu Vale, there lives a widow by the name of Stacey, who, bless her heart, has a weakness for a dog. This time it was a St. Bernard puppy, and she meant showing it at Ebbu Vale, but was advised by Helliwell not to do so, as he would be obliged to put it back because of its age. He knew that Royle's Duke of Marlborough—by the way, a vastly improved dog—was coming down pot-hunting, a very favorite pastime of Mr. Royle. Now, unfortunately, there were two ways of looking at this act of Helliwell's. As Royle's dogs were entered, he knew that Marsden would be there, and he was aware that as soon as he saw the wonderful puppy—which afterward turned up as Baron Cardiff—he would have him at any price, for Royle is a pork butcher in Manchester with heaps of the needful. Now Helliwell's great patron is J. F. Smith, of Sheffield, another St. Bernard man with plenty of money; and there is no doubt that Helliwell wanted the dog for him, and some say, tried to keep him out of the way of Marsden, who, however, got wind of the affair and made the old lady a cheerful bid of a hundred pounds or so. Bids then came in fast and furious between the rival Manchester and Sheffield men; and as there were a couple of Cardiff fellows in the swim who wanted something for themselves out of the affair, there was a good deal of time lost. Meanwhile down pops little Sydney Smith from Leeds, plants down his three hundred and fifty pounds and secures the crack. The same old story—two dogs quarreling over a bone, when the third comes up and collars it.

The great terrier show was the next on the list of fixtures, and it was managed by Mr. Cruft and financed by Spratts Patent. There has been a lot of this kind of thing lately, private enterprises with high entrance fees and small prizes, and a silver medal or two thrown in. These shows presumably pay well, but the Kennel Club could see through the wheeze, and gave the affair a severe snubbing by withdrawing their patronage. The excuse of the revised rules not being used in the schedules was put forward, but that was all my eye, as it was nothing more or less than a sort of vote of censure on the principle of such shows. But the exhibitors did not care much. They had one win to the good without being nearer the challenge class, and as the show was at the Westminster Aquarium there was something else besides dogs to look after.

Then another enterprise in the shape of Portsmouth show came in sight, this time managed by little Dr. Seelig, a good-hearted little soul, but a sadly wanting "somewhere or somehow." There is no doubt that Dear & Company, a new dog biscuit firm, ran Portsmouth show, which was benched by them. Anyhow, the show turned out a horrible failure, and the management faulty; and after a lot of complaints in the press the little doctor got the sack, and from that time he began to go down hill and had to return to the continong. Some people had their knives into him, but from what I know of the little man he was a very good-hearted fellow, but unfortunately like many others could have done with more money.

Easter week saw us at Warwick, a wonderful show; in fact exhibitors now think more of a win at that show than anywhere else, Birmingham included. The secret of Warwick success is attributable to its central geographical situation, its capacious judging ground and a well arranged schedule. It is a pleasing sight to see old and young fanciers chatting over their grogs on the night before the show at the hotels in the town and at Leamington, a fashionable resort a couple of miles distant. The second and third days are always a "frost" at this show and always will be until something is devised to keep the visitors in the town. Sporting dogs were very strong, especially spaniels, and the brothers Willett took longer than ever to judge them. It is sickening to see those two judge; and patience help the poor fellows who have to stand in the ring awaiting their decisions. Half or three-quarters of an hour is nothing for these sports to spend over two dogs, when a blind man could tell by the aid of his stick which was the better in half a minute. By the way, there were ructions in our spaniel world the other day. Mr. Cowell, the secretary of that club, asserted that Mr. Lort, one of our oldest judges, always went for any dog led in by John Reed, Bryden's kennelman. Of course there was an awful row and actions for slander and so on were talked about, and Cowell had to publicly apologize. Mr. Bowers took up the matter on behalf of the old gentleman and probably frightened Mr. Cowell, who has to my knowledge given John Reed money to lead a dog out for him under Mr. Lort. Glasgow show was also a successful one, although only Scotch judges were selected. The show of sporting dogs was now at hand and was held at Olympia, a magnificent new building in Kensington, London. It was held in connection with the Sportsman's Exhibition and was another enterprise of a private nature and was nothing more or less than a catchpenny affair. The entry was a fair one and Cruft and Etherington, another gentleman very fond of running anything in the show line, from an acrobat to an artificial waterfall, must have made a lump out of it; and it is strange the promised medals have been so long in reaching the lucky (?) exhibitors. Poor Captain Makie died the week after this show; he was a rollicking sort of fellow, up to any fun and devilment and had always the choicest of yarns to relate to us. He was well known in yachting circles and had commanded among others the racing crafts Vanduara, the two Condors and the Wendur, and it may be interesting to mention that he was carried to his grave by six of the crew of the Thistle. The captain was a Scotch terrier man and we all miss him.

KINO.—Wrightsville, Pa., Dec. 10.—*Editor Forest and Stream:* "The well-known fact" of "Malcom" has diminished till nothing more is left but what Mr. Schellhass related to "Malcom" and Mr. Schellhass has nothing to offer but a quotation from a letter from Mr. Satterthwaite. In opposition to this quotation, I will state that Mr. Dan O'Shea informed me verbally on several occasions that he never would give the true facts of Kino's breeding to Mr. Satterthwaite; Kino was imported and as well bred as any beagle living. A dog bred in the United States could not be shown in the U. S. as imported. Mr. O'Shea did show Kino at Philadelphia as imported, and this, coupled with his assertions to me, makes me feel I had the right to claim the dog as imported until the contrary is proven. Mr. O'Shea is the only person that can enlighted us and it is his duty to do so, and I hope he will.—A. C. KRUEGER.

A YOUNGSTER IN THE FIELD.—Jobstown, N. J., Dec. 8.—Yesterday I took my four-month-old puppy, R.V.O. (champion Grousedale—Flo) out for a run, and while walking met Mr. J. P. Budd, who was out shooting. Knowing of a small bunch of birds not a quarter of a mile distant, we went over. My pup began to make game as soon as the ground was reached, and after some beautiful roading he pointed stiff. I walked in ahead of him and started a nice little bunch of about a dozen well-grown birds. Mr. Budd did not shoot, but stood admiring the pup, who never moved an inch off his point I took the gun, and after a little kicking, out went the old cock bird, and I let him down in some tall weeds. After patting and praising the pup I sent him on. He found and pointed the dead bird, and then retrieved it in royal style. This was the first time he ever saw a quail, and also the first time he ever had a gun shot over him.—R. VON OHL.

UTICA BENCH SHOW.—Utica, N. Y., Dec. 6.—*Editor Forest and Stream:* Will you kindly announce through your columns the inaugural bench show of the Fort Schuyler Kennel Club, Feb. 14-17, 1888. We are about to file our application for membership with the American Kennel Club, and have engaged J. Otis Fellows, of Hornellsville, as superintendent. Will announce judges in the course of a week, when we also hope to issue premium list.—E. J. SPENCER, Secretary (Box 172).

CHAMPION CHIEFTAIN'S DEATH.—Byron, Ont.—I have had the misfortune to lose by death from extreme old age the well-known imported blaek and tan collie, champion Chieftain (E. 8,506) the winner of about 70 prizes in England, among them first at Crystal Palace in 1880. Few collies in England have had a more successful career on the bench than he had when he was in his prime.—ROBERT MCEWEN.

ST. BERNARD BREEDING CLUB.—Will you kindly allow me to say that I have no interest in the St. Bernard Breeding Club, having resigned its presidency, etc., and expect shortly to devote my time to private business. I still retain great interest in the breed, and will doubtless have a few good ones for my own pleasure.—W. W. TUCKER.

PHILADELPHIA KENNEL CLUB SHOW.—Dec. 9.—*Editor Forest and Stream:* We claim the following dates for our next bench show, viz., Feb. 28 and 29 and March 1 and 2.—W. H. CHILD, Sec.

AUGUSTA SHOW.—The Richmond County Poultry and Pet Stock Association, will give a show in Market Hall, Augusta, Ga., Jan. 24 to 29.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 25 cents.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Smuggler. By A. H. Bassett, Acushnet, Mass., for blue belton setter dog, whelped July 17, 1887, by Phil Warwick out of Model Bondhu.

Luke. By Detroit Kennel Club, Detroit, Mich., for stone fawn pug dog, whelped Sept. 28, 1887, by Duke II. (Duke—Judy II.) out of Jipsey (Don Juan—Foxey).

Bessie Pape. By Detroit Kennel Club, Detroit, Mich., for black pointer bitch, whelped July 20, 1887, by Broncho, Jr. (Phil—Dinah) out of Rie (Joe Pape—Nellie Pape).

Lily and Mignon. By Clumber Kennels, Ottawa, Can., for lemon and white Clumber spaniel bitches, whelped Oct. 3, 1887, by Smash II. out of Romp II.

Ferret, Nanette and Nailor. By Detroit Kennel Club, Detroit, Mich., for white fox-terrier dogs, whelped Sept. 28, 1887, by Avenger (Flipper—Melbourne) out of Flash (Trojan—Fannie).

Nicotine. By C. M. Munhall, Cleveland, O., for liver and white pointer dog, whelped Aug. 8, 1887, by Nick of Naso (Naso II.—Pettigo) out of Patti M. (Donald—Devonshire Lass).

M. Quad. By W. C. Burke, Jr., South Norwalk, Conn., for lemon and white pointer dog, whelped July 13, 1887, by Scoot (C. M. Bryant's Darkness—R. B. Cooke's Nellie) out of Flycatcher (Vic—Pitzer's Flirt).

Manitoba Gladstone and Frank Simpson. By Thos. Johnson, Winnipeg, Man., for black and white English setter dogs, whelped April 23, 1886, by Mark J. (Druid—Star) out of Cambria (Cambridge—Pet Laverack).

Dick Bondhu. By Thos. Johnson, Winnipeg, Man., for black and white English setter dog, whelped April 3, 1886, by Dashing Bondhu out of Duchess Primrose.

Royalist. By Maizeland Kennels, Red Hook, N. Y., for white, black and tan fox-terrier dog, by Bacchanal (The Belgravian—Bellamite) out of Miss Tackler.

Bonnie View. By Tower Grove Collie Kennels, St. Louis, Mo., for black and tan collie bitch, whelped Aug 14, 1887, by Dublin Scot (The Colonel—Jessie) out of Madge (Highlander—Hasty).

Midget Pug Kennels.—Dec. 5, 1887.—In place of Capitol City Kennels, which name I did not know was already claimed, I now claim the name of Midget Pug Kennels for my kennels of small pugs.—L. S. HUDSON, Lansing, Mich.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Mottle—Cameron's Racket. Wm. Mann's (Elizabeth, N. J.) beagle bitch Mottle to A. C. Krueger's Cameron's Racket (Rally—Louise), July 10.

Daisy—Cameron's Racket. A. C. Krueger's (Wrightsville, Pa.) beagle bitch Daisy (Thom—Music) to his Cameron's Racket, Sept. 21.

Rue—Cameron's Racket. A. C. Krueger's Rue (Victor—Flora) to his Cameron's Racket, June 20.

Whisper—Cameron's Racket. A. C. Krueger's beagle bitch Whisper (Cornet—Una) to his Cameron's Racket, July 6.

Cora—Cameron's Racket. A. C. Krueger's beagle bitch Cora (Rattler—Scioto) to his Cameron's Racket, Oct. 14.

Freddie—Floss B. whelps. Black cocker spaniels, whelped Sept. 22, 1887, by Freddie out of Floss B. (A.K.R. 3449), by Arthur S. Aborn, Wakefield, Mass., a bitch each to T. F. Leonard, Walpole, Mass., W. J. Middleton, 1,849 Washington street, Boston, Mass., Mrs. Chas. Washburn, West Everett, Mass., and a dog to J. H. Whicher, West Somerville, Mass.

The following beagles have been sold by A. C. Krueger, Wrightsville, Pa.:

Cameron's Racket—Maggie whelps. Whelped May 1, 1887; one wb&t dog to Chas. C. Rupple, Buffalo, N. Y.; one wb&t bitch to R. M. Durrach, Germantown, Pa.; one w&br dog to Mr. Hoffman, Pullman, Ill.; one wb&t ticked bitch to T. E. Hibben, Indianapolis, Ind.

Bannerman—Dots whelps. Whelped April 1, 1887; one wb&t dog to D. D. Greers, Navasota, Texas; one wb&t ticked bitch to F. A. Simpkins, Youngstown, O.; one wb&t bitch presented to Hon. W. F. Rutter, Lawrence, Mass.

Bannerman—Cora whelps. Whelped March 23, 1887; one wb&t dog to J. Otis Fellows, Hornellsville, N. Y.; one w&t dog to Geo. P. H. Rector, Vicksburg, Miss.; one wb&t bitch to E. Krueger, Wrightsville, Pa.

Bannerman—Una whelps. Whelped March 30, 1887; one dog to T. E. Hibben, Indianapolis, Ind.; one wb&t dog to Chas. L. Hyde, Titusville, Pa.

Bannerman—Scioto whelps. Whelped April 30, 1887; one w&t dog to F. W. McDowell, Germantown, Pa., and one wb&t bitch to D. D. Green, Navasota, Tex.

Racket—Nellie II. whelp. Bitch, whelped April 19, 1887, to F. A. Simpkins, Youngstown, O.

Racket—Rue whelp. Wb&t bitch, whelped Aug. 24, 1887, to Dr. H. D. Danford, Trimble, O.

June. By Victor II. out of Mary, whelped March 11, 1884, to F. Eibel, Lancaster, Pa.

Polly. Wb&t bitch, whelped Aug. 3, 1884, to T. E. Hibben, Indianapolis, Ind.

Blossom. Wb&t bitch, whelped March, 1884, to H. S. Gilbert, Millersburg, Pa.

Dido. Wb&t bitch, whelped Sept. 8, 1885, to A. C. Waddell, Kansas City, Mo.

Racer II. Wb&t dog, whelped May 14, 1885, to A. C. Waddell, Kansas City, Mo.

Maggie. Wb&t bitch, whelped Aug. 1, 1886, by Thom out of Lucy Hinton, to A. R. Barnhardt, Greensburg, Pa.

Rover. Wb&t dog, whelped Aug. 1, 1886, by Thom out of Lucy Hinton, to Allen Hendricks, Indianapolis, Ind.

Alba—Bunnie whelp. Dog, whelped March 21, 1887, to A. R. Barnhardt, Greensburg, Pa.

Bugle. Wb&t dog, whelped October, 1886, by Rattler III. out of Roxy, to H. M. Lichtenberg, Englewood, N. J.

Vida. Wb&t dog, whelped April 29, 1886, by Ringwood out of Belle, to Geo. P. H. Rector, Vicksburg, Miss.

Victor. Wb&t dog, whelped Nov. 7, 1886, by Thom out of Music, to W. E. & H. L. Ellis, Westminster, Mass.

Bounce—Jessie whelp. Wb&t bitch, whelped June 22, 1887, to F. Eibel, Lancaster, Pa.

PRESENTATIONS.

Floss. Black cocker spaniel bitch, whelped Sept. 22, 1887, by Freddie out of Floss B. (A.K.R. 3449), by Arthur S. Aborn, Wakefield, Mass., to Arthur S. Johnson, Charlottetown, P. E. I., Canada.

Avenger—Flash whelp. White, black and tan fox-terrier dog, whelped Sept. 28, 1887, by Avenger out of Flash, by Detroit Kennel Club, Detroit, Mich., to H. E. Cook, Hillsdale, Mich.

IMPORTATIONS.

Bertha. Mr. Mitchell Harrison has purchased the collie bitch Bertha from Messrs. J. & W. H. Charles, England. Bertha is the winner of eleven prizes and four cups, including the Ten Guinea cup at Barn Elms. She is also dam of Bendigo, who was bought from the same gentlemen by Mr. T. H. Terry.

Flurry III. Mr. Harrison has purchased from W. R. Dockrell, London, Eng., the collie bitch Flurry III. (Blue Sky—champion Flurry II.).

DEATHS.

Merchant of Melrose. Mr. J. Hellen's rough-coated St. Bernard dog Merchant of Melrose (A.K.R. 5680) died Dec. 7, of distemper.

Rifle and Tray Shooting.

THE BENNETT REVOLVER TEST.

DURING the past week the range at Walnut Hill has been the scene of an exceptionally fine display of revolver firing. The match has been closely watched by a number of very interested witnesses, and the report in the daily papers have been most extended ones. The daily story of the novel match is told under each date:

Boston, Dec. 5.—F. E. Bennett, the expert revolver shot, to-day commenced the task of shooting 100 shots a day with an army revolver for 6 consecutive days, at the range of the Massachusetts Rifle Association, at Walnut Hill. The object of this shooting is to settle a heavy wager which has been made that this gentleman will surpass Chevalier Paine's best record of 841 points on the standard American target at 50yds., 3 times out of 6, and the

aggregate of the 6 days' shooting to average over 841 points a day. The weather indications for shooting were good, the worst feature being the damp atmosphere which caused the smoke from the revolver to hang around the firing point, making it difficult to sight correctly. Mr. Bennett's score to-day aggregated 886 points, 45 points higher than the score he essayed to surpass, and 9 points higher than his best previous record. Out of 100 shots he secured 83 bullseyes, making a clean score of bullseyes on his sixth string and recording a run of 16 consecutive bullseyes. The weapon used was a Smith & Wesson .44-cal. Russian model army revolver, with factory ammunition. The scoring was done by the official club scorer, and the match refereed by A. C. Gould, editor of the *Rifle*. The shooting will be continued to-morrow, commencing at about 2 o'clock. The score:

1.	6	10	8	10	7	10	10	10	10	10—91
2.	8	10	9	10	7	9	9	9	10	8—89
3.	9	10	10	6	9	10	9	10	10	10—93
4.	10	9	9	6	10	10	10	8	9	9—90
5.	8	10	7	6	9	8	9	9	10	9—85
6.	8	9	9	10	10	10	10	10	10	8—94
7.	7	9	10	10	6	9	10	8	7	6—82
8.	10	10	9	10	7	9	8	9	7	9—88
9.	10	10	8	8	10	9	10	10	7	8—90
10.	9	7	7	10	10	8	8	9	9	7—84—886

At the conclusion of the revolver shooting W. W. Bennett, brother of F. E. Bennett, broke 84 out of 100 clay-pigeons thrown into the air, using a Winchester repeating rifle.

Dec. 6.—F. E. Bennett, the expert pistol shot, fired his second 100 shots at a standard American target at 50yds. with a Smith & Wesson army revolver at Walnut Hill to-day, it being the second of the six days he is to shoot. The weather conditions were much less favorable than on Monday, there being a bright, glaring light, which reflected from the target, making it troublesome for the shooter. A rather fickle wind caused considerable annoyance, and the two elements had the effect of bringing the day's aggregate below that of Monday. In addition to these objections, Mr. Bennett on his fifty-fifth shot had the misfortune to accidentally discharge his revolver before taking aim, and a serious accident was narrowly averted. The referee decided the shot a miss. Even with this accidental miss against him Mr. Bennett secured the fine aggregate of 867 points, 23 points above the amount he engaged to secure, which included 82 bullseyes out of the 100 shots, and one clean score of ten shots, all bullseyes. Mr. Bennett has four more days in which to secure an aggregate of 841 points, but there is every indication that he will secure that amount to-morrow and settle the first part of the performance he has attempted. The aggregate necessary for him to secure in the six days' shooting in order to win the second condition of the match is 5046 points. His total for Monday being 886 and to-day 867, or a total of 1753, makes him 71 points ahead of the required amount for the two days' shooting. To-morrow being club day, the shooting will commence at about 10 o'clock in the morning. To-day's score is as follows:

1.	5	7	10	9	10	10	10	9	9	8—87
2.	8	9	10	7	6	9	10	10	10	10—89
3.	8	9	10	8	10	7	8	10	10	9—87
4.	8	9	10	7	7	8	9	9	8	10—85
5.	9	10	7	10	10	10	10	10	10	8—94
6.	9	9	10	10	0	7	10	9	9	10—83
7.	9	7	9	10	9	9	10	9	9	6—84
8.	8	9	10	9	0	10	10	8	6	8—87
9.	10	10	8	9	10	10	10	9	8	8—92
10.	8	6	7	8	7	9	10	8	6	8—77—867

Dec. 7.—To-day was the third day of the contest at Walnut Hill. F. E. Bennett commenced firing his third 100 shots at 10 o'clock. The elements were decidedly in favor of good shooting, but owing to a series of mishaps Mr. Bennett was in poor form. On Tuesday he ran several hundred yards to catch a homeward train, much to the annoyance of his friends and backers. In addition to this his revolver, which he had shot over 10,000 times, worked unsatisfactorily; a dragging pull having developed, which he sought to have corrected, but which resulted in the accidental discharge on Tuesday and occurred again on his fourth shot today, thus giving him a second miss. The cause of these two premature explosions was found in an imperfection in the trigger catch of the hammer, the result of bungling workmanship on the part of some gunsmith. In the evening the revolver of F. E. Bennet, which has twice accidentally discharged in his match at Walnut Hill, and thereby lowered his aggregate on account of the referee deciding these shots counted as misses, was brought to this city and carried to an expert gunsmith, who found that the party who had previously repaired the arm had taken the liberty of cutting out a piece of the hammer and inserting an inferior piece of metal, which was soft, and caused the accidental discharge, which not only lowered Mr. Bennett's score, but nearly cost him the loss of his left hand. It was a fortunate discovery, and Mr. Bennett naturally feels that what might be construed as carelessness on his part by the public was in reality caused by the unauthorized changing of his pistol by the workman. A new part has been procured for the arm. After the accident he felt it desirable to take another revolver with which he was unfamiliar. These incidents all contributed to disturb him and lower his score of to-day, and he fell some points below the number he attempted to score. Notwithstanding the obstacles mentioned, he recorded two perfect scores on his fifth and ninth entry. The condition of the match at the present time is as follows: Three out of the six 100-shot strings have been fired, and twice out of three times he has surpassed the feat he has attempted. He has three more trials to surpass 841 points, and it is generally believed he will accomplish what he has undertaken. It is also believed that the aggregate of his six days' shooting will average over 841 points a day, which will win the second wager. Mr. Bennett's aggregate for the three day's shooting is 2585 points, 62 points ahead of the required amount. The shooting will be continued to-morrow at 2 o'clock. To-day's score is as follows:

1.	10	8	9	0	10	6	6	9	6	7—71
2.	7	8	10	8	7	8	9	8	8	10—83
3.	7	9	6	7	10	7	8	8	9	7—78
4.	7	9	10	7	9	10	7	9	10	5—84
5.	8	8	8	9	9	8	8	10	9	9—86
6.	10	7	8	10	10	10	10	9	10	10—94
7.	7	9	8	10	9	8	10	6	9	10—86
8.	8	7	8	7	7	10	9	9	8	7—80
9.	9	9	9	9	10	8	8	10	9	9—90
10.	8	10	8	8	7	8	8	8	8	7—80—832

Dec. 8.—The revolver match at Walnut Hill was continued today by F. E. Bennett, it being the fourth day of the contest. Mr. Bennett was not in the best form. On his return to Boston Wednesday evening he had his injured hand poulticed and he appeared at the range to-day with his left hand carefully gloved. It was thought that the heavy recoil from the army revolver had affected his fine holding, which can be readily understood by those witnessing the shooting, as each discharge of the weapon the recoil would throw his arm up, so the revolver would reach the height of his head. The shooting commenced a little before 2 o'clock and Mr. Bennett, annoyed by his failing yesterday to record the required amount, shot slowly, with great care and deliberation. In his physical condition he was well aware that he would require all his skill to score 841 points. When 90 shots had bren fired it was shown that it was necessary to score 79 on his last string to secure the aggregate of 841. It was thought to be an easy task for Mr. Bennett, but to the dismay of his friends the first shot was a 5, but when the scorer called a 6 for the second shot it was a dubious outlook for the shooter. When he faced the target to fire his ninety-seventh shot it was observed that it was not only necessary to secure three bullseyes to aggregate the desired amount, but it required two shots in the 10 circle, which is $3\frac{3}{16}$in. in diameter, and one in the 8 circle to secure 841 points. There was not a sound to be heard in the shooting house but the ticking of the clock. The ninety-eighth shot was fired. "Ten," called the scorer; 823 was the total at this point. Mr. Bennett took careful aim and fired his ninety-ninth shot. "Ten" was again called and 833 was counted. One more shot, which if placed out of the bullseye would lose the match. It was oppressively quiet. A passing train tooted a salute. Another careful aim, a loud report and the calling of a ten set a number of hearts to throbbing quicker than was their wont, and the grand total of 843 was credited to Mr. Bennett, which gave him the first match for securing 841 points three days out of six. The aggregate of the four days' shooting was 3,428 points, which on the second match for the six days' shooting places Mr. Bennett 64 points at this point beyond what he is required to make to win the second match. The shooting will be continued to-morrow at 2 o'clock. To-day's score is as follows:

1.	8	7	10	9	8	9	7	7	10	8—83
2.	8	7	7	9	9	8	7	10	9	8—82
3.	10	5	9	8	5	10	8	9	8	6—78
4.	10	6	9	10	8	9	9	9	10	10—90
5.	8	10	10	8	11	7	10	9	9	10—91
6.	7	6	9	9	6	10	10	10	7	10—84
7.	7	8	7	9	8	8	8	8	7	10—80
8.	9	7	8	10	10	10	10	6	10	10—90
9.	9	8	9	9	7	8	9	6	9	10—84
10.	5	6	8	10	7	6	9	10	10	10—81—843

Dec. 9.—The revolver shooting of F. E. Bennett was continued at Walnut Hill to-day, it being the fifth day of the match. The match was called at 2 o'clock, and the shooting was remarkable for its evenness as well as its excellence. From the first string he ran ahead of the required amount and gained steadily. The total secured was 868 points, which included one clean score of bullseyes secured on the third string, and a run of 18 consecutive bullseyes from the 41st to the 59th shot inclusive. The wildest shot in the hundred was exactly 6⅛in. from the center of the bullseye. The grand total secured up to date is 4296 points. Mr. Bennett has secured an aggregate of over 841 points four days out of five. The 4296 points gives him an average of 849 1-5 points a day and leaves him 91 points ahead of the required amount to date. These figures show it necessary for him to secure only 750 points on his last trial to-day. The shooting to-day will commence about 2 o'clock, and if the same time is consumed in firing his last 100 shots as the previous ones, the result will be known about 4 o'clock in the afternoon. The shooting to-day, although aggregating less than on Monday, contained the same number of bullseyes, and the 100 shots were placed in a smaller circle than ever before in any match shot on the standard target. To-day's score was as follows:

1.	10	7	9	9	7	10	10	8	7	8—85
2.	7	9	8	10	7	9	10	7	6	8—84
3.	8	8	10	9	9	10	9	8	9	10—90
4.	7	8	10	9	9	10	10	7	10	10—90
5.	7	8	10	8	9	9	10	9	9	8—87
6.	10	8	9	9	9	8	8	9	10	6—86
7.	9	10	7	9	8	10	10	9	8	8—88
8.	10	7	10	8	9	8	8	10	8	7—85
9.	9	8	9	9	7	9	8	8	10	10—87
10.	7	7	9	8	10	7	10	8	10	10—86—868

Dec. 10.—To-day was the sixth and last day of F. E. Bennett's revolver shooting at Walnut Hill. The weather was favorable for good shooting, and Mr. Bennett was in excellent form. The match was called about 1:30, and the time occupied in firing the last 100 shots was about 1h. 35m. The first string was a clean one, being all bullseyes, and an unusually high aggregate was secured on each string, the total of the last 100 shots being 876, which included 84 bullseyes. The day's score is as follows:

1.	9	8	8	9	10	10	9	9	10	8—90
2.	7	10	7	10	8	10	10	7	9	9—87
3.	10	8	9	6	9	8	7	8	8	10—83
4.	10	9	10	10	9	8	10	7	10	9—92
5.	9	9	7	10	9	9	8	10	8	8—87
6.	10	8	10	10	10	9	7	9	9	8—90
7.	9	10	9	10	10	7	6	9	9	8—87
8.	9	7	10	9	6	10	8	10	9	8—85
9.	9	10	6	9	10	10	10	9	10	10—93
10.	6	7	9	9	9	5	8	10	10	9—82—876

The aggregates of the six-days' shoot is as follows:

	Points.	Bullseyes.		Points.	Bullseyes.
Nov. 5	886	85	Nov. 8	843	75
Nov. 6	867	83	Nov. 9	868	83
Nov. 7	832	75	Nov. 10	876	84
				5,172	485

These figures show that Mr. Bennett exceded 841 points five days out of six, which won the first wager. The second wager being that the aggregate of the six days' shooting would average 841 points or better for each day, this is also won, with a surplus of 126 points. This will probably be Mr. Bennett's last appearance in public as an amateur, as a variety manager has engaged him, in connection with his brother, W. W. Bennett, to do a phenomenal shot, to appear next month. This will class both of these gentlemen as professional shots.

Chevalier Ira Paine, who was in town, called at the *Herald* office Saturday afternoon to protest against the statement made in the papers throughout this country that Mr. Bennett had beaten the best previous score with the revolver, which score was made by Mr. Paine at the same place some time last March. "I wish the matter placed before the public in the right light," said the chevalier, "and I don't wish to have any man gain notoriety on my name unless it is done fairly. Any assertion that Mr. Bennett has beaten my revolver record of 84 points, under equal conditions, is untrue. The conditions under which I made my record were well and widely known. The ammunition which I used was purchased for me at random, in stores where it was allowed to lie, probably for years, and the powder was caked and consequently unfit for record shooting. From March till November Mr. Bennett repeatedly tried in private to make as good a score as mine under the same ammunition condition, but he never came within 9 points of my mark. Then new ammunition was given him, which was just suited for the purpose, and he beat my record, but nothing was said about the conditions under which he did it. Does any sane marksman suppose that a man is 38 or 48 points better off in one day than in another, all the conditions being the same? No. If Mr. Bennett beats my record fairly and squarely under the same conditions, I will be the first one to grasp his hand and congratulate him, but when the record is beaten under unfair conditions and nothing is said about it, I don't think it an honorable act. I have not been invited to try my skill with the revolver at Walnut Hill on the present occasion, but should I be permitted to do so next April, when I next appear publicly in Boston, I will give Mr. Bennett and others another lesson with the pistol."

PHILADELPHIA, Dec. 8.—The fourth annual meeting of the Cosmopolitan Rifle Club took place at their headquarters this evening. The officers elected for the ensuing year are as follows: President, T. Frank Carlin; Vice-President, H. Siedenburgh; Treasurer, Hon. Peter Woods; Secretary, J. W. Ruppman; Standing Committee, C. H. Jones, A. Kelly, R. Koch; Captain of team, C. H. Beeler; Lieutenant, W. Denny. The secretary's report showed the club to have a good round number in good standing, and that the club was financially in first-class condition. The captain's report showed 28 active members, who, with the exception of 2, had made marked improvement in their respective averages as compared with last year. The averages show C. H. Beeler, Jr., (for the third successive year), winner of the club championship diamond badge, and J. B. Tracy, W. Denny and F. G. Ruppman the winners of marksman's badges in the order named. The above badges are offered annually by the club, and become personal property, as also the monthly average bars, which are attached to the regular club badges; these were won respectively by C. H. Beeler, Jr., 6; W. Denny, 3; J. B. Tracy, 2; F. G. Ruppman 1.

RANGE AND GALLERY.

DELAWARE.—In spite of the tricky wind and reflection from bright sunshine the shooting at Healdmoor Rifle Range on Dec. 5 was fair. The members of Company H, of New Castle, took part in the shooting, and other members are likely to attend the Monday shooting hereafter. Mr. Lunt, of that company, won the weekly military badge, and from the indications of his shooting the Wilmington militiamen will have to bestir themselves or he will hold the badge for some time. Standard American target, 200yds.:

MINNEAPOLIS, Dec. 1.—The Minneapolis Rifle Club had a shoot to-day, opening with a shoot for a badge and followed by a prize match. Following is the score, at 200yds.:

Badge Score.

Marshall	7	8	9	6	9	5	8	8	5	10—75
Morgan	6	6	8	8	10	7	7	8	8	10—78
Bird	6	6	8	7	10	10	6	8	6	7—77
Weeks	7	10	8	8	6	7	6	9	5	10—76

Morgan was handicapped one point more than Bird, so it was declared a tie and was shot off on five shots, Bird winning, 33 to 29.

Prize Match.

Marshall	9	5	5	7	6	9	6	7	8	7—69
Morgan	8	4	6	5	6	5	10	9	8	10—71
Bird	6	6	5	6	10	10	5	4	7	6—65
Weeks	6	10	5	9	5	8	7	7	9	5—71

Weeks and Morgan shot off the tie on five shots, Morgan scoring 39 and Weeks 33.

Highest scores made during the day were:

Marshall	9	9	10	8	7	9	6	7	10	6—81
Morgan	8	8	7	10	8	10	7	8	7	9—82
Bird	6	6	8	7	10	10	9	8	6	7—77
Weeks	9	9	8	8	9	9	6	7	8	6—79

Highest total, Creedmoor count:

Marshall.....48 Morgan.....47
Bird.....45 Weeks.....47

A new prize match has been arranged by the club, to take place after the badge match every Wednesday afternoon. The terms of the prize match are, 200yds. off-hand, Springfield and plain sighted magazine rifles to have 5 points handicap. Open sighted single shot rifles allowed 3 points on the total score of 10 shots, Match open to all comers. Standard American target will be used.

ANOTHER MAGAZINE RIFLE.—Captain Greville Harston, of the Royal Grenadiers of Canada, may be congratulated on having mastered a problem that has puzzled the gunmakers and mechanical engineers of this country not a little. It has been repeatedly said by those who have not Capt. Harston's faith in the resources of mechanics that rifles of the falling-block type, and notably, the Martini, could never be converted into a magazine rifle. Capt. Harston declined to accept this *non possumus*, and set to work to find a solution. This he has done by a devise which is faultless in theory, and the practical development of which is limited only by the capacities of the Martini-Henry as a military rifle. One side of the falling block being cut away he introduces there a loosely-jointed carrier, which works freely in a movable bridle, sliding to and fro in the direction of the axis of the barrel as the breech is opened and closed. This carrier receives each cartridge as it falls on the block and forces it into the chamber with a steady pressure. The magazine is a light hopper, which can be fitted beside the lock instantaneously, and the feed is kept up by a revolving action. Into a description of all the details it is unnecessary for us to enter, beyond saying the mechanism is very simple, and there are no springs likely to get out of order. It is obviously impossible for a dangerous "jam" to occur because a second cartridge cannot fall into the block until the exploded case has been ejected. The weakest point of the Martini action is overcome and the extractor made very powerful by the simplest of all contrivances. Whether this invention will ever be adopted is doubtful, but as to its mechanical merits there can be no question. Capt. Harston has come over from Canada at the request of the War Office authorities, and under his supervision three Martini-Henry rifles will be converted into magazines for trial before the committe on small arms.—*Admiralty and Horse Guards Gazette.*

NEWARK, N. J., Dec. 10.—The old-time interest in rifle shooting, which was allowed to languish until nearly all the clubs formerly represented in the monthly tournaments of the Newark Rifle Association have gone out of existence, is again being revived. The action of the Rutgers, Our Own and J. Magory rifle clubs in organizing a league for the purpose of shooting a series of monthly matches has had the effect of awakening some of the "old-timers," and the probabilities are that before the season closes other clubs will be formed and will apply for admission to the league. An effort is now being made to organize a club to make its headquarters on the Western Rifle Range. This is the only double gallery in the city, and especially commends itself for match shooting, as one of each team can shoot at the same time. The targets are illuminated by electric lights. A meeting will be called at an early date for the purpose of perfecting the organization and electing officers. A move is also being made to organize a club by the frequenters of the gallery of Von Lengerke & Detmold, and, if successful, the organization will probably take up pistol as well as rifle shooting. The Essex and Frelinghuysen clubs, both "old-timers," are still in existence, and there is a strong chance that Newark may soon have another league as strong as the old N. R. A.

UNITED STATES SMALL ARMS.—Secretary of War Endicott, in his report just sent to Congress, speaks as follows of the small arms under his management: "During the fiscal year ending June 30, 1887, 41,106 rifles and carbines were manufactured by the National Armory. The question of a reduced caliber for small arms is now under careful consideration and experiment by the department, and while the present caliber, .45, meets the demands of the service in a satisfactory manner, and was adopted fifteen years ago after extended tests, the interest awakened in the military world justifies a further examination and report upon this subject. A magazine gun has become a necessity, and during many years the department has endeavored to find one that would give satisfaction to the army. From what we learn of the magazine systems abroad nothing is gained by haste, and the Springfield rifle must continue to serve our purpose until a magazine gun, that will do credit to the inventive genius of our people, is adopted. It is to be observed that under the existing law, revised statutes, sec. 1,672, only the Springfield guns can be manufactured by this department. We are unable, therefore, to make magazine guns, and can only test and examine the magazine guns and systems brought to the department by dealers or inventors. It is very desirable that this statute should be so far modified that we can purchase or manufacture magazine guns for experiment and trial. The orders of the War Department respecting rifle practice throughout the army have taxed to the full our resources in ammunition and target supplies. The reserve supply of rifle cartridges on hand on June 30 last was small, but the army and country have been amply repaid for this expenditure of ammunition at the military posts by the great success attending the annual competitions. Larger appropriations for ammunition and target material are asked for. A matter so necessary to the effectiveness of our small army deserves the favorable consideration of Congress."

PENNSYLVANIA.—The First Brigade Rifle Club was duly organized on Thursday evening, Dec. 8, at State Fencibles Armory, Phil. Owing to Battalion Drill at First Regiment on that evening, no officers were selected, as there were no representatives from that organization present. Sergeant J. J. Mountjoy was selected as range master. The regular weekly shoot of the club will take place at the Armory Range on Tuesday night of each week, commencing at 8:30 o'clock.

ZETTLER RIFLE CLUB, N. Y.—At the annual election held Dec. 6 the following officers were elected for the ensuing year: B. Walther, president; G. A. Schürmann, vice-president; N. D. Ward, secretary; C. G. Zettler, treasurer; A. P. Hunt, cor.-secretary; B. Zettler, shooting master. During the evening Mr. N. D. Ward was presented with a testimonial by the club, in appreciation of his faithful services as secretary for the past 15 years.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

TORONTO, Dec. 5.—The McDowall shooting tournament, at C. Ayre's grounds, was brought to a close this evening. The shoot proved to be one of the most successful ever held here, the attendance each day being very large. About 100 competitors shot in the five different events, and had the weather been milder the entry would certainly have been still larger. Representatives from Hamilton, St. Catharines, Niagara, Port Colborne, Georgetown, Guelph, Winnipeg and La Salle, N. Y., were present. The following is a minute of the entries in each match: First match, 10 pigeons, 50 entries; second match, 7 pigeons, 35 entries; third match, 15 Canada blackbirds, 25 entries; fourth match, 7 pigeons, 15 entries; fifth match, teams of five men at Canada blackbirds, 6 teams. Mr. G. H. Briggs refereed most of the matches, and Mr. E. Loudon scored:

Team shoot at 15 Canada blackbirds from 5 screened traps, 18½ ds. rise:

1st Team.		2d Team.	
Adams	13	Cockburn	11
Hine	13	Gould	10
Wayper	14	Rogers	11
Smith	10	Ellis	8
Felstead	10—60	Carruthers	11—51
3d Team.		4th Team.	
George	11	Hipkins	11
Worden	5	Riggs	8
Dollery	10	McDowall	4
Bugg	10	Stroud	10
Townson	12—48	Heatherington	11—44
5th Team.		6th Team.	
Thomas	9	Moffitt	8
Wakefield	11	Musson	6
Wright	9	Pearson	9
Brown	9	Newman	7
Rice	5—43	Duncan	4—34

Sweepstake at 7 live pigeons, 26yds. rise, 4 prizes:

Carruthers	7	Bugg	4 retired.
Wayper	7	George	3 retired.
Adams	6	Newman	3 retired.
McDowall	6	Hine	2 retired.
Forsyth	6	Heatherington	2 retired.
Hipkins	5	Felstead	2 retired.
Bell	4	Stinson	2 retired.

Carruthers and Wayper divided first and second, McDowall and Forsyth, who each missed their last bird, divided third and fourth prizes.

CLEVELAND, Dec. 8.—The grounds of the Cleveland Gun Club, at Blue Rock Springs, were very lively this afternoon. A live-bird shoot or one better attended has not been held by the Cleveland club this year. The Cleveland members turned out en masse, eighteen of them being entered to the badge shoot, and five East End members were at the grounds with their guns, besides a number of spectators. Until their last time at the trap both "Wall" and Silsby had broken 14 birds out of 15. The many entries to the shoot prolonged it until dusk. When "Wall" went to the trap for his last 5 birds it was almost dark and he flinched, but Silsby broke his 5 straight and scored 19 dead out of 20. The big score gave him first badge and "Wall's" 15 out of 20 took the second trophy. Blue rock pigeons were the targets used and the marksmen shot from 5 traps:

"Roberts" (26)	1000001110111110101l0—11

KANSAS CITY, Mo., Dec. 2.—Below is the score at 10 live pigeons made by the Independence Gun and Rod Club at the match shoot to-day. The score was probably as good as was ever made at a shoot in this city:

J J Owens	1001011111—7	C R Thomas	0011111111—8
R T Proctor	1110111111—9	Chas McBride	1010011101—6
George Parker	1111011111—9	R D Mize	1011100111—7
W S Gregg	1000001001—3	J Bryant, Jr	1111111101—9
Robert McBride	0110001101—5	T C Bullene	1010001111—6
O W Cogswell	0111011101—6	T D Bedford	1111110001—6
J M Langsdale	1100111101—7	A S Wright	1111111101—9
T W Herson	1101110111—8	J N Lee	1011111101—8

There having been four ties in the shoot proper, a shoot-off at 6 birds was had with the following score: P. T. Proctor 00, George Parker 111011, J. Bryant, Jr. 110, A. S. Wright 111111—6.

BREWER ABROAD.—The champion trap shot, John L. Brewer, and his backer, Mr. J. J. Leary, sailed from New York for London, on Wednesday, Dec. 8, with the intention of making a tour of England and the Continent. Brewer never was in better condition for work. He is prepared to meet all comers, at any kind of rules, English, American, French, or otherwise, and Mr. Leary states that Brewer will be backed for any amount from $1,000 to $5,000 a side. Brewer will also give exhibitions of fancy shooting with the shotgun, and endeavor to lower English "time" records.

NEWARK, Dec. 10.—In the pelting rain of this afternoon a $500 pigeon match was shot off at Erb's grounds, near Newark. The contestants were Gus Manitz, of Orange, and J. Waring, of Yonkers. Despite the terrible weather there were more than 200 shooting men present, divided into two factions, and they did considerable betting, with Manitz as the favorite from the start. The match was at 40 birds each, 30yds., Hurlingham rules. There was no restriction as to weight and gauge of guns. This enabled Manitz to use his 10-gauge Lefever. He shot in wonderful form, shooting his opponent out on the fourteenth round. Out of his 40 birds he only lost 4, and these were very hard hit. Waring, who used black powder, shot at every disadvantage, as the smoke hung in front of the score in the damp atmosphere. The summary of the score is as follows:

Gus Manitz.....11111 11110 00111 11101 11122 11111 22211 21112—36
J Waring.....02200 11000 01012 20221 02211 21011 12011 10220—26

A handicap sweep was shot after the match for $5 entrance money divided into first and second prizes, Castles 31yds., rest 20. It resulted as follows:

Castles	1111111—7	Miller	1111111—7
Class	1111101—6	Manitz	0111111—6
Lever	1111311—7		

Altogether the sweep was the best exhibition of shooting seen at Erb's in many years.

BROOKLYN, Dec. 9.—The monthly shoot of the Fountain Gun Club, of Brooklyn, was held to-day at Woodhaven, L. I. A handsome silver cup was the prize competed for:

A Crook (24yds.)	1101111—6	A Eddy (30)	0011 W.
J H Sawyer (21)	1010101—4	C Carlos (27)	0101111—5
H Thorpe (25)	1111010—5	H W Blattmacher (24)	0111111—6
E D Grau (21)	1111100—5	T Reilley (23)	0011000—2
C W Wheeler (24)	1110101—5	M Bonden (21)	0101101—4
J E Lake (23)	1010110—4	F Rausch (23)	1111010—5

Referee, Mr. A. Crook; scorer, Mr. C. A. Dellar. Mr. R. Wells, treasurer of the club, has offered a silver cup to be shot for in January.

WOODSIDE, Dec. 9.—To-day's shooting at Northside Gun Club ground was decidedly interesting. The event of moment was a match between A. Duryea, of Greenpoint, and Mr. Boseli, of Long Branch, 25 birds, 22yds. rise, 2 barrels and gun below the elbow, for ten dinners and price of the birds. The shooting was excellent and the birds were of a good quality. John Wienholz acted as referee and the match was watched by nearly all of the noted shots of this vicinity:

Duryea.....1111111111111111111110—24
Boseli.....1111111011111111111111—24

Boseli was the favorite, as Duryea allowed him 5 dead birds.

A. H. BOGARDUS.—Captain A. H. Bogardus, the crack trap and field shot, arrived in St. Louis Tuesday of last week from Texas. He has been with Forepaugh's circus all season, and is now on his way to his home in Illinois. The Captain expressed himself as anxious to get on a match with any local shot, giving his opponent 2yds., the match to be at 100 live birds. This is not likely to be taken up, but he will probably shoot Mr. Winston, of Cincinnati, on those conditions. If the match takes place it will be at Compton Avenue Park, for $250 a side, ground traps, and modified English rules. There are 1,200 wild birds in coops there, and no difficulty would be experienced on that score. The Captain expresses himself as willing to go into the grand sweepstakes shoot at St. Louis next spring. The Captain makes another proposition, which any one is at liberty to accept. He will bet even money that he can kill 90 out of 100 birds at 30yds. rise, being allowed the use of both barrels, or he will bet 1 to 2 that he can kill 95 out of 100, or $50 to $500 that he can kill 100 straight. Mr. Bogardus did some field shooting in Texas, and one day killed 55 quail straight, missing the 56th bird.

A CLEVELAND MATCH.—After the shooting on the grounds of the Cleveland Club was over on Dec. 28, President Huntington called a meeting of the Cleveland members at the club house. The object of the meeting was to receive the communication from Secretary Kilby, of the East End Club. During the afternoon Cleveland members discussed the East End-Cleveland match freely, and many of them favored accepting the East End's challenge and shooting that club on its own terms. After Secretary Kilby's letter was read to the meeting President Huntington called for a vote to finally decide whether the East End's challenge should be accepted unconditionally. It resulted 11 to 5 in favor of acceptance, two Cleveland members refraining from voting. The challenge will therefore be accepted and 15 Cleveland members will shoot against 15 East End members at the grounds of the latter club Jan. 2. They will shoot on the conditions named by the East Ends, viz.: blue rock pigeons, Chamberlin rules, 21 birds to each man. The 15 men who will represent the Cleveland Club in the shoot will be selected from the 15 highest scores made at shoots which the Cleveland Club will hold on their grounds on Dec. 15, 22 and 26.

WELLINGTON, Dec. 10.—There was a good attendance at the grounds of the Wellington Club to-day, and some good scores were made in the merchandise matches. Swift and Perry scored a point each with 19 out of 20 in Class A. Wardwell won in Class B with 18, and Snow and Williams each scored a point in Class C with 17. Following are the winners in the several sweepstake matches: First, six clay-pigeons—Swift and Wardwell first. Second, six blackbirds—Snow and Wild first. Third, six clay-pigeons—Swift first. Fourth, six blackbird—Snow first. Fifth, six blackbirds—Sanborn first. Sixth, six clay-pigeons—Swift first. Seventh, ten blackbirds, merchandise match—Perry first, Swift, Wardwell and Sanborn second, Snow third, Williams fourth. Eighth, six clay-pigeons—Swift first. Ninth, ten clay-pigeons, merchandise match—Swift first, Snow second, Williams third, Bradstreet fourth. Tenth, three pairs clay-pigeons—Perry first. Eleventh, six clay-pigeons—Swift first.

BELVIDERE, N. J., Dec. 7.—At a shooting match between picked representatives from Pennsylvania and New Jersey, held here this afternoon, the Jerseyman lost by one bird. The match was for $100 a side and the championship of the two States. The shooters were Albert Folkner, of Oxford Furnace, N. J., and Robert Fisher, of Easton, Pa. Fifteen live pigeons each were to be shot at, but at that time it was a tie, each having killed nine birds. On the shoot-off Fisher killed three straight, while Folkner lost his second bird and the match. There was a large crowd of sportsmen from different parts of both States present, and the spirit of rivalry was very marked. The friends of Folkner are not satisfied with the result, and lay it to his gun. He used a muzzle-loader, which missed fire on his thirteenth bird, when he was two ahead. This, his friends say, caused his defeat. They will insist on another match, which will soon be shot.

ST. LOUIS.—The arrangements for the monster pigeon shoot to take place next spring here are going well forward. The crack shots of the country have signified their willingness to take part in it, and as there will be no difficulty in securing birds the shoot promises to be a success in every particular. Budd and Tice will at the same time shoot their postponed match at 100 birds for $200 a side. The event would have come off this fall but for the miserable weather. Stice is now in the South, where he will attempt to get on several matches. He will also have a turn at the ducks during his absence. Budd is at his home in Des Moines, but will probably take an extended tour to the Pacific coast this winter. He and Stice will both enter the sweepstake shoot contemplated here next spring. The event will be open to all, $50 each, the winner to take all. Over a dozen of the crack shots in this city will compete.

SPRINGFIELD, N. J.—The Union Gun Club, of Springfield, N. J., last summer held several one-day invitation tournaments, and those who were fortunate enough to secure the cards never had cause for regret. Under the management of Mr. E. D. Miller the club has built a commodious house on their beautiful ground, under the Union county hills, and they now announce a two-days' tournament, including in the programme a match for the New Jersey State championship, with a diamond badge as the emblem thereof. Seven other events open to all who will fill out the time, and any who will pay the club a visit on Dec. 20 and 21 will be satisfied. Programmes may be had by addressing Mr. Miller.

GRAHAM VS. KLEINZ.—Wm. Graham and J. Frank Kleinz are arranging a match to take place at Easton, Pa., on Dec. 26, at 50 live pigeons each, Long Island rules, and 50 live pigeons, Hurlingham rules, total score in both matches to decide the contest. The stake will be $100 a side, each match, open for $250 a side.

ST. LOUIS, Dec. 10.—Capt. A. H. Bogardus has made a match with J. L. Winston, of Covington, Ky., to shoot at 100 wild pigeons each, English rules, live ground traps, 30yds. rise, for $250 a side; the shoot to take place in St. Louis next Friday.

A RICH PRIZE.—There will be a clay-pigeon shoot at Washington Square, near Norristown, Pa., Dec. 22, for a fat heifer. Chances, $1. No shooter allowed to shoot more than three chances. National Gun Association rules.

Yachting.

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50.

A NEW SINGLEHAND YACHT.

Editor Forest and Stream:

It has seemed to me that while yachting men are constantly talking, writing and reading about yacht racing, far too little attention is given to that healt ier branch of the sport, singlehand cruising. By singlehand cruising, as here alluded to, I do not mean cruising in small open boats or canoes, but genuine yachting in comfortable little craft of sufficient size and ability to face any weather during summer and autumn. Singlehand yachts are usually small, cramped affairs, possessing so little power, owing to lack of length, that they are in consequence exceedingly slow, and in any jump of a sea bob up and down without making respectable speed to windward. These are facts which any intelligent cruising man will admit to be true. He would be very glad to have his little craft able to keep somewhere within sight of larger boats when sailing in the same direction, but she will not do it, because she is a mere baby boat, while they are giants by comparison. My reason for writing this letter is to show your readers how they may possess a singlehand cruising yacht which will go, and at the same time be handy, unsinkable and safe. I built last July a boat that is peculiar in some respects, and probably there is not another like her anywhere.

In sheer plan she bears some resemblance to Volunteer. She has a graceful clipper bow, her stern is quite as clean cut and fine as that of Puritan, and, unlike all the Nonpareil class so far designed, she shows no angular bilge; that portion of her being curved and fined down to a very pretty, easy run and counter aft. Under water her model is that of the Nonpareil, with no part of her bottom perfectly flat. She is rigged as a Roslyn yawl. Her dimensions are as follows: Length over all, 35ft.; Length on waterline, 28ft.; extreme beam, 9½ft.; draft of water with centerboard up 16in.; berths for four in cabin and plenty of stowage room in forecastle, a roomy cockpit with large locker space aft. Now I am well aware that perhaps a majority of your yachting readers will scoff at the idea of calling a 35ft. yacht a singlehander, but seeing, they say, is believing, and any yacht which can be easily handled and managed by one man must be a singlehander. As a matter of fact this 35ft. yacht is easier to manage than a 20ft. catboat; one man can hoist her mainsail in one minute or lower it in two seconds. All three of her sails can be hoisted by one man in three minutes.

She can be steered to windward and about by merely tending her jib sheet, without touching her tiller. Her owner, a New York yachtsman, has been too busy to do much yachting during the past summer, and being owner of the sloop yacht Mischief also, has left his singlehander in my charge for several months. I have sailed her many hundreds of miles on Long Island Sound, nearly always alone. Have tested her against all the yachts I could come across, they having crews, I being alone, save my collie dog, and she has not been outsailed by any boat of her size, either to windward or in running. Her sea-going qualities are first rate. She does not pound, has never taken a drop of water over her bow, and points as close as any of the sloops or catboats. Such a boat can be built for just about the price of a dumpy, slow little sloop or cutter, having far less speed, not half the elbow room, not nearly as safe and much more difficult to manage. The same boat with keel would draw 36in. of water, and would easily outsail any keel singlehander in the country.

ROSLYN, N. Y. THOMAS CHAPHAM.

HAULING UP DEEP YACHTS.

THE hauling up of a centerboard boat of the old type was an easy matter, as the flat keel and small amount of deadrise allowed her to be run up on rollers without any special care; but now that even the centerboard boats are built with deep keels it is a matter of some difficulty to handle them in hauling up in winter. The following practical directions are given in the *Field* by Mr. J. C. Wilcocks: "The yacht should first be lightened of all movable weights, such as ballast and spars and general outfit. This having been done, four 2½in. by 8in. deal planks must be provided, with four rollers 5ft. or 6ft. long and 3½in. in diameter. The yacht should then be cradled with a very stout rope or reliable piece of chain, which should be lowered so far as the rabbet of the garboard strake and be supported at that level by small lines under the quarters and at the bow above the forefoot, where the ends should be firmly secured with a lashing. A crab winch with a large double and single block is commonly used for heaving up, which must be firmly fixed by driving p sts into the ground. If on an inland lake the first part of the business is the most difficult, for as the water will not leave the boat to allow adjustment of the preliminaries, the boat must be made to leave the water, and to do this the deals, which will do the duty of ways, must be got under her by loading the ends at the under sides. Two of the rollers should be made of sinking wood, and the yacht having been laid on her side, should be hauled in until aground, and being still waterborne, the first roller can then be introduced under her, and shortly a second and third, when she can be hauled out of the water as the rollers travel on the deals. Four men should turn the winch handles, and not less than two must attend the rollers to watch and keep them square on the ways, which is done by striking the ends of them with a maul or small sledge hammer when they commence getting out of square. If the yacht is to be continually kept on inland lake, it might be worth while to have an iron carriage made for her, consisting of an oblong frame of the length of a third of her load waterline, with 6in. iron wheels, with edges or rims. Edge rails for this could be nailed to the four deal ways, and one stout oak or elm plank could be bolted to the framework of the carriage. This plank should be, say, a foot wide and 2½in. thick, and about 6in. longer each side than the extreme breadth of the vessel, which should be provided with legs cut with tenons or having bolts to go through holes or sockets in this plank. The legs should be secured to the vessel's sides with through bolts, with either lever or butterfly nuts on the inside, screwing on against a metal plate. When this little temporary railway is once obtained, hauling the yacht up will be a very simple matter, and she may remain on one deal's length of it as long as required. There should be a hole in the forefoot, and also at the same level close to the sternpost, by which the yacht can be lashed square on the carriage, as soon as she is far enough out of the water, and when in the desired position she can be shored up by four shores, one under each quarter, and others under each bow, and a portion of ballast might be put on board, unless she has already sufficient lead or iron on her keel to steady her against violent gusts of wind, which have very great power on the side of any craft in an exposed position, and against which provision must be made. If such a carriage as above described is made, the rails will, of course, be carefully adjusted to the correct width, so that the wheels will travel easily on them, and about a foot from each end of the deal ways an iron plate should be screwed with socket holes to receive a clamp or sleeper bar, the ends turned down to form tenons to go into these socket plates, which will keep the rails and deals square with each other. By shifting the after pair of rails as required, it is evident that the yacht may be removed any reasonable distance, on flat or nearly flat ground, with facility. Quite large fishing boats, and recently a barge, have been built, loaded on a low-wheeled trolley, drawn over 200yds. each, and launched sideways over the quay into the Great Western Floating Dock at Plymouth."

ON THE DELAWARE.

MR. C. L. WORK has purchased the sloop Monarch, 55ft. over all, and will cruise during December, January and February in Albemarle and Pimlico sounds.

The Quaker City Y. C. has taken club quarters in the center of the city in addition to their room in Camden, and is about purchasing ground on the river for an out of town club house. It will have a course of lectures, etc., on nautical subjects, and will stir up an interest in boating matters for spring.

The Shackamaxon Y. C. have finished their club house on Shackamaxon Slip, and have very creditable quarters. The club is flourishing numerically and financially.

The Keystone B. C. have one of the best club houses on the river, recently completed at a cost of about $5,000, and is in a very flourishing condition.

Of the Delaware yachts, schooner Avalon is laid up in Mumm's basin, New York, schooner Helen at Cooper's Point; first class sloops, Minerva and Vesper at Cooper's Point, Venitzia at Penn street, Camden, while Monarch goes South for the winter; second class sloops, Consort at Market street, Lida and White Wings at Kaigin's Point.

There is a fine fleet of large steam yachts on the river now, and it is hoped that they will all come into the clubs next year.

A REVISED "SONG OF THE CUP."

Editor Forest and Stream:

Now that the New York Y. C. has so effectually amended and revised the deed of gift, a revision of the "Song of the Cup" is evidently necessary. In the touching lines composed by ex-Com. Kane illustrative of the intention of the New York Y. C. to retain the Cup, the following chorus appears:

"Then pipe the watch and pop the cork, let landsmen go below,
Upon my word they always do whene'er the breezes blow.
I pledge you sirs, The Cup, may we never give it up!
A bumper, sirs, The Club! Hurrah! The Cup! The Cup! The Cup!"

The writer suggests, with much diffidence, as being his first attempt, the following as a substitution, and with becoming modesty buries his identity under the letter X.

"Then pipe the watch and fix the trust, and scuttle all fair play,
On this side of the Atlantic the Cup shall surely stay.
I pledge you sirs, The Cup! for we'll never give it up!
A bumper, sirs, The Club! Hurrah! The Cup! The Cup! The Cup!"

X.

YACHT BUILDING IN BOSTON.

LAWLEY & SON are at work laying down the Burden schooner, and her keel will soon be laid. The yacht will draw 11ft., with centerboard entirely below the cabin floor. The specifications call for double frames 4½ and 7½x5in., spaced 22in., with garboards and two strakes of bottom oak, and other planking of 2½in. yellow pine. The keel for Mr. Jas. Mean's yacht, a 12-ton piece, has been cast. Com. Meer's schooner has been planed outside and the deck frame is in. Volunteer is now on the ways, where her bottom will be left unpainted in order that the scale may rust off as far as possible before spring.

At Smith's yard the frames of the Bryant schooner are up. The bow of the steam yacht Barracuda has been cut off, and she is being rebuilt.

At Lawlor's old yard, Chelsea, Story has the new steam yacht nearly in frame. The frames are of oak, 4 and 5in.x6in., double, and spaced 22in. The garboard is of 3in. oak, and the other planking of yellow pine. Neal & Levy, Philadelphia, are building the engine, 15 and 30in. cylinders by 22in. stroke.

Mr. Burgess has completed the plans for Mr. John Stetson's steam yacht, which the Bath Ship Building Company will build. She will be 115ft. l.w.l., 19ft. beam, 8ft. 6in. draft, with clipper stem and long counter. The specifications are as follow: Oak keel 9x9in., not more than 3 lengths, lock scarfed and bolted with ¾in. yellow metal; stem and sternposts, white oak fastened with ¾in. galvanized iron bolts; keelson of white oak, 10x10in.; frames and floor timbers, double of oak, cant and counter frames, to be single, of hackmatack; top timbers also hackmatack; frames spaced 23in.; garboard strake, 2½in. thick of oak; eight lower courses of oak 2½in. thick; other planking of Georgia pine, 2¼in. thick; shelf of Georgia pine, 7x6in.; bilge stringer, 8x2in.; ceiling, pine, 1½in.; engine kelson, oak; plank sheer, 2½x9in.; to have four iron watertight bulk heads, 3-16in. thick. The deck fittings will be of mahogany. There will be a bridge above the deck house. The yacht will be heated by steam and lighted by electricity. She is to be finished by June 1.

A RACING CLASSIFICATION.

AT the meeting on Dec. 10, the Seawanhaka C. Y. C. empowered the commodore and secretary, in behalf of the club, to sign the agreement recommended by the classification committee, binding the club, in conjunction with the Atlantic, New York, Larchmont and other clubs, to the adoption for five years of the following system of classification:

FOR SLOOPS, CUTTERS AND YAWLS.

Class I., all over 75ft. l.w.l. length.
Class II., all over 65ft. and not over 75ft. l.w.l. length.
Class III., all over 56ft. and not over 65ft. l.w.l. line.
Class IV., all over 48ft. and not over 56ft. l.w.l. length.
Class V., all over 41ft. and not over 48ft. l.w.l. length.
Class VI., all over 35ft. and not over 41ft. l.w.l. length.
Class VII., all over 30ft. and not over 35ft. l.w.l. length.
Class VIII., all of 30ft. l.w.l. length and under.

FOR SCHOONERS.

Class I., all over 90ft. l.w.l. length.
Class II., all over 75ft., and not over 90ft. l.w.l., length.
Class III., all over 65ft. and not over 75ft. l.w.l. length.
Class IV., all of 65ft. l.w.l. length and under.

The other three clubs have not yet considered the matter at a meeting, but the special committee appointed by each have recommended the adoption of the above system, and there is little doubt but that their action will be ratified as it has been by the S. C. Y. C. The Eastern alone, of the large clubs, has as yet made no move in the matter. The importance of prompt action is shown by the fact that a design is now ready for a second class singlesticker, but the work cannot go on until it is decided finally whether the old limits of 71 and 70ft. must be considered, or whether the new boat may be 75ft. The time for actual building is now approaching, and the sooner the question is settled the better for all. It is an important feature of the system that it cannot be changed for five years, so that a man who builds to the new classes may be certain of at least that length of time before he can be outbuilt; while there is little probability that the classes now established will be changed at the expiration of that time.

ENGLISH YACHT CLUBS AND THE CUP.

THE following letter has been received by the New York Y. C. in response to the circular sent out to clubs with the new deed of gift:

ROYAL LONDON Y. C.,
2 Saville Row, W., Nov. 29, 1887.

DEAR SIR—I have laid your letter of Oct. 28 before the Sailing Committee of the club, and I am instructed to inform you that they regret to find that the new conditions laid down by the surviving donor of the America's Cup are of such a nature as, in their opinion, to be not calculated to promote sport, by deterring British yacht owners from challenging for the Cup. I am, sir, your obedient servant, G. W. CHARLWOOD, Secretary.

JOHN H. BIRD, Esq., Secretary New York Y. C., New York, U. S. A.

We understand that other letters of the same tenor have been received by the club. They will, of course, find a place in the printed report of the America's Cup Committee, and will make a fitting comment on the last and most important act of that body.

A CANADIAN OPINION OF THE DEED OF GIFT.—The new deed of gift, which is presumed to have emanated from a committee of the New York Y. C., recently presented to the N. Y. Y. C., by the only survivor, Mr. Schuyler, has been received with disgust by yachtsmen of the Old Country, and even by some of the more fair-minded yachtsmen of the United States and Canada. The document has completely "knocked out" all the yachting patriotism of Britishers, who say that it is one of the most unsportsmanlike articles ever put together. In fact, it is a perfect freeze out. Ten months' notice must be given—that means the holders of the cup shall have that length of time to view the challenger's hand! The challenging party must build a yacht of certain dimensions, and if defeated, the yacht cannot enter again, etc. The only redeeming features, if there are any in the parchment, is the abolition of an inside course in a series of races. The old-fashioned piece of plate will now, it is thought, remain a fixture in the hands of the N. Y. Y. C. No club will challenge under such conditions. The best use to which the New York club can put the antiquated chunk of silver, and save rental at Tiffany's, is to melt it into two parts, devoting one part to medals to be presented to the members of the committee of the N. Y. Y. C. in recognition of their indefatigable exertions in manufacturing an article to kill international yacht racing, and the other part to a suitable piece of plate to be preseuted to Gen. Paine, who is to receive a gift from the club in the shape of a piece of silver, in token of the enterprise and pluck he has manifested in defending the trophy twice in succession.

SEAWANHAKA C. Y. C.—The second lecture of the series, given on Dec. 10, took the shape of an informal talk on navigation by Lieut. T. C. McLean, U. S. N. A large number was present and the rooms were well filled. After the lecture a meeting was held to consider the question of classification, at which the club indorsed the action of its committee thus far, and empowered the commodore and secretary to enter an agreement with the other clubs.

VOLUNTEER'S BALLAST.—The story has just come out that prior to Volunteer's departure for New York to sail in the trial races two tons of buckshot were quietly sent aboard in boxes marked "Cement" and poured loose over the cast blocks of ballast, so that the shot found its way into the lowest crevices between the ballast. The matter was kept quiet and only lately disclosed by Gen. Paine.

EASTERN YACHT AGENCY.—Mr. G. A. Stewart, of the Boston *Globe*, is now associated with Mr. Edward Burgess in the yacht brokerage business, which they propose to push more actively than Mr. Burgess has been able heretofore to do.

A SINGLESTICKER FOR NEW BRUNSWICK.—It is reported that Mr. David Lynch, of St. John, who was lately in New York, is to build a yacht of 90ft. for Mr. Howard B. Troop, a shipowner of St. John.

PILOT CHARTS OF THE ATLANTIC.—We have received from the Hydrographic Office, New York, conducted by Lieut. V. L. Cottman, U. S. N., the pilot charts of the North Atlantic for November and December.

YAMPA.—Mr. Chapin's new schooner arrived off Staten Island on Friday last from Wilmington. She will remain in New York for several weeks, being docked here before starting on a long southern cruise.

RONDINA.—Dr. Whitney has sold this cutter to Bancroft C. Davis, who will take her to the West Indies this winter.

RESTLESS.—This steam yacht, though new this season, has been cut in two and lengthened 11ft. 8in.

CAMILLA, steam yacht, has been sold to Isaac J. McCoble by Mr. Brandreth.

NIRVANA.—Gen. Perkins's schooner sailed from New York on Dec. 10, for Nassau.

Canoeing.

Address all communications to the Forest and Stream Pub. Co.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neidé. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON.... } Albany, N. Y.
Secretary-Treasurer: F. L. MIX. }
Vice-Com. Rear-Com. Purser.
Central Div. Henry Stanton...R. W. Bailey.....E.W. Brown, 146 B'way, N.Y.
Eastern Div. L. O. Jones.....Geo. M. Barney....W. B. Davidson, Hartford.
N'thern Div. A. D. T. McGachen, W. G. McKendrick, S. Britton, Lindsay, Can.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in the Central Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

RACERS VS. CRUISERS.

Editor Forest and Stream:

I am always glad to see a man stand up for the cruisers, for they deserve the best treatment at the hands of the A. C. A.; but after reading "Mac's" growl last week I am at a loss to know just what he wants. His suggestion that prizes be given for the best cruising canoe, kit, tent and outfit, is a good one, and should be acted on by the Association. The prizes too should be valuable enough to induce competition. As to the 75ft. class, what does he propose to do by way of remedy; is there any similar race that could be substituted that Pecowsic could not win from every cruiser? The highest sailing race undoubtedly is for the A. C. A. trophy, but the Pecowsics have failed to win this time, and each time it has gone to boats that were certainly wholesome cruisers. Which is the canoe with five rigs to which Mac alludes? It certainly cannot be Pecowsic because she had five small and convenient sails, any two or three of which could be set at will, the others being easily carried within the boat. No doubt a club cruise might suit some, but the same end is attained now by the informal cruises, in small groups, made to and from the meets. It is doubtful whether a squadron cruise could be made as pleasant as a stay in camp. Last summer there were at least 150 canoeists in camp, and of these only 44 entered a race; and not more than 20 could fairly be classed as racers rather than cruisers. Now what did the others come to camp for if it was only a racer's meet? The fact that the great majority of men who came to camp never race, proves of itself that there are some inducements held out to the cruising men. Give us plenty of races for all and good prizes for cruising gear and boats. CRUISER.

Editor Forest and Stream:

Mr. Will G. MacKendrick writes with the impetuous energy of an irresponsible critic. Will he act as well as write? If so, I will avail myself of his assistance in organizing and conducting an A. C. A. cruise on Lake George. This place has been selected by cruisers for cruisers against the opinion of many racers, and it is an ideal cruising water. The whole object of the first week of the camp is cruising and loafing (and most men appear to prefer the latter). If there are any who like a cruising party of fifty better than one of three or four, let Mr. MacKendrick appear the first week of camp, and he shall have for them every attention, authority and opportunity which my position enables me to give. As to prizes for camp equipment, etc., it has long been the custom for members to offer special prizes for any object they deemed worthy. If Mr. MacKendrick or any of these cruisers will offer or obtain such a prize I will ask him to serve on a special committee to award it. And if any member comes forward to help amend as well as criticise, I, as commodore, will be glad of his assistance. I, too, am a cruiser, was one before I raced, and have given up racing now and still cruise, and admit that the question of the racing canoe in sailing has become a trying one. I admitted it to myself long ago, but, while competing, I was not in a position to criticise my opponents. To keep my own boats in good form and trim was my happiest course.

Now, however, I will join the growling cruisers so far as to suggest some further legislation. Mr. MacKendrick says truly that Pecowsic won the limited sail race, but he does not show how removing the limit or changing it would change the result and benefit the cruiser. There is a rule introduced by me some time ago and working admirably, viz., the "one man one canoe" rule. Why not extend the principle and have it "One man, one canoe and one rig." Then the cruiser with reeflines and halliards will at least have the fair advantage of them, and the racer who dispenses with them will do so at the risk of varying weather. The measurers can make their returns include rig, giving number, name, and size of sails. This rule, and possibly another insisting upon bulkheads good enough to float the canoe in such way as to allow of bailing out, would probably have a wholesome effect. Will the regatta committee consider this? Yet I doubt whether the tendency toward racing canoes as distinguished from cruising canoes will be checked and whether this will encourage the latter. My own opinion is that the best encouragement for the cruiser is a cruise and not a race. And his best prize is his own satisfaction. To run the stirring plunges of Foul Rift, or to drift and eat and sleep on a summer lake are to me their own rewards, and a canoe capable of affording me such enjoyment is the prize itself. No flag is applicable as a reward. What we want is more an exhibition than a contest; some opportunity to compare notes.

Meanwhile, are there not a large number of the Association who enjoy first and foremost, racing undisguised, and sailing in racing boats with many rigs, lean hulls and acrobatic deportment? If so, are we, the cruisers, going to turn them out or suppress their heresies, or are we going to let them race their peculiar machines while we enjoy cruising in ours? This is the question. It is no use trying to encourage racing and discourage racing machines. If members want to race they must allow the development of racing to its ultimate conclusions, and we must all remember that the greatest excitement and enjoyment and interest generally, is afforded by these same much abused racers.

If we can get a rule which will insure safe, seaworthy craft, we shall accomplish much. I fear that the cruisers who look for more do not look at the question with sufficient liberality.

ALBANY, Dec. 12. ROBERT W. GIBSON.

CANOEING IN MAINE.

Editor Forest and Stream:

I saw recently an inquiry in your paper as to the feasibility of a canoe trip from Fredericton, N. B., to Moosehead Lake, Me.; and though I may not throw a flood of light on the subject I have some knowledge of the intervening country and what I can say may be of assistance. I think that the trip would be difficult, but might be accomplished with the necessary time and grit, backed by a little cash. Starting from Fredericton my objective point would be Butterfield's landing on Grand Lake of the Chipulneticook series. There would be two ways of reaching it. First by going up the St. John 58 miles to Sullivan's Creek, or Canterbury two miles further, and then hiring a team to portage 21 to 23 miles to the head of Grand Lake. The only drawback would be the long portage. I think $6 would hire the team.

The second way would be to follow the Shogemoc, which joins the St. John at the foot of Medoctec Rapids, to Deer Lake; then either take the M. B. railway to Vanceboro, Me., or make a short portage to the Little Digdequash, which empties into Spednic Lake near that place. Then, save two carries of 200yds. and 50yds. respectively, there is plain cruising to Butterfield's Landing, 30 miles from Vanceboro. In cruising Spednic, care should be taken to keep the western shore going up and the eastern going down, to avoid mistaking bays for the main lake. I cannot vouch for the navigation of the Shogemoc, but I know it is rough enough at the mouth. However, lumbermen tell me that it has some rapids, with lots of stretches of dead water. Judging from the volume of water I have seen flowing from Deer Lake in midwinter, I should say there would be plenty to float a canoe. The map shows Deer Lake as connected with the southern branch of the Shogemoc, while I am quite certain it is at the head of the northern. Perhaps the postmaster at Lower Canterbury, York county, N. B., or Deer Lake, York county, would, if written to, give additional information to any one intending to make the cruise.

From Butterfield's there is a portage of three miles into the Baskehegan, which joins the Mattawamkeag near Bancroft, and then you have easy cruising to the Penobscot. I think the Piscataquis branch of the latter river would take you very near Moosehead, and am under the impression that it is navigable for a canoe, but perhaps some one who has been over it would settle that point. Some call the region I have described "the sportsman's paradise." Though I would warn the canoeist against very sanguine expectations, I can certify that there is enough to satisfy a reasonable man. And as for fish, the Chipulneticook lakes have togue, white perch and pickerel as good as you will find anywhere. I have not done a great deal of shooting this fall, though in all my excursions I have "lugged" (as they say here) a .38 Winchester. I saw two deer before the law was off, but none since. During my stay here I have picked up many scraps of information that should have found their way to the ears of the game wardens. The very evening before I read your editorial remarks on the hounding at Nicatous a gentleman was telling me that in the fall of '86 he saw two men there with four hounds and eleven deer in their possession. A young man of this place who was this summer connected with the tannery of F. Shaw & Bros., Township 39, Washington county, Me., tells me that in one Sunday this fall he saw three deer hounded into Brandy Pond and killed. It is a small body of water, and he says that they surround it in such a way that a deer hasn't a ghost of a chance. A law-abiding sportsman of a neighboring village told me that last winter he found a yard of eight deer, and a crust-hunter of Brookton discovered it a few days later and killed four. He says this same man killed so many last winter that he had to salt the venison down to keep it from spoiling.

Although there is a healthy sentiment in favor of the game laws here, it is not by any means universal, and the opposition, I am sorry to say, often comes from men from whom, by virtue of their positions in life, we would naturally expect better things.

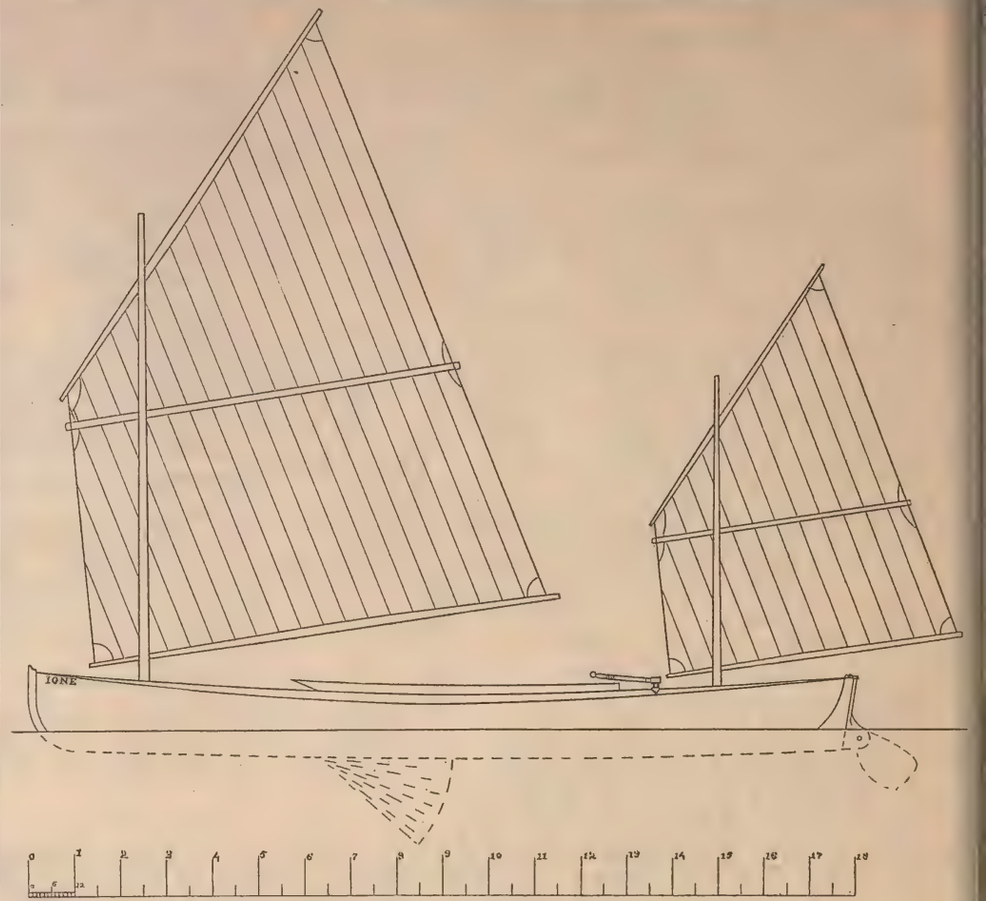
Wishing FOREST AND STREAM and its readers, not the hackneyed "compliments of the season," but a good old-fashioned down East "merry Christmas and happy New Year," I pick up my gun and stroll off to Spruce Mountain. L. J. FLOWER.

FOREST CITY, Me., Dec. 9.

LARGE CANOES IN THE A. C. A.

Editor Forest and Stream:

Now that the question of larger "canoes" is again cropping up; and as you invite discussion of the subject, I will, if you please, mount my aged hobby horse and trot him out for the benefit of such of your readers as really care to examine his paces.



It seems to me we are gradually losing sight of the original design and purpose of the canoe. A canoe may be defined as a "boat of a peculiar model, resembling that of the primitive boats, used by uncivilized or semi-civilized nations, and usually propelled by paddles." Now, there are two distinct varieties of primitive boats. The dugout—the primitive boat made out of the hollowed log—and the "frame and skin boat," *i. e.*, a frame work of light wood, or bone, covered with skin, as in the case of the Esquimaux kayak, and the ancient British coracle, with the bark of trees, as in the case of the canoe of the North American Indian, or with canvas, as in the Welsh coracle, or Irish "curragh," the canvas being merely a substitute for the hide which was formerly the covering of those primitive boats. It is, I believe, to the latter kind of craft, *i. e.*, the frame and skin boat, that we are indebted for the idea of the modern canoe, the kayak being the source of inspiration of the decked canoe, while the open canoe was evidently evolved from the birch bark of the Indian. As originally designed, the modern canoe was supposed to be used on any water; but its specialty was for cruising on waters difficult of access or navigation in ordinary boats; it was supposed to be capable of going anywhere—even up a sewer, as some critic unkindly remarked—and to combine a number of opposite qualities; to be of light draft of water for shallows, to be capable of being easily carried by its crew around an obstacle such as a fall, yet strong enough to stand the wear and tear of a cruise, and sufficiently large to carry a certain amount of camping gear, or luggage if required; either decked or fitted with air-tight compartments, so as to be safe, if the canoeist had a bit of open water with a heavy lop on to cross. The paddle being its main means of propulsion, it was yet able to sail with a fair leading wind.

This was the first ideal cruising canoe. Now, is the latest "canoe" an advance toward this for canoe cruising proper? Sailing is evidently its forte; it may be, and perhaps is, used for cruising, but for cruising on waters which could be just as easily navigated in ordinary boats, where there are few or no portages, rapids, shallows or other obstructions. For this kind of work a skiff or light boat larger than the canoes at present allowed by the rules of the Association, is certainly much better adapted. It is much more comfortable to sail in, will hold more, sail much better if the same attention is paid to rig and model, with a view to developing this quality as has been given to the sailing canoe, can be rowed faster than the latter can be paddled, and is very nearly as easy to carry round an obstruction, or to haul in and out of a boat house. If the main object of the Association be, as it apparently now is, to encourage small boat (canoe?) sailing, then it may as well go a step further and admit boats that a man can sail comfortably in. The only drawbacks to them will be the difficulty of transportation by rail or steam. Hence these larger "canoes"? will have to confine themselves mainly to the local meets of the Division in which they happen to be. I foresee the objections which can be made to the purely cruising canoe, which is not also a sailing boat, that few have time or opportunity for a cruise more than once a year perhaps, and that paddling is monotonous, while a man may sail on his own duck pond in a variety of winds, etc., etc. Nevertheless, cruising on waters which are unattainable to ordinary boats is the true province of the canoe, and most of us who want to enjoy a sail, a larger boat than one of 15 or 16ft. long by 30in. beam will commend itself. The sight of a fleet of canoes is certainly pretty. "*C'est magnifique, mais c'est ne pas le—canotage.*" C. M. DOUGLAS.

LAKEFIELD, Dec. 4.

SMOOTHSKIN CANOES.—The ribbon-carvel system of canoe-building, which on its introduction seven or eight years ago met with little favor, has lately come into notice again in connection with the Notus and other Albany canoes. In the new system a frame work or last is carefully built up for each model, the moulds are set up one foot apart and battens are permanently screwed to them, all being accurately faired up to the shape of the inside of the boat. Over this mould the ribbands are first laid and temporarily fastened, being about ¾x¾in. The ribs are about ¼in. thick, and are let into each riband for the full thickness, being bent into place while hot; the keelson and deadwoods being first secured to the mould. This makes the complete frame of the boat, and when it is completed the planking, in three streaks to each side, is laid on, being fastened with brass screws. The result is a perfectly smooth skin, with only two seams on a side. The builder of these canoes, Mr. H. Piepenbrink, of Albany, has lately turned out several very handsome models, one of them for Gen. Oliver.

CANOE PHOTOS.—Mr. W. A. Leys, of Toronto, sends us some photos of the T. C. C. boats and the club's spring camp. Mr. J. Z. Rogers sends views of the Northern Division meet, and from Mr. Chas. Livingston, of Liverpool, we have two good views of the new Charm with Mr. Stewart on board.

SAIL PLAN CANOE IONE, 18x36.—DESIGNED BY E. T. BIRDSALL, 1887.

A MAY CRUISE ON THE ST. LAWRENCE.

NOW that our long Canadian winter has set in, and our canoes are stowed away in the club house, whose doors are barred up until April next, it may not be out of the way to give a brief sketch of a cruise taken by some eleven members of the Lake St. Louis C. C. of Lachine, Canada, on May 22, 23 and 24.

At a meeting held some weeks previously it had been decided to go around the islands of Montreal and Jesa, and that we should start on Saturday, May 22. On that date and at 3 o'clock six canoes left the club house, and before the fleet had gone two miles one of the canoes, the Maud, had to return, leaking badly, owing, no doubt, to her not being in the water since last fall. The remaining five safely reached Point Claire, eight miles away, where supper was partaken of, after which a start was made for St. Ann's, about eight miles, famous by these few words by Tom Moore:

"Row, brothers, row, the stream runs fast,
The rapids are near, the daylight is past."

After leaving Pt. Claire darkness set in, accompanied by a nasty head wind, which somewhat divided our little company, but finally we reached the Clarendon Hotel, and having stowed our canoes away, were quite ready for dry clothes and the hotel fire. It being rather early in the season, but few guests were there, and we had the house pretty much to ourselves. Our party were pretty well known here, having at the last St. Ann regatta captured eleven out of thirteen races, after which, having bought brooms, they marched through the village singing songs, much to the discomfort of the inhabitants.

Next morning the villagers must have been surprised to see one of the boy's guernseys flying from the flagstaff of the hotel, it being black and yellow, and the warning used by the authorities to denote that smallpox dwelt therein. Mine host, however, soon had it lowered, and breakfast being over, we portaged the lock, had our photographs taken and started for St. Eustache, 18 miles distant.

About noon we landed and had dinner, a very welcome rest it was after one has paddled 14 miles in the broiling sun, and we noticed each other considerably tanned even at this early stage of our journey. We resumed our voyage and made a village about 3 o'clock. This was Sunday afternoon, and as usual we found a drove of Frenchman fishing, who seemed a little surprised at the appearance of our party. At this place there is a fall of about 15 to 20ft. and quite a long rough rapid with a bad turn. Only one of the canoes, the Marion L., went over, the others portaging. The scenery on this part of the river is anything but prepossessing, the current not very strong and the heat made one wish to jump overboard, so none of us were sorry to reach St. Rose in time for tea.

I might here mention that we had landed at St. Eustache and did that town up in pretty good shape, one of the boys whose aunt lived here invited us in to tea.

Leaving St. Rose next morning, the party separated, as the Marion L. wished to go around the whole way by canoe, the rest agreeing to go by steamer from the foot of the island; and I must divide up my narrative, and will give the experience of the larger party as told afterward by themselves.

They had three men who were not accustomed to handling canoes, and the wonder was that some of them were not drowned; as it was, two of the canoes lost everything they contained in the shape of food, spare clothing, etc., and their occupants had a narrow shave for their lives. They ran in all four rapids, the worst being at Terrebonne, which are fully three miles long and very dangerous. In this rapid two canoes upset, and had it not been for aid in the shape of a flat-bottomed boat from shore, the result might have been "different like."

The canoes which formed this party were the Doctor, Coquette, Oregon and Shawinegan. After reaching Bout de L'Isle that night the party decided to remain there for the steamboat next morning.

The other division left St. Rose at 8:30 A. M. and sailed until noon, when the wind left them, and very pleasant they had found it, after paddling the day previous. They ran all the rapids without mishap, had dinner at Bout de L'Isle at 2 o'clock, and started on their homeward journey of twenty-four miles against a strong wind and current up the St. Lawrence, reaching the foot of the canal at 8 o'clock, and, after portaging the six locks, reached home at 11, having journeyed over seventy miles that day, fully fifty of which by paddle.

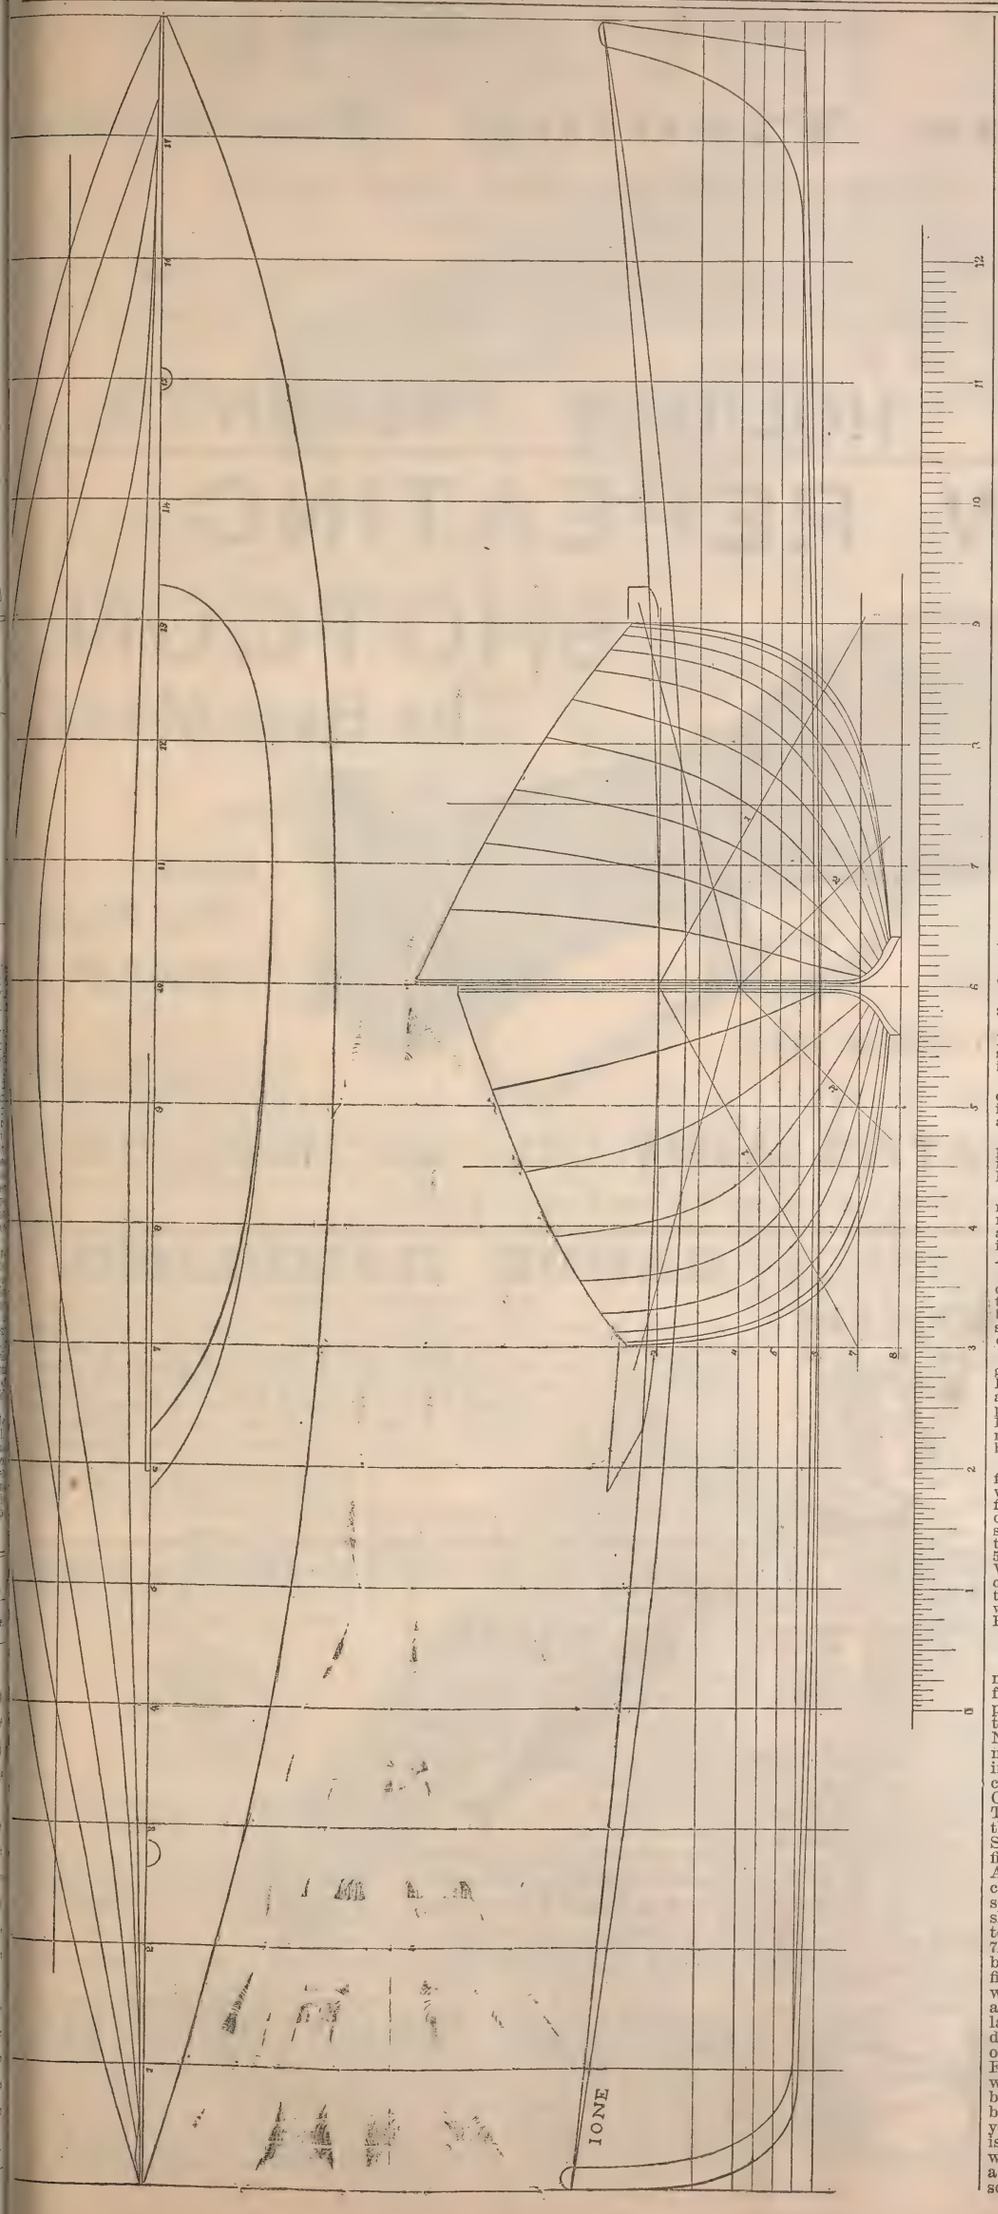
Next morning was spent in comparing notes of our journey, and all seemed well satisfied with the result and pleased that we were all together again. MARION L.

THE BRITISH CANOE ASSOCIATION.—The first meeting of the provisional committee of the British Canoe Association, formed last August, was held in London on Nov. 29. A flag was adopted similar to the A. C. A., but with blue in place of red and the letters B. C. A. The R. C. C. also held a meeting at the same time, and some important changes were made in the rules, but we have received no detailed report as yet.

A NEW BOOK ON CANOEING.—Mr. W. Baden-Powell is now engaged in a work on canoeing, which will form one of the Badminton library of sporting books.

IONE—A LARGE CANOE.

APROPOS of the discussion over the admission of larger canoes now going on in our columns, we give the lines of a boat of this class which has proved quite a success. The canoe Ione was designed last winter by Mr. E. T. Birdsall, of New York, and built by Bradley, of Watertown, N. Y., last spring.



She is 18ft. long by 3ft. wide and is smooth build, of ¼in. plank; keel of white oak 1¼in. thick; stem and sternpost of hackmatack; planking of cedar; deck, mahogany; coaming, walnut, flared; Radix board of largest size, which is rather small for a boat of this length. She carries about 125ft. of sail and 100lbs. of lead cast to fit close to the garboards, no shifting ballast. With this lead in and sail set one can sit outside of the coaming on the deck to leeward and not get wet, the sails and spars weighing 50lbs. and the usual crew over 150lbs. On a beam wind in smooth water with full sail and two persons weighing together 340lbs. hanging out to windward she has beaten catboats of equal waterline length. When driven in heavy weather with the above load to windward and reefed she is quite wet as she goes through the waves when they are short and choppy and the crests thus cut up come aboard. Although wet in heavy weather she is fast and will beat to windward in winds and seas that would blow a 15×30 canoe to leeward.

In common with all narrow and shoal boats she rolls when going to leeward in a seaway. The under water body conforms to the wave form curve of areas, other recognized principles of design as set forth by Dixon Kemp being adapted to this special case as far as possible. During the past season she was sailed with the ballast and sails above described with either one or two as crew. It is proposed to add next summer a jib of 30ft., cutting the present mainsail down the line of the mast, thus making it a gaff sail all abaft the mast, the bowsprit will be 4ft. outboard and the jib will trim aft of the mast and be capable of being set and taken in from the cockpit. When sailing alone, in addition four 25lb. pigs of lead cast in the form of a truncated pyramid and covered with canvas and roped, will be carried to be shifted to windward.

The Ione has no watertight compartments, but will probably be fitted with some this winter. The sails are of Polhemus twill, about 4oz. A 6lb. Chester anchor and 25 fathoms of 12-thread manilla has held on in 15 fathoms of water with a good jump on, a lee-going tide and two 15x30 canoes fastened to mizenmast. All the sailing of the above boat has been done in Newark and New York bays and around Sandy Hook and Staten Island. The yards are egg-shaped and the booms square to facilitate the reefing gear.

THE NEW DIVISION.

THE call for a preliminary meeting to consider the formation of a new division of the A. C. A. that was lately published in the FOREST AND STREAM, brought together the following canoeists on Dec. 9: Vice-Com. Stanton, Knickerbocker C. C.; C. J. Stevens, W. P. Stephens, B. H. Nadal, N. Y. C. C.; J. F. Newman, R. J. Wilkin, M. V. Brokaw, R. W. Blake, Wm. Whitlock, H. C. Ward, J. Johnson, Brooklyn C. C.; L. B. Palmer, J. L. Douglas, J. V. Pierson, H. S. Farmer, E. C. Burling, Ianthe C. C.; G. F. Secor, H. M. Carpenter, Shattemuc C. C.; W. H. Hillier, G. W. Cox, W. Gau, Essex C. C.; Wm. M. Carter, Trenton C. C.; A. S. and E. A. Pennington, Paterson C. C.; F. McLees, J. T. Holden, Rutherford C. C.; H. L. Quick, M. Simpson, E. L. Hoppock, J. H. Keeler, Yonkers C. C.; C. V. Schuyler, I. V. Dorland, A. C. Molloy, David H. Miller, Arlington C. C.; F. W. Kitchell, Perth Amboy C. C., and W. M. Brownell. Of the 37 men present 22 were members of the A. C. A. Mr. Whitlock was chosen temporary chairman and Mr. W. P. Stephens secretary. Vice-Com. Stanton, of the Central Division, addressed the meeting, speaking of the desirability of a new division which should cover the States of New Jersey and Pennsylvania, and made a motion to the effect that such a division was desirable.

The question was discussed by a number, after which the motion was carried, as follows: It is the sense of this meeting that a new division of the A. C. A. is desirable; said division to embrace the eastern watershed of the Alleghanies, starting at the boundary between New York and Connecticut, crossing the Hudson River at a point below the Highlands, thence following the eastern slope of the Alleghanies, and including the south bank of the Potomac River. The question of boundaries was fully discussed and the above limits decided on as best conforming to the physical features of the country. The area will embrace the lower Hudson, the Delaware, Susquehanna, Schuylkill, Juniata, Potomac and Chesapeake Bay. A letter was read from the Washington C. C., favoring the proposed plan. It was also moved that the chair appoint a committee of eleven from the A. C. A. members in the proposed division, who should draw up and send to all members in the division a circular letter, outlining the plan and asking their support. A general meeting of canoeists, A. C. A. members and unattached, will be held in New York early in January to elect officers and frame a formal application to the A. C. A. for recognition as a division. During the evening the boundaries of the new division, and many details of its organization were discussed, but all final action was deferred to the general meeting in January. The question of a division meet was not considered.

A NEW CANOE CLUB IN NEW YORK.—A movement is on foot to establish a new canoe club in New York city, with a house on the Hudson, near Manhattanville. There are now a dozen canoeists in that vicinity who are interested in the scheme. Others who would like to join can send their addresses to the FOREST AND STREAM.

BUILDING IN CANADA. The Ontario Canoe Co. are busy with some 7×3 folding boats on an order from Holland. They are also building a new model canoe 14×42.

A. C. A. MEMBERSHIP.—Central Division.—Mr. David Rice, of Amsterdam, has applied for membership.—EDWARD W. BROWN, Purser, C. D.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

E. O. D.—We know of no boats of the size mentioned for New York owners.

F. M. F.—The extreme range is secured by giving the arm an elevation of from 45 to 75 degrees.

L. G., New York.—What kind of a gun is the best for use in a small country place, a shotgun or a rifle? Ans. A shotgun.

T. W. K., New York.—The best canoe for a small river is a Rob Roy or a similar model, 14ft. long, 26 to 27in. wide, 9in. deep amidships, and drawing but 4in., the weight to be under 55lbs. A sail is generally of little use in such a boat.

C. G., JR., Webster, Mass.—The small fish sent were too much decomposed to identify. If possible send us more. Keep them in alcohol for a week and then wrap them in muslin wet with alcohol, and they will keep for some time.

J. B. M., New York.—There is nothing better than alcohol for preserving specimens of fish. If they are large, cut a small slit in the abdomen to let the alcohol inside, but not large enough to let the intestines out. Use two parts of alcohol to one of water.

FISHERMAN.—Is the fish called sole the same as the plaice, if not what is the difference? Ans. No, the sole is a long and narrow fish while the plaice is broader. There are other differences also. There are no soles in America except a few in confinement, imported by the Fish Commission, while the plaice is common to American and European waters.

G. S., Kaolin, Pa.—Can you tell me where I can buy a few hundred yearling brook trout for stocking a pond? Ans. Occasionally there have been advertisements in our columns of yearling trout, but no one seems to have enterprise enough to keep it up and to supply the demand for partly grown fish. We do not know of any one, at present, who has yearling fish for sale.

J. C. S., St. Joseph, Mich.—1. Have you ever published the rules governing the fly-casting tournament of the National Rod and Reel Association, if so, in what number of your paper? 2. Where and when will the next tournament be held? Ans. 1. The proposed rules were published in FOREST AND STREAM of Jan. 13, 1887, and the amendments in the issue of March 10. 2. This will not be decided until the next annual meeting, which will probably be held in January next.

H. B., White House, N. J.—1. On Oct. 30, I received 20 live carp from the U. S. F. C., and not having my pond completed the fish were placed in a temporary pond about 4ft. wide, 20ft. long and from 2 to 15in. deep, with a mud bottom. Have seen several dead ones but can see no live fish. Are they alive? 2. If alive, what should they be fed? 3. Would it do to construct a pond with only the survivors to start with? 4. At what time do carp spawn? 5. What is the best time to turn out quail, fall or spring? Ans. 1. We cannot say, it is possible that the water may be deficient in oxygen, in coming directly from the ground. 2. Nothing in winter, in summer they will find natural food. 3. Impossible to say with the meagre information you give. 4. At two years old. 5. Fall, if they are fed.

A roe shad weighing 3½lbs. was caught in the Hudson near Dobbs Ferry on Nov. 29. It was a mature roe of three or four years' growth, and was caught in a seine with a lot of perch and other fish. But how it got there at this season of the year is a mystery. The first shad of the season in the New York market begin to arrive from Florida about the middle of December. Early in January they reach Savannah in their annual migration northward along the Atlantic coast, and about the last of January begin to arrive from North Carolina. In February they reach the Delaware Breakwater. They are not again met in large quantity until they reach the Hudson, which they endeavor to do in time to celebrate St. Patrick's Day. This year's run came late, however, the first shad of the season having been caught off Keyport, N. J., April 3. The shad season for New York ends with the last receipts from the Connecticut River, whence the best fish of the season come to market. The average weight of the Florida shad is 4lbs., from which it increases rapidly in its northern tour to Delaware Bay, where the average weight is 6½ to 7lbs. Here, in North River, the average is lowered to 4½lbs. by the presence of a large number of smaller and lighter fish. In Connecticut River they again reach an average weight of about 5½lbs. Within the last three or four years a few shad have come to market from as far east as Rockland, Maine, and the neighborhood of Boston, but the demand for them ceases shortly after the local season is over. Shad have been caught in the North River as early as Feb. 17, but that was in consequence of an extremely open winter, and this forerunner of the season was soon followed by the regular run. But the Dobbs Ferry shad cannot possibly be the forerunner of an early migration, for winter is yet to come. The only plausible explanation of the mystery is that, deluded by the continued warm temperature of the water, the fish has turned shoreward from the Gulf Stream a thousand miles northward of its proper route at this season.—*New York Times.*

The Forest Waters the Farm;

OR,

The Value of Woodlands as Reservoirs.

BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGRICULTURE ET LES FORETS.

PAR M. ANTONIN ROUSSET.

Translated by
REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

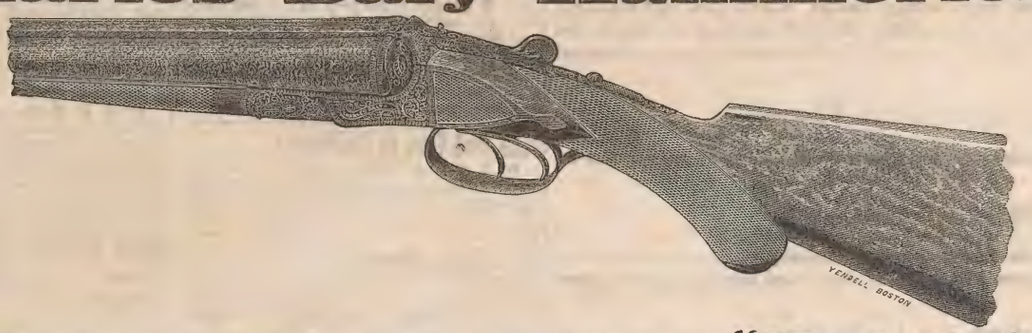
CHARLES DALY 3-BARREL.



The success of this gun introduced last year has exceeded our expectations. The maker's name is a guarantee of perfection in workmanship and every other desirable quality in a gun. The rifle barrel is rifled on a new system, which gives perfect results. The barrels are put together (a difficult thing in a three-barrel gun) with perfect accuracy. IT IS A GREAT CONVENIENCE TO ALWAYS HAVE A RIFLE WITH YOU. THE EXTRA WEIGHT IS NEXT TO NOTHING.

12-Gauge are made with rifle barrel, .32 W. C. F., .32 Marlin, .38 Marlin, .40 Ballard, .45 Government. Price, 85.00
10-Gauge " " " " " .38 Marlin, .40 Ballard, .45 Government. - - - - " 95.00

THE SHOT BARRELS ARE FINE DAMASCUS.

Charles Daly Hammerless.

As an evidence of the worth and increasing popularity of this "Best of the Hammerless," the sales this spring have been nearly double those of any former spring season. Alongside of any other make, costing 50 per cent. more, they excel in every respect. Especially in the remarkable close hitting and consequent solidity and lasting quality, and long-distance shooting. Here is a letter from one of the best shots in the South, who, like hundreds of others, believes the Daly is the ONLY gun:

CHICAGO, April 28, 1887.

F. P. TAYLER, ESQ.—DEAR SIR: The Hammerless Diamond Daly ordered herewith is to be the same weight, drop and trigger pull as my old gun purchased of you in the spring of 1881. The old hammer gun and I will never part company if it can be avoided, and I only hope the new one will prove as good in every respect. I do not expect to get a better one, because I do not think a better one can be made. This gun has been shot in the field and at the trap during the past seven years more than falls to the lot of half a dozen ordinary guns, and it is still solid and good for many years more hard shooting. It carried off the $500 Diamond Badge, representing the State championship of Illinois in 1885, when, owing to a gale of wind and strong birds, very close, hard shooting was required to stop a bird within bounds. In this contest many of the guns (57) on the grounds did not do justice to the men who held them. Now, I want as fine a gun as you can turn out. If it is too pretty to shoot with I have the old one to fall back on. I can only say in conclusion that I am wedded to the Daly gun, and intend to own one as long as I can carry it.

Very truly yours,
GEO. T. FARMER.

SELF-COCKING.

Automatic Ejecting.

This new Revolver is now ready for delivery. It is almost a fac-simile of the celebrated SMITH & WESSON, and is guaranteed equal in quality and finish to **any pistol in the World.** At present will be made only for the .38-caliber S. & W. cartridge. .32-caliber to follow.

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1887 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1888 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1888 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportsmen, anglers and naturalists, make up these pages.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogeneous pastimes and practices dubbed sport. That time has long since passed away. Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

Forest and Stream Pub. Co., New York.

HOLIDAY PRESENTS.

Buy Them Early.

NO present gives so much pleasure or is so lasting as a good book, and none is so thoroughly appreciated by the average man, woman or child. A good book does not get broken or wear out, but remains always a source of pleasure and instruction.

Nothing is more annoying or inconvenient than to postpone the purchase of holiday gifts to the last moment, and appreciating this fact we call attention to the following list of standard works suitable for the holidays. These vary in price so as to fit every pocket, and among them all something will be found to appeal to every taste. Any of these books will be sent by mail, postpaid, on receipt of price.

Sport with Gun and Rod.

This superb volume contains a vast amount of matter of the highest interest to the sportsman. Almost all kinds of American game birds, mammals and fishes are treated in its pages, and it is profusely illustrated by some of the best American artists; 886 pp. Three styles are published: Embossed leather, $15; cloth, $10; cloth, on cheaper paper, $5.

Antelope and Deer of America.

By HON. J. D. CATON, LL.D. This volume is equally a necessity to the sportsman and the naturalist. It tells of the haunts and habits of our antelope and deer, where to find them, how to hunt them, of their life in the woods and under domestication. The best book on the subject ever written. A second edition. Price reduced to $2.50.

Rod and Gun in California.

By T. S. VAN DYKE. A story of outdoor life in semi-tropical land. Through the charmingly told narrative runs the tender thread of a love story. Price $1.50.

The Canoe Aurora.

By DR C. A. NEIDE. The well told story of the author's cruise in a tiny canoe from an Adirondack lake to the Gulf of Mexico. Price $1.00.

Canoe Handling.

By C. BOWYER VAUX ("Dot"). The author of this pleasantly written volume is acknowledged to be the first of American, and so of living, canoeists. In his book he tells all about how to sail and handle a canoe, and how to care for it, either when in use or laid up for winter. Price $1.00.

Small Yachts,

THEIR DESIGN AND CONSTRUCTION, by C. P. KUNHARDT. This sumptuous quarto volume covers the whole range of yacht designing and care, and it is the only work of the kind yet issued in America. The text occupies 325 pages, illustrated with many engravings, and besides there are 70 full page plates, showing the characteristics of the best modern yachts. Price $7.00.

Canoe and Boat Building

FOR AMATEURS. By W. P. STEPHENS. A manual for boat building by the canoeing editor of FOREST AND STREAM. Besides the 189 pages of descriptive text, there are 29 plates, working drawings, which enable even the novice to build his own canoe and build it well. Price $1.50.

Hunting Trips of a Ranchman.

By THEODORE ROOSEVELT. A delightful book of hunting adventure in Dakota and Montana. Price $3 50.

Training vs. Breaking.

By S. T. HAMMOND, kennel editor of FOREST AND STREAM. Nearly forty years experience in training and handling dogs has taught the author that these intelligent animals are more easily controlled by kindness than by severity. He tells how to accomplish by this kindness what you cannot with the whip. There is a chapter on training pet and house dogs. Price $1.00.

Canoe and Camp Cookery.

By "SENECA." A little book full of receipts and hints for the camp cook, by a practical man who has tried them. Indispensable to the camper. Price $1.00.

Forest Runes.

Poems by "NESSMUK." With artotype portrait and autobiographical sketch of the author. Cloth, 208 pp. Price $1.50.

Our New Alaska.

By CHAS. HALLOCK. In this handsome illustrated volume, Mr. Hallock gives the result of his travels in our northernmost possessions. He found Alaska a great country of almost boundless resources, and tells about it in his own happy style. Price $1.50.

Woodcraft.

By "NESSMUK." "Nessmuk" is a Nestor among American sportsmen. In "Woodcraft" he imparts the knowledge of the woods that he has been fifty years in acquiring. No man, however much he has camped out, can read this book without learning something. Price $1.00.

The History of the Mastiff.

By M. B. WYNN, who is acknowledged on all hands to be one of the first authorities in the world on this splendid breed of dogs. The history of the guard dog is traced from prehistoric down to present time, and the tale is told with the enthusiasm of a true lover of man's best friend. Price $2.50.

Uncle Lisha's Shop.

LIFE IN A CORNER OF YANKEELAND. By ROWLAND E. ROBINSON. See advertisement elsewhere.

Artotypes of Paintings.

By JOHN M. TRACY. Mr. Tracy has won a reputation for his faithful portraits of dogs and his beautiful and sympathetic delineations of the incidents of the field. We have for sale a series of admirable artotypes of these paintings, which preserve with admirable fidelity the spirit of the originals. The artotypes are 15x20 inches. Price $1 each.

Book of the Black Bass.

By JAMES A. HENSHALL, M. D. Comprising its complete scientific and life history, with a practical treatise on angling and fly-fishing, and full descriptions of tools, tackle and implements. Illustrated. Cloth, 470 pages, Price $3.00.

The Still-Hunter.

By THEO. S. VAN DYKE. A practical treatise on deer-stalking. Extra cloth, beveled, 390 pages. Price $2.00.

Southern California.

By T. S. VAN DYKE. Its valleys, hills and streams; its animals, birds and fishes; its gardens, farms and climate; its insects and reptiles, with hints on going to California. Extra cloth, bevel edge, 235 pp. Price $1.50.

Cruises in Small Yachts and Big Canoes;

Or, Notes from the Log of the "Watersnake" in Holland and on the South Coast, the Logs of the "Water Rat" and "Viper" on the Thames and South Coast; with remarks on anchorages for small craft. By H. FIENNES SPEED. Cloth, 280 pp. Price $2 50.

Yachts, Boats and Canoes.

By C. STANSFIELD-HICKS. With special chapters on model yachts and singlehanded sailing. Numerous illustrations and diagrams and working drawings of model yachts and various small craft suitable for amateurs. Cloth. Price $3.50.

Camping and Cruising in Florida.

By JAS. A. HENSHALL. With a list of fishes and birds, 84 illustrations and maps. Cloth, 250 pages. Price $1.50.

Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. Cloth, 250 pages. Price $3.00.

A NOTABLE ART ENTERPRISE!

The Sportsman's Reverie.

A SERIES OF PICTURES FOR SPORTSMEN.

READERS of the FOREST AND STREAM cannot fail to recollect Mr. Thomas F. Watson's poem entitled, "The Sportsman's Reverie," printed in this journal about two years ago. Later on a few stanzas were added to cover other scenes of typical American sport with the gun. The author depicted vividly the varied visions which come before the view of the veteran sportsman as he sits in easy chair before the fire. Of the author and his poem the *Detroit Free Press* said in an appreciative notice: "The author is evidently a man of the most acute sportsmanly enthusiasm, as well as of nice literary taste. His poem is built upon a very simple plan. Before a cheerful fire—like Ike Marvel's hero—sits a veteran of rod and gun; he grows half drowsy over pipe and fire and the poet has caught—with a nice and sensitive appreciation—the reminiscences of a hundred hunts which flit through his brain. One experience after another is described with graceful pen touches; the quail, the woodcock, the snipe, the deer, fall before the crack of the gun; a long day's sport—a glorious day such as no man ever compassed between sun and sun—is described, even the trout, from the clear rapid, paying tribute to the prowess of a dreamland sportsman, until at last, with the fall of the quiet night shadows, the sportsman draws his boat to the shore, his tired retriever crouches at his feet, and, with his ducks, the final trophies of his sport, at his side, he looks back over the darkening water; and then, once again at his fireside, the end of the vision comes naturally and gracefully."

And now these "word pictures" of the poet have been complemented with the actual canvas pictures of the painter. Artist-poet and poet-artist have united to give us the poem in a magnificent setting. Mr. Robert Hopkin, the celebrated artist of Detroit, has painted a series of twelve pictures, each telling in color what the poem tells in words. From these paintings have been made superb heliotype engravings, each having beneath it the particular verse of the poem illustrated. The series is remarkable for strict adherence to nature fidelity in portraying action, and artistic merit.

THE TWELVE PICTURES:

No. 1 shows the hunter seated in an easy attitude in an arm chair, gazing reflectively into the fire on the hearth. Above the fireplace are the head and antlers of a deer. The sportsman's right arm is around the neck of his dog, which is resting on his haunches beside the chair. His left hand holds his pipe. The firelight flickers on the floor and around the legs of the chair.

No. 2 represents dawn breaking over a small lake. The night shades are fleeing. A mist is rising from the eastern end of the lake, of which trees fringe the edge. A plover is circling in the air, and in the foreground is a mallard lazily flying out over the glassy water.

No. 3 represents snipe shooting. In the foreground is the sportsman, his body twisted around to the left in the attitude of making a double on snipe. Standing beside him is the setter, waiting for the word to retrieve. To his right is the border of a wood, the branches bending to the strong wind. In the distance are the sails of craft on the lake.

No. 4—woodcock shooting—shows an opening in the copse around whose border a brook is winding. In the foreground, standing deep in the ferns and rank vegetation, is a setter on a point. Behind the dog is the sportsman in the attitude of shooting at a bird flying directly over him.

No. 5 shows a quail hunter in the foreground, walking along ready for the shot, which will follow the rise of the birds, on which the dog is drawing to a point. A haze is over all, and the sky is that of a day in Indian summer.

No. 6 depicts grouse or partridge shooting in the beech woods. The hunter is walking down a slope. The dog has come to a point ahead of him. The bird has flushed and the hunter is shown aiming. The pointer has stiffened into an attitude of strained attention, as he watches the bird fly away. The upper part of the sportsman's body is in the shadow, the lower part in the strong light of the sun rays.

No. 7 shows an angler reeling in a trout. A brook is tumbling down through the woods and over the rocks into the pool. The sky is cloudy and the sunlight is struggling through.

No. 8—deer shooting—is a forest scene. In the foreground a buck, just shot, is falling on the edge of a lake. Tearing down the slope behind him are two hounds. To the left, behind the roots of an upturned tree, are seen the head and shoulders of the hunter, whose rifle is still bearing on the deer.

No. 9 represents shooting over decoys. A gale is blowing and the water of the channel outside is lashed into whitecaps. In the bay the decoys are tossing in the chopping waves. In the foreground is a point of rushes, in which the skiff of the hunter is partially concealed. The flock of ducks, which has just swung in outside the decoys, is broken by the discharge of the first barrel. One section is wheeling out over the river. The other has broken off to the side and is wheeling out again to meet the first section. Some scattered birds are dashing above the head of the hunter, and he is twisted around in his skiff aiming at a bird flying above and behind him.

No. 10 shows flight duck shooting. The scene is a marsh, on whose broken surface the sun is setting behind the clouds. In the foreground, on a grassy point, are the hunter and his spaniel. The hunter is in a kneeling attitude and in the act of firing his first barrel. The spaniel is plunging into the water to retrieve the bird which has fallen to the first barrel. In the distance are flying ducks.

Nos. 11 and 12 represent the hunter retiring from the marsh and at home, and these two are among the strongest of the set.

The pictures are printed on the best 150lb. plate paper; size of paper 24×30in.; size of print 14½×17½in. The pictures have the tint and tint border, and the artist's remarque and signature, and form artist's proofs, an édition de luxe.

PRICE, $30 FOR THE SET; SINGLE PICTURES, $3.

ANSWERS TO CORRESPONDENTS.

ROBBER RULE NUMBER TWO.

THE New England Kennel Club and the New Haven Kennel Club have withdrawn from membership in the A. K. C. These are the first results of the passage of the obnoxious rule ordering exhibitors to register their dogs in the so-called official stud book, the first guns in the battle against the petty oppressions of the A. K. C.

Not only have the Boston and New Haven clubs withdrawn, but, as will be seen by reference to our kennel columns, the Hartford Kennel Club views the new rule with such disfavor that it seems probable that if a dog show is to be held by it this year it will be conducted under other rules than those of the A. K. C. The old New England spirit is not dead. Boston has ever been quick to resist injustice and oppression.

It is not surprising that this attempt at coercion should have been met by determined action on the part of the Boston Club, and it can hardly be doubted that the stand taken by this, the strongest and most influential kennel club in the country, supported, too, by New Haven, will induce other clubs to withdraw unless the obnoxious and arbitrary rule shall be promptly rescinded. If an attempt should be made to enforce the rule the result can easily be predicted.

There is perhaps room for a difference of opinion as to whether the New England clubs have in this matter pursued the course which is for the best interests of dogs and dog shows. It may be thought by some that it would have been a wiser policy, while declining to hold their shows under A. K. C. rules, to have remained in the association and to have resisted this extraordinary attempted tyranny within that body; but even those who reason in this way must respect the promptitude with which the clubs have shown their independence, and the courage with which they have made their position clear. Such decided action will leave no room for doubt in the minds of any one as to where the New England clubs stand.

This was a case where prompt and decided action was needed. It was no time for backing and filling, for arguments pro and con, or for waiting to find out what one's neighbors were going to do. A principle is involved and these clubs were quick to show the stuff they are made of.

It is clear that one section of the country has no intention of submitting quietly to the dictation of the A. K. C., a dictation repugnant to all our institutions and our modes of thought. The course of the clubs in other sections will be awaited with interest. We are already in receipt of inquiries as to what the Westminster Kennel Club intends to do in the matter, and Philadelphia will have to decide before long.

We have yet to hear, among disinterested dog owners, the first word in favor of this rule, while on the other hand we have received a great number of indignant protests against it. It is not that the money called for by the rule amounts to anything, but the principle involved is a vital one. If the A. K. C. can swoop down on the dog-owning public with a rule like this, and command them to register their dogs in a certain place, there is literally no limit to their powers.

RIVER POLLUTION IN OHIO.

THE once clear and beautiful rivers and streams of Ohio are rapidly being converted into foul nuisances. The cities and towns of the State now without exception dispose of their sewage by turning it into the streams to poison the waters, and spread disease and death to the people who live upon their banks. The pollution destroys the fish, and by wicked waste one of the valuable natural food supplies of the State is being ruined. Before a remedy can be applied some plan must be devised for the disposal of sewage other than by turning it into the rivers.

This question has been brought to the attention of the City Council of Columbus by Mr. P. E. Fleck, of that city, and it is proposed to take action, which may lead to devising the required remedy.

It so happens that the Ohio State University, an institution admirably equipped with a competent corps of science in its various departments, and having a complete chemical and mechanical laboratory, is situated on a large farm, lying adjacent to a portion of the city of Columbus, which is at present without sewerage and with natural watercourses (small rivulets) flowing from the district in which sewerage is needed through the farm. All the circumstances and conditions are favorable for the experiment of sewage farming or purification.

This is something to secure the attainment of which the fish and and game clubs of Ohio might very properly join forces with those who have started the reform movement. Legislation will be needed to secure an appropriation for funds to carry on the sewage experiments. If a remedy should be devised, either by the discovery of some new method of treating the sewage, or by the adoption of one of those already in practice, the waters of Ohio could be made once more to teem with food fish. Under present conditions it is folly to spend money to propagate fish and then to put the fry into polluted rivers and poisoned streams.

Ohio is not alone in having permitted this gigantic folly. There is not a State in the Union where the same conditions do not hold, in a measure determined only by the density of the population. The problem of the scientifi disposal of sewage or its conversion into useful products is one of the momentous questions of the day; and it is assuming greater and greater importance every year as the population increases and stream pollution grows more baneful. City and town authorities and State legislatures cannot afford to shirk the task of providing the remedy so imperatively demanded.

WHO IS HE?

IN another column we print three paragraphs from the draft of the annual report of the New York Commissioners of Fisheries, which is to be presented to the Legislature at its next session. The passages are given as read by Gen. Sherman at the meeting of the Commissioners in this city the other day. They will not be embodied in the report as it goes to the Legislature, because Commissioners Roosevelt and Bowman took exception to them. These gentlemen believe that running deer with dogs into the water and firing bullets into them from the rifles of cockney "sports" stimulates them to breed and increases the game supply. These gentlemen have been selected by the State to care for its game interests; their opinion on such a subject is entitled to deferential respect. They did well to suppress these paragraphs. Such statements of the facts as these are, put into official reports, have a tendency to shake public confidence in the Commissioners' stimulative theory. That theory will obtain most strongly where the public has no correct information of the actual state of affairs in the North Woods. It is a theory that battens on popular ignorance.

It must be said for Messrs. Roosevelt and Bowman, however, that they are by no manner of means alone in holding this theory. Others there are who have such faith in the productive efficacy of exercising a deer by putting a mongrel hound on its track to drive it into the water, that they believe in keeping up the practice in season and out of season. To increase the deer supply they hound even in close season. Gen. Sherman in the passages objected to by his associate Commissioners reports:

> As an illustration of how things are working, it may be stated that last summer there was detected and arrested a gentleman of high personal standing, hounding deer out of season, who at the legislative session appeared before the Game Law Committee in advocacy of the present hounding law!

Who is this "gentleman of high personal standing?" Just how high must a gentleman's personal standing be to elevate him one whit above the lowest skin-hunter when hounding out of season? How often in the course of six months can a gentleman of high personal standing be detected in the commission of a misdemeanor without having his character fall, or as they say in Wall street, take a slump? One of these days we hope to reach a point where it will be an impracticable feat for a gentleman of high personal standing to go into the woods, there bribe guides to hound or jig unlawfully, and then bring his high personal character out again unsmirched and untarnished. The time may be far off, but present indications are that we are making headway in that direction.

NOTES AND COMMENTS.

THE late Philip Embury, of West Orange, N. J., who died Dec. 11 at the ripe age of ninety-six, was a conspicuous example of the gentlemen of the old school. It is said of him that "he had a contempt for idleness and society airs, and retaining his faculties to the last, was probably the most prominent representative of genuine democracy of his age at the time of his taking off." In his younger days Mr. Embury was a devoted sportsman; he with Messrs. Aycraigg, of Passaic, and Palmer, of New York, formed a trio who made their duck shooting headquarters at Princes Bay; and in those days there were ducks in the bay to reward them.

Forester Frank Parker, in behalf of the New York Forest Commission, has selected a site for a deer park. It is in the town of Deming, in Ulster county, and the agent finds that there is in the tract ample browsing material, such as deer need. A temporary park of one hundred acres will be inclosed, with two smaller ones, and when the work is well under way these parks will be thrown open. We trust that the Forest Commissioners will not forget to avail themselve of the counsel of those members of the Fisheries Commission who know all about stimulating deer to breed by chasing them to death with dogs. The establishment of the State deer park will afford a magnificent opportunity to demonstrate the efficacy of dogging. The officials will find no trouble about buying a sufficient force of hounds at a low figure in some of the game-depleted Adirondack districts, where dogging deer has not worked beneficently as it should have done if the stimulating theory were correct.

Some weeks ago the FOREST AND STREAM had occasion to expose the capture of big trout in Maine by unsportsmanlike methods. A journal in this city at once came to the defense of the accused parties, and insinuated that we had been threatened with action for libel, and so frightened off from saying anything more on the subject. In due time we showed by conclusive evidence that the charges which we had made were well founded. A month has now elapsed, and we have been patiently waiting to see whether the motive of self-respect might not be strong enough in these defenders of trout jiggers and manufacturers of spiteful insinuations against the FOREST AND STREAM'S motives to prompt them to abandon the position which they at first took.

James Carson Brevoort, whose death was recorded last week, made a number of contributions to natural history. He was specially interested in ichthyology, and a genus of fishes, the Brevoortia, was named in his honor.

For Christmas Week.

THE GRAY PINE.*

PART ONE.

LIKE most of those who have inherited the hunting instinct of our progenitors and were born where no large game exists, it was once my great ambition to kill a deer. It had been outlived, not gratified, for though year after year I went to the Adirondacks for this sole purpose, it was never my fortune to kill a deer, nor but once to even get a shot at one.

If one was started it always took any runway rather than that on which I was stationed, or went over the mountains to some pond or stream miles away and so escape or fall a prey to the hunters of some other party.

My last attempt was made late in October, 185–, when though we were enjoying the most delightful autumn weather in the Champlain valley, there were sharp premonitions of approaching winter in the narrow valley of the Adirondacks which was this year to be my hunting ground. The deciduous trees had struck their colors and the faded banners of scarlet and purple and gold were trailing upon the earth, sodden with autumnal rains, or tossed here and there by fitful gusts of the shifting winds; and more than one snow storm had grizzled the "black growth" of the mountain sides and blanched the treeless peaks with the whiteness they were to wear for many a month to come.

The night after my arrival at the little farmhouse where I was to stay, several of the neighbors dropped in, and a hunt was planned for the next day. Sim Woodruff, the most inveterate woods-haunter and hunter among them, drawled out in a low monotone. "The's tew three deer a keeping up in the basin 'n under Aowl's Head, they ha'n't been mislested this fall, 'n' the' ha' no daoubt o' startin' on 'em any day, 'n' gittin' a good race. They'll water tu the river, sartin, 'n we c'n man every identicle runway, 'n' someb'dy nuther is cock sure to git a shot."

Silas Borden the shoemaker said, "'T'ain't no way sartin 'at a deer started aouten the basin won't water t' Thompson Pawnd." He spent more of his time in fishing and "a studyin' inter aoudoor things" than in making and mending his neighbors' footgear, and his opinions in matters of woods-lore was not to be lightly taken. But Sim said sententiously, "They'll water tu the river!" The shoemaker said no more in support of his opinion, but sat gazing meditatively into the glowing slit of the stove hearth, and so it was presently settled the party should meet here at Uncle Harvey Hales' the next morning, and then man the runways on the river, while Sim took the dogs to the basin lying under the rocky knob, known as Owls' Head, and put them out there.

As my host was lighting me to bed after the last caller had departed, I said, "Do, if you can, Uncle Harvey, put me on a runway to-morrow where I can get a shot. This is the fifth year that I've been trying to get one somewhere in this region, and haven't suceeded yet!"

"If you don't git a crack at a deer to-morrah, it won't be my fault," he said as he set the candle on the little oil-cloth covered stand and seated himself on the edge of the bed. "I'm a goin' t' put you t' the Riffles, 'n' it's the best runway on the river. The fif' year, hey? Wal, they say 't the's luck in odd numbers, 'n' like 'nough your 'n 'ill change this time. 'F you c'n shoot at a deer 's well 's you can 't a patridge, y'r all right, for I've seen yer cut their heads off. But"—and his gray eyes twinkled under their grayer shaggy brows—"like's not ye can't—the's a differ'nce."

"Well," I said with more confidence in my voice than in my heart, "all I ask is the chance, and if I miss a good shot, you won't be troubled with me another fall."

"Then I hope you'll kill a deer to-morrah," he said heartily, for I'm allus glad t' hev ye come." In those days the region was not thronged as now with tourists and pleasure seekers, and the people were glad of a visitor for simple friendship's sake, and a few days of companionship with one from the outer world, of which they saw so little. Now and then in summer some ardent angler from abroad braved the torments of the black flies, or an artist came to gather fresh sheaves from an unreaped field; in fall a few hunters and an occasional cattle buyer from the valley of the lake, and in winter a fur buyer or two were almost the only visitors in all the year.

"Wal," said Uncle Harvey, rising and snuffing the candle with his fingers, "good night, sleep good!"

This injunction I obeyed, between Aunt Natty's dried roseleaf-scented sheets and under the carpetlike coverlet till daylight came in at the little window and turned the gloom to gray, and the voices of the gathering hunters and the whimpering and impatient yelping of Sim's hounds awoke me. Half an hour later when we were straggling along the road, some one asked, "Where's Sile? thought he was agoin'." Sim, who led the party and was being led by the dogs straining at their leashes before him, answered over his shoulder, "Sile! I'll bet a cookey the plegged critter 's apullin' foot for Thompson Pawnd," and he looked toward the round peak of Owl's Head now detaching its dark gray outline from the scarcely lighter gray of the overcast sky, as if he half expected to make out somewhere under the curtain of the woods the form of the little shoemaker breasting the mountain ridge, beyond which lay the lonely pond. "Let him go an' be darned! I shouldn't wonder 't the pawnd was all froze over!" which seemed not unlikely, for the road was hard as a rock and the swift current of the river running here beside it was edged with bristling borders of ice, and little spiky rafts of it were drifting along, tinkling against shores and mid-stream boulders. One or two of the hunters had dropped out to the runways they were assigned to, when Sim struck out of the road and across the narrow fields and soon vanished with his hounds in the haze of woodside saplings and branches. One after another took the station allotted to him by Uncle Harvey till only he and I were left. Crossing a rude bridge that spanned the river and going half a mile further up the right bank we came to the Riffles, where he placed me, and after giving a few concise directions went on to his stand above. Here at the Riffles running down a steep slope and across the narrow intervale to the naked brink of the river, was the clearing of a deserted farm bordered on either side with a brushy fringe of second growth, backed by the great trees of the old woods. Half way up the slope, desolate and forsaken, with no path leading to them, stood a small house with unglazed windows, and a ruinous log barn. My stand faced a long straight reach of the river where it broke into a foaming rapid over stony shallows, running nearly eastward till under the root-netted bank at my feet it turned again on its devious northward course through the valley. The old woods of beech, maple and birch came down with a sudden sweep from the dark evergreens of the heights, and a crinkled seam in the even gray of their tops marked the way of a mountain rivulet that just opposite gave its small contribution of noise and water to the roar and rush of the river. The tenantless farm was like an unmarked grave that one might come upon in the heart of the woods, and made the place no less "woodsy and wild and lonesome" than if the ancient trees still shaded its untilled acres. For a while I was satisfied with the sense of complete isolation; with listening to the ever-changing yet monotonous voice of the river singing its untranslatable song to the hushed wilderness; with looking at the noble sweep of the mountain slopes and the given outlines of their rocky steeps; and then with studying the shapes of the great yellow birches that bent their shining and maned trunks steadfast and silent over the turmoil of the waters while the little branches waved and nodded as if beating time to the river's song. Then the near rocks mottled with many-colored lichens and mosses that kept foothold above the well-defined limit of high water. And then I suddenly remembered why I was here, and that Sim must have the dogs out by this time, and my ears were soon aching with the effort to catch out of the river's uproar the shriller clamor of the hounds.

Many times in the next hour it seemed to me that I heard it rising above the everlasting soughing surge of the Riffles, while I stood with strained nerves and rifle ready, only to be as often disappointed, when the fooling puff of wind died, and the river went on with its endless song. For a while a mink amused me, stealing along the other shore alert, shy and inquisitive, then diving for a minnow, then swimming away lithe and silent as a snake. A raven came down like a great dusky flake out of the lowering sky and lodged on a dead treetop; then presently a flock of snow flakes wavered toward the earth, and with a savage blast of north wind down came a pelting snowstorm. I stood at my post till the river banks were so white that the stream for all its foam looked black, and the barrel and sight of my rifle were loaded and clogged with snow faster than I could clear them, and then I began to look around for a shelter of some sort. The house was too for from the runway which I was loth to get out of range of, but twenty rods back from me in the north edge of the clearing stood a solitary evergreen. To this I retreated, and facing the river backed in among the thick lower branches. These and the dense top gave me considerable protection from the storm, now raging so furiously that a deer might have passed unseen within ten rods of me.

The sheltering tree, which at first I had taken for a spruce, I now noticed was of a kind that I had never before seen. It seemed to be, if such a thing were possible, a hybrid of the pitch pine and one of the spruces: its leaves too short for a pine, too long for a spruce, and wearing not the healthy, lusty dark green of either, but a hue of unwholesome gray. Though evidently old, it was low and stunted, as though it could draw no suitable nourishment from a soil that fostered other trees. The long branches writhed out in snaky curves from the lichen-scabbed trunk, and toward the ends were clasped by pairs of hooked cones like the warty claws of some unclean bird, and they hissed, rather than sang, as do the branches of the evergreens to the stroke of the wind. The bare earth about its roots showed no undergrowth of flowering woodland plants, but only some frost-bitten fungus, black and foul with decay. A strange, uncanny tree, I thought, a fit canopy for witches when they hold their wicked meetings, and it may have been a fancy begotten of storm and solitude, but I began to feel as if some unholy spell was creeping over me. Just then the storm lulled; the wind almost ceased its howling, and the snowfall slackened, so that the rush of the waters again became the dominant sound, and the long foamy reach of the river reappeared. Then out of the voices of stream and forest came the unmistakable cry of a hound, hardly assured before a great buck splashed into the upper end of the Riffles, and came down them toward me. My heart beat wildly, but sank when, midway in the rapids, he turned to the shore and began to climb the further bank. It was a long shot for me, but my only chance, and I took it. Aiming a little above and ahead of him, I fired and missed. He did not lower his flag, but halted an instant when he had gained the top of the bank, looking toward the point from which the thin report had come to him—halted long enough to have given me another shot if I had been armed with a double barrel or a repeater.

My powder flask was not returned to its pocket when he vanished. The hound, at fault when he came to the water, pottered along the shores trying every place but the right one, and giving no heed to my calls and gestures, and I was too "cat-footed" to wade the icy stream and put him on the trail. While my spirit was yet in the very depth of humiliation, Uncle Harvey came down from his stand, having heard the shot and nothing more of the hound after he had reached the river. "Did ye kill him?" he asked, though he must have known by my looks that I had not. Then, "Where was he?" and "where was you?" I pointed out the spot, where a broken toppled maple leaned over the Riffles, at which the deer had gone out of the river, and showed him the tree under which I stood. "Hmph!" after looking over the distance with two or three calculating glances, "Le's go hum. You've had yer shot," and more out of humor than I had ever seen him, he sharply called the hound, and tucking his rifle under his arm led the way toward the road. As we passed the strange evergreen I asked, glad of something else than shooting to talk of, "What kind of tree is this that I stood under when I fired? It is something I never saw before." He stopped and looked at it, at first carelessly, then with more attention. "God!" with an expression of horror and disgust, "was you a standin' under that tree?"

"Yes; why not?"

"T a no wonder 't ye missed! It's more a wonder 't yer gun didn't bust er suthin' an' kill yer! Why, man alive, that 'ere 's an *Onlucky tree!* come 'way from it," and he hurried on, giving me no time to ask another question till we were in the road. We are all superstitious, but he was one of the last men whom I would have taken to be foolishly so, and my curiosity was much excited.

"Tell me about the tree, Uncle Harvey," I said, "I never heard of it before."

"It's what I tell ye, an onlucky tree, 'at no man, much less a women is safe to go anigh! I wouldn't stand' under that 'ere tree ten minutes for half o' York State! I didn't know 't the' was one o' the cussed things left here, 'r I'd ha' burnt it 'fore naow. I c'n tell ye no end o' hurt an' trouble they've made; no end on 't! Why, Sim Woodruff, his father was a choppin' one, not knowin' what it was more'n you did, an' his wife a stannin' lookin' on with her young un in her arms, an' a chip flew an' took her in the eye an' put it aout, an' he cut his foot so 's 't he was laid up all winter; an' the baby took a onaccaountable sort of a sickness an' died. An' there was Dan'l Frost lay daown 'n' went tu sleep 'n underneath one one day when he was het an' tired a traoutin', an' got up sick an went hum 'n' died in less 'n a week. 'N there," halting and pointing to a blackened stump that stood near the roadside in the center of a patch of frost-withered ghostly fire weed, "I c'n tell ye a sight wus story 'baout one 'at stood right there, but," lowering his voice as we moved on, "I can't tell ye naow, for we're a comin' tu M'nroe Beadle 'n his relations was consarned in 't." When this hunter joined us a few minutes later, Hale briefly told him that I had missed a deer, and why, adding, "We mus' go an' burn the blasted thing the fust chance we git." Burning, it seemed, was the only effectual way of destroying these dangerous trees.

Facing homeward we came to one after another of our party, and toward nightfall reached Uncle Harvey's. However much some might have been at first disposed to laugh at me, when the old man explained the cause of my ill-success, no one had a jibe for me, but all congratulated me on having had no worse luck than a miss, and I thought the tree or the strange superstition concerning it had served me a very good turn.

At dusk Sim came in and was glad to find his favorite hound toasting his ribs under the stove. The other dogs, he said, had started another deer and run it over Owl's Head, since when he had neither seen nor heard them. Presently, without knocking, as every one entered there, came Silas Borden, looking tired, but well satisfied, and told us that he had killed as "nice a barr'n doe as ever run the woods, over tu Thompson Pawnd. Maje an' the pup run her, an' they're daown tu my house, Sim. Miss Borden she's fed 'em up good. Tur'ble good womern tu dawgs, Miss Borden is, when the's venison brung hum. Golly blue! if I didn't hev a tougher aluggin' on't ov' the ridge." Then he related with all the minuteness of detail that hunters never tire of giving or listening to, the incidents of his solitary hunt, mapping on the stove griddle with the stump of a match his course and that of the deer and hounds, and his position when the deer came to the pond, and it was bedtime when his story was ended.

The next day was a stormy one of sleet and snow and wild wind that no one who need not would go abroad in, while I sat by the roaring stove in the first stages of a severe cold, and taking frequent draughts of Aunt Nabby's "pennyr'y'ltea." Uncle Harvey told me the "wust story of the onlucky tree."

ROWLAND E. ROBINSON.

* John H. Sears, in his "Notes on the Forest Trees of Essex, Clinton and Franklin Counties, N. Y.," says, of the strange superstition concerning the gray or scrub pine (*Pinus banksiana*): "This tree is known as the 'unlucky tree' by the people in this part of the country. The more observant ones call it a cross between the pine and the spruce. I met several men of good general education, who were convinced of the danger arising from this tree, and who cited cases of its malignant influences. It is considered dangerous to pass within 10ft. of its limbs, and more so to women than to men. It is equally dangerous to cattle; so that whatever ill befalls a man, his family or his cattle, if there is one of these trees on his land it must be destroyed, burned down by wood being piled around it, for no one would venture to cut it down."—*Bulletin of the Essex Institute, Vol. XIII., 1881.*

AMONG THE BONIN ISLANDS.

IN FOREST AND STREAM, No. 13, Vol. XX., April 26, 1883, there appeared a sketch of adventures among the Bonin Islands, to which this letter will serve as a sequel. As I cannot flatter myself that many of your readers will have remembered much of the story, I will briefly recall the original. The incidents described occurred in 1853, when, a young midshipman on my first cruise, I was member of a surveying party, sent from the sloop of war Plymouth, then anchored in the harbor of Port Lloyd, Bonin Island, to survey a detached group of islands some thirty miles to the southward, the object being to find a suitable harbor to provide a coaling station for the line of steamers of the Pacific Mail Company, then projected from San Francisco to Japan and China. There were two lieutenants, now admirals, one midshipman, and about thirty men in the party, and we had a launch and a large cutter.

Our party made headquarters at Coffin Island, the rather sombre name being that of one of its discoverers, Captain Nathaniel Coffin, of Nantucket, who, while on a whaling voyage in the Transit, in 1823, put in for fresh water, and unaware of previous visits, took possession and gave it his name.*

*The group, however, in the Pacific Ocean, lat. 27° N, long. 142° E., had been more than once discovered and claimed before, the Japanese having in 1675 first visited and named them Buninshimo (Uninhabited Islands). This discovery was made in the usual form; a disabled junk drifted among the islands, and its crew, on their return to Japan, reported "mild climate, fertile country, inexhaustible lumber, incredible quantities of fish and crabs, the latter from 4 to 6ft. long, and excellent water. Japan needed a penal colony, and this group was selected, Ogasawari, a powerful Damio, being the projector of the scheme. After a few years this enterprise failed, then for nearly a hundred years there is a lapse of history. In 1760 the experiment was tried over again by a descendent of Ogasawari, and again it proved a failure. Now it may be that, during this long period, and thence up to 1823, when Coffin took possession, somebody else did, but I can find no evidence to that effect. So our claim to its discovery is apparently good as against any country but Japan.

After Coffin, though, the group became the scene of many discoveries, taking possession and letting go again.

In 1825 the English whale ship Supply, and in 1827 the British man-of-war Blossom, Captain Beechy, R. N., took possession, the latter strengthening his claim by firing a salute to the English flag he hoisted, a ceremony omitted by the whalers for want of guns.

In 1829 the English founded a colony at Port Lloyd, "consisting of five white men and twenty-two Sandwich Islanders, male and female." Among the white men were two Americans, Nathaniel Savory and Alden Chapin, both New England men. The business of the colony was turtle catching and farming. Nathaniel Savory

Our party found upon the island two families, one an Englishman and Kanaka wife, whose name I forget, and a Captain Robinson, also an Englishman, with two wives and a lot of children, among whom was one, a young girl of twelve, named Caroline, who, I then thought, was about the prettiest of all of the girls I had ever fallen in love with; and there was the natural result, to be expected when a pretty tropical-blooded girl, that never before met a boy, is through propinquity brought into contact with a youngster who hadn't seen a girl prettier than the ordinary China girl for a long time. We were devoted to each other, and my readily given adoration was supplemented by a still stronger feeling of gratitude, for under circumstances fully detailed in my original story, Caroline had saved my life by rescuing me from the alternative of death by drowning in a sea cave or being devoured by a shark.

That I was not mistaken in the opinions I entertained as to the charms of Caroline, I will quote a few lines from the official report of Captain Kelley, a grave and reverend Seigneur, whose judgment would not run the risk mine did, of being biased:

"The population of this newly-acquired territory does not exceed eleven, viz., two male settlers, cultivating the land and taking turtle; two females, natives of Assumption, wives of the settlers; three male children, two female children (one, whose name is Caroline, remarkable for her beauty), one female from Assumption and a deserter from this ship."

Caroline I find occupies a considerable space in my story, and I flatter myself that those who read it would be glad to hear more about her. I will quote only the concluding paragraph on which this letter hinges:

"And Caroline, if her father carried out his intentions, is now perhaps a sedate matron, in some New England village with little Carolines of her own; recognizing that her probable fate, should she remain with him on the island, would be that she would become the wife (married island fashion) of some sailor, who, tempted by her beauty, would desert some whaler for her sake, he had resolved to give her to the wife of some calling whaling captain to be brought up in America, and educated as a Christian woman. I have often wondered if this has occurred, and now as I write have half a hope that through this personal her whereabouts may transpire."

And now I have to report that even unto the Orient the far-reaching influence of the FOREST AND STREAM has reached. My personal has been answered, and I have rediscovered Caroline, and in the sequel I propose to tell you some more about her and some of her adventures. In my search for information about her I have waded through a mass of official documents, reports and history; Commodore Perry, Bayard Taylor, Captain Kelly, Consul Jones, and a book on "Remarkable Voyages" have contributed.

About two years ago I received a letter from Commander Chas. T. Cotton, of the Navy, who was in command of one of our vessels on the China Station. He had read my story in FOREST AND STREAM, and wrote that he felt confident that he had met my heroine. "I remember her well, and in July, 1881, she was still a very handsome woman, married, or had been married, and had children, whom she had brought to Yokohama to be educated. Who her husband was, whether alive or dead, or what was her married name, I cannot now recall. She was a remarkably good-looking woman, and I had no idea that she was as old as from your description she must be."

Com. Cotton referred me to Mate P. C. Van Buskirk; then and now on duty in the Pacific, as likely to know more of her. I wrote to Van Buskirk, and in due time came his answer from Acapulco. Van Buskirk was with us in the Plymouth, and knew of the circumstances occurring in 1853, and serving subsequently on the station, had collected very copious notes. From the information he furnished me I will finish this sequel. "Yes," he writes, "I have met Caroline. I spent three nights under her roof. The Alert had gone south surveying and left me on Peel Island as keeper of the coal pile. She is now the widow Webb, and has a most comfortable home at Port Lloyd, with a farm of some seventy acres, and employes quite a number of Kanakas, raising coffee and taking turtles for their shell and sharks for their fins, which command good prices in the Chinese market. She has two sons who superintend the work, and Zipper, now a very old woman, is with her, has a cabin to herself, and it was apparent that Coroline was taking every possible care of her, and everybody treated Zipper with marked respect." [Zipper was the "female from Assumption" spoken of by Capt. Kelley, and the woman whom we supposed to be the spare wife of Capt. Robinson.]

"Caroline was still a handsome and attractive woman, talked intelligently and well, not only of past events on the island, but of changes in the outside world, for she had shelves loaded with English and American illustrated magazines, being, although unable to read or write, very fond of pictures. She remembered perfectly the advent of the Plymouth and her particular friend the young officer of the surveying party; and spoke of you most pleasantly, and a great deal."

Van Buskirk's items, as obtained from Mrs. Webb and others, will complete this history. The man occupying with his Kanaka wife the other cabin on the island when we were there was named Mottley, and the woman Kitty. Robinson went over to the Caroline Island, and brought a number of the islanders to work for him. Kitty got up a quarrel between her husband and Robinson, and seduced from him all of the Caroline Islanders; leaving Robinson with but one assistant "English Bob," who was in love with Caroline. In 1861, the Mottley party attacked the Robinsons, Bob was killed and Robinson took to the woods with three children, John, Henry and Eliza, and after a few days was captured by the Mottley gang, and sent out of the island by a whaler.

Zipper with Caroline, then nearly twenty years old, Susan and Charles, fled in another direction, and succeeded in finding their way to the northern shore, where they subsisted on shellfish, roots, berries, fruits, etc., until Zipper one night (they ventured out of hiding only at night) found on the beach a plank in which were wrought-iron nails; these they hammered into fish hooks, and one large one into a knife, which they sharpened upon lava stones, and "by the aid of this instrument Caroline's fine long tresses were shaved off (we all, except Caroline, laughed at this recital) and of them were made fish lines, after which they had fish in plenty. Up to this time Zipper, who was in great terror of the Mottley party, had not permitted a fire. After fish were caught she yielded, and with fish, crabs and turtle eggs, they lived very well, comparatively, for they succeeded in obtaining fire by rubbing sticks together, one relieving the other."

A passing whale ship saw the smoke one day, stood in, sent a boat and rescued the party after their eleven months of camp life, carrying them to Port Lloyd, where Governor Webb received them most hospitably, fell in love with Caroline, married her, and dying left her a pretty widow well provided for.

There may come a sequel to this sequel. Some months ago I wrote a letter to Caroline, in care of the Consul at Yokohama. I intended to have incorporated the answer in this sequel, which has been long promised to the editor, but it has not come.

PISECO.

---

was elected Governor, which position he held at the date of our visit in 1853.

During the subsequent period of thirty years history has repeated itself, for there arrived at one or the other of the various islands, successively, Russian, Portugese and Dutch men-of-war, the captain of each going through the usual ceremonies of taking possession.

The comfort of the colonists was not much disturbed by this periodic change of their nationality. They raised their goats and pigs, cocoanuts and bananas; caught turtle and fish, and became very useful to the many whalers in the Pacific. But all was not at peace among themselves. The principal law in vogue was the old-fashioned simple one, that "he shall take who has the power, and he shall keep who can." There was but one unity of interest, and that I judge from the records did not amount to much, being self-defense against outsiders who interfered with them. There were pirates in those days, and pirates as well as whalers need fresh water and provisions, and such articles cost them very little. Visiting Port Lloyd they helped themselves to all they wanted, including in many cases such of the Kanaka wives as struck their fancy.

Once—it is a matter of history—a Portugese Lorcha came for provisions, and within twenty-four hours Governor Savory was transformed from the wealthy husband of several wives to an impecunious widower, and most of the colonists were in the same boat. But while in the midst of their sorrow a Yankee whaler arrived; her captain was a shrewd trader, and availing himself of the opportunity "went quickly to the Sandwich Islands, returning with a goodly supply of women, who were gladly welcomed, and supplied with husbands without delay." Hardly were the nuptial ceremonies completed when "another American schooner, whose captain was an ungodly man, came seeking fresh water, but the crew straightway made away with all the newly married wives, and much stock and provender."

Thus it is shown that the life of the islanders was not entirely monotonous nor free from vicissitudes.

I have gone thus a little into history for this reason. The record shows that our claims to the islands is superior to those of any other nation. Collin was the first white man to discover it, Savory the first white official; both were Americans. Thus, when Captain John Kelley of the Plymouth in September, 1853, went through all the ceremonies and "took formal possession in the name of the United States," they became part of our domain, and are thus entitled to a place in the history of the United States.

Associated with Governor Savory was one Captain Thomas H. Webb, an Englishman, who came to the islands in 1849, and who eventually succeeded Savory as governor. My reasons for introducing Captain Governor Webb will appear, as also the reason for the following modified quotation from the report of the U. S. Consul to Nagasaki, Mr. A. C. Jones: "The administration of Webb was attended with trouble; his subjects were unruly spirits. Several broke out in open defiance and rebellion; open war was the result; four or five persons were killed, others fled to remote parts of the island, where, it is told, they subsisted on roots and berries until taken off by a ship that had put in for water."

A CHRISTMAS WEEK MEMORY.

"NOW, Mrs. Campbell," said I, as I rose to take my leave, "this is the seventeenth, and I mean to devote the next week to shooting, and if you will just mention what game you would like me to send you for Christmas"—

"No limitation?" queried she archly.

"Well," I said, "I have no Aladdin's lamp to whirl me away to remote regions, nor genii to do my bidding. I trust to my own unaided resources, so I must limit you to game to be found in the valley of the Indus."

"Oh, that will provide quite a sufficient variety," said she, "and since you are so liberal, I will give you the bill of fare, if you will take your pencil and jot down the items."

"No need for pencil and paper," said I. "Your commands shall be engraved on the tablets of my heart," and as I spoke I placed my hand over the cardiac region; but this was five and twenty years ago, when all the women of my acquaintance were angels.

"That means," said she, "that if you fail to provide anything that I stipulate for, you will declare that I never mentioned it."

"Mrs. Campbell!" exclaimed I in tones of feeling, "cast no reflection upon my honor as a man, still less on my devotion to you. Tell me only what to send, and you may prepare your menu and issue your invitations."

"Well then, item first, one wild boar's head—a good tusker, remember—that I may be sure it is not a domestic pig's. One haunch of antelope venison, and don't try to put me off with goat's flesh. That will do for the substantials. Then partridges, let me see, six brace of black partridges. There are no quail now; say ten brace of snipe. Then three brace of wild duck and a brace of hares. Then I think that will do—but no, if you should see a bustard—remember I don't lay any commands upon you, but if by lucky chance one should come your way."

"Your wishes are my commands," said I in tones suited to the occasion.

The next moment I was in the saddle and cantering away to the ferry. Half an hour later I had reached the opposite bank of the river, and another brisk twenty minutes' canter took me to my home, an isolated indigo plantation in the depths of Sindee jungles, some four miles from the banks of the Indus. The dogs bounded out to meet me, the syce took my horse, and the bearer came forward to receive my commands, and instructing him to call me half an hour before daybreak, I slipped into my pyjamas and lay down to meditate on the contract I had undertaken, and to lay out my plans so as to best insure success. The birds (apart from the bustard) presented no great difficulty, and there was a reasonable chance of shooting a wild boar within a week. The snipe were a good twelve miles from my bungalow, and one day of the six would have to be devoted to them, but no antelope nor bustard was to be found within twelve or fifteen miles of my home, and one might roam for hours over the sandy wastes they frequent, without sighting either, and sighting did not always mean getting a shot, and then, although a true sportsman rarely misses, he fires a great many shots that do not result in bringing the game to bag.

That I was anxious to redeem my promise to the letter goes without saying. I was young and she was fair. Still fairer was her sister, a girl of sixteen, but as I lay and arranged my plans I realized that although I had occasionally made heavier and as varied bags in the allotted time, success in every detail depended on my being favored with good luck. I had the strongest of all incentives to exertion, "the light that lies in woman's eyes."

I was soon asleep, and for a few hours slept the sleep that comes from good digestion, when I was awakened by the quick *gooro, gooro*, of some wild boar which were passing close to the bungalow, and had set the dogs to barking. I jumped out of bed and went to the door. It was a bright moonlight night, rather chilly, and a little fog hovered over the swamp of a few hundred acres which bounded my plantation on one side, and had been a rare feeding ground for wild boar before I had broken ground in the neighborhood. As I stood I heard the grunting of the pigs that had aroused me, but they were not making for the swamp, and feeling thoroughly awake and refreshed I concluded to dress and make a tour of the earth dyke that skirted the swamp.

I was soon dressed, and picking up my rifle and a supply of ammunition (I used muzzleloaders in those days) I walked down to the nearest point of the dyke and stepped lightly on it for a look round; and there, not 20yds. from me, stood a full grown tusker feeding all alone. He threw up his head instantly, but unprepared as I was, my snapshot took effect; he rolled over, half struggled to his feet, plunged forward a step and tumbled over dead.

A good beginning, thought I, as I went back to the bungalow and instructed my bearer not to call me before daylight, but to get some low caste men in the morning, send for the boar and have him brought up and dressed.

It was full daylight when I arose. The boar, a grand old tusker and by far the biggest I had ever shot, was lying outside the bungalow, and the low castes were boiling their water over a camp-fire and anticipating a good feed. I gave instructions to keep the head, salt the hams, reserve one roast and a few chops, and let the shikaris have the rest.

This arranged, I took breakfast, took my shotgun and dogs and one man along with me, and started for some jungle three or four miles off, where hares and black partridge, although not exactly plentiful, were always to be found. My first shot was a mallard, which I brought down in good style; then I went through a jungle of low bushy trees (jhand) in which I made some very bad shooting at black partridge, bagging only three: and after a day's tramp I reached home with five partridge, one hare, one mallard and a blue crane.

The next day was devoted to snipe shooting. I galloped out in the morning with my syce on a second horse, took eighty charges along with me and fired them all away, bringing back eight brace of snipe and two brace of teal. I shot the first snipe, missed the next five or six in succession, and then shot a little better, losing three or four birds through not bringing the dogs with me. I felt a little mortified, as I had averaged two out of three at quail shooting the previous spring, and counted on something like forty birds to my eighty charges. Now I should have to go again to complete my ten brace.

The next day I mounted my camel and made a very early start for the sandy plains in quest of bustard and antelope. A herd of the game was started soon after arrival on the ground, but they trotted off about 300yds., and all my effort to get nearer was of no avail. While thus engaged my eye fell for an instant on the ground near me and caught the eye of a squatting bustard. Directly our eyes met, he sprang up, and dashed away behind me at railway speed. By the time I had changed weapons with my driver, who carried the shotgun, and brought the camel round for a shot, the bird was 60 or 70yds. away and taking wing. Away we went again after the antelope, and seeing that they stood occasionally to watch us, we struck off at nearly right angles to their course, made a sweep of three or four miles and came upon them lying down, this time again at about 300yds. There was no bush cover, but about a hundred yards beyond them there was a little sand hill, and we circled round to get behind it. Making the camel kneel, I jumped off and made for the mound on foot; but the antelope had been disturbed, and when I next sighted them they were trotting away at 200yds. distance. I emptied both barrels at them with just such result as I expected, for antelope present no contrast to the desert sand.

It was then past noon, and we made away for a clump of bushes to give the camel a chance of browsing, while the driver and I disposed af our luncheons.

We were now nearly twenty miles from home and some six or seven miles off the point where the road entered the desert, and after an hour's rest we made for this point. I kept on foot, traveling parallel to the camel at about 400yds.

We traveled four miles in this order, when the driver brought the camel to his knees and signaled to me to join him, and when I did so he pointed to a mound about 200yds. off and told me that three antelope were asleep behind it.

Noiselessly I stalked them, reached the foot of the mound and was debating by myself whether to stalk round it or over it (it was perhaps 30ft. long and 8ft. high), when the buck, followed by his two does, trotted round toward me, and there we stood face to face, the old buck and I at about ten paces. Up went the rifle, but the buck was quicker than I. While I was pulling the trigger he and his does were legging it at express rate, and by the time I had run round the mound and sighted them again, they were 100yds. off. I gave them the second barrel of course, but it evidently was not my day in.

During the afternoon we put up several coveys of sand grouse, but I was bent on larger game and let them pass; two or three pair of bustard were sighted on the wing, and one pair I marked down about a mile behind me, but did not go back for, and as the day advanced I gave up all hope, and seeing a covey of grouse I took cover behind a sand heap, and sent the camel man round to put them up. They made straight for me. I took the first coming, a favorite shot with me, and wheeling round dropped a second and wounded a third, which fell about 100yds. off. Picking up the birds, I mounted and rode home somewhat disconsolate, but dinner and a pipe brought me into a more cheerful mood and I no longer despaired of filling the bill.

The next day being Sunday was devoted largely to dreaming, castle-building and vain imagining generally, and on Monday morning away I went for the sandhills again. We had scarcely entered on them when I saw a bustard in the act of crouching about 70 or 80yds. off. Diverting my glance instantly, I took my shotgun, with No. 3 shot in the first barrel, and an Eley's wire cartridge No. 1 shot in the second barrel. I started on foot to pass within 25yds. of where I had marked my bird down, but having got the estimated distance, I could at first see no

sign of him. At length our eyes met, and away he went on foot, giving me an easy shot, which bowled him over. At the shot a second took wing, and was about 50yds. off when I got a bead on him, he was hard hit, but flew away nearly half a mile, when he fell in his effort to alight. The camel man marked him down, and after a long quest we found him dead.

An hour later we sighted a herd of fifty antelope lying down. There was a small bush which would have afforded excellent cover for stalking a single animal, but the antelope covered so much space that some of them would be sure to sight me. Nevertheless, I decided to try it, but while my camel was kneeling I saw the herd move off. They went toward some clumps of jugube bushes about a quarter of a mile off, and sending the camel man around to get behind them, I went nearly direct for the cover. I had just entered it, when I heard a rush and saw the whole herd trotting toward me headed by a good buck. They sighted me at the same instant and whirled around without much waste of time, but I got my ball in and heard the thud which told me it had struck. I thought, too, I heard a struggling behind the bushes. When I got up the antelope was gone, but I found blood and tracked him to the edge of the jungle, when I saw him standing on three legs about 200yds. off, The camel man saw him too, and was going after him when I shouted to him to pick me up. The poor beast led us four miles before he gave in, when I got off and gave him the *coup de grace*.

We then went for sand grouse, of which I got a brace before lunch, and two more brace after. Later I got a long shot with wire cartridge at a bustard on the wing, but failed to score, and went home delighted with my day's success. The contract presented no more difficulties.

On Tuesday I went to the snipe ground, but first picked up a guide to take me to some deeper water where ducks abounded; a continuation of the snipe ground and about a mile off. My first shot on the water failed to score, but it started hundreds, which went wheeling round in all directions. I got five brace in about two hours, then went to the snipe ground, dropped my three first birds in succession, missed the next four, which humbled my pride a little, and sat down to lunch with five brace to show for twenty-five shots. I got another five brace after lunch and then cantered home.

The following day I crossed my first day's partridge ground on the camel, and made for some cultivated alluvial lands on the river's bank. The ground was only half cleared, the plots of low tamarisk bush covering about as much area as the plowed land. This tamarisk is capital cover for partridge and hare, and rare good grounds to shoot over, and I wound up with a good day's sport, leaving the ground with six brace of black partridge, a brace of hares, a brace of stone plover and a wild goose. The latter presented himself unexpectedly. After the partridge shooting I heard some blue crane at no great distance, and loading with wire cartridge I tried in vain to stalk them. Returning to the camel I was preparing to mount, when a flock of wild geese came flying toward us at no great height; I brought down the first, which landed some fifty yards behind me with a loud thud, but that did not prevent his giving the dogs a good run as he ran along with outstretched wings.

My contract was complete, and I had Christmas eve for a time of rest, which I spent in great part at least in picturing the faces of the two sisters when the basket should reach them with every detail as per requisition, and in dwelling on the greeting with which they would welcome me on the morrow, for it was arranged that I should spend Christmas with them. I pictured the hostess's triumph in being able to make such a display of game upon her table, not so much for the game's sake as for the evidence it afforded of her influence, but I dwelt with still fonder anticipation on the thought that her demure little sister would let me know by a pressure of the hand or a glance of the eye that she knew for whose sake I had been toiling. And my fancies—were they prophetic, and did there come the pleasures of fruition? Ah! But that was five and twenty years ago.

SHIKAREE.

THE SPOTTED HYENA.

"JANUARY, what's the matter with the Kaffirs? Instead of following the wagon, as usual, they are all running in front of the oxen."

"*Impisi, n'kos*" (hyena, sir)! was the answer returned by my Zulu henchman, who was walking alongside the wheelers, while I was seated on the fore chest of the wagon, trying to keep off the midges by enveloping myself in clouds of tobacco smoke.

The day had been intensely hot, and we were trekking at night in order to relieve the oxen, and on the hinder part of the wagon hung a portion of a Burchell zebra (*Equus burchelli*) which I had shot during the day for the purpose of feeding a pair of lion whelps, which were among a collection of live specimens that were being taken down to the coast. In all my trips up the country I was generally accompanied by a lot of Kaffirs, who kept company with my teams for the purpose of getting the surplus meat, which I constantly shot for my own party, and on this occasion a spotted hyena (*Hyæna crocuta*), attracted by the smell of the remains of the zebra, was following the wagon and caused the stampede, which attracted my attention. Stopping the team I ran back, rifle in hand, to try and get a shot in the bright moonlight, but the moment I appeared at the rear of the wagon the hyena sprang into the grass and disappeared. Climbing up and concealing myself among the rear cages, I directed the driver to go on and stop on hearing a low whistle from myself. We were hardly well under way before the hyena reappeared in the road and followed, but the moment the signal was given and the wagon stopped, he would dart into the grass before I could get a steady aim. After several failures, I noticed that the wagon was just passing the summit of a hill. Ordering the driver to whip his oxen into a sharp trot down the incline, I dropped off when we had gone about 150ft., crouched on one side of the road under the shadow of a bunch of tall grass, and when the hyena's body appeared like a silhouette on the crest of the hill, he caught a raking shot which dropped him in his tracks. This was my first introduction to the "wolf" of the colonists, and thoroughly detested by them for its ravages among their flocks, but like our western animal of the same name, its numbers have been much decreased by the free use of strychnine. My next experience was somewhat different.

There was a farm on my road up country, where I frequently used to stop for several days at a time, in order to rest my oxen and give them the benefit of the fine grass. One morning the native shepherd reported that a sheep had been taken from the kraal during the night, and traces were plain where it had been dragged over the wall at a corner of the inclosure, and down into an almost impenetrable kloof, but a short distance away. As the farmer did not like to lose a second sheep, which he would have been obliged to slaughter in order to get a carcass for poisoning, a spring gun loaded with slugs was arranged so that anything attempting to pass at the same spot would receive its contents. During the night the report of the gun was heard, and we were on hand early the next morning to ascertain the result. There was no dead hyena, but bloody traces were followed down to the kloof, by pretty much the same path, along which the sheep had been previously dragged. Of course the farmer felicitated himself on being rid of a scourge, and no further search was made. That afternoon I left, and some time elapsed before we again met. The circumstance had slipped my memory and was recalled by the farmer, asking if I had forgotten about setting the spring gun for the hyena, and he continued by saying: "A few days after your departure I noticed a number of *aas vogels* (vultures) sitting on the trees in one part of the kloof, and judging they were feeding on the carcass of the hyena, I determined to cut my way in and have a look at the remains of the thief. With the assistance of my two sons I finally managed to get in, and what do you think I found? The slug riddled the body of a Kaffir." He added with a quizzical look, "I let the *aas vogels* finish him without asking the coroner to hold an inquest."

While on my tramp to the Diamond Fields, I stopped one morning at a Boer's house to inquire how far I would have to walk during the day, so as to reach water for my usual night camp. He told me that just before sunset I would reach "hyena pond," where I would find water, wood and good grass, but to look out for the hyenas, as they were thick in that neighborhood. So much so, that travelers usually kept a watch at night, to protect their oxen. Sure enough, just about the predicted hour I struck the promised place, and the pack pony was turned loose to fill himself with sweet grass, January started a fire, while I arranged the little tent and covered the ground underneath with a good coating of long grass, to prevent any stray stones from interfering with my slumber. After having our suppers, the pony was caught and tied to the limb of an acacia tree, just back of the tent; some extra wood piled on the fire, and I crawled into the tent, rolled up in my blankets and stretched out; while January curled up, dog fashion, just at my feet. I slept as a thoroughly tired man would do and knew nothing until just before daybreak, when I was awakened by a horrible sensation of nightmare. On coming to my senses, I found myself lying flat on back, while January was squatted on my chest, shaking as if he had a severe fit of the ague. The howling and yelping of hyenas, mixed with the affrighted whinnyings of the pony, instantly gave me the clue for January's behavior, who was sent rolling almost into the fire, while I followed on all fours. Picking up a brand which I whirled around my head and hurled in the direction of the hyenas, caused them to scuttle off, much to the relief of both January and the pony. Coffee was soon made, and on that day I covered more ground than usual, simply because the hyenas gave me an early start.

In my wanderings I frequently came across young hyenas in the possession of the Boers, many of which were very tame, but experience taught me that after reaching maturity they were apt to snap, not so much from ill-temper as from fear, as they are certainly the most cowardly wild animal I ever met. I once had a pair sent me about half grown and quite tame, and as the cage in which they arrived was unsafe, was directing the keepers about shifting them into a stronger one, when an up-country friend walked into my yard and reminded me of a promise made to show him through the Botanic Garden. As he was an enthusiastic florist and one of the editorial fraternity I immediately started off with him, warning the keepers to be careful. We had scarcely passed off my premises, when there was an outcry behind us, and I turned just in time to see a badly frightened hyena bolt across the lane and plunge into a strip of bush opposite. I instantly gave chase, leaving a badly demoralized editor behind me, and soon overhauled my quarry, which had squatted from sheer fright soon after entering the bush. He allowed me to straddle him, and on reaching down to seize him by the nape I instantly realized the enormous muscular development of a hyena's neck as he suddenly twisted his neck to give me a nip. A sharp inward kick from the heel of my heavy hunting boot landing on his ribs knocked enough wind out of him to keep him quiet until the pursuing keepers secured him with a rope and dragged him back into the yard. On starting after my visitor I found he had increased his distance up the lane, and when I reached him he remarked: "If that hyena reception was gotten up for my special benefit I am perfectly satisfied, as it was a complete success, but I would much prefer a floral one."

Several merchants in the interior acted as my agents, and I frequently called on them to pick up whatever they had succeeded in getting for me. On one occasion while stopping with one of them, he proposed that I should accompany him to an outlying Boers, whose wool he wished to purchase. As it would take the better portion of two days to reach the farm, my host's cape cart carried forage for its team, beside some provisions for ourselves. It was fortunate that these precautions were taken, for as the first day of our journey was drawing to a close, we found out that we were lost on the veldt and would have to camp for the night. Selecting a valley, through which a stream ran, we started a fire, and a Malabar coolie, who accompanied us, soon had a very fair curry and a cup of coffee ready for supper. After a soothing pull at our pipes, my host and myself crawled under the cart, rolled up in our blankets, using the harness for pillows, while the coolie made himself a bed with the cushions in the cart. About midnight we were awakened by something tugging at our pillows, and my friend sprang out and climbed into the cart with the coolie. While he was so doing I caught a strong whiff of jackal smell and unsuccessfully tried to laugh him out of his foolish fright; consequently he uncomfortably dozed the balance of the night, sitting upright in the cart. The next morning we found that the little thieves had nearly ruined the reins by chewing them. While the coolie was preparing breakfast I heard the peculiar call of a bull gnu (*Connochætes gnu*) from the top of the hill in front of us, and picking up my rifle, proposed that each of us should go to the tops of the opposite hills and see if we could discover any indications of a road. On his acquiescence, I started in the direction from which the sound proceeded, and by careful stalking managed to kill the gnu. Failing to find any signs of a road, I turned to descend, when I spied my friend coming down the opposite slope at racing speed. On reaching camp I found him leaning against one of the cart wheels, showing evident signs of fright, and on inquiring the cause, he said:

"I came face to face with a lion on the top of the hill."

"Nonsense," I replied. "There's not a lion within a hundred miles of us. They have been all killed off in this region years ago."

"I tell you that I met one just now, and let's hook up and get away from here as soon as possible."

"Well, you go and hook up, while I go up the hill and see if I can't pot him. As it is the first chance I've ever had at a lion I'm not going to let it slip."

He continued begging me to return until I passed out of hearing, and on getting on top of the hill and knocking around among some large boulders, just as I expected, a large male hyena shuffled out in front of me and was instantly killed. Retracing my steps and reaching the cart the facts were made known, but my friend persisted in saying that he had seen a lion. That afternoon we reached the Boers, and when the story was told to him and his sons, the chaff my friend had to stand was something outrageous. But he bought the wool nevertheless, and continued buying until in a few years he was able to retire on his means. He is now living at his ease in England, while I am still enrolled among the toilers, showing that commercial thrift is evidently a better accomplishment, in a wordly sense, than zoölogical knowledge.

The young of the hyena look very much like puppies of a solid dark brown color. The spots gradually appearing with age, thus reversing the usual procedure in some of the larger cat animals, such as lions and pumas, which are invariably spotted at birth and gradually assume their solid color as they become older. I once had a pair under my charge which bred regularly, and the only difficulty I had in rearing the young was the nervous fidgety habit the mother had of carrying them about in her mouth and letting them drop on the hard floor of the cage. This was counteracted by making a partition with a sliding door in it, and whenever the young needed suckling the mother was admitted, and after they were satisfied a threatening gesture would cause her to spring through the open door, which was immediately closed after her.

There is a peculiarity about the spotted hyena which bothered me a good deal at first. Judging from external appearances, every one which came into my possession seemed to be a male; and, on questioning the Boers about this characteristic, I was invariably told that they were all hermaphroditic. Not believing the assertion, I set to work to try and solve the mystery, and after a series of observations managed to pitch on a cage which, from unerring actions, evidently contained a pair. Then watching my opportunity, as they lolled about in various positions, succeeded in identifying the female. After that there was not so much difficulty, particularly if the female had ever borne young. I would refer those of a scientific turn to the articles of Dr. Watson in "The Proceedings of the Zoölogical Society, London," 1877, p. 369; 1878, p. 416; 1881, p. 516, for a thorough technical description of the singularities of the spotted hynea.

FRANK J. THOMPSON.

HUNTING IN FLORIDA IN 1874.—VI.

ON our second day's sail down the river, at a wooding-up place, Capt. B. drew my attention to a woman standing in a doorway, with a child in her arms, and said, "That is the wife of Mr. Lang, who was murdered a few weeks ago in the neighborhood of Ten-Mile Creek you have just escaped from." As the boat was about to start, I failed of an opportunity to learn definite particulars from her of the terrible tragedy, but this seems the proper place in my narrative to give the denouement. Less than a year afterward I found the following in the *Boston Transcript*, but by whom written I know not, nor, though correspondence with true men in the vicinity of Fort Capron, have I been able to obtain other than conflicting accounts of the arrests and trials:

"Now that spiritualism is being brought so prominently forward, it is interesting to learn, from the Chicago *Tribune*, that an ingenious attorney in Florida was the first person to discover a practical value in it. His client, Tom Drawdy, was accused of murdering one Lang, and the jury was composed of eight colored and four ignorant white men. There was no doubt of the murder; there was no flaw in the evidence. But the counsel found one. He maintained that no proof of Lang's death had been given, and, in all probability, he was still hiding to obtain revenge. This made a commotion, but the main argument was yet to come. The gentlemen of the jury had heard that spirits were very common all over the North; that some had even been heard of in St. Augustine. Supposing the jury brought in a verdict of guilty and hanged an innocent man, what could they expect but that his spirit would haunt them through life, appearing with staring eyes and clammy tongue, the death damp on his hands and the horrors of the tomb round about him? Of course they would take the responsibility, and they did, by acquitting Tom Drawdy forthwith. Here, therefore, is the first authenticated instance of the practical value of spiritualism, and it may be added that that value was of a dubious sort.

Without affirming or denying the truth of these statements in their fullest extent, I am assured from all I can learn that Mr. J., the father-in-law and reputed instigator of the murder, was shot dead in his tracks by the sheriff while resisting arrest, as he had assured me he would be, rather than be arrested; that Tom died in the State's prison not long after incarceration, and that his colleague in the murderous affair was shot by the guard for insubordination in the chain-gang.

Leaving the steamer at Tocoi I proceeded by a mule railroad to the old town of St. Augustine, bidding goodbye to my companions Fred and Erwin, who continued on to Jacksonville and thence to New England by steamer. My familiarity with quaint old towns in Europe, hundreds of years ante-dating the settlement of St. Augustine, prevented my realizing the novel sensation so generally depicted by tourists on first beholding its dilapidated walls and coquina-stone castle. A walk before breakfast on the long sea-wall and a ramble around the fort through its moat, and across the draw-bridge, with a hasty inspection of the cemetery and the old cathedral and square, satisfied my curiosity, and I spent the forenoon, as the mule-car did not return to Tocoi till 1 P. M., in searching for objects of natural history in the suburban lagoons. Taking the Palatkasteamer for Jacksonville at Tocoi I re-admired the remarkable river whose very

source I had found near Fort Drum at the northern boundary of Alpatiokee Flats, and had jumped across, but now widening to two miles in extent. Conversing with a stranger on board, about three o'clock of the second day, and inquiring for Jacksonville time, he displayed an old-fashioned silver movable-cased watch, remarking, it was the best time-keeper on board, though a relic of his grandfather's day. Telling him I could match it as a time-keeper, I felt in my pants watch pocket for a silver-edged lepine watch that I had owned for more than thirty years, and which, then an old watch, was given to me by a watch repairer to replace one I had left with him to repair, but, through careless exposure at his window had, during his temporary absence from the room, been grabbed by a sneak thief with half a dozen others on the same rock, and successfully secured. But lo! the pocket was empty. I recalled changing my double-time lever watch the second morning before at St. Augustine from my money belt, where I had securely carried it through all my swamp experiences, to my vest watch pocket, and putting the old lepine without a chain into my pants pocket. A little reflection convinced me that it had slipped out while gathering specimens in the suburbs of St. Augustine. So soon, therefore, as I arrived at Jacksonville, I wrote the postmaster at St. Augustine, explaining my loss and requesting him to send his clerk to certain points in the lagoon I designated, offering him a reward of five dollars if he should be successful in finding it and would send it to my home address in Massachusetts by mail, carelessly neglecting to mention the numbers on the case and the works of the watch for identification, though I had them with me in my pocket book, and also at my home. On arriving at my home a month later, almost immediately my wife handed me a letter from the postmaster for explanation. He sent his clerk as requested, but he found nothing. During the evening, however, he overheard a negro man say his son had found a watch that day in the moat of the castle, and obtained his consent to give it to him if I would send on the numbers of my lost watch and the five dollars reward if the numbers I should send indentified it. Remembering my tramp through the moat I hesitated not to send the money with the numbers, and in due time received my watch in good order.

At Jacksonville I disabused the minds of those who had told me when I started up the St. John's, that after a residence of years in Florida they had concluded that Lake Okechobee was a myth, and advised them to look out for the report of the exploring party who had circumnavigated it. Shipping home my collection of beasts, birds, reptiles, fishes, etc., by the shortest route, I made a detour from Jacksonville to the southwest and northcast sections of Georgia between which I had spent the years from '38 to '42 as teacher. The little frontier village of '38 in the Lower Creek Indian country of hardly more than forty log houses, where, at the age of 19, I made my début as principal of a school in which I had pupils in a, b, c, as well as in advanced Latin and Greek, sending two of the latter class to college at the end of my first year of instruction, had become a municipality of 5,000 inhabitants. The Creeks had, after hard fighting, been removed west of the Mississippi within five years of my location in the hamlet, and, with the exception of a few individuals, the character of the people partook of the worst elements of a frontier settlement. Seventy miles distant from any stage route, my only way of reaching it at that time was by an old negro and his mule cart, making the journey in two days and camping at the foot of a pine tree at night. My mail came once a week on horseback, the original star route I imagine, and all the appointments pertaining to civilization were of the most primitive stamp, such as New England had outgrown a hundred years before.

A conch shell blown at the Court House in the center of the village square, for it was the shire hamlet of the county, notified me on the morning of my first Sunday that a strolling Methodist preacher would hold services in the Court House at 11 o'clock. Repairing from my room just outside the village to the place of worship, I passed in the open square two faro tables where peripatetic professional gamblers were fleecing a much larger gathering than I found inside the Court House. The preacher had his own Bible and hymn book and led all the services, giving out each hymn line by line, and starting the tune himself at each break. During the first prayer I heard just outside a sudden out-burst of loud talking mingled with fearful oaths, which made me open my eyes, but seeing neither minister nor worshippers in the least disturbed, I composed myself and concluded there was no disrespect intended for us. Before the sermon was half through the outside rabble had matured a plan for a horse-race, which was kept up with the usual accompaniment of swearing and disputing till long after our services were ended. Longer experience in the community taught me that the occasional religious services enjoyed by a moiety of the citizens was not objected to by the gamblers and horse-racers, so long as they were not interfered with in their mode of enjoying the Sabbath. Inquiring for some of my old pupils of thirty-six years before, I found the war had spared a few, but not one of half a dozen or more that I met recognized me, so changed was I from an almost beardless youth of nineteen to an old man of fifty-five.

In northeast Georgia, where for nearly a year I was both instructor and colleague of an aged minister in 1841, I was equally unrecognized by all who had known me in either capacity. It was in this region that I attained my majority and cast my first vote, on which was the name of Alexander H. Stephens, in his first candidacy for Congress. The intimacy we formed during the year I dwelt in his vicinity was never broken, but renewed from time to time, as circumstances brought us together—the last time but a few months before his decease in 1882.

Desirous of visiting the site of my last school-house in Georgia I left the cars at a station within seven miles of it, and borrowing a horse from one of my old pupils, now a lawyer of middle age, I essayed to find it. My route required me to cross the same stream twice. At the first crossing I forded the stream by gathering my limbs crosswise upon the pommel of the saddle, but found the second, by my recollection of its bed, more than swimming to my horse, with too swift a current to think of stemming, and so turned aside for the night to stop with the father of my pupil, who with his wife occupied the same plantation of 3,800 acres I used to visit in '41. True Southern hospitality welcomed me as of yore, though despoiled of everything but the naked land by the exigencies of the war. Talking over the situation with the old gentleman he related the following war incidents:

One morning one of his many negroes accosted him, "Massa, we's all free." "Ah, how so?" "Massa Lincoln says so." Surprised at the statement, and knowing the blacks always had information of important movements at the North, sometimes days in advance of the whites, the master mounted his horse and galloped to town, six miles, to learn that no one there knew what the statement meant. In the afternoon news came by the mail from Augusta of Lincoln's proclamation freeing the slaves, and the master galloped back to his plantation to inform his negroes that Massa Lincoln's saying so had nothing to do with their freedom, as they were all under Jefferson Davis, and ordered them to their work as usual. Two years subsequently the master was again surprised by the same old negro saying one morning, "Massa, now we's free for sartin." "Ah, how's that?" "Lee's surrendered Richmond, and Jeff Davis has fled!" Again galloping to town, no such news had reached there, but at 10 o'clock the mail confirmed it, and galloping back, the master blew the conch shell, that brought all his negroes in a trice from the most distant parts of the plantation into his yard, when he said to the scores before him, from the very spot on the piazza where we were sitting: "It's a fact, Lee's surrendered; you are all free, and now you must look out for your dinner. This last announcement to poor dependents that had never in their lives, from the youngest conscious child to the gray-haired old men and women, ever had a thought about providing their dinner, the regular cook of the plantation dealing out their rations at the appointed time each day all prepared, so took them aback that not a shout was heard or the wag of a tongue, but on the contrary, their very countenances of jet black grew pale with consternation. After leaving them to their reflections for half an hour, the master blew the conch shell again and told them he had been anticipating this result, so giving them a dinner, he related the following plan as the best thing for him and them—he being left with nothing but his land, stock and farming implements, as Confederate money would at once be worthless. The oldest married negro could first choose twenty acres of land in any part of his thirty-eight hundred, and move his cabin on to it and make a home for himself; then the next oldest married man, and so on, and then the unmarried could make their choice. He would also let each have a mule and a plough, and the use of his gin house and cotton press, and for his own support they should pay him a certain per cent. of what they got for their crop; or every one could quit the plantation and look out for himself. With the exception of one young unmarried man, all accepted his offer and moved their dozen or more cabins on to the land of their choice, and at the time of his narrating the circumstances to me, ten years afterward, every family was on the place of their first choosing, with hardly an exception, and everything had gone prosperously with him, and for his own sake he would not have slavery restored for all his plantation. A second visit, eight years afterward, to the same plantation produced the same testimony from the considerate and humane old master.

Expressing my approbation of a beautiful peacock strutting in the yard, the generous old wife said to me, "Catch it and mount it for your museum at Brown University, as a present from me." In five minutes its life was forfeited to the interests of science.

Having promised a gratuitous lecture in the village in the evening, I mounted my horse after dinner to return, a young man accompanying me a mile to the creek I had forded the day before, but the rain during the night had swollen it to swimming and also overflowed its banks on either side for more than 100ft. Observing on the right a high staked fence, extending within 20ft. of the other side, with the top rail just above the rushing stream with overhanging branches, I gave my horse to the young man to take back to its owner at his convenience, and mounting the fence, with the incumbrance of the peacock with its 5ft. tail and 15lbs. weight, and a tall silk hat, I walked the sharp edge of the rail by the aid of the slender overhead branches, thanks to the acrobatic practice of my youth, till I reached the end of the fence, when, tossing the fowl as far toward the shore as I could, and holding my watch and purse above my head, I followed, landing in water only waist deep, instead of neck deep, as I feared. My companion on the opposite side, seeing me safe across, swung his hat and shouted, "A Yankee for anything and forever!" Replacing my watch and shouldering my bird, I plodded the five miles to the village, arriving just in time to change my wet underclothes for dry, but for the want of another suit of outer garments was obliged to lecture in wet pants. My neighbors and pupils of a generation before were, however, well pleased to hear the voice of their old friend and teacher.

Learning that an old college-mate was residing in the vicinity of Toccoa Falls in northern Georgia, I made a detour of 200 miles by rail to call upon him. These falls are of wonderful beauty, and with the present railroad facilities, are attracting hundreds of visitors annually.

From Toccoa, Georgia, to Charlotte county, Virginia, I accomplished by rail what took me by stage through the same towns in December, 1841, from Monday noon of continuous travel, night and day, with the exception of Sunday, to Thursday noon of the week following. I was the only through passenger, and usually at night the only one, so that my trunk was taken inside the stage for fear of robbers, and filling the place between the seats, made me a more comfortable couch. The rivers were all crossed by ferries, and one night, the lights of the stage having gone out, the new driver missed the path leading to the ferry, and found out his mistake when a sudden wheeling around of the horses upset the stage within twenty feet of the bank, waking me out of a sound sleep. Relighting the uninjured lamp by matches furnished by myself, we surveyed our surroundings, and loosening the jaded horses, shouted for help. Soon the negro ferryman on the opposite side replied, and coming to the proper landing several rods up stream, soon righted matters for us. At another ferry the rope broke when nearly across, but as it was in the daytime, we soon caught by the overhanging branches and pulled ourselves up stream to the right landing place.

The cars leaving me in Virginia five miles from the nearest of my old school-mates of 1832, I engaged a horse for two days' riding. When brought for me to mount, the bridle had no two parts alike, one stirrup was of wood suspended by a rope and the other of iron suspended by leather, and the horse himself was evidently a remnant of the cavalry of ten years previous, or more probably of the artillery or an ambulance corps. To my remonstrance, I was told it was the best in the neighborhood, a most painful contrast to the blooded animals, with gorgeous trappings, I used to ride on the fox hunts forty-two years before in the same region. Arrived at the door of the residence of my school-mate, she herself appeared, so unchanged in all the intervening time I could not help grasping her hand with a school-boy's familiarity, and tightening my grasp the more she tried to escape from it, while I was parleying for a recognition from her. At length, propriety suggested my rudeness, as she evidently began to be alarmed, and letting go my hold, I asked her the leading question, whether she could not recall events of forty-two years previous. "Oh, dear, am I so old," was her only answer, with a quick, "but who are you?" "I am the little Yankee boy of the log school-house on your father's plantation;" and then she herself seized both my hands involuntarily and it was my turn to leave the unclasping to her. The next moment tears came to her eyes, with the sad exclamation, "Oh, that you should find us all in such changed circumstances from what you knew us in our childhood and would have known us up to the war. That hack of a horse you just rode up on and its rigging is a fair sample of how the war left us—my husband, a physician, and our two sons returning from the ranks on the surrender of Lee with not a cent between us all except twenty-five dollars I had contrived to secure to myself and which my husband took to Petersburg to purchase me a calico dress, the first of any kind I had purchased in all the four years. In yonder shed is our carriage that, for the want of suitable horses and harness, has not been harnessed since the war, and every luxury of the kind forborne, with no prospect of the times being any better in my day." Such and much more was the sad tale I listened to during the three hours I stopped, before proceeding ten miles further to the residence of her twin sister, and two miles further to the residence of her brother, near the paternal mansion, where during their youth every luxury abounded as well as at their several homes, till the exigencies of war made Virginia the greatest sufferer of all the seceding States.

Spending only one day and night between the three families, I returned to the station and hastened on to Washington, to find, to my great disappointment, that I had not after all my effort secured a Wurdemann heron. Subsequent study of the species, however, proves my specimen not to be the long-known blue heron, but a variety now lately determined to be the *Ardea wardi* or Florida blue heron.

Leaving Washington after spending one night, I reached my home on the evening of the last day of April, in a snowstorm that had been unintermitting during the day.

The following extract from a detailed report of the New Orleans *Times-Democrat* Exploring Expedition through the Florida Everglades in 1884 will make a fitting close to our narrative.

"When we reached White Water Bay we had accomplished all we promised to do, and more than any man or men ever were able to do before. We are the first party of white men who ever penetrated the Northern Glades, and the first who ever started from the southern shore of Lake Okeechobee and came out at the Gulf of Mexico through Shark's River, without diverging a mile to the east or west from their due south course.

"In conclusion I sum up my observations of the Everglades in a few words:

"It is a vast marsh, interspersed with thousands of islands small in extent, and with few exceptions completely inundated, even at the time we explored them, which was during a very dry season. On the islands that were out of water there was but a few inches of soil covering the rocks. In my opinion, their drainage is utterly impracticable, and, even if it were practicable, the reward for such an undertaking would be lands that could be utilized for no other purpose than as a grazing ground for stock. They are nothing more nor less than a vast and useless marsh, and such they will remain for all time to come, in all probability.

"It would not be possible to build, or maintain if built, a telegraph line along the route traversed by us, which statement is made in reply to numerous inquiries as to the feasibility of such an enterprise. A. P. WILLIAMS."

I have designedly omitted in the foregoing narrative scientific names of specimens and specific descriptions, intending it only as an account of the adventures of a naturalist collector in the Everglades. J. W. P. JENKS.

BROWN UNIVERSITY, Providence, R. I.

As a supplement to the foregoing narration, I may state that recent information gathered during a late visit to the region, almost convinces me that Mr. J.'s unexpected visit to our camp on Sunday was in pursuance of a plot between him and a neighbor for some evil purpose, which was frustrated by that neighbor failing to find our camp, so deeply hidden as it was from the usual trails of the cattle rangers. My informers claim that after we left the State dark hints from some of the outlaws gave color to their regret that so good a prize had escaped them. Personally, I can but hope that their better class of neighbors did them an injustice by drawing any such inference after our departure, though subsequent events akin to the murder of Mr. Lang do not perhaps warrant a conclusion as to their innocent intentions toward us.

As to the trial of the murderers of Mr. Lang, personal witnesses of it assured me in my late visit that the account quoted in the narrative from the Boston paper is substantially correct, and that the "spiritualism" dodge of the cunning lawyer secured a verdict of manslaughter only, against the clearest weight of evidence in favor of murder in the first degree. Tom's fate was to be punished so repeatedly in the Penitentiary that, at length, his powerfully robust frame succumbed to the lash and two or three years only sufficed to put him in his grave. His companion in the murder of Mr. Lang was shot by the prison guard while attempting to escape after some years of imprisonment. Mr. J. was arrested at his own table by a ruse of the sheriff and his posse, who were dining with him as pretended cattle-buyers. But escaping from jail before his trial, and removing with his family into regions still more remote, he was at last, through one who had been a Pinkerton detective, and who had been for two months playing the part of a cowboy and "hail fellow well met" with him and his neighbors, decoyed into an ambush through the pretense of the detective's wishing to trade horses with him. Though none but the detective was in sight while the negotiation was going on, suddenly Mr. J. became suspicious, and mounting his horse fled, while the posse in ambush fired, but only wounding him, though instantly killing his horse, which fell so quickly that his rider pitched headlong into the low fork of twin trees, and by the time the posse reached him he was dead with a broken neck. J. W. P. J.

LONGBILLS AND LONGTAILS.

"WHAT time does Tom generally come for his mail?" "Oh, any time after 8 or 9 o'clock." I look up at the clock in the little country grocery, and it points to 7:30, and as I do so the door opens and Tom's smiling face appears, none the less welcome for being earlier than I had expected. We take our seats in the buckboard, and turn the horse's head toward Tom's ranch, about two miles distant. The road lies across one of the most productive of the reclaimed islands bordering on the San Joaquin River, and we ride through immense fields of strawberry and blackberry vines, and asparagus beds reaching almost to the horizon. The time is so pleasantly taken up with plans for the day's sport that the ranch is reached almost before I am aware of it. A comfortable two-story house is almost hidden by weeping willows, flanked by immense barns and surrounded by lofty piles of baled straw, making the place look as if fortified against an enemy's approach. At the door we are met with kindly greetings by Tom's wife and little daughter Mamie, and we step in and rest for a few moments, after which we go out and inspect the live stock, of which there is an unusual variety—of cows I would not pretend to say how many, only that a steam engine runs morning and evening to drive the machinery that automatically separates the cream from the milk, and which is of itself a curiosity well worth seeing.

Coming next to the fowl yard, we find an immense flock of tame geese and ducks, and another curiosity is that there are always several wild geese in the flock, and they come and go at pleasure. At present there are four, and they do not seem frightened, although we approach pretty close to them, probably because no one ever disturbs them. Next come the dogs, seven in all, I believe, and in fact they all came some time ago, on our first arrival, to renew our acquaintance. One of them, answering to the name of Lemons, is a little fellow of the wooly species. He is a full-blooded "Poland mopsey," so called, I think, because in some countries people stick them on the end of a pole and use them to wash windows with. A few weeks ago, early one morning, Tom and I had been having fine sport shooting at passing flocks of teal, half a mile above here, and all the ducks we dropped fell in a fine patch of alfalfa. Lemons and the shepherd dog had followed us, to make up for the absence of Duke, the favorite red setter, who had got penned up in the barn between two herds of cows and could not get out. I had brought down four teal, but could only find three. Searching about in the deep alfalfa, I at length came across Lemons digging furiously at a hole in the ground, with the shepherd dog standing beside him, as if superintending the job. Suspecting something, I ran my hand down into the hole, and scraping away the dirt found the missing teal, where poor Lemons had been trying to dig him out. Not the least interesting of the animals is little Mamie's pet beaver, that climbs up into her lap, and shows fear only when the dogs approach too closely.

But we must go and get ready for the snipe hunt, which we have planned for the afternoon. Tom goes off to the armory to load shells, I drag my 15ft. canoe from the place where it has been carefully housed during my absence, and launch it in the river that flows only a few rods from the house. The rest of the party come along, and soon we all embark. Thoughtful and kind-hearted Mrs. Tunstead, our hostess, comes down to the river to see us off and brings for us a bag of nice apples and pears and a package of lunch, little imagining that by so doing she is getting her name into print. Now we push off. I am alone in my boat, but the other carries Tom, Henry, his nephew, and Gerard, a neighbor, besides Duke, the red setter. "Tom," I remark, in an ordinary tone of voice, "your boat is too heavily loaded to pull easily, better let Duke come in with me." Now, Duke is so nearly human that he always likes to go in the fastest boat, and only waiting to hear the change proposed, he plunges overboard, swims to the side of my boat and I drag him aboard, and he lies down, wet and dripping but happy. This river, generally so smooth, is a splendid place for exercising the double paddle; this morning a stiff north wind dead ahead holds us back somewhat, but it will be a splendid wind for us on the snipe marsh. After quite a long pull we arrive at the island, which is our destination, run up into a little cove, haul up our boats, and make ready for tramping the marsh. But first we sit down on a pile of hay and dispose of the lunch, which, in my case at least, goes to the right spot. Tom is first out into the marsh, a shot is heard, and he holds up the first English snipe. Now we are all interested and impatient to get at them. Little Duke is running frantically about wagging his tail as though he would break it off. What a curious manner of expression the wag of a dog's tail is, but it is genuine all the same. Cold-hearted man will look you in the face and "smile, and murder while he smiles," but who ever heard of any one being bitten by a dog that was wagging his tail?

Now we trudge across the marsh for a half mile, but no sign of any more birds. We go on a little further and a shout from Tom ahead hurries us up. "Come on, boys, we are just in time." We look down and see not what I had almost expected, a large lot of snipe already killed and tied up in bunches ready to carry away, but instead a steer, mired down in the soft black mud. Here is an interesting job for a party out purely for pleasure. This poor animal has no doubt been lying here for days, is nearly famished, and he bites ravenously at the willow branches that we hold down to him. We cannot go away and leave him to die. Tom goes back to the landing and returns presently with the painter from my canoe and an armful of hay. Girard, Henry and I have in the meantime found a long, heavy plank, and with much labor we now succeed in getting the end of it under the animal's belly, and by prying over the bank we raise his body almost clear of the mud. Having well filled up under and around his forequarters with willow brush cut near by, we all seized hold of his tail and prepare for a grand, united effort. [Right here perhaps some reader will say, "Oh come, never mind the steer, let's go and hunt." Have patience, my dear sir. If this muddy tail does not pull out we will be with the snipe in fifteen minutes.] Perhaps Tom detects a shade of impatience on my face, for he says, "Keep up your courage, Andy, the birds are getting fatter all the time." Now then. All together, and we drag the poor creature out of the black mud upon a comparatively dry bed of willow branches, where we leave him for the present greedily devouring the hay.

Starting on again we travel a long distance without success, but at length the ground becomes wetter and soon the snipe begin to jump up with their peculiar little remark of *hensk*. I miss several birds at first, perhaps through fear of hitting my companions, who are rather too near, but at length I bring one of the little fellows to grass, quite a distance away. Marking the spot carefully, I walk up and find him. How handsome he is, lying stretched out with his wings extended, his fan-tail spread out and every feather so bright and fresh. Altogether too handsome to be carelessly poked into a dirty hunting-coat pocket, so I take a fine wire about 4in. long (I always carry a supply) and doubling it in the middle twist it around the bird's leg close to the foot. Another twist of the ends and I have a loop through which a cord is passed, which may be slung round my shoulder or tied at my side as is most convenient. Snipe carried in this manner will look clean and fresh at the end of the day's sport and will not have that gummy draggled appearance which they present when dumped out of the hunting coat or game bag, and a bunch of a couple of dozen will be something almost to be proud of.

"That's all very fine," some Eastern sportsman will say, "just show me where I can get two dozen English snipe and I will hang them in any way you recommend." My friend, this land of corn, wine and oil is only six days' railroad journey from New York. Owing to sharp competition the fare is now reasonably low, and there are plenty of marshes within easy reach of San Francisco, where good bags of snipe can be made, if the hunter is a fair shot and does not mind mud or hard work.

"Come along, Andy," shouts Tom from far ahead, "we will have to fine you." But I find that I am doing very well where I am, and very soon my little bird on the string has many for company. The snipe, popping up in twos and threes before my friends, do not seem inclined to leave the marsh, and after circling around for a moment, drop down again, often within gunshot of where I am standing, so I only travel slowly a short distance back and forward. One little wet place in the center of the marsh "pans out" particularly rich, and I go around and over it eight times, each time putting up birds from ground that I thought I had hunted thoroughly.

Presently Tom and the young man come back over the marsh. Tom looks tired and used up. No wonder, for he has been carrying about a fearful load, of which he thus delivers himself: "Andy, why would this be a terribly severe place for a poor man?" "Give it up." "Because he would have so many long-bills presented to him," and he marches off, relieved and happy. I soon recover from the effect of this, and after looking carefully, to see whether my gun is all shaken to pieces or not, I resume the sport. A snipe jumps up, and with my right barrel I drop him, quite a distance away, and as I notice, in exact range of that tall bunch of grass. While I am looking and marking it carefully, another flies along and goes down at the report of my left barrel, in range of that round-topped tree, away off on the horizon. I must have both of those birds. I drop my handkerchief at my feet, go straight away to the bunch of grass, and retrieve my first bird, come back to my handkerchief, take a line for the round-topped tree, and pick up my second.

The sun is getting low in the horizon now, and soon I hear a shout in the distance, "Come on, Andy, we are going home." "Why don't you stay and hunt?" "We will if you will show us anything to shoot." I do not go immediately, being loth to leave such fascinating sport, but work on toward home, sometimes coming back a little way, all the time having excellent shooting; but presently remembering that we have a mile of heavy walking besides two miles of paddling, I hurry up and rejoin my companions, who look rather fagged out, and we plod on our homeward way, passing the steer, still munching his hay, and looking as if he would go through the night comfortably. Then on again through the deepening shadows to the landing, where we throw ourselves upon the hay, and rest a moment and count our birds. The others have fifty-eight, my bunch is thirty-seven. "Just one short of eight dozen," says Tom, "let's go back and get the other snipe." But I notice that his motion does not meet a very vigorous second, and we take once more to the boats. Poor Duke is pretty well tired and flattens himself out on the floor of my canoe.

The paddle back is so easy that it is only a resting spell after the tramp of the day. Nearing the wharf a loud masculine "Hoo! hoo," from Tom, is echoed by a feminine one from the house, and we are soon seated discussing a good dinner, with appetites born of good digestion and sharpened by healthful exercise. ANDY.

San Francisco, Nov. 28.

AUTUMN IN THE "GAME PRESERVE."

RIFLE and trap, rod and net have done so much during the past decade in thinning game and depopulating streams that it is impossible to longer rely upon the statements of railway guides or upon the bold-typed advertisements of summer hotels. Experience, or, if he has not had time to acquire that, the word of some reliable hunter, trapper or cowboy, must be the sportsman's compass through the little territory that yet preserves the characteristics of the American frontier. The southern portion of the "Game Preserve" extends from the Wind River and Big Horn ranges southward to the line of the Union Pacific, or more correctly to the Bitter Creek country. In general terms the region may be described as a vast section having an elevation of about 7,500ft., the altitude being somewhat lower at its southern boundary and higher as the mountains are approached. Several isolated peaks raise themselves above the tableland, and deep cañyons furrow its surface. Few streams and springs are found and most of these are alkaline.

A ride of a few miles in any direction will show what the prospects are for a successful hunt. Buffalo heads and elks' antlers are to be found on either hand, but it is antelope signs for which we are looking. We are twenty miles northeast of Point of Rocks, U. P. R. R., traveling in a northwesterly direction toward the Wind River Mountains. Steamboat Buttes are on our left, and Sweetwater is on our right. Hour after hour we have been going over ridges and into cañons, but the summit is close by; a few more steps and we shall be on the great plain. Stop! There on the crest, standing out against the cold blue sky, is the game we are after. It takes but an instant to dismount and fire. The bunch jumps back out of view, and we press on, hoping to find at least one victim. But fate is against us, at least at this stage of the game. The scene before us is, notwithstanding our ill-fortune, sufficient to inspire fresh ardor. To our left, and less than a mile distant, the plain is one moving mass of antelope. Even where the eye can no longer trace the form of the animal, the white tails appear thicker than sage brush. We have found our game, not in tens and hundreds, but literally in thousands. In the meantime the bunch that first drew our fire has stopped. Should the leader once turn around his curiosity will enable us to retrieve our former miscalculation. Our horses are brought to a standstill and we sit motionless as statues, awaiting developments. First one and then another of the nimble-footed herd turns and looks at the intruders. Step by step they draw nearer, and then commences the movement we have been expecting. The leader strikes a sheep-like jump, and under his guidance the bunch circles the spot where we stand. Our sights are elevated to the 300yds. notch, and again we try our luck. This time a yearling doe falls. Five minutes suffice to dress the carcass and pack it on the saddle.

Now for the main herd. Our pace has to be very slow, for we are in full view and cannot afford to excite their suspicion. They see us long before we are in range and make tracks northward. No! not all. A small band turns toward the southeast, evidently with the intention of watching us from an adjacent knoll. We have but one course left. We must put the knoll between ourselves and the antelope and crawl up on them. The bridles are thrown over the horses' heads, and half-creeping, half-running, we race with our unseen game. But such caution was not long necessary. Instead of ascending the knoll the antelopes made their customary circle and were within 100yds. of our rifles before a sharp crack brought them to a realizing sense of their danger. Five shots in all were fired, and we dressed four fat antelope within half a mile of the place. It is surprising how far and fast these little creatures can go with a hole through them that would render many a larger animal absolutely helpless. Five antelope would afford many a meal at camp, and further pursuit being out of the question we retraced our steps, and two hours later we were enjoying antelope steak, coffee and slapjacks.

The antelope is too often a victim to his own inquisitiveness. Wary he may be, but his habit of circling a stranger will sooner or later bring him within range. Every one is familiar with the "red blanket" dodge, but even this seems to me to be unnecessary. Any pot-hunter with plenty of patience can wrap himself in a great coat or saddle blanket, concealing his head carefully and in an hour from the time he is discovered by the herd can empty a Winchester at close range. Antelope are not seen here in summer. Their breeding ground and range is on the southern slope of the Wind River Mountains. The first snows drive him out to the plateau, and as the winter grows more severe he gets closer to the railroad. For the next two months antelope will be found in abundance near Red Desert Station.

Like the antelope, the elk is a lover of the lofty tablelands and must be sought in similar localities. He is as wary as the antelope and seldom, if ever, is the victim of curiosity. When he runs he means business, and the horse that follows must have better training than can be acquired in a Wyoming cow camp. Elk are becoming very scarce. I know of but one large band between the railroad and the mountains and that is near Bush Ranch, some forty miles from Point of Rocks. The worst of the elk is his liability to become confused when surprised at short range. A herd will huddle up and bunch under such circumstances, seemingly ignorant of what direction to take until all avenues of escape are closed. In this way I have seen a band of eleven exterminated, the cowboys shooting them for mere wantonness when wanting neither flesh, hide nor horns. Occasionally a few elk will join a bunch of cattle and roam with them, and in not a few instances have allowed themselves to be driven with a herd of steers.

"Look for the antelope and elk on the hilltops, for deer in the hollows." It takes the novice but a short time to learn the rule and to recognize and distinguish the tracks and signs of this pathless region. The mule deer alone makes his permanent home on the southern slopes of the great plateau. In the summer sunshine he cools himself beneath an overhanging rock and finds shelter from the wintery wind among the sage brush at the bottom of some deep cañon. In spring the doe makes her bed upon the native grasses, and here she gives birth to the spotted fawn. The greatest danger to the deer lies in his love for one peculiar spot. If startled he may lead the hunter on a wild goose chase over miles of rough country only to bring him back to the starting point. As an example of this I give my ride of yesterday. We had grown tired of antelope steak and craved a change of diet. Two of us started early in the day to scour the surrounding cañons. Tracks were plenty, but no deer. After four hours of hard riding, when we had about given up the search, we plunged into a deep cañon with precipitous walls and a grassy bed. Our horses were just descending the bank when from under their very feet sprang one of the noblest bucks that it has been my pleasure to see. Out of the cañon he jumped and over the hill he trotted. Our horses refused to stand and before I could draw a bead I raised to 300yds. This just overshot him and now there was nothing to do but follow the trail until it was lost among the rocks. Two miles of this and the chase was given up. Suddenly my comrade pulled my rein. There in another cañon was our buck. This time we tried stalking but to no purpose. He was gone and no cleft track showed his path.

Homeward we turned. The sun was low when we reached the cañon where first we found him, and we certainly had no expectation of meeting him again. Yet there he was high up the ridge in a little gulch. He had not seen us, so after dismounting we crawled to the shelter of a rock not more than 200yds. from his lordship. He was lying down, only the antlers being visible. I thought I could get nearer, but scarcely had I issued from concealment when he made a bound. Our rifles cracked together and he fell prostrate. When we reached him we found a hole through the head and another through the loin; the latter had broken the backbone, so either shot was fatal. His hindquarters, when skinned and dressed as close as Chicago hams, weighed 23lbs.

Last week my comrade was riding the range when he started seven deer from a cañon. They ran slowly over a ridge, and as he did not pursue he surmised that they

would stop in the next ravine. Contrary to his custom he was without a rifle, and it was a six-mile gallop to his cabin, but he made the trip and on his return found the deer at the spot he expected. Three of them never left the cañon, and their carcasses are now encircled by strychnined coyotes and badgers.

The Rocky Mountain sheep has, when undisturbed, as great a love for familiar spots as has the blacktail. He is found among the rocks in all parts of the Game Preserve. I have seen a group stand on a cliff and watch a passing train without exhibiting a sign of fear; but let a solitary man walk along the track and no ledge is so narrow, no ridge so steep that the bighorn cannot put it between himself and his pursuer. In this portion of the country they run in bunches of eight or ten. They are not as plentiful here as in the Bruncau region among the northern ranges. I have grown tired of trying to stalk them, and when one is needed for the larder I shall have to waylay a bunch as they come down their well-worn trail to a mountain spring. With a favorable wind it will be no trouble to get the fattest of the flock, but the method is a disreputable one.

The buffalo alone remains for a passing note. He is not quite extinct, but his habitat is so unsettled that it is useless to look for him except in the immediate vicinity of the National Park. A few breed on the northern slope of the Wind River Mountains; some in the remotest valleys of the Big Horn, but the majority seem to understand that their only safety consists in keeping within the charmed square where Uncle Sam looks out for their preservation. I have seen four in this region within the past three months—two bulls, a cow and a calf. A band of cowboys roped the calf, but it died during the second day of its confinement. About two years ago a band of eighteen came near the railroad, but two would-be hide-hunters from Rock Springs chased them into a sink-hole, where all perished. The quicksand was so treacherous that no effort was made to secure their hides, so the last band was wantonly destroyed, and no one can tell how soon the same fate may befall the elk and antelope of the Sweetwater country. SHOSHONE.

POINT OF ROCKS, Wyo., Dec. 10.

BY THE HOUSATONIC.

WITH a feeling of regret I shook the sacred soil of Virginia from my feet, after quite a stay, and bade my hospitable companions good-by. Aunt Dilsey and all the darkies on the plantation, forty odd, crowded round the army ambulance containing my wife and chicks and earthly possessions. "Good-by, massa, God bless you. You've been mighty kind to us all." Charlie cracked his whip, off went the four-in-hand team of mules, and I saw them no more, glad enough to know that I had ruled kindly over the simple people I had charge of, nor left an enemy behind. It was a sudden change from Virginia to New England, but I was cosmopolitan, a sort of citizen of the world. I had tried Chinese and darkies, now I was going for the Yanks. So it came about that, on the banks of the beautiful Housatonic, I set up my wigwam and provided myself, now more at leisure, with rod and gun and dog.

At that time woodcock could still be found if diligently sought for; and quail and partridges (so I shall always call them) were in fair numbers, and much of my time was passed afield. My companion M. was an excellent shot, and had as good a dog as any man would want to shoot over; quail was his "best hold" any time. Duke was a large, fine liver and white setter, of whom I propose to say a few words. He passed into my brother's hands for "large money" after I first met with him, and was made a present to me, and a royal gift it was. His first owner had treated him with great severity. It is needless to state that I changed this at once when he came into my possession. Though I lived very near his former owner, I do not think the old dog ever looked the same side of the way his cruel master was on. I liked him all the better for it. Knowing old dog; his photo hangs on the wall near me as I write. Whenever I put on my sporting rig, he would dash round and bark, and whimper with delight the moment I took my gun. But let me take my rod instead, and he would go off and lie down with a most disgusted expression of countenance. I shot over him until he got too old to hunt or to stir around, and at the last buried him in a quiet nook near the scene of his early triumphs. We all felt as if we had lost a dear friend, and so we had, and I drove down, a summer ago, to the old fellow's grave on purpose to review the innumerable pleasant hunts I had had with him in the olden time.

M. had, or claimed to have—and I do not doubt him—the very singular faculty of smelling a partridge. At first I thought he was making game of me, but afterward I changed my mind. I have repeatedly been out with him, when he would call out, "Look out, Capt., there's a bird here; I can smell him," and his face would flush up and so would the bird. In these days of guns we have all sizes and makes of guns and ingenious contrivances, with endless discussions as to bores and loads of powder and shot and wads and all that. But here was a man who did great execution (I call killing sixteen quail right along good execution; I call killing four partridges straight in the brush better) with a mean, insignificant-looking little muzzleloader, weighing about scant 6lbs., and carrying say 2½drs. of powder and about 1oz. of shot, a gun you could hold easily in one hand. I have often seen M. kill three partridges straight. I had a grand gun and it would carry further than M.'s, but he secured the most game as a general rule. I tumbled into a bog one day and got my muzzleloader clogged up with mud. I scrambled to my feet, up got a bird and I pulled on him. I heard a peculiar ringing sound and I found two inches odd of my right barrel blown up and twisted round. I could only use the left that day, but when I had the barrels cut off it made a grand woodcock gun, and as far as I could see performed as well as ever.

"Capt., let us try Bog Hollow." We jump into the wagon, stow away dogs and guns, cluck to old Buckskin, a famous trotter, and rattle away. Four miles over a drive it would be hard to match in beauty, along the banks of the Housatonic. We are going for woodcock and partridge; the law is not up yet on quail. A capital place I fancy for birds—a long reach of swamp and lots of alders running well up, with hills on borh sides. This must be the home of the woodcock. And here I am not having had any practice on game for several years, and facing one of the crack shots of the country.

Though it was not always so, yet can I stand a heap of silence when I'm hunting. Most hunters do too much talking out in the woods; and nothing riles the Governor more than to keep shouting out, "Toowho, toowho!" or "Did you kill him?" I have a black dog, Dash, not to be named with old Duke. Up we go, M. on one side of the swamp, I on the other. *Whirr, whirr,* up go three or four partridgss; out sing the reports of our guns. First sight best sight. I pull quick and see my bird go end over end, while M. says, "Mine's hard hit." We call our dogs and down-charge them, load up and go carefully. Dogs are both fresh and will do better when they slow down. Steady, Dash! Whoa, Duke! Ah! they are beginning to draw on the birds. Lovely sight. What sportsman worthy of the name can ever tire of looking at it. Careful, find dead bird; fetch him here, Dash; that's a good dog. Here, Duke. Both dogs come in, each tenderly bringing in his bird, with no chewing nor mouthing. Good boy, good boy. I feel delighted to think my right hand has not forgot its cunning. But better not brag. Go easy.

We wave hands to the two dogs and walk on. Old Duke knows there's another bird ahead. How carefully the veteran covers his ground. By Jove! what a dog. Look out! he's on a point and Dash is backing him. Cluck! Away goes the bird, but the shot follows faster. Over he tumbles. You can almost hear the thud as he strikes. Wonderful little gun. Bah! a partridge gets up right in full view and I miss him with both barrels. Better luck next time. "Capt., you'd bea good shot," says M., "If you didn't pull so quick." That comes from early habit in shooting woodcock in the brush.

Let's sit down by this spring a while. Not so bad. Three present and accounted for. No. 4 has gone up the run, we will put him up again.

M. gets both barrels off about as quickly as any man I ever shot with; and he fires away at the smallest provocation, no matter how far off the bird. What's a charge of shot, anyhow? Then again, and I thoroughly agree with him, pull on a partridge, no matter how far off; if he hears the shot whistling around him, which he is sure to do, he will stop all the quicker; probably thinks it is a hawk. I deem this sound doctrine, and I add, follow your bird right up, if you fail to down him the first time, go for him the second. Keep on going; keep him moving, he will tire sooner. Then put your trust in good powder and shot and aim, to say nothing of luck, and you will fetch him.

I have before said that no sport in my estimation surpasses shooting the ruffed grouse. Where can you find a bird more up to all sorts of wiles and dodges, wide awake all the time; cunning as a fox? Yet not such a hard bird to kill, if you can only get a fair "swipe" at him. That is the season I say train up your dog in the way he should go on these birds first; then when he gets age, he will go it. If your dog is to cut loose and set sail and away the moment he strikes the scent, no more game for you. You want your dog to road the bird right along, carefully and quietly. The Governor, who has killed no end of these royal birds, used often to bring his favorite pointer to heel and then walk the bird up; this was when the game was very scarce. I agree with Bogardus, use plenty of powder, so you can feel a slight spring to your gun when you fire it, but not such large size shot. The Governor ran out of ammunition once and went for grouse with No. 10 shot, and had excellent results. The pointing of the gun is the key to the whole matter.

All this while we are sitting down by the spring, and that fourth bird is to be looked after. Hie on, good dogs, and let us see what you can do. Whoa, Dash; look out your way, M. Cluck! up goes a woodcock. I pull on him, over he goes and the dog with tail curled proudly over his back, brings him carefully in. Now look out for another bird. Both dogs are making game. Up goes a ball of feathers. M. cuts loose with both barrels. No go, clean miss. I bang away with the right, and timber doodle's feathers part company, and I can't help saying "Wiped your eye," and I put No. 2 away safely in my jacket.

We ought to be close up to that fourth partridge. Look out, he must be right by us; the swamps are not very wide here. Both dogs are making game; we move ahead a step, and with a mighty roar away goes the old cock. No use, he had to go or be kicked up, and M. downs him handsomely with the right-hand barrel and his equanimity is restored. He hates to be beaten, but I, who have always hunted with good shots, don't cry over a defeat. I have enjoyment enough watching the intelligence of my dog, breathing the pure delicious air, enjoying the sunshine and scenery, without howling if I do not get my bird every shot.

One thing in the woods M. and I always made a point, that was to destroy all the traps and twitch-ups we came across. The woods were full of them; and lots of game went off to market with never a shotmark on them. One old chap used to trap his birds and then hang the bunch up and fire away at them.

Well, we have done well enough up Bog Hollow, let us swing round by Squash Hollow, we ought to pick up a few woodcock there. Four partridges and two woodcock—that will keep the gridiron going. Round we go, and strike in by the headwaters of a trout stream, put the dogs in and follow them right up. Grand ground for woodcock, this. Look out, there went a bird. Dash ran over him. I remind my dog that that kind of work won't pass muster. I don't believe in continually lathering your dog; but if you do whip him, let him know you mean business. Careful now, here's a bird. See Dash. Look at Duke. Curious quality this, that the moment the dogs strike the scent and feel it growing warm they should stop instantly as if turned into stone. A little toss of my head, up goes the bird through the alders, two reports ring out, M. has fired at one, but did not know whether he struck him or not. It is brush work now, quick trigger and eye of faith. Old Duke, thoroughbred that he is, points his bird and retrieves. Dash stops, and yet brings me nothing. Bird here somewhere. I look, and we both look, and I am on the point of giving up when M. says, "Look up," and lo! there is the woodcock hanging in the bush.

We beat through that cover carefully. I picked up a couple more of woodcock and M. did equally well, though I think the cover favored me, and I had more practice in the brush. I carried my gun differently from my companion, he generally hunting with muzzle down, while I habitually carried mine at "present arms." In this way it keeps twigs and branches out of one's face, and the gun falls readily into hand as you pull on your bird; if it goes off, well and good, no harm. I have had so many close shaves shooting with careless people that I have made it a rule "Two's company, three is none."

One curious incident happened to me. We had hunted down the swale and had done fairly well. I had lost sight of my dog; and following him up found him on a point, and lo! in front of him was a fine partridge strung up by a wire, and not long caught. With a fervent wish that the trap-maker had been in the bird's place, it was only the work of a moment for me to uproot the snare and transfer the bird to my game jacket. So we came out of the swamp and over the fence and down the road to Old Buckskin. I was well pleased that we had taken five partridges and five woodcock into camp. I had, contrary to expectations, "kept my end of the log up;" and as we drove home in the twilight we made an agreement to be soon on hand again at an early hour and have another whack at the birds. CAPT. CLAYTON.

Natural History.

THE GROUND RATTLESNAKE.

READERS of this article living in the extreme Southern States will know what is meant by "ground" rattlesnake, as this branch of the *Crotalus* family is at home in those States. But Northern people often, and quite frequently, too, think that, as this is called the ground rattlesnake, some varieties of rattlesnakes spend part of the time in trees away from the ground.

The ground rattlesnake is so called from its great resemblance to the surface of the ground where it is usually found. Its color is ashy gray, almost white underneath, speckled on the sides with small black or brownish spots, and marked along the backbone with beautiful, velvet-like black blotches—a specimen of 18in. having some as large as a two-cent piece. They are rarely seen of a greater length than 18in., the usual size being about 12 or 15 long, and 1in. in diameter in the largest part. The rattles are very small, but, nevertheless, a noise is made with them which can be heard several feet away. They love a warm, rather barren ridge, and are seldom met with on low lands. The fangs are two in number, situated at the outward corners of the upper jaw, and vary in length with the size of the snake, the largest being not over ½in. They are curved in shape, sharp as a needle, and hollow up to within a very short space of the point. The virus is ejected through this hollow into the wound. The fangs are loosely attached to the jaw, similar to the claws of the cat family, and connected with the poison sacks situated immediately in their rear. A more nicely calculated arrangement cannot be found in all nature; in fact, to use a slang, but expressive phrase, it "fills the bill." The sacks somewhat resemble a gumboil.

So much for the natural history of the ground rattlesnake, as observed by one whose most fascinating pleasure consists in studying nature—from nature—and roaming the fields and forests with and without the instruments of destruction. I recently received a letter from a little friend who lives on the far southeastern coast of Florida, which I give below, *verbatim et literatim.* The writer is but twelve years of age, and the composition and handwriting something remarkable. But the letter will speak for itself:

GLENCOE, Fla., Oct. 16, 1887.

Dear Charley:

* * * Wednesday morning. The train hasn't come through yet because of the wash outs, but we expect it today, and so I thought I would tell you what happened to me Monday afternoon. It was late in the afternoon when I reported to papa that there were some quail in the front road, so he took Charley's shot-gun and went out there to see if he could not kill some, and I followed him to show him where they were, and when he was just aiming at them I felt a sharp pain on my left ankle and looking down I saw a ground rattlesnake in the act of running into the bushes. He was about six inches long and only had a button on its tail. I called out to papa that I had been bitten by a rattlesnake, and then ran in the house where mamma bathed my foot in strong ammonia. Papa shot at the snake [killing it] as soon as he saw it, and came running in the house and sucked the wound, which took a good deal of poison out. The bitten place turned purple, and commenced swelling half an hour after that, and now it is swollen up to my knee.

Mamma gave me a great deal of brandy and whiskey and when it had made me dizzy they said the danger was over. Dr. Fox happened to be at Mrs. Joe Bryan's and came to see me. He brought some nitrate of silver so that papa could cauterize the bite if it needed it.

Your loving friend,
ROBERT W. HOWARD.

Since receiving the above I learned a few more particulars. Two wine glasses full of whisky and the same of brandy were given immediately after the wounds had been bathed in ammonia. No effect was noticed (from the liquor drank) until quite a while afterward, when it produced a dizziness. The bite was situated between the heel and ankle bone, and the fang marks about three-eighths of an inch apart. The boy was complaining—limping, etc.—for nearly a week, but then got well and lively. Two or three hours after the bite his foot was swelled, but no swelling above the ankle. The next morning his leg was swelled some.
